if so, let it be raised some other way—by temporary loan, if need be. I feel bound, at the outset, to record my protest (late though it be) to the action of the Secretary of the Treasury in issuing any portion of that $44,000,000. Without going into detail, I wish to say that I regard that action as unwarranted by the law, as unwise, of evil example, of evil result. That action has, more than all other things combined, brought about the present unsettled state of business affairs, to the vast detriment of the country. If the Secretary of the Treasury had held to the laws, and had refused to interfere by this method, one thing would have been settled forever; that is, it would have been understood that $356,000,000 was the limit of the legal-tender, and no party would have found it possible, as an independent measure, to have reissued it. His action has unsettled the financial policy of the country, and has now brought to his aid the whole power of the Administration, and is made the basis of every argument in favor of inflation. Now that it is issued, we hear from every side that it cannot be taken back, and that it must therefore be legalized; and that is the main position of those who favor increase.

Will gentlemen reflect? The legalizing the $44,000,000 heretofore issued by the Secretary of the Treasury without the authority of law, and against the prohibitions of the law—what security have you, what assurance has the country, that upon some future pretext he may not issue a further sum, to be subsequently legalized? Sir, there is no light in which this action of the Government on this subject can be viewed that is not alarming. The losses of the country already (aside from the morality or legality of the action) are incalculable. Commerce needs nothing so much as a fixity, a settled and fixed policy; that the law shall be the law of all *in* office, and *all without* office. Six months of business are already sacrificed to the nation by the uncertainties which this action has occasioned. I can in no aspect of the matter overstate my regret for the course which has in this respect been pursued, nor the danger it entails upon the future. I do not, sir, favor inflation in any way whatever. The financial question with us, sir, is the great question of the day; it is paramount to all others; it is a subject which should receive first the most careful consideration of Congress, for on it hinge the great interests of the country. Our industries are paralyzed, and, at the present time, from no other cause than the uncertainty which exists in the public mind as to the action of Congress in regard to the legalizing of the volume of currency. The business interests await the decision with painful anxiety; merchants, manufacturers, mechanics, and laborers, all are in a state of suspense. They should know without delay, and the amount should be fixed by Congress—placed beyond the power of the Secretary of the Treasury to either contract or inflate.

Mr. Speaker, in presenting my views I shall endeavor to present them in a practical business way.

I assume, sir, the resumption of specie payment at as early a day as practicable is deemed desirable by all sound financial and businessmen. The matter of importance to us is not so much the time, as that we are properly prepared to resume before we attempt it. How can we prepare the way for it? Not, in my opinion, by any *direct* legislation fixing any particular day or specified time; but by a fixed financial policy which shall fix the volume of currency or legal-tenders; no increase, but rather a contraction till the volume shall not exceed $700,000,000. In a few years the business interests of the country will show us the only true American financial "elasticity" by conforming to our financial policy.

In my opinion, sir, we shall never properly prepare for the resumption of specie payment until Government and people practice more economy. I am pleased to see the gentlemen on the other side of the House so suddenly taken with economical ideas. I hope they may prove permanent, that this is not a death-bed conversion; for should they be continued in power beyond the present Administration I fear their extravagance would plunge the nation into bankruptcy. The first lesson to be learned is strict economy in every department of the Government, commencing at Washington, and in all the departments from Maine to California, the great lakes to the gulf; Army, Navy, custom-houses, post-offices, Indian Bureau, and internal revenue.

I beg to call the attention of the House to the receipts and expenses of a portion of the custom-houses as enumerated by the chairman of the Ways and Means Committee:

MAINE.

	Receipts.	*Expenditures.*
Machias	$194 46	$6,868 72
Frenchman's Bay	24 68	6,783 00
Castine	223 54	8,502 25
Wiscasset	54 60	4,074 47
	497 28	26,288 44

MASSACHUSETTS.

Gloucester	$3,164 61	$18,911 00
Marblehead	513 65	1,657 79
Edgartown	7 90	6,650 00
	3,686 16	27,218 79

RHODE ISLAND.

Bristol and Warren	$216 62	$1,805 67
Newport	2,164 40	7,462 12
	2,381 02	9,267 79

CONNECTICUT.

	Receipts.	*Expenditures.*
Stonington	$1,680 00	$1,980 86
Middletown	2,364 12	4,055 85
	4,044 12	6,036 71
Gross receipts and expenditures	10,608 58	68,811 73

With this exhibit, I leave the Eastern States, merely remarking that Government patronage and money may well carry the Eastern States for the republican party when it costs $6.48 to collect one dollar.

NEW JERSEY.

	Receipts.	*Expenditures.*
Perth Amboy	$1,094 16	$7,915 43
Little Egg Harbor	.....	4,324 00
Great Egg Harbor	.....	1,656 58
Bridgeton	.....	849 39
Burlington	302 20	534 00
	1,396 36	15,279 40

Cost of collection, $10.94 to collect a dollar. (The Administration carried New Jersey last fall.)

MARYLAND.

	Expenditures.
Annapolis	$2,246 64
Eastern district	4,555 00
	6,801 64

Here it costs $6,801.64 to collect nothing.

I will not detain the House by a further exhibit.

The custom-houses I have enumerated are but a portion of those which do not collect from customs enough to pay expenses. Why cannot these and others in old parts of the country be closed, Government property sold, and not be detrimental to the commerce of the country, or lessen the receipts from customs, saving a large amount of money annually, and those employed in them and the superfluous employés in the different departments of the civil service become producers instead of a burden upon the Treasury of the nation? They may be useful for election purposes, but very expensive to a heavily taxed and suffering people burdened to keep up this big army of officials. The large salaries and perquisites are too often used to corrupt the franchise. It is full time to have our system of collecting the revenues from our custom-houses, post-offices, and internal revenues overhauled.

"Reform!" "reform!" is called for by the people. This system has been growing upon us for years, and while we are passing through this shrinkage incidental to the resumption of specie payments all unnecessary burdens should be lopped off, lifted from the people. It is said, and truly, that every able-bodied man who comes to this country adds $1,000 to its wealth; they help to develop the agricultural and mineral wealth of the country. Why not turn the fifteen thousand employés in the Government Departments, who can be spared, into the productive interests of the country, and add $15,000,000 to its wealth, saving an annual expenditure of at least $22,500,000! Ah, sir, I will tell you why: they are often placed in the Departments by Congressmen without regard to fitness or the requirements of the Departments, but for political influence, and are expected to vacate their place for a few weeks about election time to attend to the political interests of the parties to whom they owe their appointments.

As a commercial nation in the family of nations we occupy precisely the same relative position as we severally do in our individual communities. If we as individuals spend more than we earn, we are growing poor; but, if by greater industry and economy we earn more than we spend, we are growing rich. That is precisely what we will have to do as a nation before we will be prepared to resume specie payments. Export more than we import, bring the balance of trade in our favor, then the resumption of specie payments will come to us in the only natural and safe way, governed and controlled by the natural laws of trade. As far as our internal finances are concerned, the people have the most unbounded confidence in the security of our circulating currency; it is guaranteed by the Government; all the real and personal estate of the nation is pledged for its ultimate redemption. When it is redeemed in coin the people will not only have full confidence in it, but hoard it as they did coin in 1857. Then the people had not confidence in our circulating medium; they disposed of it as fast as possible. In 1873 they hoarded it, and hence the scarcity; banks suspended on a currency basis; the people had more confidence in the greenbacks and the national-bank issues than in the banks themselves, or even the savings-banks. The New York City savings-banks had on deposit last September over $170,000,000—mostly the savings of the mechanical and laboring classes of its one million people, showing clearly the industry, economy, and thrift of that portion of the population.

Mr. Speaker, there are more people in the manufacturing establishments of New York, from Fourteenth street to the Battery, than in any two manufacturing cities in New England.

The bonds purchased by the Government during the "panic" were mostly sold to it by the savings-banks, and the greenbacks locked up in their vaults to meet the demands of their depositors. I think, sir, I underestimate when I state that $50,000,000 of our circulating medium was hoarded in that way, and in the pockets of the people of the city of New York. Although business has not revived since the

"panic," by reason, as I believe, in a great measure, of the uncertainty of the action of Congress in regard to our financial matters, yet the currency is fast flowing into the banks and the regular channels of trade. There is no difficulty in obtaining money to pay for real values, or to carry on any sound business. Money is plenty and cheap in all financial centers; like water, it will find its level; it will gravitate where trade and commerce call it, and when not required in trade will center in the financial centers until the requirements of the business interests of the country call for its circulation. The people of the South and far West will find plenty of money in their localities to pay for their products when ready for market. If they have any left after paying their debts, it will remain with them. It would not be any different though we should double the present volume of our currency. What the business interests of the country now require is a fixed financial policy; the absence of it is what paralyzes the great industries and business interests of the country. The supply of manufactured goods in the market is light. Nothing but the uncertainty in regard to the action of Congress retards the industries of the nation. Nothing but dire necessity will compel the Government and people of this country to practice more economy. We have of late commenced in earnest; we should not turn back. No more inflation, Mr. Speaker. Let us advance toward the specie basis; when we have reached it, then we can maintain the commercial interests of the country on the only recognized standard of value of the commercial world—specie, or currency on the specie basis.

The products of farmers, merchants, manufacturers, mechanics, and laborers will not command perhaps as much in currency; but its purchasing power will be as large, and with this advantage we shall be on a safe and sure foundation. The theory of finance of the gentleman from Pennsylvania [Mr. KELLEY] is far-stretched and fine-spun, and is only adapted for home consumption, home use. It would perhaps answer our own people quite well if we would wall up the American nation, shut ourselves up, be a world within ourselves. But we are a commercial nation; our finances should be placed on a commercial basis.

Some theorists assert that gold is of no essential use to us; that it should be treasured up by the Government and banks until a sufficient amount has accumulated to resume. I beg to call the attention of such theorists to this fact, (as sound and clear to my mind as any mathematical problem can be,) that if exchange is against us our specie will be taken from us. The true road to specie payment is retrenchment and economy. Those who present so doleful a picture of contraction, compared with inflation, I think make a great mistake if they at any time in the future desire a return to specie payment. We shall at some time have to ford this stream of inflation, cold and repulsive as it is. Why stand shivering on its banks? Shall we still further swell its turbid waters, and finally have to cross it with less strength and vitality to resist the current? I know full well the desire of some portions of the country for more currency and banks. I would give them all the banks they can furnish money to establish. I know full well they are anxiously waiting to hear how we can prepare the way for them. The Committee on Banking and Currency, after some two months' deliberation, presented a bill, desiring it to be recommitted to them. The chairman of the committee stated they desired to see what impression it made on the country. If the gentlemen of the committee intend to wait until they can present a financial scheme to the House which will suit all sections of the country, all conditions of the people—those who are speculating, overtrading; those who desire a plenty of money and nothing to purchase it with—they will have to wait and turn over the great question of finance to their successors next session. The financial problem can be properly solved if grappled with on sound financial principles. I will briefly state my views to the House.

In the first place, I would establish free banking, with the following conditions: All circulation should be based upon the deposit of Government bonds. I think it essential for the security of the people that the national Government should control the circulating currency of the country. Our present circulation is the best we have ever had. All portions of the country which desire the establishment of more banks should be permitted to have them in proper proportion to their wealth and population; specified amounts should be reserved for States and Territories now destitute, giving them the opportunity of taking the amount accorded to them in five or ten years. The balance should be free to any section of the country that might apply for it.

When banks call for circulation, issue to them, upon the deposit of bonds, the amount of currency the law accords to them, and cancel an equal amount of legal-tenders, and so on until the whole amount of $356,000,000 of legal-tenders shall have been canceled. That would keep the volume of currency the same. The increasing population, wealth, and trade of the country would be working a silent, unperceived contraction, which would eventually place us on a sound financial basis, founded and established upon a solid and safe resumption. Governed and controlled by the laws of commerce and trade, to them we must conform as a nation, if we would conduct our financial affairs upon the basis of other commercial nations.

Mr. Speaker, I have heard objections made by gentlemen on this floor to the Government paying interest on the bonds pledged by banks as security for circulation. It should be borne in mind that the banks are heavily taxed by the local and general governments, especially those in commercial centers. They pay 1 per cent. on the gross circulation issued to them, and are required by law to keep 25 per cent. as a reserve, making the Government tax on the available amount 1¼ per cent.

Permit me to quote from the remarks of Mr. Buel, of New York, before the Committee on Banking and Currency. That gentleman, interested as a banker, lives in the financial metropolis of the nation. His testimony on the bearings of our present banking law on the interior portions of our country may therefore be deemed perfectly disinterested.

Mr. Buel illustrates as follows:

Allow me to illustrate, and suppose, for example, the case of a bank organized in a small town in New York State:

The capitalists of the place subscribe a capital stock of, say		$100,000
This sum is taken to the United States Treasury and lent to the Government, and for which the bank receives in United States fives, at present price, say		84,000
This United States stock is then taken by the bank and lodged with the Comptroller of the Currency, and he issues to it 90 per cent. national currency, say		75,600
Of this, or its equivalent, the law says 15 per cent. as reserve must be kept on hand, say		11,340
Which, deducted from the $75,600, leaves the bank to loan out to its dealers and obtain interest for, but		64,260

Now the practical operation of this is, that of the loanable capital of the place $100,000 has been contributed and paid into the bank, and the place has got back as loanable capital or credits its own notes for only $64,260. The place, instead of "inflating" its loanable capital by organizing a bank, has got one-third less by the operation.

Now let us see how the profits stand. The principal sources of profits for banks in small places are from circulation and deposits:

1. Interest on the United States bonds, $84,000, 5 per cent. in gold, is $4,200, which, at 12 per cent. premium, is worth	$4,704 00	
2. Interest at 7 per cent. on the $64,260, currency, allowed by law to circulate, is	4,498 20	
3. We will suppose the bank able to attract say $50,000 deposits, upon which it pays no interest, which is a liberal supposition for banks of this character; deduct reserve required by law, 15 per cent., $7,500, leaves $42,500, which, at 7 per cent. interest, gives the bank	2,975 00	
Total profits, say		$12,177 20
From total profits we have to deduct for United States tax on capital not in United States stocks, $16,000, ½ per cent.	$80 00	
Also tax on circulation, 1 per cent.	756 00	
Also tax on $50,000 deposits, ½ per cent	250 00	

In the city of New York, for 1874, the State, county, and city tax rate will probably be 3 per cent.; and in Albany City, 5 per cent. and upward. In smaller cities and villages in New York State the rate of tax is from 2 to 5 per cent. In New York and Albany Cities banks are assessed upon the whole capital, par value; and by the law of the State is required to be so assessed everywhere in the State.

State and county and town tax on the capital, say only 2 per cent.	2,000 00	
Salary of officers, rent, &c	3,500 00	
Total taxes, expenses, &c		6,586 00
Leaving a total balance of profit above paying expenses, taxes, &c., but no allowance for bad debts		5,591 20

Not enough of total profits left to pay the stockholders a dividend of even 6 per cent. on their capital.

If the Government should relinquish the tax on banks it should retain a part of the interest on bonds pledged by banks as security for circulation, what proportion I will not state, merely remarking that banks of deposit and discount are essential to the business interests of the country, and should not be so severely taxed or hampered as to drive capital from such investments. The matter of circulation is not an item of so much importance to city banks as to country banks. The profits of city banks are mostly derived from deposits loaned to their customers, a reciprocal arrangement between them. The banks in the interior have much smaller deposits, which cannot be relied upon for profits.

I do not think, Mr. Speaker, that the greenbacks should be allowed to remain in circulation any longer than necessary to effect the change which I have mentioned. They should be retired at as early a day as possible, and currency issued by the Government to the banks on the deposit of United States bonds substituted for them. Such currency, after resumption of specie payment, would in time of financial panic be more reliable than the greenback itself. Both would be secured by the same national security, but this advantage in favor the currency issued to the banks. The Government has nothing to redeem its promises to pay in coin with, except what the law accords to it. When it pays out the amount in the Treasury it must await the slow process of recuperation by collections from duties on imports and internal taxes. It must then await the slow process of law for replenishment.

The banks have as security for their circulation Government bonds, the pledged security of the nation, same as the greenbacks, with the addition of the personal security of the stockholders in case of a deficit, to the full amount of their stock. Their deposits are loaned on commercial bills maturing daily, which would be collected far more rapidly in time of panics than the more slow method of Government collections. Capital is sensitive. The financial barometer gives warning of the approach of a storm. The small cloud appears in the distant horizon; the financial navigator begins to reef sails preparatory to breasting the coming storm. They call in loans; loan on short time; strengthen themselves to be prepared to meet liabilities.

The banks under the present law could only be called upon to

redeem in coin their own bills as presented at their counters for redemption. That would be a slow process with the circulation of the banks scattered over the broad extent of the country. Not so with the greenbacks. A large portion of them would be treasured up in the banks as a reserve to meet liabilities. In case of a sharp run on the banks for specie, a large portion of them would be presented at the Treasury for redemption in coin; the banks and individuals would hoard them. I repeat that it is important for the Government to retire its greenbacks at the earliest possible time. It would be far less disastrous to us as a nation to have a portion of our banks suspend specie payment than it would be to have the Treasury of the nation suspend. The theory of redeeming the greenbacks in gold-bearing bonds would not be redemption in specie, but merely exchanging one promise to pay for another.

Mr. Speaker, the House will perceive from the statement I have made, the obstacles in the way of establishing new banks, in consequence of having to purchase bonds at the present premium of from 14 to 19 per cent. to obtain 90 per cent. of circulation, losing the use of some 30 per cent. of the capital.

I recommend a new issue of bonds for banking purposes, 4 per cents, having a long time to run, say twenty to forty years, principal and interest payable in gold coin, interest payable quarterly, to be sold at par for banking purposes, as security for circulation issued to the banks on the deposit of the bonds, 90 per cent. of currency to be issued on them; also allowing the banks now having circulation to exchange the new 4 per cent. bonds for those now held by the Department as security for circulation. This would fund a fraction of the public debt with a low rate of interest-bearing bonds. I think the credit of the Government is now so good that in a few years $700,000,000 of our bonded debt might be thus funded as security for the currency of the country, saving in interest annually $14,000,000.

At the time our present banking law was framed we were in the midst of our civil war. The Government was rapidly issuing 6 per cent. bonds at par in currency; it was wise at that time to limit the currency issued on them to banks at ninety cents on the dollar.

A 4 per cent. bond, such as I have named, would sell at par, and would be ample security for the redemption of 90 per cent. currency issued on their deposit. This would afford facilities for banking without the loss of available capital to the amount I have indicated.

The greenbacks received for the bonds should be canceled to the same amount of the banking currency issued, thus keeping the balance of currency the same; the surplus, as it may accrue in amount to $5,000,000, to be used for the purchase of our various issues of bonds.

Thus, the Government would in time withdraw all its greenbacks, and they would be replaced by currency issued to the banks throughout the country upon the pledge, as security for their redemption, of the bonds of the Government.

Mr. Speaker, in this long discussion I do not hear the fact as often, or with as much force as it deserves, that paper is *not* the constitutional currency of the country; that instrument knows gold and silver, and nothing besides. I am not here to question the *wisdom* or the necessity which in the extremity of the national peril drove us in this direction. But the war was closed eight years since, and now the national peril arises from *the very means adopted to save its existence*. We are bound not only by the necessities of the law, but by the partially forgotten reverence for the instrument upon which we rely for prosperity and perpetuity, to surmount objections and return again to the sanctions of the fundamental law.

Banking and Currency.

SPEECH OF HON. JOHN P. JONES,

OF NEVADA,

IN THE UNITED STATES SENATE,

April 1, 1874.

The Senate having under consideration the bill (S. No. 617) to provide for the redemption and reissue of United States notes and for free banking—

Mr. JONES said:

Mr. PRESIDENT: It seems to me it is the Middle States, the Western States, and the Southern States that lack prosperity, when they come here and tell us they have no product with which they can get the kind of money that the world uses to transact its business, and which is acknowledged everywhere to be the standard of value. I cannot see how it is that the currency of this country is at from 10 to 15 per cent. discount, and yet that there is not enough of it, unless it is because the people distrust their Government and have no faith in its stability.

Senators tell us that we need more banks in this, that, and the other locality in the Southern and Western States. Let me ask, is there any power in State lines that prohibits money going from one State across its boundaries into another? If this money is wanted in one section of the country and it exists in another, will it not travel from the section in which it is to the place where it is wanted? We find no difficulty in getting all the gold we require in California, Nevada, and Oregon. Gold and silver are the chief products of Nevada, and we pay out that gold and silver to whoever will come with what we want and give us the most for it; and I presume that gold will travel to any country where it is not made a fugitive by vicious enactments that make irredeemable paper a legal-tender for obligations and debts. Whenever you make a paper money that has no intrinsic value whatever a legal-tender for the payment of debts, then gold will disappear from the circulation.

Mr. MORTON. Let me ask my friend a question. Nevada, I believe, is a State in the Union, and yet Nevada refused to accept that which the Congress of the United States did make a legal tender, and the legal-tender currency of the United States has been persistently rejected both in Nevada and California.

Mr. JONES. The people of Nevada were honest enough to do this: When a man agreed to pay a certain sum in gold and silver, which were worth more than greenbacks, they forced him to do it. They were unable to see how the Government could be assisted by allowing a debtor to plunder his creditor. It is one of the glories of that State, and one of the glories of that coast, that debtors there were never permitted to plunder their creditors, as it seems to me is sought to be done here at this time.

Mr. MORTON. Will the Senator allow me to ask a question right there?

Mr. JONES. Certainly.

Mr. MORTON. I ask him what would have become of our country if all the States of the Union had followed the example of Nevada and rejected the legal-tenders?

Mr. JONES. We should have put down the rebellion for fifteen hundred millions less money than it did cost.

Mr. HAMILTON, of Maryland. That is true.

Mr. JONES. That is what would have happened to this country. And more than this, we should have been spared all the embarrassments and uncertainties which have nearly overwhelmed us during the past nine years. We should have saved since the close of the war a hundred millions a year, and prevented untold disasters yet to come if we do not retrace our steps, and which will, as I believe, imperil the honor and prosperity of the country. Why, sir, if the opportunity the war gave us to issue the greenbacks had been denied us, and if such great benefits, as some seem to think, have flowed from such issue, I tremble at the contemplation of the condition we should have been in if peace had continued, and the glorious opening had been lost to us forever; for with the increase of population and the alleged necessity of a certain amount of money *per capita*, we never could have owed enough on which to do our business.

Now, sir, what did happen? Ignoring the history of other nations; taking no warning from the wrecks of false financial systems strewn along their pathway, the first thing we did was to make irredeemable paper a legal tender, and thereby almost immediately advanced the price of everything 100 per cent. Having thus made everything we were compelled to buy double its former price, we then entered upon the negotiation of loans and a rigorous system of taxation to raise money with which to buy. This we should have done in the start, and what we could have done; but we first thoroughly demoralized the whole country and all its industries; we plundered the creditors and allowed the debtors to discharge their obligations by paying from 30 to 50 per cent. less than they owed, and then we started to raise money for putting down the rebellion in the only way we should have done in the commencement. We resorted at the outset to measures condemned by financiers everywhere; to that which I would only have been willing to do at the last extremity. When every dollar had been raised that could be raised by taxation; when every man had been put into our ranks that could have been forced into them by conscription, then, as a last resort, I would have agreed to the issue of irredeemable paper money. A great war cannot be carried on by pieces of paper payable at convenience and bearing no interest. This paper currency, instead of adding strength to the imperiled country, was a source of weakness. Its issuance was an impeachment of the patriotism of the nation, and an underrating of the resources of the country. It was a cheat upon the people in teaching them the pernicious idea that in carrying on a great civil war economy and industry were not necessary; that production and destruction were convertible terms; and that the activity of the printing-press in the production of paper money would amply compensate for the activity of armies in the destruction of wealth.

Mr. MORTON. I will say to my friend that his position is consistent, inasmuch as he regards the greenback as a curse from the beginning.

Mr. JONES. I do, most undoubtedly, and I further believe that it is the duty of men to face that question. I know that the loyal people of the United States have been disinclined to discuss the morality or wisdom of the financial measures of the Government inaugurated during the rebellion. So joyful were they with the thought that we were able to put it down at all, that they have not cared to scrutinize the means by which it was suppressed. But it seems to me, if "history is philosophy teaching by example," it is the duty of this body to investigate the subject, so that in case another rebellion shall arise we may see whether the last one was not put down at about double the cost that need to have been incurred. It seems to me that it was, and that the experience of the past is the best light to guide our footsteps in the future.

Much is said about the value of the greenback; the superior quality of the Government money, the best, as they tell us, that the world has ever seen; one Senator, in a moment of supremest exaltation, declaring it "battle-born." We are told that the honor and entire resources of this great Government are pledged to its redemption. What is this "great Government" so far as that pledge is concerned? At present, it is this Senate. Some appear to think that there is a power exclusive of this body whose honor is pledged to the redemption of the greenbacks. If this Senate votes that it will not pay them, then the honor of this country is not pledged at this time to their redemption. This Senate has voted on several amendments to the bill under consideration that it will not pay them; it has voted that it will take no means toward paying them; and that it will not look to any day in the future when the creditors of this country may expect that it will pay them at all; and unless some future Senate shall be elected, unless some body shall hereafter convene in this Chamber, that will be more careful of the honor of the country than the present Senate seems now inclined to be, I do not understand how that honor is to be kept unsullied or the pledge redeemed. Most certainly an additional issue of irredeemable paper money is a violation of the spirit of the pledge and a step in the direct road to ruin, bankruptcy, and dishonor.

Mr. LOGAN. Will the Senator allow me to interrupt him?

Mr. JONES. Certainly.

Mr. LOGAN. The Senator spoke of the pledge of this Senate representing the Government. He does not mean to say that the Senate is the Government?

Mr. JONES. So far as the redemption of the Government's promises are concerned, it is.

Mr. LOGAN. Then every time the Senator is defeated a part of the Government is defeated.

Mr. JONES. Of course, I mean that the Senate is the Government, not in its power to enact a law, but in its power to prevent the enactment of one. No law can be passed without the assent of the Senate. When Senators grow eloquent about some great government, so sacred that we scarcely dare to raise our eyes and gaze upon it, being pledged to the redemption of these pieces of paper, what do they mean? Do they not know that whenever a majority of this body refuses to vote that this paper shall at some future time be redeemed, then that pledge is broken and the honor on which it rested is scattered to the four winds and vanishes into thin air?

I believe that the present financial system is an injury and only an injury to all the industries of this country, and a comparison of the census statistics for 1850, 1860, and 1870 will make it manifest.

When people complain that the banks of this country are viciously distributed, it can also be shown that the industries of the country are viciously distributed. Men have not been left free to select the occupations which they can best and most profitably follow. Whenever an inflation occurs, such as has taken place, the first rise in price takes place in stocks, worthless and otherwise; the stocks upon the market in Wall street, that are shuttlecocked between the battledoors of the "bulls" and "bears." The next thing to rise in the country is personal property, fabrics that men can speculate in and the operations in which can be closed within brief periods. The next property to rise is city lots and rents of every description. You see your city property figuring magnificently on the assessment rolls, and men spending their anticipated incomes from the rents of such property. The next thing that rises in price is labor. The last of all that rises is agricultural lands.

Now mark what the census tells us. In 1860 there were thirteen hundred thousand people engaged in manufactories in this country. The wages paid to them amounted to about $378,000,000. In dealing with figures I give round numbers, and do not pretend to be entirely accurate, because I am speaking from recollection. The capital stock of the manufacturing establishments of the United States was about $1,000,000,000, the product was $1,800,000,000, and I will say that during that year our exports were much larger than our imports. We were exporting of cotton fabrics about $12,000,000, I believe, to China.

In 1870 there were about two millions of people engaged in manufactories. They received about $775,000,000 in wages. In other words, about 50 per cent. more were engaged in the business of manufactures than in 1860, and they received about double the wages. The capital used in this manufacturing business was about $2,100,000,000. One would suppose that the product would be about 50 per cent., certainly not more than 75 per cent., above that of 1860; but the product, instead of being $1,800,000,000, was $4,200,000,000, or nearly 150 per cent. more than in 1860. This increase was in the price of the product and not the quantities produced.

These figures seemed to show extraordinary prosperity in the manufacturing interests; but the panic of September dispelled the illusion. The tremendous superstructure of credit upon which this apparent prosperity rested was based on too slender a foundation of actual capital, and the moment the public confidence was shaken the entire manufacturing interests of the country were paralyzed and many of the oldest houses ruined.

The Superintendent of the Census computes the average increase in prices of manufactured articles at 56 per cent. in 1870 over those of 1860. The farmers and producers of our raw materials pay this 56 per cent. upon all they consume in the production of their crops, and in addition thereto they pay enormous profits which the retail dealers always exact when an inconvertible paper currency is the circulating medium. Those dealers always put their prices at rates which will insure them against the possible depreciation in value of the currency from the time of sale till the day of payment and also return them an exorbitant interest on the credit extended.

And now as to the condition of the agricultural interest in 1870. The decade between 1850 and 1860 exhibited a much higher degree of prosperity in this direction than that between 1860 and 1870, viewing it from whatever stand-point you choose. People seem to have left their farms and sought the cities to engage in the semi-gambling business of manufacturing, made so by an inconvertible paper money.

There were nearly six millions of people engaged in agriculture in 1870; the value of their farms, with implements, machinery, and live stock, was $11,000,000,000. This enormous sum represents the capital then invested in agricultural pursuits in the United States. And what was the product of, or the return for, this vast investment? About $2,400,000,000.

We have thus seen two millions of people engaged in manufacturing, with a capital of $2,100,000,000, flood the country with a product valued at $4,200,000,000; now deduct the cost of raw material used in this great production, which was $2,400,000,000, and you have $1,800,000,000 left to represent the interest on the $2,100,000,000 of capital and the earnings of two million people employed. In other words, two million people, with a capital of $2,100,000,000, earned over $1,800,000,000 in the year 1870, while six million people, with a capital of over $11,000,000,000, earned but $2,400,000,000 in agricultural pursuits during the same period. Three times the number of laborers, employing more than five times the amount of capital, receive but 33 per cent. more as the gross amount of their product. This is $900 to each person engaged in manufactures against $400 to each engaged in agriculture.

And yet honorable Senators inform us here that we want more paper money, so that the inflation in prices of personal property and of stocks, and of the business that draws our population to the cities, shall be indefinitely increased, that speculation shall be aggravated, and that the farmer shall receive less and less from year to year, while the gambler and the stock-jobber shall get more and more. They want money for what? I have seen nobody anywhere who wants to hire out, but everybody wants to hire somebody else.

We do not want to have enterprise stimulated in this country. We want labor encouraged by better money. We want the laborer who receives his pay for a day's work to know that it will not shrink in value on his way to the store where he buys the necessaries of life. We want no more banks of circulation without redemption, for though I admit that they are great institutions for the accumulation of wealth, they do very little toward its production. They absorb nearly all the surplus property in their immediate vicinity. They adorn with palatial residences the avenues where gamblers and stock-jobbers dwell, while they cover the farms with blisters in the shape of mortgages.

What need of more banks? What relief can additional banks give to those who have no security to offer for loans? Who fails now to obtain loans on sufficient security? As it is claimed that there is but an insignificant profit of 2 per cent. on circulation, while money in the South and West readily commands from 1 to 2 per cent. per month, why are not banks of deposit, requiring no charter from Government, more to the purpose than additional banks of circulation? Will the money-lender refuse to be satisfied unless he receives not only the interest on his capital but also a charter from the Government to collect interest on what he owes? For the bank issues, which we call money, are really mere evidences of the bank's indebtedness.

Does the much-eulogized bank currency lack the flexibility to enable it to reach the places where it is most wanted? Is the locality of the bank important to the borrower? Will not the best interest and security bring the money from any distance for investment? If all the banks of the United States were in Texas, would New York suffer for the want of money? Did not the surplus capital of Europe come to carry on our war and build our railroads? Doubt that water will find its level; doubt that quicksilver will find the pores of the vessel containing it; doubt that atmosphere will press toward a vacuum, but do not doubt that capital will seek the best investments as to interest and security.

I can see nothing to result from additional issues of inconvertible paper money but inevitable disaster. It would work the confiscation now of a small portion of the creditor's property for the use of the debtor, to be succeeded from time to time by further confiscations.

Most of the representatives here of States that are claimed to be debtor States desire an increase of this currency. I say to them that no nation can be strong and be dishonest; no nation can be strong and attempt to confiscate the property of one citizen and give it to another; no nation can make money plenty when it says to the creditor who has loaned it, "You shall receive back only a portion of what you have loaned in full satisfaction of the debt." A spoliation of this character will take away the inducement for the creation and accumulation of property, and, if such a policy continues, I venture the prediction that the time is not far distant when, as was said in the times of the worthless continental money, the hard-hearted and nimble-footed debtor will pursue his fugitive creditor and will pay him without pity and without remorse.

Does this Congress mean now to leave entirely out of view and to discard forever a standard of value? Did any country ever accumulate wealth, achieve greatness, or attain a high civilization without such standard? And what but gold can be that standard? What other thing on earth possesses the requisite qualities? Its value is represented by the average amount of labor required to produce it. Its scarcity gives a small quantity of it great value, so that it is easily transported from place to place. It is capable of division and subdivision, and also of being reunited—all without loss. It is in every commercial country made into coins and stamped, by national authority, with a certificate as to fineness and weight. It is flexible and self-regulating, and flows by natural laws wherever the exigencies of trade demand it.

Gold is the articulation of commerce. It is the most potent agent of civilization. It is gold that has lifted the nations from barbarism. It has done more to organize society, to promote industry and insure its rewards, to inspire progress, to encourage science and the arts, than gunpowder, steam, and electricity.

The use of gold had its origin in the necessities of mankind. The human heart is set upon it. It will command the proper services of everybody at all times and in all places. The necessities which compel its use are as inexorable to-day as they were at the beginning, although improved systems of exchange have diminished the proportionate volume necessary to do the work.

So exact a measure is it of human effort, that when it is exclusively used as money it teaches the very habit of honesty. It neither deals in nor tolerates false pretenses. It cannot lie. It keeps its promises to rich and poor alike.

While it has seen human institutions perish and human governments crumble and decay, it is itself imperishable. The gold that was in Solomon's temple possessed the same qualities as the gold dug to-day from the sands of Africa. The gold of California and the gold of Australia are precisely the same. It defies the corroding hand of time and the friction of the ages. It is the common denominator of values. It makes possible the classification of labor and the equitable interchange of commodities. Gold has intervened in the bargains made between men since the dawn of civilization, and it has never failed to faithfully fulfill its part as the universal agent and servant of mankind. But it withdraws from the companionship of the bedizened harlot called irredeemable paper money, and says to every people, "Banish her before you look for my return." It is the oxygen in the commercial atmosphere, and its absence produces financial asphyxia.

The value of gold is not affected by the stamp of Government. That is merely the final and reliable evidence of its weight and fineness.

You must have something with the attribute of extension when you measure extension; to measure weight you must have something of specific gravity; and to measure value you must have something of value—something that requires labor to produce it. Gold has this requisite. The stamp on a gold dollar says in effect: "This Government pledges its honor that this coin is nine-tenths fine and contains 25.8 grains in weight." The Government stamp on every piece of coin is a certificate to mankind that the bearer has rendered a service unto society which is measured by that piece of metal, and that he is entitled to an equivalent service from society in return, payable on demand. Such a draft has never yet been dishonored.

What does a piece of this Government paper say—this paper that the honor of the Government is pledged to redeem, and which the custodians of that honor refuse to redeem and refuse to take any steps toward redeeming? It says: "The holder of this piece of paper has rendered a service unto society of an uncertain, unascertained, and unascertainable value, dependent entirely upon the precise day of the week or month when such service was rendered, and is entitled to such service in return as the 'bulls' and 'bears' of Wall street, or a vote of the Congress of the United States, or both, may determine." [Laughter.]

We are told that money is the utensil of trade; that it is the tool of the workman. Well, sir, it seems to me that our present currency, instead of being the spade of the husbandman, is the dice-box of the gambler. [Applause.]

It is said that it is the grease that lubricates the wheels of commerce. Well, sir, this irredeemable paper money is a sort of grease that makes the hub expand, the spokes expand, and the axle expand. At one moment the grease spurts out on everybody, and the next this wheel without a tire is running dry on its axle. [Laughter.] Another difficulty is that the driver is too often diverted from the management of his wagon to speculation in the rise and fall of the grease.

The money which consists of paper promises cannot be a standard of value. It measures nothing but the average hopes, fears, confidence, and doubts of this people as to the ability and intention of their Government to ultimately redeem it in gold, and is itself measured by gold. It finds its way into the pockets of speculators and gamblers, who win it, rather than the pockets of the laborers who earn it.

Mr. MORTON. I will ask my friend a question. He talks about gambling. I will ask him if there has not been as much gambling in California and Nevada in the last ten or fifteen years as in any other State in the Union?

Mr. JONES. The people there buy what they think is valuable and likely to increase in price, and if they have anything which they fear will fall in price they sell it. We have never had any money panics. We have never called upon the Congress of the United States to relieve the gambler from any portion of his liabilities, or to issue more money in order that he might more easily pay his debts. [Applause.]

The speculators in California are debtors, as they are on this side of the mountains. They and they alone are demanding an increase of the currency.

We are told that our industries are languishing, that our cotton mills are idle. Well, sir, as they can run but six or seven months in the year under existing conditions, I hope they will remain idle until the glut of fabrics they have produced is disposed of, so that when they start again they may furnish constant employment and their operatives be sure of their pay.

We are told that our iron mills are idle. Well, sir, I hope they will remain idle until the men who labor in them can have better assurance of continuous employment and its reward than is furnished by the purchase of railroad iron on credit by bogus companies, which depend upon taxing the people to keep them up, or the sale of their bonds for funds with which to pay interest. If our mills are only to run spasmodically and overstock the market, or roll out iron for railroad tracks in uninhabited regions to enrich land-grabbers and speculators, I hope they will remain idle. Their work can result in no good to the operatives or the country.

Our manufacturing interests were not brought to a stand-still by any movements toward redemption. The panic which drove their operatives into the streets last fall, to struggle through the winter, was the legitimate fruit of the existing financial system and was not caused by a scarcity of paper money. It came from a want of confidence that the inflated prices which then prevailed could be maintained and a belief that the bubble would soon burst. Those who had money hoarded it, instead of allowing its healthful circulation, and, as a consequence, stagnation, panic, and ruin followed.

Sir, I maintain that there is money enough now in this country for every legitimate purpose. But that you will ever see that glorious time when nobody will want money, that you will ever reach that era when nobody will be clamoring for more money, I do not believe. I hope that time will never come, for then production will cease and paralysis seize upon the country, and it will go down, down among the semi-barbarous and uncommercial nations, in which direction I believe the votes of the majority on this floor are calculated to send it.

Why, sir, as long as it is easier to loll at the sea-side than it is to delve in the dark depths of the mine; as long as it is more agreeable to lead a life of elegant ease than to toil in the factory, the field, and the foundery; as long as money will buy immunity from labor and can be exchanged for the necessities and luxuries of life, so long will you hear the cry re-echoed throughout this land that more money is wanted. The very fact that money is wanted is what stimulates legitimate enterprise, endeavor, and energy.

Suppose you vote $10,000 apiece to-day to every man in the country, what would be the result? The desire to borrow would cease when all were thus supplied, but about that time it would be discovered that the money was absolutely worthless, and the refrain of "more money" would change to the more sensible one of "better money."

Mr. President, I had not intended to say a word at this time, except to ask the Senator from Indiana a question; but now, although I have been betrayed into somewhat extended remarks, I desire to say something further.

I sympathize heartily with the debtors of all sections of the country. I sympathize with all those who, tempted by the surperabundance of money, have embarked in experiments and speculations that have proved disastrous, and who now find themselves burdened with debts for which they have nothing to show. I know it would be very agreeable as well as profitable for them to have the volume of this paper currency increased, and its purchasing power thereby diminished; in other words, to make property go up and money go down, so that they could get the latter easily and pay their debts without inconvenience; and I would almost be persuaded to vote with their friends here, if I was sure that they would get out of debt; but the very moment you issue this additional currency and they see property rising in price from day to day, will not these reckless risk-takers mistake it again for prosperity? Will they not think they are getting rich, and use the increase in the price of their property as an additional margin to run further in debt? I fear these will be the results. I am afraid the remedy proposed will not reach the disorder at all. I hope the Senate will decide to stand by the integrity of the country. No government, no people, can be prosperous that ignores the proposition that honesty is the best policy; that essays, by any sort of legislation, to disturb the relationship between debtor and creditor; that tells the creditor that the hard day's work he has already performed and loaned to the debtor shall be repaid by half a day's work on the part of the latter; that attempts to "coin money in that false crucible called debt," and legalizes robbery by enacting that the base result shall be a legal tender.

If money is scarce, I ask in the name of common sense, why will not people give more for it? Why do not the values of property in this country bear some just relation to the values of property all over the world? Why, sir, the premium on gold does not fully show the

depreciation of this paper; and there is the difficulty. I differed from nearly every Senator on this floor in the reasons which induced me to support the amendment introduced by the Senator from New Jersey, [Mr. FRELINGHUYSEN.] The objection was made by friends of that amendment that it would have a tendency to make gold rise in price. Now, sir, I say gold ought to rise. Every other commodity in this country—butchers' meat, groceries, provisions—everything that enters into domestic use has risen, so that in relation to them greenbacks are really at a depreciation of fully 40 per cent., while in relation to gold, which has been shorn of one of its chief uses by being demonetized, the same greenbacks are at a depreciation of only 10 or 12 per cent. The effect of this is to discourage mining enterprises and depress mining interests. If the Government ever intends to resume specie payments these interests should be stimulated and encouraged by every legitimate means.

There is no demand for gold in this country beyond the small amount necessary to pay the duties on imports and the interest on the national debt. When I come here from Nevada with gold and silver—the only money in circulation there—and find that it is too low in price, I cannot help it. In order to get its full value I must engage in foreign trade, become a gambler in the gold-room, or leave this country and go to France, England, or some other country where gold is the standard and circulates at its full value. If I stay here I must trade it for paper at a premium of from 10 to 12 per cent., which, as I said before, is much less than the difference between paper and every other commodity. I have no remedy. I must submit to the loss. It is to the interest of this country that the real depreciation of paper should be exactly measured by the premium on gold. That this is not the case there are examples all around us to prove. That no good does or can result from this state of things can be easily demonstrated. For example, suppose one thousand wagons can be made to-day in this country at $100 apiece; as gold stands now the foreigner who would like to purchase them and thus give us an export trade to balance off some of our imports could pay for them with $90,000. But he can get them for $85,000 in a country where gold circulates as money, and this country loses the business. Now suppose gold should go up to 125, where it really belongs, in that case he could pay for the same wagons with $80,000 in gold and still not disturb the relation between paper and anything else in the country. This would make possible an export trade that is not possible now, owing to the depreciation of gold. In other words, gold is the cheapest thing in this country, and the commodities sent here from every portion of the earth seek that in exchange in preference to anything else we produce. We can export nothing so readily as gold. It is the cheapest commodity we have, and is therefore in the greatest demand for exportation.

Gentlemen ask, "How will you get the gold with which to resume specie payments?" As a general proposition, I would say that the Government should hoard gold; that it should take no part in the gold gambling of this country. I admit it would be a great injustice to the debtor to say that specie payments shall be resumed immediately, because he contracted his debt when currency was worth about what it is to-day, and it would not be just to make him pay in an appreciated currency. But he has to pay some time. I would put it off three years, and say that on the 1st day of January or the 1st day of July, 1877, the greenbacks, the national legal-tenders, should be redeemed, either in bonds or in gold, at the option of the Government, and destroyed, and at the same time I would repeal the legal-tender clause as to all debts contracted after that time. This would be contraction, and would cause a reduction in the price of everything. Without such contraction the maintenance of the specie standard would be impossible. The effect of that would be to make the condition-precedent to a return to specie payments. Unless we make these conditions-precedent, unless we fix that time certain in the future, the people will never commence to prepare for it, and will never be more ready than they are to-day.

It is as though you were owing a certain debt and you asked your creditor when you should pay it, and he should say, "Well, pay it by and by; pay it almost any time." The debtor is never ready to pay a debt when that is the understanding. But if you are told the exact time when the debt is to be paid, you will put your house in order and get ready to pay it. If you will fix a time for resumption, it will not be the Government alone that will resume; that will be the least and easiest part of it. Resumption will take place on the part of the people of the country. If the Secretary of the Treasury alone were to redeem, he would be a shining mark against whom all the banking-houses of the world could make their combinations, and Wall street would assist in the work. They could and would make corners on him in gold, but they could not make corners on forty millions of people. When the people knew that gold was to be the currency of the country at any stated time, each man would have his little amount of gold and it would flow into the country in a thousand Pactolian streams. There would be no doubt about it. The people would be ready. Gold will be found all over this country when you do not banish it; when you permit it to circulate; when you give it its true function.

Capital will not remain with any people, unless it is fostered by thrift, by exact transactions, by just laws and their faithful observance, by energy, enterprise, prudence, and economy. It demands that labor shall be respected, and idleness reprobated. It abides with a community that lives upon its earnings and not upon its debts. It exacts protection, that it shall not be wrested from its rightful owner, either by violence, vicious statutes, or doubtful construction of the Constitution.

Perhaps the South, which has within a few years experienced a great change in its whole social fabric, has not yet entirely adjusted itself to the conditions I have named. It would be strange, indeed, if it had. But the sooner its people see in them the way to success, the sooner they will see the dawn of returning prosperity.

Loans on uncultivated lands have never been considered very desirable investments, more than upon salubrious climate or unutilized water courses. The long loans which may be required to enable well-applied industry to anticipate at times the products of its fields would never be extended by the banks of circulation now asked for. These must come from savings-banks, which require no charter from Government, but are the outgrowth of an industrious and economical people. The land-owners of the South, though they fully realize that slavery is abolished, do not yet appreciate the new requirements of the great change in their industrial system. They have yet to learn that land alone is not productive enough to pay interest on nearly its value, besides wages and profits. The farmer must absolutely own the land he cultivates and must not be at the mercy of money-lenders. His true way to get money is by the sale of so much of his land as will enable him profitably to cultivate what is left. What avails it for the owner of two or three thousand acres of land to do nothing and say, "Well, it is a singular thing we have not more money; we ought to have more money, because we want to hire somebody to work, and we want the money to use as capital." If they want money very badly, they should, as I have said, sell some of their land. Let them sell at the present prices, if they can; if they cannot, they should reduce the prices until sombody besides themselves shall see that it is a good bargain and be induced to buy. That is the way they do the world over.

The refusal of men with money to buy property at the extravagant estimate of its value by the owner is no evidence of hard times or of the scarcity of money. Money is plenty enough to buy things at their actual value, but the buyer must have something to say about the price he will give. It really seems childish for people to hold on convulsively to land and other property at double price, and then wonder that with them money is scarce and hard to be obtained. Money would have to be plentiful indeed, and correspondingly cheap and worthless, if sellers alone were to fix the amount they should receive; that is to say, if a man with something to sell were to make the bargain for both sides. That is what is the matter in this country to-day. You have property inflated to a tremendous pitch, and the cry that comes here for more money means about this: "We are worth so much property; our land is worth so much, and we know it; but we cannot find anybody with money who is foolish enough to give us our price." Come down with your prices and you will find plenty of money. You never will find anybody with money who will give it to you. The man who would be foolish enough to give present prices for property would not have any money long. He would soon get rid of it.

I should like some gentleman who is in favor of an increase of the currency to tell me, first, if the people have confidence in this great Government, how it is that this money is depreciated; and, secondly, if the people need more money so badly, why they do not show a disposition to decrease the prices of property they offer in exchange for it. The demand for more currency is to float these balloons of inflation. There can be no other explanation of it.

It does seem to me that this proposed increase of the currency is the most high-handed measure ever attempted by any legislative body on earth. It is precisely like the proceeding of the Prussian king when he debased the coin of the realm; it is like what occurred in 1695 in England, when disreputable people clipped the coin; with this difference, that we see no manifestation here of the courage and virtue of Frederick the Great, who, after distress had passed, honestly restored the standard; or of the wisdom and justice of William the Third, who, under the inspiration of Newton and Locke, Somers and Montague, in the midst of a great war, called in the mutilated coin and replaced it with other of full value.

Senators tell us that the balance of trade is against us; that we have too much money to pay in interest on our bonds, and for our duties on imports, and all that sort of thing. Sir, the balance of trade is never against a country unless it is selling its credit, unless it is selling its notes and bonds abroad at a discount and investing the proceeds in unproductive enterprises, as our municipal, county, State, and national governments have been doing. There can be no balance of trade against us, unless we admit that our people are much more simple than the people of any other portion of the world.

What makes up the trade of a country? It is the trade of individuals. The balance of trade is never against me, because I do not buy anything that I do not want to buy, and never pay anything more for a thing than I think it is worth. Therefore the trade is just even. I really think I have a little the best of it, and the person who trades with me thinks he has the best of it, and probably both of us are right when our respective needs are considered. So it is with a nation. But when you sell your credit abroad and mortgage the future prosperity and productiveness of the country, like a spendthrift heir anticipating an inheritance, then I admit the balance of trade may be against

you, but I do not think the printing of more paper promises will cure the evil.

We are told that we cannot get back to specie payments because the balance of trade is against us; but we reply that the balance of trade is against us because we do not get back to specie payments. Give us the money that the world recognizes to regulate our trade and the balance of trade will take care of itself.

With this redundancy of money, the financial reports of the market showing that it is a drug in New York, commanding but 4 or 5 per cent., and equally plenty in every commercial center of the United States, the borrowers dictating almost their own terms, how is it that this money does not seek the great opportunities for investment which we are assured are to be found in the Southern and Western States?

I was talking a day or two since with a distinguished gentleman from a Southern State, and said to him, "You have a great deal of money and you live in that section; what do you do with your money? You say you want more money in your region." He answered, "I have my money invested some in Central, and so on," naming a variety of stocks. "But," said I, "why do you not place your money in those investments that you say promise such great returns?" "Well," replied he, "I do not want any of it myself, but I am in hopes that somebody will go down there with money and invest it in that way. None of it for me, because there is no security." [Laughter.]

Gentlemen will learn by and by that high interest and scarce money, if there are synonyms in the language, mean bad security. That is just what they mean and nothing else. The only way to be in a condition to give security and obtain money thereon in a community is by industry, by labor, by obedience to law, by thrift, and a careful husbanding of resources. Why, sir, in any congressional district in the United States, if men will be industrious and will save their money, and can operate on some legitimate financial basis, two, three, or four years are sufficient to make money plenty in that section.

I say to the farmers and planters of the South that the fluctuating currency they are using increases the price of everything that goes into the production of their crops, while everything they produce is paid for at prices regulated by the price of gold.

It is a suggestive fact that the average price of wheat has been less for the last three years than it was for the three years prior to 1861, and the same is true of nearly all the principal products of the soil. Thus the farmer is not benefited by high prices in any particular whatever. He is cheated all the time. Then the manufacturer, by overproducing, finds himself in debt with a large amount of goods on hand—a large amount of estimated values; but if called upon suddenly, as he is apt to be in these panics, for money, he cannot respond, he cannot sell, because the country is already supplied and the market overstocked under the unhealthy stimulus of our diseased financial system.

I protest with all the energy of my nature against any further increase of paper money. Honor and policy, principle and interest, are alike arrayed against it. There are neither arguments nor precedents in its favor. Everything is against it—experience, philosophy, and fact. A doubtful and lame expedient in time of war, defensible only on the dangerous plea of necessity, it can have no excuse whatever in time of peace, and must be regarded as an alarming usurpation. A state of profound peace has reigned for nearly ten years throughout the land, with no immediate menace of war. With a climate and soil unsurpassed, with a population as enterprising, industrious, and ingenious as any upon the face of the earth, we see to-day, instead of the prosperity which these conditions commonly insure, the industries of the country paralyzed, trade stagnant, and distrust prevailing everywhere. The cause for this can be found nowhere except in the inferior and vicious agent used for stimulating the industries, effecting the exchanges, and distributing the wealth of the country.

I regard this question as one of the most serious and important that ever pressed upon Congress and the country. Its solution involves the material and moral welfare of the nation. An inflation of the currency, instead of being a remedy for our present evils, would aggravate them all. It would unsettle values, put an embargo on legitimate trade, and, in the end, again paralyze the industries which it might temporarily stimulate. It would force merchants, in self-defense, to become speculators and gamblers, while most of the capital of the banks of the country would be employed in adjusting the winnings and losings of the stock-board and gold-room. It would encourage national and individual extravagance, the results of which would probably be to precipitate repudiation and bankruptcy.

I have neither time nor inclination to make comparative estimates of the amount of money in circulation *per capita* in this and other commercial countries. There can be no doubt that there is a redundancy of it whenever the market price of gold is above its mint price. This philosophic truth was established beyond cavil by the report of the bullion committee of the British Parliament in 1809. The Government has no more to do with the amount of money in circulation than it has with the amount of air in circulation. Let it but perform one of its highest duties; let it repeal the barbarous law of 1862, by which paper money was declared a legal tender in the payment of debts; let it retire its promises, and restore the world's money, the constitutional money, the only real money, and permit it to perform the functions for which it was intended, and the volume will be regulated by laws as unerring as those which keep the heavenly bodies in their places.

While there may be a variety of ways, there are but two general roads between which to choose; the one leading toward inflation, the other toward contraction. The former appears easy and inviting; the latter steep and rugged. But in the end, so surely as effect follows cause, contraction will lead to safety, honor, prosperity, happiness, and life; while inflation will surely lead to dishonor, misery, and decay.

I am yet unwilling to believe that this Senate, representing a proud and sensitive nation, beset by embarrassments, will tolerate a proposition calculated to increase existing evils, and in the main by the very means by which they were originally engendered.

Currency and Banking.

SPEECH OF HON. JASON NILES,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

April 2, 1874.

The House having under consideration the bill (H. R. No. 1572) entitled "An act to amend the several acts providing a national currency and to establish free banking and for other purposes"—

Mr. NILES said:

Mr. SPEAKER: If I were to ask myself the question why I should speak on this occasion, I doubt whether I could give any very satisfactory answer. I certainly do not expect to enlighten this House by anything I can say. I do not expect to change the views of honorable gentlemen who have been considering this question, and whose opinions are, no doubt, already formed. But I believe that even when a member does not expect to change the opinions of his fellow-members, or to enlighten those who may or may not need enlightenment, he may still perhaps find for himself some plausible excuse for addressing the House. I have prepared no set speech. I have listened carefully, honestly, attentively to what has been said on this currency question. I came here with no fixed, unchangeable opinions, but sincerely desirous to be enlightened; and I have tried to act the part of an impartial listener.

We are in a singular situation. On the one hand we are called upon by solemn pledges so to act as to secure the ultimate redemption of the paper currency now afloat. On the other, there is evidence of great financial distress coming up from all sides, a cry of hard times, of a great scarcity of money; and, as the gentleman from Tennessee [Mr. BRIGHT] said the other day, "the cry is money, money, money!" He told us the people wanted money, and money they would have. He gave us to understand that there was an importunity in their cry which was not to be disregarded or resisted, and the money must come.

Now, that being the case, are we not placed in the predicament of the old navigator who was trying to steer between Scylla and Charybdis? Are we not, on the one hand, in danger of disregarding the solemn and repeated pledges heretofore made, at an early day to return to specie payments, and, on the other, of turning a deaf ear to the deep-voiced popular cry for "more money?"

All will admit, no doubt, that we ought faithfully to fulfill every undertaking and every pledge we have made to the country, and that we ought, in the sacred language quoted by my friend from Tennessee, [Mr. MAYNARD,] to act as he who sweareth to his own hurt and changeth not. Every one will agree to that. Let there be no bad faith. Let us do everything which can be required of us by right, by justice, by sound morals, in order to keep plighted faith.

On the other hand, we ought to do all that we can consistently with this duty and these obligations, and all that lies within the province of legitimate legislation, to relieve any financial distress which may prevail over the land.

But here let me say that there are things from which the Government cannot relieve the people. It cannot relieve them from the sad consequences of their own extravagance and financial misconduct; from the effects of insane speculations and an utter disregard of the maxims of common prudence and common sense.

Now what ought to be done? What can be done? Unceasing complaint is heard that while money is abundant in the great eastern and northern cities, it is almost a stranger in the West and South. My friend from New York [Mr. MERRIAM] startled us the other day by asserting that he had the authority of the Treasurer of the United States for saying that the whole South is literally plastered over with shin-plasters. I was almost tempted to say that if so, they were furnished by the Treasury of the United States. But that there is a great scarcity of money throughout that section there can be no doubt. So far as we can properly afford any relief for the scarcity existing there or elsewhere in this country, it ought to be promptly furnished. The bill now before the House is professedly intended as a relief measure; and if I could believe it would supply what the country needs, and did not tend largely to augment the already vast volume of irredeemable paper so as to preclude the possibility of an early specie resumption, I would support the bill out and out. Perhaps by proper

amendments my scruples may be overcome and I may yet give it my vote.

What can be done? We are told that in the last ten years our prosperity has outstripped everything which can be found in any previous decade of our history; that we have the best currency the world has ever seen; that it answers all the wants and demands of trade, all the uses of money, and that nothing is needed but plenty of it. Now, sir, if I understand fully this argument, and granting it to be sound, may we not reasonably inquire what we are ever to gain by a resumption of specie payments? Why resume, when we now have a better currency than we shall have after resumption shall have been attained?

The logical sequence is, that resumption is a thing undesirable, and ought to be postponed to the Greek calends—some day beyond eternity. It is argued that our paper currency operates in every respect as favorably to the farmer, the mechanic, to all the industrial classes, as one convertible into gold at the will of the holder; that if a man has wheat to sell and sends it to Europe, and sells it for coin, he gets a premium on the coin which equalizes the transaction to a sale for currency at home; and the authority of an ex-Secretary of the Treasury is invoked in support of the proposition, that the prices of labor and the products of labor become accommodated to the existing condition of things, and that then there are no substantial evils from this cause.

But there is one thing which gentlemen overlook; and it is of great importance, and I call special attention to it. It has been truly and forcibly said that the great thing to be desired in financial affairs is "a currency that will not vibrate with opinions; one that cannot be blown up or blown down by the breath of speculation." Now if our currency had a fixed and unchangeable value in gold, and never went above or below it, then the argument might have some force. But as it is there is a constant vibration, a ceasseless fluctuation. And it was demonstrated by my friend from New Jersey [Mr. PHELPS,] in his excellent speech of yesterday, that the farmers, mechanics, and the other toilers of the land are the very ones on whom the losses occasioned by this fluctuation inevitably fall *with most oppressive weight*. Hence I say the argument is not a good one; hence I say that you cannot so "accommodate" the currency here to the state of things abroad as to prevent loss, and great loss, from continually falling on the agricultural and other industrial classes of the land.

Sir, I am not one who would dishonor our currency. I desire to see it elevated and rescued from threatened dishonor. But who are they, may I ask, whose policy tends to dishonor the currency? Is it those who wish to increase its value, to bring it up to the standard of the currency of the world, or those who would augment its volume to such a degree that redemption is among the impossibilities for generations to come? I think those who seek to keep good faith with the people and the world, those who would bring the currency gradually but certainly up to an equality with the currency of the commercial world, are those who would cover it with honor and not with dishonor; and that a contrary policy tends to dishonor it both at home and abroad.

As regards the much-vaunted growth and wealth of the country, I deny that the last ten years have been throughout the land ten years of unexampled prosperity, for when I look abroad over my own section I see mansion houses dilapidated, fences rotting down and unrepaired, plantations washed into gullies, large fields growing up in sedge-grass and bushes, and the whole face of that region wearing the aspect of poverty and desolation. I believe that our people to-day in the State which I have the honor in part to represent, are in a worse condition than they have been at any time since the year of Lee's surrender. And we heard the other day the eloquent but sad account given by the gentleman from Missouri [Mr. BUCKNER] of the condition of things in his own great State. He told us that there the plantations had gone down, that the farming interest is more depressed than it has been for thirty years, and that improved farms will not command in greenbacks to-day by from 50 to 100 per cent. what they would have sold for in gold from 1856 to 1860.

I believe it to be lamentably true that the laboring classes of this country are in a worse condition now than they were before the war. It is true that they get nominally higher wages, but the cost of living and the prices of nearly all the necessaries of life have gone up proportionally higher than have the wages of labor. Hence the frequent strikes that are prevailing; hence the clamor against railroads and other corporations; hence the threatening assemblages in the streets and squares of the great cities, and all those manifestations of uneasiness and dissatisfaction which arise when the laboring classes are distressed.

The gentleman from Ohio [Mr. SHERWOOD] the other day, in his able speech, illustrated the hardship to the borrower of a thousand greenback dollars, at a time when the currency is depreciated, who should be compelled to pay off his debt after specie resumption had taken place; and in the case supposed he is (to use his own words) "swindled out of $100 principal and $10 interest," making the sum paid for the use for one year of $1,000 borrowed, over 22 per cent.

Now that is one view of the subject. Let us take the converse of it and see how it operates. Suppose the gentleman borrowed $1,000 when greenbacks were 12 per cent. below specie, and before he paid his note they were 25 to 30 per cent. below, and he then paid it off, who is injured? The gentleman is benefited, but somebody else is the sufferer. Now what is the fair inference from all that? It is that our currency is wrong in this, that it entails loss on either the creditor or the debtor; that it is—to use Mr. Webster's oft-cited expression—blown up or blown down by the breath of speculation; and so long as this sort of currency exists it will be liable to ceaseless variations, from which either the creditor or the debtor must be a sufferer.

What is the argument to be deduced from this? It is that we must, as soon as we can consistently with other duties and obligations, get rid of this currency and substitute something not liable to these never-ending vibrations and fluctuations. That is the fair conclusion.

There is no sort of doubt that there is distress in the country. I am not one of those who would deny, or ignore, or deride it. But how does this distress come about? We have had, Mr. Speaker, an abundance, and we may say a superabundance, of paper money. We have enjoyed the exhilarating effect similar to that enjoyed by those who have partaken freely of champagne. We have had the stimulation, the exhilaration, the ethereal exaltation of the *cham*-pagne; but now comes the *real* pain, torturing the nerves and racking the whole system of the wretched sufferer. Now it seems to me the great thing to be desired, to prevent so far as possible this financial intoxication, is to get our currency on a firm and stable foundation; to return to the old specie basis, so that we can have a gold dollar at command as readily as a greenback dollar. I do not say or believe that this can be done to-day or to-morrow; but let it be done at as early a day as practicable. I think this policy ought to be constantly kept in view in all our legislation.

Let us stand where we are if we cannot go forward. Let us hold on to all that we have gained in the direction of resumption, and when we cannot go forward, let us stand firm and wait for a more auspicious time to proceed with the task before us. It is said that there is relatively too much currency in the North and East, and not enough in the West and South. That is probably true; but can we not change its present location, and so more nearly equalize the circulation? If this is practicable, then by all means let it be done. If free banking will do it, let us have free banking; provided it does not look to such an augmentation of the volume of currency as to render the resumption of specie payments at no far distant day impossible. But if the effect of free banking shall be to flood the country with a vast volume of depreciated paper money, that is never to be redeemed but in other depreciated paper no better than itself, then, I think, free banking ought to be avoided as one of the greatest of calamities to the country.

Some gentlemen argue that specie resumption is ultimately to be realized by the passage of this bill. If I took that view of it I should cheerfully and heartily support it. But the objection to the method of redemption provided for in the bill is this: it proposes to swap one sort of depreciated paper for another sort no better, which is itself irredeemable. The greenbacks are no better than the national-bank notes. These last consequently would seldom be redeemed, because who that holds national-bank notes would care to exchange them for a currency which is no better? What we need is a currency that is good everywhere throughout the world of commerce.

My friend, the gentleman from Tennessee, [Mr. MAYNARD,] asked the other day "What is money?" And he answered his question by saying that is money which the law makes money. I agree with him in that, but not perhaps in the sense which he intended. I say that is money which the law makes money. But what law? Not the law of Tennessee, nor the law of Mississippi, nor the law of Massachusetts, but the great higher law of the commercial world, the commercial international law; that is money which is made money by that law. But really the gentleman does not think that it is within the competency of legislation by Congress to make a thing money in defiance of the laws of trade and of commerce. If so, then by a simple act of Congress the leaves on the trees might be converted into money. There are some things which even Congress cannot do, and I know it can do many. It cannot reverse or repeal the great laws of nature.

There is a great deal in definitions. Mr. Burke defined poetry to be the art of substantiating shadows and lending reality to nothing. Now, is not the definition of money as given by the gentleman from Tennessee identical in substance with Mr. Burke's definition of poetry? Does not the gentleman invests the law with the power to substantiate a shadow and lend reality to nothing?

I have alluded to the hard times, to the dullness of business, and to the general financial distress. But what is business? I believe it was Girard who said of the people of Philadelpia, "They goes apout sheating one another all day, and at night they calls that pizness." The operators in the gold-room in New York, and the speculators of the stock-board with their gambling operations, call that business. And no doubt the gambler, in his back room when dealing faro, calls his manipulations business. There are a great many things that are called business. But would not the so-called business of the gold-room and of the stock-board be stimulated by the adoption of measures looking to the expansion of the currency? And here I beg leave to reproduce an oft-quoted and well-known extract from a speech made many years ago by Daniel Webster:

A sound currency is an essential and indispensable security for the fruits of in

dustry and honest enterprise. Every man of property or industry, every man who desires to preserve what he honestly possesses, or to obtain what he can honestly earn, has a direct interest in maintaining a safe circulating medium; such a medium as shall be a real and substantial representative of property, not liable to vibrate with opinions, not subject to be blown up or down by the breath of speculation, but made stable and secure by its immediate relation to that which the whole world regards as of a permanent value.

A disordered currency is one of the greatest political evils. It undermines the virtues necessary for the support of the social system, and encourages propensities destructive of its happiness. It wars against industry, frugality, and economy; and it fosters the evil spirit of extravagance and speculation. Of all the contrivances for cheating the laboring classes of mankind, none has been more effectual than that which deludes them with paper money. This is the most effectual of inventions to fertilize the rich man's field by the sweat of the poor man's brow. Ordinary tyranny and oppression, excessive taxation, these bear lightly on the happiness of the mass of the community, compared with a fraudulent currency and the robberies committed by a depreciated paper. Our own history has recorded for our instruction enough, and more than enough, of the demoralizing tendency, the injustice, and the intolerable oppression on the virtuous and the well-disposed, of a degraded paper currency, authorized by law, or in any way countenanced by Government.

Now, granting that the present currency was a necessity, the offspring of the war, is it a thing to be perpetuated forever? Does it not "war on industry?" Being irredeemable in its character, does it not foster extravagance and speculation? And as an illustration of this, showing what it has done, I will read a little article in relation to the operations in Wall street:

It is a significant fact that the number of those who are known as "Wall street operators," for the most part comparatively young men, has gone up from one hundred and forty in 1860 to upward of two thousand at the present time. The exclusive business of these operators is that of speculation in stocks and gold, making money or losing it according to the artificial fluctuation of prices. They produce nothing and add nothing to the value of what others produce. They simply propel an enormous machine, by which thousands of billions in nominal value change hands every year without adding one penny to the wealth of the country or the real interests of legitimate trade.

And note this, showing how young men are deluded from the wearisome and toilsome and lonesome life of agriculture or mechanical pursuits in the country, to the city where life teems with excitement:

Impatient with the system of moderate profits, as arising from productive and useful labor, young men by the hundreds have poured into the large cities to seek their fortunes by speculation and rapid gains. Nor can there be any doubt that our currency system, with its uncertain values and its enormous inflation of prices, is one of the chief causes of this movement within the last ten years. It has demoralized the country, fostering the spirit of gambling and extravagance on the one hand, and contempt for honest industry on the other. If there be weighty financial reasons for getting rid of this ballooning system, there are important moral reasons why it should come to an end.

A friend near me [Mr. BUNDY] says that my statement will be complete if I will state that all these gamblers are in favor of the resumption of specie payment. If that were true I would state it. But I do not believe it is true, because I believe they live and move and have their being in this very system of reckless speculation which prevails.

Mr. GARFIELD. How can there be gold gambling after the resumption of specie payments?

Mr. NILES. There cannot be. There is a fallacy which I wish to notice right here, as it seems to have weight with a great many. That is, that our currency must of necessity be the best in the world because it is backed by all the wealth of the country, by untold billions, whatever that wealth amounts to; and therefore there is no danger of any one ever losing anything by it.

Now, sir, the currency of one commercial country must be substantially in accord with the currency of others. On this matter I wish to read a sentence from Mr. Webster, which is exactly to the point. He says "it must be something which has a value abroad"—there is the idea—"something which has a value abroad as well as at home, and by which foreign as well as domestic debts can be satisfied. No amount of security can ever make that equal to gold and silver which cannot be readily converted into gold and silver." Why, sir, I know men whose paper is perfectly good in one respect, because they are men of ample wealth, are fully able to pay all they owe and ten times more; yet their paper is not good in another sense, because they do not pay just exactly when it is due. They have to be sued to coerce payment. Their paper, no matter how good the backer, no matter what amount of property is bound for its payment, is not good, because it is not readily convertible into money. So, no matter how good the currency of the Government is here among us, if it is not readily convertible into that which the commercial world recognizes as money, then it does not fulfill all the purposes of a good currency. It will not pay debts abroad as well as at home.

I shall not tire the House with an array of figures, because we must have become weary of figures. I know it is said they "cannot lie;" but that, I think, depends a good deal upon who manipulates them. I recollect to have seen in 1858 an account which startled me—an estimate made by an acute arithmetician in the city of New York, who demonstrated as incontrovertibly as figures could demonstrate anything in the future, that Seymour and not Grant was to be President of the United States. He proved that as he thought no doubt beyond contradiction, by the potency of figures. Since then I have been distrustful of figures. Gentlemen here have furnished us with any amount of them, piled and massed together; but any man who can tell what they all prove, when carefully compared, will deserve to rank, not indeed, among the seven wise men of Greece, but at least as one of the many wise men of America.

Currency—Taxation—Bank Monopoly.

SPEECH OF HON. W. S. HOLMAN,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

April 2, 1874.

The House having under consideration the bill (H. R. No. 1572) entitled "An act to amend the several acts providing a national currency and to establish free banking, and for other purposes"—

Mr. HOLMAN said:

Mr. SPEAKER: There is and always has been in the United States a vigorous public sentiment in favor of gold and silver coin as a circulating medium. It is the natural outgrowth of our experience. Our people like the honest face of real money. The argument in favor of it is unanswerable, and if the measure were practicable I have no doubt our currency would rest on a metallic basis. Indeed our people have for so long a period been accustomed to regard gold and silver as the only true basis by which commercial transactions can be safely governed, and having seen the countless frauds of paper money issued by irresponsible banks, have been reluctant to adopt a currency less in value than the standard of gold and silver.

But, Mr. Speaker, notwithstanding I have been all my life a disciple of the famous statesman of Missouri, and believe that all interests, and especially the interests of labor, are better promoted by a money coined out of gold and silver, such as is recognized as money by the whole commercial world, than by any other standard of values, yet, in common I think with most of the citizens of this country, I have been driven to the conclusion that in our present circumstances, to compel by legislation the resumption of specie payments would be impossible, and the attempt would be attended with universal disaster. Nothing can be more apparent than this. The experience of all commercial nations has been that to *maintain* specie payments the paper currency cannot very greatly exceed in amount the coin money of the nation.

There is certainly not now in this country, and has not been for several years past, more than $140,000,000 of gold and silver coin. The Director of the Mint in his last report to Congress states the amount as follows:

The coin, except as to the Pacific coast States and Territories, being as a general thing in the Treasury and banks, the present time is a favorable one for estimating the amount of gold and silver coin in the country. From the most reliable data obtainable, the gold coin is estimated at $135,000,000, and subsidiary silver $5,000,000—total, $140,000,000. The silver coin is principally in circulation in California, Oregon, Nevada, Idaho, Arizona, and Texas.

Nor can we anticipate at an early day a rapid increase of the precious metals. In 1861 our mints coined in gold, silver, and nickel $63,400,597, and in 1873, $38,689,183 only; and it is clear that a very large portion of the gold-bearing securities of the United States—whether issued by corporations, cities, counties, States, or by the nation—are held by European capitalists. I think that no gentleman can estimate the amount of gold flowing from the United States to European coffers at less than $140,000,000 a year. I think that is a very moderate estimate. We receive annually more or less coin and bullion from abroad. But the balance of trade is largely against us. Our whole policy tends to that result, and unless it were largely in our favor, the vast sums we are annually paying to European capitalists as interest on our public securities alone would render the resumption of specie payments, except to the highly favored capitalists, practically impossible. The gentlemen who have controlled our affairs seem to have aimed at this. The act of March 18, 1869, "An act to strengthen the public credit," *so called*, opened the coffers of all Europe to our five-twenty bonds.

A few years ago the Committee on Ways and Means reported a bill to allow the Treasury to issue coupon bonds for *registered* bonds. I opposed that measure, and in course of the discussion said:

Now, the slight difference between the two classes of bonds is in favor of American investment and tends to retain the large portion of the bonded securities of the Government among our own people. There is therefore that embarrassment in the way of increasing in the hands of foreign capitalists our securities. I think any measure that tends to decrease the indebtedness of the country in the hands of foreign capitalists is a measure of the highest importance to the public interest.

Mr. DAWES, in reply, said:

The gentleman alludes to the fact that heretofore the Committee on Ways and Means have opposed this facility of transfer. That may have been the case in times past, because it was once the policy of the Government to keep all its evidences of indebtedness in this country. *That policy has passed away.*

Out of this new policy grew the syndicate. This policy makes the bankers of London the masters of our system of finance, and pours the wealth of this nation in a remorseless flood into the coffers of Europe.

This policy must be reversed before the precious metals can obtain a permanent foothold in this country. If the volume of coin cannot be largely increased, can gentlemen expect the country to encounter the universal bankruptcy that would follow such a reduction of the currency as would bring it up to the value of coin? A despotism could not force such disaster upon a people.

But beyond that, and still more important in this inquiry, no people can for a long period of time pay annually into their public

treasury, in the form of taxes, whether external or internal, the larger portion of the medium which represents their wealth and industry—their currency. I doubt whether any nation for a series of years could pay in the form of taxes into their treasury a sum equal to one-half of its currency or near that without the absolute prostration of labor. The drain upon the national wealth through excessive taxation, by imperceptible degrees, and by inexplicable and countless agencies, if long continued absolutely exhausts the producers of wealth. It is clear that where the taxation is heavy and the currency insufficient the resources of the country are gradually exhausted. I think it fair to estimate that the resources of this country are annually taxed not less than $550,000,000. The entire revenues of the Government for the last fiscal year were $333,738,204.67, and the following are the sums actually received from people through taxation:

From customs	$188,089,522 70
From internal revenue	113,729,314 14
Total	301,818,836 84

Gentlemen who have the most carefully examined into taxation in the several States estimate the local taxation for all purposes, State, county, township, city, and town, at $250,000,000 annually. If this is correct the aggregate annual taxation exceeds the enormous sum of $550,000,000. The customs taxes are gold, but currency is in the main the agency employed in the purchase of gold to pay the tax, and a large per cent. of the annual taxes, is always suspended in national and local treasuries. I will be told that the money drawn from the people is ultimately restored to the volume of the currency, but the exhaustive effect of excessive taxation on our industries, on the producers of our wealth, is none the less obvious. It takes from the mouth of labor the bread it has earned and swells the wealth of the skillful and too often, unhappily, unscrupulous molders of policies and laws. It is a powerful and subtle centralizer of wealth.

We are told by the Comptroller of the Currency that the following table of the currency of the country is correct for the two periods, October 13 and November 1, 1873, named:

	October 13.	November 1.
National-bank currency	$350,049,056	$350,332,884
Legal-tender notes	359,566,888	360,952,206
Fractional currency	46,699,191	47,876,149
Totals	756,315,135	759,161,239
Deduct amounts held by the Treasury and by the banks	116,496,997	128,140,727
Which will leave unaccounted for	639,818,138	631,020,512

This Comptroller tells us these national banks "hold an average reserve of more than one hundred millions of legal-tender notes, which is equivalent to a loan to the Government without interest." How considerate and liberal these banks are!

Now, sir, with such a weight of annual taxation and such a volume of currency, could even avarice so harden the capitalist that he would, to increase the value of his money, still further oppress our industries? Will the present reduced volume of currency suffice for the wants of the country? No, sir; not with the present burdens of Government. No other people bear such taxation on such a volume of currency. The tax upon labor is now exhaustive and crushing.

Mr. MAYNARD. Paid by the productive industries of the country to the non-producing classes.

Mr. HOLMAN. My friend from Tennessee is correct—paid by the productive industries of the country to swell the wealth of the non-producing classes. It is very clear all of that five hundred and fifty millions of money is never in a state of suspense and drawn from circulation at the same time, but it is clear a large percentage of that amount is always in a state of actual suspense, and the banks kindly keep suspended a hundred millions more. I doubt whether during the last two years there has actually been in circulation in the United States to exceed four hundred and fifty millions of money at any one time. I do not think it can be demonstrated that at any one time there has been in actual circulation, within the reach of the citizens for the purpose of business, to exceed four hundred and fifty millions out of the seven hundred millions of our currency. My friend near me says four hundred and fifty millions is too much, and perhaps he is correct. We are at the mercy of a few great capitalists. The enormous interest now drawn from the country by the national banks will show how completely every industry in this country is placed by law at the mercy of incorporated avarice.

It is very clear you cannot reach and maintain specie payments by the force of legislation where the aggregate amount of the precious metals in the country does not bear some reasonable relation to the amount of paper money, and yet no absolute rule can be laid down You may reach specie payments without it. We have within the last eighteen months seen the difference in the price of gold and paper apparently 8 per cent. But gold is with us but an article of merchandise and not a standard of value. Its value now is a question of demand and supply. In other words, for a moment that general representative of values, gold, as an article of merchandise was but 8 per cent. above the value of our paper. This was but an incident of no permanent value. To reduce the currency to increase its value to that of gold would be an act of heartless despotism to which the country would not submit and could not submit, and still bear the present burden of taxation.

The truth is, sir, that only at short periods and in favored sections has our currency been on an actual and solid specie basis. Those old frauds upon the people, the local banks, were constantly in a suspended condition, and no financier can figure the millions they drew without consideration from the labor of the country. Those periods of our history of *bona fide* specie payments were periods when the paper issues were not redundant, but at the same time the tax-gatherer was almost unknown and the burdens of government unfelt.

I believe, Mr. Speaker, however much we may desire to reach specie payments and transact our business in the money generally recognized by the commercial powers; however desirable this may be not only for giving stability to business and an actual measurement of our wealth, but to gratify a just national pride in having surmounted the embarrassments of a great national debt in a briefer period that the nations had ever witnessed—however desirable all this might be, in spite of the vastness of our resources and the sleepless energy of our people, it is impossible, in my judgment, unless the burdens of government, State and national, can be immensely reduced. I indulge the apprehension—a prediction I should be glad to see not realized—that many years will elapse before specie payments in fact are resumed in the business transactions of our country, unless by an act of unparalleled oppression in a forced reduction of currency, or by applying the vast franchises now surrendered to a few capitalists to the benefit of the whole people, and reducing taxation to the absolute necessities of Government, State and national.

We have the example of England. Here a great debt, piled up by her European wars, suspended specie payments from 1797 to 1820, in spite of her vast resources as a commercial power, the accumulated resources of centuries. No one can read the financial articles written during that period in favor of resumption and not be impressed with the fact that on that subject nothing new is to be said. The writers of that day—some of the most enlightened writers on finance the world has produced—went over the whole ground. They brought all the force that can be given to argument to the English people in favor of early resumption; but it was found to be impossible. The nation had to recover from the exhaustion of war, and yet her securities were held by her own people. Great Britain did what the men who control the affairs of this nation seem incapable of doing. Her statesmen, in grappling with a great debt, the fruit of nearly half a century of war, did not hesitate to reduce the interest on her public debt when that debt was found oppressive to her people. Capitalists had driven her to hard bargains in the hour of her extremity. She had issued bonds at as high as 6 per cent., and she reduced the interest to an average of 3 per cent., and her consols (consolidated annuities) to this day express the views of her statesmen as to what a nation should do when the question was presented of dividing the burdens of a public debt between labor and capital. No pretense of public faith was strong enough to justify an act of injustice to the people. And yet a limited monarchy could scarcely be more mindful of the rights of labor than the representatives of a free people.

England reduced, in the adjustment of her public debt, the interest on bonds issued on an inflated currency, and history has not denounced the act as a violation of public faith; and England did not hesitate to tax her bonds. But here, sir, every act of our legislation has discriminated in favor of our public securities and against the industry upon which those securities rest for their value. If it was doubtful whether the five-twenty bonds were payable in greenbacks or gold, the presumption should have been in favor of the labor that was pledged for their payment. But it was not doubtful; no impartial mind in Christendom would have held that the principal of the five-twenty bonds was payable in gold. There was no ambiguity in the terms of the act of February 25, 1862, declaring the greenback lawful money and a legal tender in payment of all "claims and demands against the United States of every kind whatsoever, except *interest* upon bond and notes, which shall be paid in coin." It is a significant fact that the five-twenties were issued without any explanatory statute; but when issued and in the hands of capitalists the act of March 18, 1869, was passed, pledging gold for these bonds and adding nearly $200,000,000 to their value. The faith of the nation would have been violated in inflating the greenback currency to reduce the value of the bonds, just as the faith of the nation to the labor of the country was violated by paying these bonds in money far more valuable than the nation contracted to pay.

I think, sir, that good faith to the industry and labor of this country is just as honorable and obligatory as good faith to capitalists, who reaped a richer harvest out of the national misfortunes than any other nation ever permitted. Even France promptly adjusted her enormous public debt at an interest of 3 per cent. It was an army of capitalists who invested your lobby when that act of March 18, 1869, was passed, and already you have paid $39,758,532 premium on the bonds you issued payable in lawful money—$39,758,532!

So, sir, while Great Britain could and did reduce the interest on her public securities in justice to her industries, you have overlooked the rights of industry, and have imposed burdens upon it, not written in the law, heavier than the law justified. And I must say, sir, that the act of 1869, by which the principal of the five-twenty bonds, constituting the body of our national indebtedness, was converted into a

gold security, has, in my judgment, done more to postpone the day of redemption than any one other feature of your legislation. In the first place it floated those bonds at once into the foreign market, and the payment of the interest is draining the country of its gold; and has, in the second place, largely augmented your debt. This $39,758,532 would have been an appreciable payment on the principal of your debt. There was no warning of the measure. It came upon us without notice and was rushed through this House. It was an act of unmitigated bad faith. Gentlemen say they will not fight this battle over. We shall see.

By changing our policy and declaring the five-twenty bonds to be payable in gold we at once induced a rapid purchase of our securities abroad, and the increased amount of gold flowing to Europe makes America "the hewer of wood and drawer of water" for foreign capitalists. Let us see, sir, the effects of our policy in comparison with England. Here is the quotation of her securities and ours on yesterday, received in New York:

The London advices that the governors of the Bank of England, at their meeting to-day, did not advance the bank rate of discount and that the latter still stands at 3½ per cent., were not unanticipated, the reports yesterday having removed all question with reference to the rumored disquiet on the English exchange. Securities were strong, the quotations at the close of the market being as follows: Consols for money, 91 15/16@92; consols for account, 92¼@92 5/16; five-twenty bonds of 1865, old, 109¼@109⅜; five-twenties of 1867, 109; ten-forty bonds, 104¼; new fives, 104⅝.

England adjusted her debt fifty years ago at 3 per cent., and her bonds are worth to her capitalists 92½ per cent.; while our five per cents and six per cents are at 109. Of course our bonds go abroad, and free bankers are struggling to add still further to the value of these bonds. And yet, strange to say, we are, when we have money in the Treasury, buying up these very bonds at the enhanced premium. Thus, in the interest of capital, you have enlarged the debt and increased unjustly its weight upon the people.

Mr. Speaker, I regret to reach the conclusion that the resumption of specie payments in this country is now at least impossible. It is not a question of money so much as it is a question of the weight of the public debt upon our industries. We should reduce the burden of this debt as far as good faith and public honesty will justify. The weight of taxation must be diminished. In what other nation is labor so severely taxed? Reasonable economy will reduce your national expenses $40,000,000 annually.

I do not believe that specie payments are possible, without universal disaster, while the current expenses of the nation are estimated by your Secretary of the Treasury, as they are for the next fiscal year, at $319,198,736.82, being $190,920,656.82 after deducting interest on the public debt and pensions. It is this fearful annual expenditure that is exhausting the country. Now, while your legislation is in the main for the benefit of capital through countless monopolies, and while the enormous profits of issuing money through national banks drains the country and builds up imperial estates, I would be rejoiced, sir, to see any policy, consistent with public honor, which would bring back our bonds so that these exactions on the resources of the nation, this drainage of the wealth of the nation, would be diminished, and that would give to the whole people the imperial franchises now held by the few. Such a policy, with economy and honesty in public affairs, will restore specie payments. The highway to specie payments is reduced taxation in State and nation, retrenchment and reform.

But, Mr. Speaker, while I am very confident that paper money will have to constitute the basis of our currency for years to come, I think the only question is, and will be, in what form it shall be issued.

I have listened to the gentleman from Missouri [Mr. HAVENS] to-night with great pleasure while he discussed this question. I do not think that the public men of this period, the members of this House, treat the people well or their Government well when they talk about the greenback as an irredeemable currency. Irredeemable! Such is the odium attempted to be stamped on the lawful money of the nation by capitalists and bankers who swarm in the lobby. Why, sir, it is not currency in the sense in which you can apply the term irredeemable to it. *It is money.* It is not simply currency, but money. You cannot speak of the gold dollar as currency in any proper sense; for currency generally signifies something to be redeemed.

The greenback is money in the same sense in which a gold dollar is money, and both are made money by the same high authority, the only authority that in this country can make anything money, the law of the land. The making of money is the act of the sovereign authority of the nation, and your Government has declared the greenback lawful money and a legal tender in the same manner that it has made the gold dollar lawful money. You make the gold dollar lawful money for all purposes; the greenback lawful money except in payment of your bonds and duties on imports. Gold for the capitalist, the greenbacks for the people. Such has been your uniform discrimination.

This greenback money, under the sanction of law, rests for its value on the energy, enterprise, labor, wealth, and honor of the people of this Republic. It is the money in which the nation discharges obligations infinitely more sacred than bonds purchased at 50 per cent. of their value. Irredeemable paper! I do not envy the man who in complacency to wealth can sneer at the lawful money of his country, the solitary feature of your whole policy in the interest of the people.

Sir, if the Government of the United States possesses the power to make money at all, they have made money—not promises to pay, not an irredeemable issue—but they have made money in the form of the United States notes. I think that is money which is declared by law to be money, a measure of value, a standard of exchange, a medium by which debts are extinguished by law. An act of Congress declares what is money; it stamps the money quality, the representative value, upon a bit of gold or silver just as it does upon paper. There is no difference in that respect.

The stamp of the United States upon gold or silver gives it the character of money and fixes its value as money. Without that, sir, it is simply an article of merchandise—bullion; a thing of the market, a commodity for bargain and sale simply, but not money. Paper which bears the stamp of the United States upon it as money is money. Its value fixed by law. It bears the highest impress of value—the faith of the nation. It is the only paper money ever issued in this country that bore an honest front. It is not a child of monopoly. It is the common wealth of the whole people, at once a loan of the people to their Government without interest and a safe and solid medium of exchange. Irredeemable paper! A dishonored currency! say the capitalists, for with $400,000,000 in circulation it saves the people $24,000,000 from their rapacity. They would redeem it in national-bank paper under the guise of free banking for the bondholders. We shall see whether this can be done.

No sneer can change the fact that that is money which is made so by law. Why, sir, the most enlightened writers that I have read, and I do not regard J. Stuart Mill as the least of them, all esteem that to be money with which by law debts may be extinguished, which makes a final disposition of the claim of one citizen against another. The greenback is money. I admit this is very unpopular talk here; but the bank lobby are not the people. We are told we cannot issue this lawful money in lieu of the $354,000,000 of national-bank paper and apply this $354,000,000 in payment of the public debt, thus saving to the people annually $21,240,000 more, because the faith of the nation is pledged that only $400,000,000 of greenbacks shall issue. Can servility to capital go any further than this? Pledged to whom? To the bondholders who got their greenback bonds converted into gold bonds? Are these the gentlemen who are so anxious for the good faith of the nation? The bankers? Are they not satisfied with the $50,000,000 they have been drawing without consideration from the labor of the country annually for years past? Where did one Congress get the power to bind its successors forever by an ordinary act of legislation? O, yes! It is all right to amend the act of 1862 by the act of 1869, after the bonds were issued, and add $200,000,000 to their value; but of course legislation that would relieve labor and save to the producers of our wealth, the patient toilers in the field and the mine and the shop, $21,240,000 a year would be a violation of public faith! What an argument in a republic!

But it is said on behalf of the bankers the greenbacks were solely a war measure and the Government cannot issue them in time of peace. How eager these gentlemen are for their valuable and sovereign franchises! The Supreme Court held in the legal-tender cases, (12 Wallace, Supreme Court Reports, page 529,) and in every case decided since, that the greenback was lawful money and a legal tender for the payment of debts contracted before the war and since the war. The Supreme Court say:

The Constitution was intended to frame a government as distinguished from a league or compact, a government supreme in some particulars over States and people. It was designed to provide the same currency having a uniform legal value in all the States. It was for this reason the power to coin money and regulate its value was conferred upon the Federal Government, while the same power, as well as the power to emit bills of credit, was withdrawn from the States. The States can no longer declare what shall be money or regulate its value. Whatever power there is over the currency is vested in Congress. If the power to declare what is money is not in Congress, it is annihilated.

And again:

But the obligation of a contract to pay money is to pay that which the law shall recognize as money when the payment is to be made. If there is anything settled by decision it is this, and we do not understand it to be controverted.

But some of the very gentlemen who are now arguing that the issuing of greenbacks was the exercise only of a war power and not under the constitutional power to "borrow money," or "regulate commerce," or "coin money and regulate the value thereof," did but a few days ago vote, in this hour of profound peace, to add $18,000,000 to the legal-tender notes. Both the House and Senate have within a few days voted to issue $18,000,000 of lawful money, and now in behalf of the banks the question is raised. So the Supreme Court and Congress have decided that greenbacks are lawful money, and I hope that the people will see to it that Congress shall not reverse that decision. Certainly the Supreme Court never will.

If any other decision had been pronounced by that court, if the decision first pronounced by Chief Justice Chase—a most unfortunate decision—if that decision had stood as the law of the land, no citizen who loved his country could have failed to tremble at the disasters that might overtake us in the future. I believe that in the whole history of this nation there never has arisen and never will arise a question of such magnitude for the decision of the court. It is easy to foresee emergencies that may arise when the honor of the nation and the safety of the Republic might be involved in that question. If the first decision had stood as the law, the expedient which went far to save the nation from disaster could never have been resorted to again without a change in the Constitution, and the decision would have

been followed by bankruptcy and disaster to a multitude of our people.

Now, sir, the question is, is it for the interest of the whole people that instead of greenbacks, pure and simple, the benefit of which during the war and since the war inured to the whole people of the country, you should have the issue of the national banks? Or shall the bankers' notes be withdrawn and lawful money issue in their stead, and be applied to the payment of the public debt? This, in my judgment, is a vital question. I am and have been uniformly in favor of issuing greenbacks and withdrawing the national-bank notes—giving the whole people instead of a few wealthy capitalists the immense profits of issuing money. This is not a measure of inflation, except that the $100,000,000 greenbacks held by the banks would enter more directly into circulation.

I insist that, while the issue of paper money is inevitable, that kind of paper money should be adopted which would most completely destroy monopoly in money. Certainly one of the highest prerogatives of government is the issuing of money. I think it is not simply one of the highest, but in a certain sense it is perhaps the highest prerogative of government to issue money. It is not pretended that in the proper and legitimate sense the issue of a national bank is money; it is more properly to be called currency. It is redeemable—what an idea—in greenbacks!

Mr. MELLISH. Will the gentleman object to a question here?

Mr. HOLMAN. Not at all.

Mr. MELLISH. I would ask the gentleman if he understood the gentleman from Connecticut [Mr. HAWLEY] in his argument to deny the law of the land as established by the Supreme Court?

Mr. HOLMAN. The argument of the gentleman from Connecticut was simply in favor of reaching specie payments at once, without reference to the question whether the greenback was legal money or not; to get clear of it as soon as possible. It was in its main feature an argument for a speedy return to specie payments.

I have heard it argued by some one that the issuing of more greenbacks would be an increase of the national debt. But is that true? Of course not. It is quite clear that if greenbacks are issued they should at once be applied to the extinguishment of the national debt; that indeed is the main object. Suppose that the $354,000,000 of national-bank paper now out should be substituted as they came from time to time into the Treasury by an equal amount of greenbacks, and the greenbacks applied to the extinguishment of $354,000,000 of our national debt, or, if the gold act of 1869 is to remain in force, purchase the bonds. It seems to me that if that can be done it would be a wise measure. It would reduce the interest on the public debt about twenty or twenty-one millions a year, even if you adhere to the pernicious policy of purchasing the bonds at a premium. To that extent it would diminish the drain upon the country for gold and would hasten the resumption of specie payments.

The saving of $20,000,000 a year to the industries of the country is a very important item. That is a sum equal to one-third the entire expenses of this Government fifteen years ago. That it can be done no gentleman pretends to deny. That there is any obstacle in the way of it no one will assert. I am not arguing that you can do this at once, but as the bank-notes come into the Treasury from time to time they should be canceled and United States notes issued in their stead, and the bonds of the banks surrendered from time to time as their circulation is canceled. Within two years the country would receive the full benefit of this measure of relief, and without injustice to any one a larger portion of the public debt would be extinguished than has been extinguished under oppressive taxation during all the years since the war; for during all those years, under a taxation more exhaustive than any people have ever borne for a long period of time, you have only paid $323,253,800 of the principal of your debt. No person pretends to assert that this is impracticable. Why can it not be done? I have never been able to understand the reason why not. You have expressly retained the right to modify or repeal the bank law. The banks as banks of discount and deposit would still remain, and, like other people, they would do business on the lawful money of the country. There is no public reason against this measure. I am aware that with a Congress teeming with bankers and capitalists the obstacles may be insurmountable. But, sir, will the day never come when the legislation of Congress will be for the benefit of the whole people and founded on public reasons? Will special franchises and corporate powers and remorseless monopoly always rule this nation? I think we already hear the heavy footfall of the coming power of reform.

In my judgment the objectionable consequence of a redundant currency is, that with the agencies here at work it tends to centralize wealth in certain portions of the country. There is no objection to the increase of wealth or the representatives of wealth if it is diffused. If your currency was increased to $900,000,000 and it was diffused over the whole country in the form of greenbacks, reaching labor in all its varied fields and departments, there would certainly be nothing to deplore. Such was the actual state of things during the war and before the banks had obtained complete mastery.

I think the years 1864 and 1865 were years of actual prosperity in this country; not simply apparent but real, notwithstanding the waste of war. Labor during that period—and the whole test of a nation's prosperity is in the condition of labor; that is the true test of a nation's policy—labor during that period was animated and encouraged by at least reasonable rewards, even in proportion to the values of the commodities it produced. I do not think there is any objection at all to a reasonable increase of currency if issued in the form of United States notes; for it would inure at once fully and completely to the benefit of the whole people, and is more certain to be diffused among the people than if completely under the control of the banks. But the trouble is that in this country, more than in any other upon the face of the earth, there exist agencies for centralizing wealth.

I admit that when you increase the currency to what is reasonable and proper, when you actually inflate it, as was the case at one time during the war when the currency was twice its present volume, the machinery of your national banks concentrates it in vast amounts and makes it effectual in building up special interests and promoting enormous private fortunes. There is no denying the fact that under the agencies which Congress has created more fortunes have been built up—imperial fortunes—than have been accumulated during any corresponding period of history, except when the marauding chiefs of the Middle Ages seized and consolidated the wealth of their less-powerful neighbors. But, sir, this has resulted not from the circumstance of a redundant currency so much as from the agencies of financial centralization you have created. The inevitable effect of this national banking system is to centralize our wealth.

The system proposed by my friend from Tennessee [Mr. MAYNARD] in the pending bill is spoken of as a "free-banking system." The title is captivating. A system of free banks! Free banking! The ordium that attaches to the present banking law is that of monopoly. If there is anything that ought to be abhorred by a free people it is monopoly of advantages in that which may be justly common to all. There is something so monarchical about it, so hostile to the fair play and the genius of republican institutions, that the instincts and sympathies of a free people are against it. Hence "free banking" is an attractive title. But, Mr. Speaker, is there in fact anything like free banking in this bill? Free banking? A large portion of your bonds are held by European capitalists, or rather by their agents in the United States. You find the names of those agents of the great moneyed houses of Europe on the petitions before us for specie payments. The national banks have on deposit in the Treasury to secure circulation bonds to the amount of $392,852,100.

The body of our bonds not owned by the banks or foreign capitalists is held in the commercial centers—New York and Boston, Philadelphia and Baltimore; not in the West and South, where the banking facilities are inconsiderable; not in the States like Illinois, Indiana, or Tennessee. Those bonds are held, except in inconsiderable sums through the country, by capitalists in your great cities.

Mr. MAYNARD. Will the gentleman allow me to make a suggestion in this connection?

Mr. HOLMAN. Yes, sir.

Mr. MAYNARD. The gentleman will recollect that we have authorized the issuance of a bond at a lower rate of interest, 4½ or 4 per cent., and any parties who may wish to establish banks, by presenting to the Treasury the amount of their capital in coin, will be able to get as many of those bonds as they may desire; and the Government with that coin will pay off an equal amount of the 6 per cent. bonds held by the principals of the Belmonts and the Ciscos and that class of people. The direct tendency of this, as it seems to me, would be to reduce our high interest-bearing bonds to bonds bearing a lower rate of interest.

Mr. HOLMAN. There is no question but that that line of policy, if practicable, would be in some degree beneficial, but the gold is not in the country and the holders of the present bonds will be your bankers; but it is a benefit infinitely less than would be secured by applying the greenbacks substituted for bank-notes to the payment of the bonds; then it would not be 1½ and 2 per cent. saved, but 6 per cent., by the payment of the bonds. The application of the $354,000,000 of bank-notes transformed into greenbacks to the extinguishment of the public debt has a substance in it infinitely beyond that which possibly could result from the pending bill; for this bill applies to bank-notes to be issued, while my plan applies to those issued on 6 per cent. bonds. The bill simply lightens the interest on the bonds which may be purchased with gold, while my plan pays off $354,000,000 of the bonds even on the present basis of our currency, pays the bonds, interest and principal both.

Indeed, sir, if this country had grappled with this question bravely, and had extended the same even-handed justice to the people and the capitalist, and had provided, *not for the purchase at a premium*, but for the *payment* of the five-twenties in the money in which they were payable according to the terms of the contract, and had issued greenbacks as currency instead of national-bank paper, and applied those greenbacks in the extinguishment of the debt, then, with a currency of seven hundred or seven hundred and fifty million dollars our public debt would have been so greatly reduced at this hour that the interest could not possibly at this time, with the resources we have had and the taxation our people have borne, exceeded $40,000,000 a year; and when you reduce the interest on the public debt to $40,000,000 you have got it well in hand. It would then be a comparatively light burden on our people, provided that in justice to labor, the tendency to extravagant expenditures of the Government be with firm purpose held in check. But now the interest we are paying annually swells up to $104,750,688.44, mostly in gold; $23,571,126 is paid to the national

banks in gold annually. No gentleman can take up this report of the Comptroller of the Currency without being impressed with the fact that this banking system is one of unexampled profit to the capitalist, and is a fearful drain of wealth from the producers of our wealth into the coffers of the non-producing classes.

Now, no gentleman appreciates more fully than my friend from Tennessee [Mr. MAYNARD] the proposition that any agency by which wealth may be accumulated in this country, except it be by patient and plodding industry, is to be deplored and discouraged. Even when, in legislation by which a good is accomplished, you are compelled to create an agency by which wealth may be amassed without industry, a thing scarcely possible, you have to deplore the fact and admit that of all things that legislation and that system of public policy are wisest and best which furnish no facilities for accumulation of fortunes except through productive industry.

Excessive fortunes, such as bring poverty and wretchedness to multitudes, will occasionally be accumulated in spite of the wisest system of laws. But to frame your laws to that end, encouraging princely estates on the one hand and poverty on the other, is imitating the most odious principle of monarchies. The wealth which is built up in Wall street by watering of stocks, the hoarding and expansion of currency through the banks to depress on the one hand and enhance on the other the fruits of labor, and gambling in gold, is a dishonor and a curse to the nation. The imperial fortunes thus accumulated are drawn through countless channels from the patient toil of our people. Can any gentleman say that our laws are not responsible for this? When did you enact a law, except the law for the issue of United States notes, that did not open up opportunities for the unscrupulous stock-jobber to take from labor the bread it had earned? Do you think the crafty speculator, who uses the power of your monopolies and wields the special franchises you grant so freely, can accumulate an estate of millions without consigning multitudes of your people to want and wretchedness?

Looking at the last report of the Comptroller of the Currency this startling fact is apparent, that for the last fiscal year the surplus fund of the banks had accumulated to $118,113,848 after the payment of the dividends half-yearly year after year. The dividends for the first half of last year were $24,826,061, and for the next half $24,823,029; in all $49,649,090; that is, a dividend of profits, as will be seen, of nearly 11 per cent.—10.87—not simply on bank capital, but on bank capital and the surplus *after all expenses are paid*. Since God created this earth such a system of steady and remorseless absorption of the wealth of a people has never existed; never, sir. The Bank of France, the fiscal agent of the government; the Bank of Berlin, the fiscal agent of the North German Confederation; and even the Bank of England, quasi fiscal agent of government, are government agencies—the two former inuring to the benefit of the government, and the latter only partially so. But, sir, in the range of all history no such agent for centralizing the wealth of a people has ever existed as this system of ours under the sanction of law.

Here, sir, is the statement of the Comptroller of the Currency:

The national banks are required by the act of March 3, 1869, to make semi-annual returns to this office of their dividends and earnings. From these returns the following table has been compiled, exhibiting the aggregate capital and surplus, total dividends, and total earnings of the national banks, with the ratio of dividends to capital, dividends to capital and surplus, and earnings to capital and surplus for each half-year, commencing March 1, 1869, and ending September 1, 1873:

Period of six months ending—	No. of banks.	Capital.	Surplus.	Total dividends.	Total net earnings.	RATIOS.		
						Dividends to capital.	Dividends to capital and surplus.	Earnings to capital and surplus.
						Per cent.	*Per cent.*	*Per cent.*
September 1, 1869	1,481	$401,650,802	$82,105,848	$21,767,831	$29,221,184	5.42	4.50	6.04
March 1, 1870	1,571	416,366,991	86,118,210	21,479,095	28,996,934	5.16	4.27	5.77
September 1, 1870	1,601	425,317,104	91,630,620	21,080,343	26,813,885	4.96	4.08	5.19
March 1, 1871	1,605	428,699,165	94,672,401	22,205,150	27,243,162	5.18	4.24	5.21
September 1, 1871	1,693	445,999,264	98,286,591	22,125,279	27,315,311	4.96	4.07	5.02

Let us see further. The "total net earning"—I use the words of the complacent Comptroller—of these banks for the year ending on the 1st day of last September were as follows: For the six months ending on the 1st day of March, 1873, $31,926,478, and for the next six months, ending September 1, 1873, $33,122,000, (the panic increased the profits,) in all for that year, $65,048,478. The *net earnings* of the year! Net earnings after paying the munificent salaries of bank presidents and other officers, and rents and expenses! Net earnings for one year, $65,048,478! Fifteen years ago the entire revenues of this nation of over thirty million people were $41,476,299.39, and the expenditures (the deficiency being made up of loans) were $62,537,221.62. I quote from the report of the Register of the Treasury to the present Congress. Such, then, is your policy. A bank system invested with the national and sovereign prerogative of issuing money, for the payment of which the faith of the nation is pledged, is permitted to levy a tax on the industry of the people, for the benefit of a few capitalists, largely exceeding the revenues or expenditures of the nation only fifteen years ago.

When we estimate our taxes here is a startling item to be taken into the account. Yet we have accustomed ourselves to look with such complacency upon the rapid building up of imperial estates at the expense of the hard and patient industry of our people, that an accumulation of $118,113,848 of surplus fund and the division among a handful of capitalists of over forty-nine millions of money annually does not strike the nation with astonishment at all—forty-nine millions in annual dividends and over one hundred and eighteen millions of surplus fund on which to compute dividends in the future! You will note, sir, in this table the rapid accumulation of this surplus fund and the steady payment of dividends.

Now, is it policy to enlarge upon such a system? If this money, this $65,048,478, came from somebody else than the patient laborers in your fields and shops and mines, the men whose labor is the only wealth of the nation, it would not be a thing so greatly to be deplored; but this $118,113,848 of surplus funds accumulated in so brief a period since the organization of these banks, after the enormous dividends declared every six months, swelling up to $49,649,070 in the last year covered by our reports—a year of panic and disaster—ought to fill the country with alarm. Can you expect anything less than disaster to your varied industries; can you hope that labor shall receive its proper rewards and your productive industries prosper, when the fruits of labor are thus gathered into the rapacious coffers of your banks? Shall the object of labor only be to build up princely estates for a handful of bankers? Is it for this your people are to toil year after year?

Mr. HUBBELL. I should like to ask the gentleman whether with greenback issue we would not still have banks and they would not have the same profits as now?

Mr. HOLMAN. I think not. In the first place, the greenbacks would diminish the burden upon the people in the reduction of your debt to the extent of more than $20,000,000 in gold annually. That would be something. It is a big item to begin with. In the second place, the banker doing business on money procured as your farmers, mechanics, and merchants procure it, by legitimate business or honest industry, and not made to their hand by your Treasury at the trivial interest of 1 per cent.—yes, sir, if your bankers got their money as your farmers and mechanics do, by honest industry, or as your merchants or traders get it, by legitimate business—would realize no such imperial profits as are shown by this Comptroller's report. Their millions of bonds would not be nearly duplicated. Six per cent. is a heavy interest to the great body of the people of the country, and the people who are mostly in debt are the men who are engaged in industrial pursuits, and an interest of 6 per cent. is as high as the business of any country can endure. Interest even at that rate is a fearful tax on labor. Interest, in the judgment of most of the States of the Union, at 6 per cent. was recently deemed the highest interest which should be allowed by law. Yet, according to this showing, we are encouraging and enlarging a policy which will impoverish labor and enable the capitalists to more than double that rate of interest; for gentlemen must remember that the "earnings" of these banks during the last year, as shown by the table I have submitted, the net earnings, was 10.87 per cent. on capital and surplus both, and this after every expense—salaries, rents, suspended debts, banking-houses, and all else—is paid. Why, sir, I find that the net earnings of some of these banks last year, as shown by this report of the Comptroller, exceeded 20 per cent., in one instance 25.61 per cent., on capital and surplus fund. Even in the State of Maine the net earnings were 11.47 per cent. on both capital and surplus fund.

Mr. HUBBELL. The gentleman seems to be under a misapprehension. He seems to be talking as though the profits of banking were made from the circulation. Now, the fact is there is no profit in banking so far as circulation is concerned; but the profit from banking is in the deposits. The people have confidence in our system of banking more than they ever had in any system that ever existed. And the consequence is that these banks draw all the idle money in from the communities, the cities and towns where they are located, and the bankers are enabled to use these deposits, to make profit out of them at a high rate of interest?

Mr. HOLMAN. Will the gentleman tell us how it happens that the banks can afford to pay these extraordinary dividends on their banking capital and accumulate so great a surplus fund if it is not a profitable business?

Mr. HUBBELL. The people have so much confidence in the national bank that it will draw deposits when another would not.

Mr. HOLMAN. You cannot by any *finesse* or subtilty of reasoning obscure the fact that if you deposit $392,852,100 in bonds with the Secretary of the Treasury and receive from him half-yearly 6 per cent. gold interest on these bonds, and also receive from the Secretary at the sole expense of the Treasury $354,000,000 of national-bank notes ready to circulate as money, and pay to the Secretary of the Treasury only 1 per cent. interest on this money, you have almost doubled your wealth, and that if you do keep on hand, as the Comptroller says, $100,000,000 greenbacks as a reserve, you have still the enormous sum of $254,000,000 added to your wealth.

Mr. HUBBELL. Let me ask the gentleman what has become of the capital? The bonds draw 10 per cent. all through the West.

Mr. HOLMAN. Certainly; that is what, among other things, I am complaining of. You have added that 10 per cent., indeed 15 percent. and more, to the value of the bonds by your act of 1869, after the bonds were issued, adding to the burdens of the country and sending your gold abroad by making the bond a gold bond. The whole system unhappily hangs together and is all for the capitalist and all against the people. A few gentlemen of wealth holding $100,000,000 of your five-twenty bonds, the principal of which was payable in greenbacks and which by the act of 1869, you make payable in gold, deposit them in the Treasury and receive the interest half-yearly at 6 per cent. in gold, and receive also $90,000 in bank-notes, for which, as a tax, they pay the Government 1 per cent. per annum. If they honestly obey the law, they keep in their vaults 15 per cent. of this in greenbacks, leaving them $75,000 to loan at 10 per cent. interest, payable in advance, to the farmers and mechanics of the country. Here is $100,000 with interest at 6 per cent. in gold subject to no tax, and $75,000 to be loaned at any interest the bank can extort from the hard-pressed industries of the country. Will you tell me there is no profit there? We have figures here which cannot be so distorted.

But let me say further to my friend—and it is one of the gravest objections to his banking system—the current money of the country in the hands of individual citizens is, as he suggests, gathered into the banks. The banks monopolize the loaning of money and fix the rate of interest; and to make the interest more oppressive, loan on short time with interest in advance, compounding the interest time and again during the year, remorseless as death. How rapidly the hard-pressed citizen finds the life-blood drawn from his vitals, and the hard coinage of his labor drawn into the inexorable vaults of the banks. Yes, sir, the franchises you have granted do indeed give the banks the absolute monopoly of your money and the power to fix and regulate the interest on money. My friend says truly, you establish a national bank and the citizens deposit their money at a low rate of interest, or none at all, and the money, instead of being loaned on mortgages on lands and other securities for a reasonable period, is loaned out in commercial transactions alone, interest in advance at ninety or one hundred and twenty days, never falling below 10 per cent. and compounding with crushing effect.

Mr. HUBBELL. I desire to ask the gentleman one more question, if he does not complain of these interruptions.

Mr. HOLMAN. I do not object to being interrupted.

Mr. HUBBELL. Do I understand that the gentleman proposes to do business without banking?

Mr. HOLMAN. I do not expect the country to carry on its business without banking.

Mr. HUBBELL. If business is to be done by banking, several hundred millions of money will be required to do that business.

Mr. HOLMAN. I do not suppose the business of the country can be done without some form of banking. Mediums of exchange are necessary. Banks always have existed and always will exist in this country. It is always, even where banks have to redeem their issues, a profitable business. Yes, sir; banks of discount and deposit are convenient agents of business; but I deny that banks are necessary to issue money; this is a prerogative of Government. The belief of the people is that Government bonds are deposited by the banks for securing deposits with them, and citizens having money, instead of loaning to the farmer and mechanic and merchant at reasonable rates and for a reasonable time, deposit it with the bank. The result is, that instead of the old-fashioned mode of loaning money year by year which our farmers and business men practiced years ago, the money is gathered into the banks and loaned in commercial transactions and at bank rates, which are utterly impracticable in the pursuits either of the mechanic or of the farmer. They cannot respond to the demands of the banker in the three days of grace.

Mr. HUBBELL. I will ask the gentleman, how is it possible for business men to avail themselves of idle money if they are obliged to go about to John Roe and Richard Doe, or any one else who may have a little, in order to borrow?

Mr. HOLMAN. Do no persons want money except the business men of your great commercial centers? Without monopoly or the national prerogative of issuing money the country will always be substantially supplied with banking facilities. We have them now outside of the national banks. But for Congress to organize a system with the design of gathering up all the money, and taking it from the ordinary channels of loans on time, for the purpose of bringing it under the laws of banking transactions, and to aid in this, giving the bankers $354,000,000, is not, in my judgment, a wise policy.

Mr. MAYNARD. Will the gentleman allow me to ask him a question?

Mr. HOLMAN. Certainly.

Mr. MAYNARD. The gentleman from Indiana has stated, from the report of the Comptroller, in substance, that the profits received from the banking capital have been about 11 per cent. Six per cent. of that of course is interest which is paid by the Government on the bonds which are held by the banks, and the other 5 per cent. is paid by the customers of the bank, the community. Now, so far as the Government is concerned, the taxing power, it is a matter of no sort of consequence whether the 6 per cent. is paid to the men who own the banks, the stockholders of the banks, or paid to other capitalists who hold the bonds in their safes for investment simply. On the other hand, is it not manifestly for the interest of the community that banking shall be so conducted that this very interest which they are obliged to pay, and do pay, shall go in to make up the profits of the banker, so that he will have less reason to make a heavy exaction upon the general community that deals with him?

Mr. HOLMAN. Well, the banker will undoubtedly charge all the interest he can to begin with. He will undoubtedly do that. When was capital ever satisfied with less interest than it could extort? It is an inhuman and wicked policy to encourage or permit an exorbitant rate of interest, and yet you do encourage it when you facilitate a monopoly of money. To my mind one of the most melancholy spectacles of life is an industrious citizen with a small estate and embarrassed with a debt too large to be discharged without the sacrifice of his home, and yet not so large but that he may hope to pay it by persistent labor, and that debt held by a bank under its iron rule of prompt renewal, the high interest compounding remorselessly and swelling the principal. In vain he stints the comforts of his home and toils on, the 10 per cent. never loses a moment; it eats up his labor and eats into his heart; every dollar of interest begets more. It is the interest that eats out his vitals and extinguishes hope; like the myth of the ancients, the stone he would roll to the summit of the mountain everlastingly falls back before it reaches the summit. It is not a pleasant picture. Yet the monopolies of money you have created and would enlarge by this bill produce such pictures endlessly. You cannot invent an agency by which a few capitalists can gather up $65,048,478 in a single year, more than one-seventh of your *actual* circulation as I have shown, from the industries of the people without bringing oppression and disaster on the country. And yet your complacent Comptroller, surrounded by bankers, argues in this report, that the profits of this national-bank system do not exceed the profits which some of the monarchies allow their bankers to extort from their people. And such a report is made in a republic!

[Here the hammer fell.]

Mr. MAYNARD. I hope the House will, by unanimous consent, allow the gentleman to proceed.

There was no objection.

Mr. HOLMAN. You put the bank-notes on exactly the same footing in effect that you do the issues of your lawful money. The idea of convertibility and of redeeming bank-notes by greenbacks is one of the tricks and absurdities of "sound opinions on finance." No opinion on finance is sound to the capitalists unless it tends to increase the rates of interest and profits of capital and makes the "rich richer and the poor poorer."

If it were not for the gravity and dignity of the subject, one could hardly help smiling at the idea of redeeming bank-notes with greenbacks. They differ in two respects; the one is lawful money and a legal tender, and is issued on the credit and for the benefit of the whole people of the United States; the other is not lawful money or a legal tender except for certain debts due to and from the United States, and is issued on the credit of the whole people and for the sole benefit of a few wealthy capitalists! The people have $382,000,000 now issued for their profit, and a handful of the favorites of Congress have $354,000,000 for their sole benefit! In all else, while the greenbacks are in circulation, the two issues are exactly the same in effect. Here is one note of one color and another with another, issued by exactly the same authority, prepared and engraved and stamped at the same Government printing office, and by the same process; they are both printed on paper that you have furnished and paid for out of the Treasury; they are engraved by the same men, the same young women who manipulate the one currency in your Treasury manipulate the other. The bureau of the bankers' note is a Bureau of your Treasury; it kindly manages the affairs of the bankers at a cost to the people of $212,259.53 a year; and the whole rests upon the wealth, the energy, the industry, the integrity of this nation. Both are on the same level from the moment the process of making begins and they are sent forth from the printing offices of your Treasury into circulation until they are finally returned to the Treasury as mutilated currency and disappear in smoke.

And yet, with the greatest gravity, gentlemen talk about the convertibility of the bankers' note as an excellent feature, greatly enhancing its value, and sneer at the greenback as an irredeemable money and dishonored! And yet the bankers' note is simply redeemable in greenbacks! One of our issues of paper redeemed by another; the one

issued to swell the wealth of some wealthy gentlemen, the other the money of the people. Of course it is the latter that is dishonored and irredeemable, yet both standing upon the same solid foundation, and the only difference being that you give the one—that much of the public wealth—to the capitalists, in whose interests you have for years administered this Government. No American citizen who feels as a man ought to feel will listen patiently to gentlemen who in the presence of bankers and in complacency to wealth and as an argument for more special privileges undervalue this lawful money of the nation, the greenback, as dishonored and irredeemable paper. If it were true, the nation should blush for its dishonor. It was the money you paid to the soldier whose blood was the cement of the Union; it was the only money you gave him to support his wife and his children while he faced death on the field of battle in your defense; it is the money which you pay after these long years to the disabled soldier on his crutches, and to the widow and children of his dead comrade. It is the money of the pension-list.

I should think that no American citizen could hear without indignation gentlemen in the interest of bankers thus depreciate the money you have deemed good enough to pay your most sacred obligations, except indeed that to you a more sacred obligation, the bonds cheaply earned by your capitalists and the capitalists of Europe, to whom in gratitude you pay gold, and give them at the cost of the people the money that rightfully belongs to the people. O, of course, in a Congress of bankers money issued for the benefit of the people is dishonored and irredeemable.

Mr. FIELD. And in the Senate they call it a lie.

Mr. HOLMAN. Yes, I am afraid my friend is correct; but I hope not. But it is the money we have been paying from year to year to the widow whose husband sleeps upon the battle-field, a dishonored and irredeemable paper; and yet it is that money which has given life and animation and spirit and hope to the people of this country for years and years, animated labor and diminished its burden; a money which our people have faith in. The only people who have no faith in it are your bankers, your men of Wall street, and their agents. The people of this country, the toiling masses, have never exhibited any want of faith in that money, which rests for its value on their labor and their honor. Irredeemable paper! And yet the paper of the banks is admirable and solid, such is the deliberate opinion of Wall street, because its wealth goes into the coffers of the banker; and Congress will, of course, accept "the sound financial views" of Wall street! Wall street, of course, prefers specie payments, with over $550,000,000 of annual taxation upon us; but will be satisfied if Congress will give them the high prerogative of issuing money on the public credit and at the public expense for their own benefit.

Nothing is clearer, sir, than that this now oppressive debt would have been easily borne and liquidated ultimately without oppressing our industries if there had been justice in our measures of policy, and no issue of paper money beyond the reasonable demands of commerce and range of taxation would have been required. An inflation of the currency to pay the public bonds was never necessary to bring the debt under reasonable control, and I am not aware that it was ever seriously proposed. The people and the public creditors were entitled to even-handed justice. It cannot be truthfully denied that it was absolutely just to pay the principal of the five-twenty bonds in United States notes on such a volume of currency as the business and exigencies of taxation of the country might require. Certainly the bondholders could not complain of the volume of currency for the last six years. It is equally clear that as paper money was inevitable and the Government had inaugurated the policy of issuing paper money, and for that purpose, I think justly, had superseded local banking, and as the Government was and is incurring the expense of issuing all paper money and currency, the faith of the nation gives it its entire value, it should have been and should be issued as United States notes, greenbacks, and applied to the payment of the public debt.

It is proposed to issue $400,000,000, including the $354,000,000 now out, of national-bank paper. I ask again, can any man give a good reason why this $400,000,000 should not be issued as United States notes and applied in payment of the public debt? There is none. This saving of $24,000,000 a year in gold would infuse a new life into the nation. But the lobby of bankers is against it. The people are not here. I say again, sir, if Congress had done and would do justice to the country in these two measures, and there was honest economy in our affairs, the nation would rise up like a giant relieved of a staggering weight. But you will not even allow a vote on such propositions. You relieved the banks in 1871 from a large portion of their taxes. You tax them but 1 per cent. on the money you give them, ½ of 1 per cent. on their deposits and excess over capital stock and no more, and yet I find in the pending appropriation bill an item of $600,000 to be taken from your Treasury for the reissue of their notes. No such special franchises and favoritism was ever tolerated in a free country.

You say the notes of the banks in the hands of the holder are subject to local taxation, and the greenbacks are not. Why, sir, the greenback was subject to local taxation until 1864; for two years they were taxable. I opposed the law that exempted them from taxation, and this argument is without avail when every one knows that you have but to repeal the law that exempted them from taxation two years after the first were issued. The leading banker of this House, now a member, got that bill passed.

But the pending bill proposes to let in a few more capitalists to the corporation of bankers.

Free banking! Free to whom? Free to a handful of capitalists who hold your bonds; free to the Vanderbilts, Ciscos, and Belmonts; to the representatives of European bondholders, who are now heavy stockholders in your banks. Yes, sir; free to the Rothschilds and Barings Brothers. What an insult to the public intelligence to call this free banking! It but enlarges your corporation of bankers. It confers upon more capitalists the power to swell their fortunes out of the industry of your people and add 5 per cent. and more to the interest on their bonds annually. It confers upon a few more men the sovereign prerogative of issuing money at the national expense. I ask that this additional money shall be issued in the name and for the benefit of the nation. But, instead of that, the demand of this House, swarming with bankers, is that it shall go to swell the wealth of the bondholders. The country is lost sight of in this scramble for fortunes.

I predict that this will not be the permanent policy of this House; I indulge in that hope and prediction. The time must come when the voice of the masses of the people will be heard on this subject; when capitalists and bankers will not control your legislation. But to this hour no enlightened people on the face of God's green earth have had so little to do with guiding the affairs of their government as the people of this Republic have had in directing the affairs of their own Government for years past. Their voice has never been heard here. That man does not live who will dare to stand up in this House and say that the act of 1869, under which you have already paid out nearly $40,000,000 in premiums for your bonds, was the result of public opinion; or that the addition of $54,000,000 to the bank issues instead of United States notes, three years ago, was the result of public opinion; or that the act relieving the banks from the license tax and the income tax on dividends was enacted by the force of public opinion. But why enumerate? The body of your legislation for eight years has been in the interest of capital, special franchises, grants in money and lands to favored classes and corporations, subsidies, and monopolies. Why, sir, your statute-books are in the main records of private aggrandizement and special privileges; and out of all this have sprung the bitter fruits of this hour, the suspicion in the public mind of the absence of integrity in public affairs—the shadow of national humiliation and dishonor.

No, sir; if this nation is to remain the model republic, a type and symbol of true greatness in a nation, we must reverse all this. It is not for favorites, or for the aggrandizement of a class, or to give splendor to the nation by fostering imperial estates by franchises and monopolies, that laws are to be made in a republic. No, sir, but to do equal and impartial justice to the whole people; to foster and gladden every home and fireside, so far as it may be done by just and equal laws.

I am conscious of the power of the great monopolies that now, compact and solid, are felt in our legislation; but this, sir, cannot last in a free government. It may be years before an issue will be made with the consolidated capitals that now silently direct the course of public affairs; but sooner or later that issue will be made, and no man who has faith in the people will doubt the result of that issue. The people will see to it that the great agencies of government, the majesty of law, shall not be employed to aggrandize classes and amass imperial private fortunes, but for the common and equal benefit of all.

I have voted for increasing the greenbacks to $400,000,000. I regretted that the House refused to permit an amendment to increase that amount to forestall this bill. I would very cheerfully vote to add $400,000,000 more to our greenbacks and retire the national-bank paper—in my judgement a wiser or juster measure than this never passed Congress—but I cannot with my views of what is just to the country vote to enlarge the corporation of bankers that a few already rich shall swell their fortunes at the expense of the energy and labor of a whole people.

Mr. HUBBELL. Allow me to ask the gentleman another question before he sits down. I would like to ask him, as a matter of principle, what right the law-making power has to regulate the price of money any more than it has to regulate the price of corn or wheat?

Mr. HOLMAN. I do not think government has the right to regulate the price of a bushel of corn or wheat. These are the direct fruits of labor. But money is an artificial thing, the offspring of social and political society—a measure of values. To prevent oppression and injustice is a high duty of government, and by the common judgment of mankind through all ages law has laid a restraining hand on the avarice of the lender——

Mr. HUBBELL. I do not ask what the custom has been, but what is right.

Mr. HOLMAN. I speak of the existence of a law or a principle of law which has received the approval of mankind through all the ages as of itself evidence of what is just. The law fixes the value of money and may as well regulate the value of its use as its value in exchanges. Limitation should be imposed upon the lender upon high grounds of public policy, that he should not be allowed to oppress the needy by even a temporary and partial monopoly of an artificial

measure of value common to all. Money, unlike corn or wheat, is of no value except as money, and the value of its use may be justly fixed by law, else *extortion* arises. This has been regarded as a sound maxim of policy among all civilized nations, and has never, I think, until the last few years been questioned. The most heartless and inhuman system of legislation would be that which overlooked the force of necessity on one hand and the power of avarice on the other, and left the debtor at the unrestrained mercy of the lender.

Mr. HUBBELL. Has not the tendency in late years been to remove governmental restrictions upon rates of interest?

Mr. HOLMAN. If any country has done so it has done a most inhuman thing. I know that capital has been demanding this, but I am not aware that any nation has acquiesced in its demands. I know that when for a short period of time different States in this Union have removed the restrictions upon the lender, or rather allowed great latitude in contracts for the use of money, it has universally resulted in extortion and oppression, poverty and wretchedness, on the one hand, and excessive opulence on the other. Surely a government may prevent such injustice. Surely it may restrain those who happened by the fortunes of the hour to control the representatives of value, this artificial creature of government, which receives all its value from the common labor of all, from extorting unreasonable gains from its temporary use. The law of the Hebrew lawgiver touches the conscience as proper and just. With the advantages now possessed by capital repeal the limitations on interest, and the rapid centralization of wealth would imperil republican government, which rests in the main on an approximate equality in the material condition of the people.

Interstate Commerce.

SPEECH OF HON. J. AMBLER SMITH,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

March 24, 1874.

On the bill (H. R. No. 1385) to regulate commerce by railroad among the several States.

Mr. SMITH, of Virginia. Mr. Speaker, I concur fully in the conclusions of the Committee on Railways and Canals, that Congress may rightfully regulate commerce carried on among the several States, and, necessarily, to provide by statutory regulation that the charges made by persons engaged in such commerce shall be fair and reasonable; in other words, that Congress may regulate commerce among the several States, whether railroads be the medium of transportation and operation, or rivers, or lakes, or steamboats or sail-vessels, or any other instrumentality whatever.

I scarcely regard it necessary to refer to the numerous judicial adjudications which have been from time to time pronounced in the premises. The power is manifestly deducible from a provision of the Constitution too plain to be misunderstood, that—

> The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof. (See Constitution, article 1, section 8.)

This is to say, whatever means are "necessary and proper" to give full effect to any expressly granted power, such means, by necessary and irresistible implication, are as rightful and legal as though expressly written down in the Constitution.

Take what express power you will, the means to render its exercise effectual to the fullest extent are as legal as the substantive power itself, and are a part of the express power, without which it could not be called into existence. Now, this simple common-sense principle is decisive of the point in question.

Is the regulation of commerce by railroads and, of consequence, the regulation of charges of transportation by them, a necessary and proper means, in the judgment of Congress, to give effect, full and perfect, to its admitted power and duty of regulating commerce among the several States? The moment Congress in its supreme discretion decides on this "necessary and proper" connection between the end to be accomplished and the means to accomplish it, the question is at an end.

Without this exercise of implied power the Government could not be efficiently carried on for an hour. It would be a feeble abortion, an emasculated thing, without energy or any reliable power even of self-preservation. And it would be most absurd to say that this life-giving principle of implied powers does not apply to the great, broad, all-pervading, all-embracing province of the regulation of commerce. The principle indeed applies to each and every power and obligation of the Federal Government prescribed by the Constitution.

Hence, the agencies and instrumentalities of commerce, railroads for example, developed since the adoption of the Constitution, fall at once within the jurisdiction of Congress, and are clearly within its discretion as means of executing the commercial power. If Congress, in determining the mode and measures for executing its great trust of the regulation of our domestic commerce, or rather commerce among the States, shall come to the conclusion that the regulation of the freight charges of railroad companies is necessary and proper as an appropriate means of regulating commerce among the States, that moment the means or measure becomes legitimate and constitutional. The great end justifies all the incidental, necessary, and proper means. Hence, when the Supreme Court held under advisement the power of Congress to incorporate a national bank, it was held (see McCulloch *vs.* State of Maryland, 4 Wheaton, 411) that though the Constitution confers no express powers on Congress to pass an act of incorporation, nevertheless, if an act of incorporation be necessary as an instrument of carrying into effect any one of the expressly granted powers, it becomes legitimate; and so it was decided that the incorporation of a national bank, being necessary and proper to give effect to an express power—in that case the money power—it was decided to be a constitutional exercise of power; and a national bank was accordingly established; which gave the country, it may be well to mention, a currency which was equivalent to specie at every point in the land.

I repeat, then, that if Congress shall, in exercising its authority over commerce among the States, regard the regulation of railroad or other charges of transportation necessary and proper, or shall deem advisable the establishment of other lines of railroad as avenues of trade, those measures come within the exercise of its constitutional authority. This is the doctrine of right reason and common sense; and hence, when the point of judicial investigation was reached, the question was at once settled in favor of the doctrine maintained by the committee's report.

This whole doctrine of implied powers has been often and clearly elucidated, and its application and extent defined by the decisions of the Supreme Court.

In the case of the United States *vs.* Fisher (2 Cranch, 358) it was held that—

> The power to make all laws necessary and proper for carrying into execution the powers granted confers on Congress *a choice of means*, and does not confine it to what is *absolutely necessary*.

And in the great case of McCulloch *vs.* Maryland (4 Wheaton, 316) it was ruled, (Chief Justice Marshall delivering the opinion of the court)—

> That if the end be legitimate and within the scope of the Constitution, *all means which are appropriate, which are plainly adapted to that end*, and which are not prohibited, may constitutionally be employed to carry it into effect. And that if a certain means to carry into effect any of the expressly granted powers be an *appropriate measure, not prohibited, the degree of its necessity is a question of legislative discretion, not of judicial cognizance.*

These high judicial interpretations, to which others might be added, are conclusive to show that it is in the discretion of Congress to determine what is appropriate, fit, proper, effective, to carry into execution an express power of the Constitution; that it has choice of the means to effect the end, only that the relation of the means to the end be appropriate and not forbidden; and that, when Congress applies its judgment and decides the appropriateness and adaptability and efficiency of the selected means, that means or measure becomes instantly constitutional. And this simple view, fortified as it is by the decisions of the Supreme Court and the uniform practice of the Government, I submit in all deference, is to a great extent an answer to the very able argument of the gentleman from Kentucky, [Mr ARTHUR.]

And now to apply this reasoning more specially to the commercial power as laid down in the Constitution.

The Constitution, article 1, section 8, provides in terms that—

> The Congress shall have power to regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

Now the extent of this power, vast and comprehensive as it is, has been settled in every conceivable aspect by the supreme judicial authority of the nation.

First. As to commerce with foreign nations. As to this branch of the commercial jurisdiction there is no diversity of opinion. The grant is unrestricted, is plenary and exclusive. It is entirely outside of State authority. (See Gibbons *vs.* Ogden.)

Secondly. As to commerce with the Indian tribes. This, too, is plenary in Congress and exclusive, not concurrent.

Thirdly. As to commerce among the States. And here, too, right reason and common sense and judicial construction have settled everything.

The very terms of the Constitution render certain beyond the possibility of a doubt the meaning of the framers of the Constitution, "commerce *among* the States," as to the phase. The word *among* indicates beyond mistake the meaning of this grant. *Among the States* palpably implies that more than one State was meant, that two or more States were meant, and consequently, when commerce, that is trade, intercourse, exists between two or more States, then the regulating power of Congress intervenes. "The word among," (says Chief Justice Marshall in Gibbons *vs.* Ogden) "means intermingled with a thing which is among others, is intermingled with them." And in the case of Gray *vs.* The Clinton Bridge Company, (Law Register for January, 1868,) it is ruled that the power of Congress over regulating commerce extends to transportation of passengers and merchandise, whether it is carried on by water or on land, or by steamboats or railroads. The question whether transportation by steamboats, which were unknown at the time of the adoption of the Constitution, can be regulated by Congress is

here definitely settled, and the same principle applies as well to the modern invention of railroads.

This case, though there are others like it, determines beyond controversy the extent of congressional jurisdiction over *interstate* commerce, leaving nothing doubtful. If a doubt could by possibility linger, it is wholly dissipated by a more recent decision of the Supreme Court in the case of the freight State tax, (12 Wallace, 232.) In this case the State of Pennsylvania imposed a tax upon freight carried by a railroad or other transportation company "doing business with the State of Pennsylvania." The court held that this was a regulation of commerce, and, being applied to interstate commerce, was an interference with the province of Congress, and therefore unconstitutional. The court said:

Beyond all question, the transportation of freight, or of the subjects of commerce, for the purpose of exchange or sale, is a constituent of commerce itself. This has never been doubted, and probably the transportation of articles of trade from one State to another was the prominent idea in the minds of the framers of the Constitution, when to Congress was committed the power to regulate commerce among the several States.

So that the question has been settled, both affirmatively and negatively, that the power of Congress to regulate commerce among the States extends to all commerce between more States than one, and whether carried on by railroad or other vehicles of transportation. But it may be said, and doubtless will be, that all this involves a dangerous expansion of the power of the Federal Government. Sir, that is not the question. The true and only question is, is it all in the Constitution? It unquestionably is there, and being there, there is no expansion of power whatever, only the exercise of conceded powers, and it is not to be presumed to be dangerous, because it is a most violent presumption that the wise and pure framers of the Constitution could have put into that great instrument the elements of dangerous authority.

But my State-rights friends here need have no apprehension as to any dangerous expansion of Federal powers from this source. There is a branch of State commerce, and an important one, too, that which is carried on by citizens of the same State—the neighborhood trade, it may be styled—which is left untouched by the Constitution and judicial construction. Said Judge Marshall:

It does not apply to commerce which is *completely* internal; which is carried on between man and man in a State, or between different parts of the same State, and which does not extend to or affect other States. * * * *The completely internal commerce of a State may be considered as reserved for the State itself.*

That, I humbly submit, suffices for State authority in the matter of commercial regulation. The States could not safely have a jurisdiction in the matter beyond this; and placed mostly in the hands of the national lawgivers, it is more safely and far more beneficially exercised than if left with the States. On this point experience lights our path. Under the old Confederation the States held individually the commercial power, and the consequence was continual rivalry to obtain commercial advantages for the ports and cities of the several confederate States, one with the other; and this conflict and rivalry led to constant commercial complications and interruptions and as constant strife, and inharmonious relations among the several members of the Confederation. The difficulty was solved by a demand for a new government, the present Constitution, by which the commercial power of the Union was transferred to a common head, the Federal Legislature, so that uniformity and concord in feeling might be secured; and secured they have pre-eminently been, with marvelous advantage to commercial prosperity and general grandeur. In other words, the States once had the power, and proved themselves unsuitable depositaries of it, and it was transferred to the present Federal Government, and a bright and all-glorious experience has evinced the wisdom of the transfer. There would be no wisdom in a change either by constitutional amendments or by the mutations of judicial decisions.

As to the policy of exercising at this time the regulating authority of Congress over railroads as instruments of commerce, it can scarcely be controverted that "now is the accepted time" to put it into execution—the peculiarly fit occasion.

It has become a universal concession that all the transport lines between the West and the East are wholly inadequate to move forward to the sea-board the vast bulk of western production. And it is as well known that in consequence of this inadequacy of the means of transportation and the exorbitancy of railroad charges, and the inappeasable rapacity of railroad monopoly, the farmers of the West have scarcely any surplus left from the charges of transmission to market, so much so that corn is often used for fuel. Then, has not the time come when it is the bounden duty of Congress to call into exercise its whole stock of power to provide remedy and relief?

The statesmen of the country are looking to the free and full expansion of western development as one of the great sources of American grandeur and prime agencies of national power. Congress, therefore, has a grave task to perform, a high responsibility to meet, in reference to this great—supremely national—measure of the regulation of railway transportation. If it let the bill reported by the Committee on Railways and Canals now before it fail, it will have adopted a dwarfing and anti-relief policy which cannot fail to elicit popular disappointment and dissatisfaction.

The bill, Mr. Speaker, which has been prepared by the committee seems, though the subject is a new one, to be well guarded in its provisions and admirably adapted to the great end it proposes. One feature of it in particular, the appointment of nine commissioners by the President, coming from and representing all sections, is a provision savoring of broad and generous nationality, which cannot fail to arouse—which is so much needed—a national and harmonizing spirit throughout the country. That this admirable provision of the bill will be executed with the best effect in the appointment of men as commissioners of the highest order of capacity, we have in the considerate temper and sound wisdom and honest patriotism and truly national spirit of President Grant an assurance on which the country can rely without a single misgiving.

I trust, Mr. Speaker, it will be the pleasure of the House to pass this bill, and to follow it up by making a liberal appropriation for the completion of the James River and Kanawha Canal, a work conceived by Washington and favored by the leading statesmen of the country since the foundation of our Government.

Centennial Exhibition.

SPEECH OF HON. J. W. STEVENSON,

OF KENTUCKY,

IN THE UNITED STATES SENATE,

March 3, 1874,

The Senate having under consideration the bill (H. R. No. 1394) in relation to the centennial exhibition—

Mr. STEVENSON said:

Mr. PRESIDENT: Could my sense of duty yield to the strong desire which I feel to oblige the two Senators from Pennsylvania, and many other valued friends in Philadelphia and elsewhere, who are deeply interested in this proposed international exhibition, I should take no part in this discussion. The vital and important questions, both of doubtful constitutional power, not less than of unsafe governmental policy, which the bill in my judgment involves, forbid me to be silent.

Besides, there is a personal matter which demands of me a word. I observe in the pamphlet which accompanies the President's message in behalf of this centennial exhibition the following statement:

The following States have passed resolutions calling upon their Senators and Representatives in Congress to lend their support to measures promotive of the success of the exhibition: North Carolina, Virginia, Kentucky, Tennessee, New Jersey, and New Hampshire.

If any such resolves have ever passed the Legislature of Kentucky they have not reached my colleague or myself. If the action referred to took place, it must have been at a period when the proposed international exposition was regarded as wholly a State enterprise, for which no appropriation by Congress was asked or expected.

Be that as it may, I am fully satisfied that our joint opposition to an appropriation of untold millions of the public money to the proposed Philadelphia exposition in 1876 will be fully approved by a large majority of the people of Kentucky, irrespective of party.

Indeed, so clear are my own convictions of the want of constitutional power to make such an appropriation, that I hesitate not to avow, that I should willingly resign my trust, rather than by my vote aid a measure which I think clearly unwarranted by either the letter or the spirit of the Constitution.

Let no one believe that I or the people whom I have the honor in part to represent in this Chamber are opposed to any appropriate celebration of the one hundredth anniversary of American independence.

No, sir; no. Very far from it! That eventful day will be celebrated throughout the length and breadth of the entire Republic. It will mark the first century of American constitutional liberty! Its very coming will be joyous; every American heart will be stirred by the gladdening memories which its advent will awaken of the great declaration which, one hundred years before, absolved the American Colonies from the shackles of English oppression. Celebrate it? Why, sir, to be sure we shall.

But how shall it be celebrated? I do not think any one State has a right to appropriate such a day to itself and ask that the Government should by pecuniary aid confine its celebration to one spot. I must also say that an international exposition has never seemed to me the most appropriate mode of such a celebration.

So long, however, as the plan and mode of its celebration were limited to private, individual, or corporate effort, Congress had no right to interpose any objection. Such has been the case in regard to the proposed centennial celebration at Philadelphia up to this time.

What is its history? Certain worthy and public-spirited citizens of Philadelphia, as early as 1870, conceived the project of an international exposition in that city in 1876, as a fit commemoration of the centennial anniversary of American independence. It was wholly a private undertaking. In 1871 application was made to Congress for the passage of an act incorporating these gentlemen as the centennial commission.

This act contained a flaming preamble, setting forth the near ap-

proach of the centennial anniversary of American independence in 1876, and the propriety of an international exposition at *Philadelphia*, as a fit commemoration of that day.

There was no pretense that it was sought to be made a Government undertaking, or that the United States were to become in any way responsible for the mode or manner of the proposed celebration.

Upon the contrary, the seventh section of the act expressly declared—

And the United States shall not be liable for any expense attending such exhibition, or by reason of the same.

By the eighth section it was provided, that when the President of the United States should be officially informed by the governor of Pennsylvania, that suitable provision had been made for the erection of all suitable buildings, he was authorized to issue his proclamation that the international exposition would be held at Philadelphia on the 4th of July, 1876, &c.

The act met with warm opposition. One of the strong arguments against its passage, was, that it was local and sectional, and that the celebration of such an anniversary should be *national* and not *international*, and that it should not be limited to a single locality.

I quote from the debate on the act of 1871. When the bill was taken up in the Senate on 22d February, 1871, after being reported from the Committee on Foreign Affairs by the Senator from Pennsylvania, [Mr. CAMERON,] its passage was opposed by several Senators:

Mr. CONKLING. Mr. President, there is one reason for the adoption of this bill this morning, and that is that the honorable Senator from Pennsylvania approves of it and wishes us to pass it; and seriously, this reason, with me, goes a great way. The honorable Senator knows how glad I should be to give my vote to anything which meets his approval. Nevertheless, I think this legislation ought not to occur at this time and in this way. I am not going to address to the Senate any argument promotive of the mere interest of locality, or of sectional wish, because I think such a subject as this is not an appropriate subject to be disposed of upon such considerations.

It is alleged in the city of New York that long before the thought occurred to those urging this measure the idea was suggested of a centennial celebration—

Not, sir, an international exposition, but a centennial celebration by the whole nation—

to commemorate the one hundredth birthday of the nation, to be held, not in Philadelphia, but in New York; and it is said by those in New York who have given attention to the subject that the idea was borrowed in Philadelphia. Whether this be so or not I care not now to stop and inquire, and I say to the Senator from Pennsylvania, in advance, that, were I able to cope with him in such an adventure, I would not engage in a game of chance or a scramble of activity to determine the question whether New York shall obtain an advantage over Philadelphia in such a matter, or whether Philadelphia shall obtain the advantage. I would rather address myself to arguments of a different character. If the city of New York, or the city of Saint Louis, or the city of Philadelphia, chooses to undertake a centennial celebration, in its own name and behalf, it is the business of the city undertaking it. Any city, or any body, incurring the trouble, expense, and responsibility, will deserve the glory of success or the discredit of failure, as the case may be. If, however, the United States are to stand sponsor, if the celebration is to be national, if it is to be held under the auspices of the Government, and patronized by the nation, then my honorable friend from Pennsylvania will agree with me that care should be taken to make it not only creditable, but to insure its being conducted in the best way.

Mr. CAMERON. If the Senator will allow me, I ask the Chair whether, under the rules of the Senate, I can object to the reading of that long paper, because if that is read I may as well give up the bill to-day. There are two or three columns.

The VICE-PRESIDENT. The Chair will answer the point of the Senator from Pennsylvania by reading the fourteenth rule:

"When the reading of a paper is called for, and the same is objected to by any Senator, it shall be determined by a vote of the Senate, and without debate."

Mr. CAMERON. I have no objection to its going on the record, but I do object to its being read now, so as to take up time.

Mr. CONKLING. I do not propose to have this letter read to consume the time of the Senate—far from it; and the objection can only drive me to reading it myself as part of my remarks; this I have a right to do. If he has any objection to the Secretary's reading it, of course he can compel me to read it; but I wish it read as part of my remarks. That right I believe every Senator has.

The time at which the celebration is proposed is more than five years distant. It is the 4th of July, 1876; and although I know that time and deliberation are necessary for its creditable consummation, I submit that there is no necessity for hasty legislation to-day, or during the nine days that remain of this session. If various plans had been considered, if the press and mind of the country had been active on the subject for even half a year, the case would be different. We should then very likely have before us the material out of which to form a discerning judgment and embody it in legislation. That, however, is not so. For, although the American Institute a long time ago made this suggestion, and although parties in Philadelphia some time ago made the suggestion also, and although the bill has found its way through the House of Representatives, it is not true that in the country at large it has been canvassed and ideas invited to any such extent as would be useful. In the brief time which has elapsed since the topic was brought to public notice, and notwithstanding the very rare instances in which it has elicited attention, a great many suggestions have been made in regard to it which have received no consideration, though they deserve attention.

I have in my hand a letter written by a distinguished citizen now abroad, a man of thought, who held high rank as a journalist for years at home, who represented the United States creditably at a leading foreign court, and who from Berlin has sent me the result of much reflection upon this subject. Being better than anything I could say, I ask that it may be read. It is a letter from Hon. John Bigelow, formerly our minister to France.

Mr. CAMERON. That right you have; and that will occupy the time.

Mr. CONKLING. I do not wish it to occupy the time; but the letter is important and instructive, and I feel it my duty to insist that if, by act of Congress, a celebration is to be held, the act shall be fairly considered, and that no locality shall be allowed to monopolize the occasion, unless for good reasons. This letter, I will say to the honorable Senator, makes the suggestion, among others, that instead of any one place being selected, several should be selected; and for this good reasons are given. I assure the Senator from Pennsylvania I do not want to occupy time unnecessarily; but I do not think he should ask me to allow his bill to escape consideration.

After some further objections the letter was read.

Mr. Bigelow, whose high character and residence abroad entitled his opinion to respect and consideration, did not favor an international exposition. I quote portions of his letter. Mr. Bigelow writes from Berlin on 14th December, 1870, to Mr. CONKLING. After referring gracefully to the event which marks the term of so memorable a political cycle, and the necessity of suitable preparations for its appropriate observance, he urges a celebration irrespective of political differences, or party dissensions under the auspices and direction of the Federal Government, or by the people acting through a national organization, in a mode the most universal, with the least displacement of the population.

Mr. Bigelow then continues:

Though I cannot presume to have thought of all or even of the most appropriate ways of commemorating the approaching centennial of 1876, yet I will name a few that have occurred to me to show the general character with which I think the memorial exercises of that occasion should be impressed.

First. At least one complete set of gold or silver current coins, with new devices commemorative of the day, should be struck off at the Mint for every citizen of the United States able and willing to pay for it.

Secondly. One of the eminent poets of our land, or all, should be invited to sing in enduring verse our national farewell to the departing century.

Thirdly. Every art should be laid under contribution for some appropriate memorial of the degree of excellence to which such art shall have attained, and with which it will begin the succeeding century.

Now listen, Mr. President:

Fourthly. Foreign nations might be invited to participate in the celebration in such way as should seem most fitting. At least the opportunity could be offered them of sending or withholding their congratulations upon the occasion, and thereby showing in what estimation we as a nation will be held abroad, and the nature of our relations with the rest of the world at that period. * * *

Fifthly. It is to be hoped and presumed that by 1876 no portion of the continent of America will be in colonial dependence upon any foreign power, but that we shall constitute one compact family of independent States under such form of government as shall best suit the people living under them, and all in friendly alliance with the United States. * * * *

Sixthly. Competent persons should be invited to prepare a series of histories by which to measure the progress and product of civilization in the United States for the expiring century.

The friends of the proposed exposition at Philadelphia would listen to none of these suggestions.

The bill was taken up again on the 23d of February. I quote what was then said:

Mr. CONKLING. I wish to move an amendment to the bill if a vote is to be taken on it. I move, in the first place, to add the city of New York. I understand the junior Senator from Pennsylvania to say that his idea is that it ought to be not in any one place but in more than one. I propose to test the sincerity of that suggestion by moving to add the city of New York.

Mr. SCOTT. I have no objection to New York celebrating the day as she sees proper, but not as a national matter.

Mr. THURMAN. But the question I should like to have some light on is, what kind of international celebration are you going to have? I presume the Government of the United States will have to foot the bill.

Mr. CAMERON. I shall say nothing except to say that the city of Philadelphia is determined to make this exposition a grand success. There is as much wealth in Philadelphia as there is among the same population, I believe, in any part of the world. They have as much pride about this *fair* as any people can have; they will give their means freely, and they will have a celebration that everybody will be proud of. We mean no disrespect to New York; New York can entertain a great portion of the vast multitude that will come to this grand international fair, and it will not interfere with her glory. I only rose to pledge my word that the people of Philadelphia, and it may be the people of Pennsylvania, will give their millions if necessary to make this exhibition creditable not only to Pennsylvania, but to the whole United States.

Mr. CONKLING. Then what do you want an act of Congress for?

Mr. CAMERON. They only ask an act of Congress to give it character.

Was not this an admission that it was local; that it was a private undertaking for a fair? The bill was taken up on the 25th of February, and the motion to insert "*and New York*" was rejected. Listen now:

Mr. SHERMAN. I do not think the Senator from Pennsylvania ought to be worried any more about this bill. It simply authorizes the people of Philadelphia, at *their own* expense, to have a *show*.

Mr. SUMNER. Who says that?

Mr. STEVENSON. The Senator from Ohio, [Mr. SHERMAN.] Still the Senator from Pennsylvania [Mr. SCOTT] insists that it is unjust to urge that this act of incorporation did not make this centennial exposition a national affair. Why, how could a celebration be regarded in any sense national, which, by the very terms of the act, excluded the President from issuing a proclamation, notifying the country that an international exposition would be held in 1876, until informed by the governor of Pennsylvania that suitable buildings had been erected?

Mr. SCOTT. The Senator will permit me to say that the language of the act is that suitable provision shall be made for their erection. It does not say that the buildings shall be erected before this proclamation shall be made.

Mr. STEVENSON. But that funds should be raised.

Mr. SCOTT. That the funds should be provided. At some other time I may have occasion to say that in good faith everybody believed the funds were provided at that time.

Mr. STEVENSON. The Senator and myself cannot disagree as to the condition-precedent on which the President was to act. I asked him yesterday if the funds requisite for the erection of these buildings had been provided. He replied that the commissioners had invited proposals for the plans of the proposed buildings, and had accepted a plan; they had also invited proposals for buildings, which had been received; but the Senator says, he understands that they are waiting to know whether this celebration is to be international or national in its character before they determine whether they can

accept any proposal. In other words, no provision has as yet been made for the buildings.

I come now to the second act.

Mr. CONKLING. Before the Senator leaves the first act, may I inquire of him whether, in traversing the debate, he has found that the reason for this act of Congress stated——

Mr. STEVENSON. I have already read what the senior Senator from Pennsylvania [Mr. CAMERON] said on that subject.

Mr. CONKLING. Did the Senator having the bill in charge state the purpose and object of it?

Mr. STEVENSON. Undoubtedly. Mr. CAMERON stated that the only purpose of the act was to give it character.

Mr. CONKLING. I speak now of the first act.

Mr. STEVENSON. Yes, sir.

I pass now to the history of the second act. The discussion during its progress proves still more strongly the local and private character of the corporate undertaking. It was approved on the 2d day of June, 1872. It is an act incorporating a private stock company, with a capital of $10,000,000, known as the centennial board of finance. Its object was to take charge of the Philadelphia centennial exposition, and by the agency of stock subscriptions to raise $10,000,000, which sum was deemed necessary for the success of the exhibition.

The company organized and went to work in 1872. We are informed by the junior Senator from Pennsylvania [Mr. SCOTT] that this board proceeded to apportion upon the population of the United States the amount which they believed each State ought to contribute in order to realize ten millions.

Was not this apportionment by the board on the States a strong argument that this exposition would, for its success, require an expenditure of at least ten millions? If not, why was the capital stock placed at that sum, and why did the board make a requisition on the States for ten millions?

The answer is easy, Mr. President. The board knew the exposition at Vienna had cost some twelve or more millions, and their estimates were based upon that cost.

Mr. SCOTT. Will the Senator allow me to state a fact to him?

Mr. STEVENSON. Certainly.

Mr. SCOTT. I desire at this point, not to interrupt my friend, but to get the facts before the Senate. I have had placed in my hands a letter written by one of the persons connected with this exhibition to Mr. Goshorn, the director-general of it, who states the actual expenses of the Vienna exhibition, and with the consent of the Senator I will read it.

Mr. STEVENSON. Certainly.

Mr. SCOTT. It is dated February 28, 1874:

MY DEAR SIR: In the papers brought from Vienna by Major Myers I find some information as to the finances of the Vienna exhibition later than that given in my report recently sent in. The balance-sheet to the 30th of November shows an outlay for the exhibition of 19,700,000 florins, about $9,800,000, which is rather more than has been previously reported. A sum of some 15,700,000 florins appropriated, or appropriated and received, it is not clear which, leaves a deficiency of 4,000,000 florins, which it was thought would be covered in part by the returns yet to be made from ticket agents at the railway stations and at the post-offices, and also by the proceeds of sales of the property.

Yours truly,

W. P. BLAKE.

A. T. GOSHORN, Esq.

The statement has been made on several occasions that the expenses were $17,000,000. I think there has been a confounding of the actual expenses in consequence of the statement about the florins instead of dollars. This is the most recent intelligence I have on the subject.

Mr. SARGENT. If the Senator from Kentucky will allow me a moment, I have information, I think from a still higher source, that the original appropriation by the Austrian government was 20,000,000 florins, or $10,000,000 in round numbers; that after a further expenditure of all the proceeds of the exhibition and all that was realized from the sale of the property there is a deficiency of some 15,000,000 florins, or $7,500,000, making a deficiency in all of $17,500,000; calling that a deficiency which was originally appropriated by the Austrian government. These are the figures which I gave yesterday, and I have the highest authority for their accuracy.

Mr. SCOTT. This letter is dated the 28th of February.

Mr STEVENSON. The bill was taken up on May 24, 1872, upon motion of the senior Senator from Pennsylvania, [Mr. CAMERON.] I quote what occurred:

Mr. POMEROY. If the bill is to be passed, as I suppose it is, I do not want to make any objection to it; but I must say that I do not think it is proper to set up a *corporation* in the city of Philadelphia that is not in the first place subordinated to the police authority of that city. These men can put the police at defiance under this act of incorporation. They may all be so good that they will not want to do anything of that *kind*; but I do not believe in incorporating an institution of this kind, with ten millions of capital, to go into any city.

Mr. HAMLIN. It will happen but once in a hundred years.

Mr. CAMERON. I have only risen to repeat what the Senator from Maine has said, that this will only happen once in a hundred years. Commissioners are selected from every State and Territory in the Union. They go there for the purpose of doing honor to their country.

Mark what follows. The Senator continues:

This is the only way in which the money can be raised without expense to the Government. A million of people, it is expected, will each subscribe ten dollars, and thus ten millions will be subscribed. It is necessary to have some responsibility for this. All they ask of the Government is that the Treasury Department shall print their certificates of stock, so that if they are counterfeited the counterfeiters may be punished. They ask nothing else of the Government. There is no doubt they will raise the money.

Is not this a voucher against any liability of the Government, either express or implied? Still this bill was opposed by Mr. Trumbull upon constitutional grounds, and most justly.

I quote a paragraph or two from what he said:

Mr. TRUMBULL. I do not know, then, by what authority the Congress of the United States incorporates gentlemen residing in every State and Territory of the United States, with authority to borrow $10,000,000, and to mortgage the property that they shall acquire in the city of Philadelphia in the way of buildings, &c., and requires the Secretary of the Treasury to issue bonds or certificates for them, under the seal of the United States I suppose—I do not know whether the seal is provided for or not—but they are to go on and put up buildings, and fix rates of charge, and make what money they can out of it, and when the great exhibition is over they are to divide the profits among them, whatever they may be. I do not know the clause of the Constitution that authorizes this; but I presume the authority is to be found in the Declaration of Independence. [Laughter.] I understand this relates in some way to the Fourth of July; and if my friend from Massachusetts [Mr. SUMNER] were here I have no doubt he would find the constitutional authority for this in the Declaration of the 4th of July, 1776, which of course would regulate a celebration on the 4th of July, 1876. Now, unless it is to be traced to that source of constitutional power, I really do not know where it is to be found.

And will the junior Senator from Pennsylvania [Mr. SCOTT] allow me just here to recall what he then said as to an express disavowal of all liability on the part of the United States?

Mr. SCOTT. I suppose the Senator from Illinois really desired more to occupy a few moments until the Senate would assemble than to make any serious objection to the passage of this bill. When the subject was first introduced in Congress it was feared that an appropriation would be asked. Everybody in both Houses was so sensitive on that question that an express disavowal of all responsibility on the part of the Government had to be incorporated in the act.

Mr. MORRILL, of Maine. Is that so?

Mr. SCOTT. That is so. Now, in order to make this national enterprise successful, some means must be adopted to carry out the end which the Government has already sanctioned by an act of Congress. When it was suggested that an act of incorporation by the State Legislature would accomplish it, the objection was at once raised in various quarters that that would localize it, and that the charge would be made that it was a local speculation. It was therefore deemed better that it should come to Congress, and that Congress, having already given its sanction to it as a national enterprise, could certainly exercise the necessary means to make that enterprise successful.

My colleague has already made all the constitutional argument that I propose to make on the question.

The act was then passed. Now, I submit that this enterprise was *private, corporate, and local;* that the Government never has been, and is not now, its sponsor; that neither of these acts—the one incorporating the centennial *commission*, or the other incorporating the centennial board of finance—could have been passed but for the assurance by the friends of the measure that the Government of the United States was in no way to become responsible for the exposition or for any of its liabilities.

Up to this time no obligation, direct or indirect, exists binding the Government of the United States to take part in this proposed exposition at Philadelphia.

Ten days ago, when the elder Senator from Pennsylvania attempted to take this bill up and pass it during the morning hour, I objected to its consideration without debate. That Senator was greatly surprised that any one should object to the passage of a simple bill like this, which asked not for the appropriation of a dollar. I then said, I feared the bill was but the entering-wedge for the appropriation of many millions. Now it is admitted that an appropriation of three millions—possibly ten—will be asked if this bill becomes a law.

A very simple bill, surely! An unpretending measure, which upon its face proposes to empower the President to extend an invitation to the governments of foreign nations to be represented and take part in the international exposition to be held at Philadelphia under the auspices of the United States in 1876, while its real object is to bind the Government to a future appropriation of millions of the public money! Why was not the object of the bill expressed upon its face? Why seek to pledge the faith of the Government to future appropriations of unlimited amounts without informing Congress of its true intent and meaning? Why, under the phase of a bill proposing one object, seek indirectly to accomplish another? I have great respect for the president of this centennial board of finance, and bear my willing testimony to his high character and worth as one of the leading public-spirited citizens of Philadelphia. I know personally the excellence of many other gentlemen connected with this enterprise. Far be it from me to do them injustice, or to cast the slightest reproach upon any of them. But I cannot hesitate to enter my protest against the mode and manner of this proceeding. It comes in a most unusual and questionable shape, and is stamped, I will not say with intentional, but certainly with actual, *indirection.*

This commission knew, long before the panic in September last, that all efforts to raise this required amount of $10,000,000 had proved, either by stock subscriptions or by donations, a signal failure. They knew as well in October as they know now, that an application to Congress for aid to their corporate enterprise would become necessary and would be made. Why did the board not make a frank and full *exposé* to Congress, and ask an appropriation of whatever amount of money they deemed necessary? Then their proposal would have been understood. It would have been referred to the proper appropriation committees, or to the Judiciary Committee to report upon the constitutional power of Congress to grant the relief sought. The whole subject would have, upon the coming in of these reports, been discussed in the Committee of the Whole in both Houses of Congress. Why, under color of an invitation to foreign nations, seek to avoid all the guards which our rules throw around the appropriation of public money? I confess I have heard no satisfactory response to

these questions. The disappointment of the commissioners to realize money, from the panic or any other cause, affords no reason for withholding from Congress that fact as soon as it was ascertained.

Besides, sir, this exposition is to be held under the auspices of a corporate commission, and not under "the auspices of Congress," as I have already shown by the debate. This exposition is not national. It is not a governmental undertaking.

But we are told that the honor of the Government is already involved in this exposition, and unless we come to the rescue, the proposed exposition will fail, and the United States will be disgraced. How disgraced? In what manner and to what extent can the failure of an international exposition, proposed and undertaken by a private stock corporation chartered by Congress, but with which the Government has no connection, and over the management of which it possesses *no control*, affect the honor of the United States?

The answer is, the President of the United States has already invited crowned heads to take part in this exposition, and the Government is thereby bound to see that there is no failure for the want of means.

If invitations have already been issued by the President to foreign nations, why the necessity of this modest bill?

Its advocates reply, that foreign nations regarded the communication by the Secretary of State, of the President's proclamation, as an invitation by and in the name of the Government of the *United States*, and that we cannot recede.

This reasoning is more specious than solid, as I think I can clearly show.

What are the facts?

The eighth section of the act creating the centennial commission, approved 3d March, 1871, provides—

That whenever the President shall be informed by the governor of the State of Pennsylvania that provision has been made for the erection of suitable buildings for the purpose, and for the exclusive control by the commission herein provided for, of the proposed exhibition, the President shall, through the Department of State, make proclamation of the same, setting forth the time at which the exhibition will open and the place at which it will be held; and he shall communicate to the diplomatic representatives of all nations copies of the same, together with such regulations as may be adopted by the commissioners, for publication in their respective countries.

The President, it will be seen, had no authority to issue this proclamation until informed by the governor of Pennsylvania that provision had been made for the erection of suitable buildings. The governor of that State did, upon 24th June, 1873, inform the President that provision had been made for the erection of said buildings.

Upon 3d June, 1873, the President issued his proclamation, as follows:

Whereas by the act of Congress approved March 3, 1871, providing for a national celebration of the one hundredth anniversary of the independence of the United States, by the holding of an international exhibition of arts, manufactures, and products of the soil and mine, in the city of Philadelphia, in the year 1876, it is provided as follows: "That whenever the President shall be informed by the governor of the State of Pennsylvania that provision has been made for the erection of suitable buildings for the purpose, and for the exclusive control by the commission herein provided for, of the proposed exhibition, the President shall, through the Department of State, make proclamation of the same, setting forth the time at which the exhibition will open, and the place at which it will be held; and he shall communicate to the diplomatic representatives of all nations copies of the same, together with such regulations as may be adopted by the commissioners, for publication in their respective countries;" and whereas his excellency the governor of the said State of Pennsylvania did, on the 24th day of June, 1873, inform me that provision has been made for the erection of said buildings and for the exclusive control by the commission provided for in the said act of the proposed exhibition; and whereas the president of the United States centennial commission has officially informed me of the dates fixed for the opening and closing of the said exhibition, and the place at which it is to be held:

Now, therefore, be it known that I, Ulysses S. Grant, President of the United States, in conformity with the provisions of the act of Congress aforesaid, do hereby declare and proclaim that there will be held, at the city of Philadelphia, in the State of Pennsylvania, an international exhibition of arts, manufactures, and products of the soil and mine, to be opened on the 19th day of April, A. D., 1876, and to be closed on the 19th day of October, in the same year.

And in the interest of peace, civilization, and domestic and international friendship and intercourse, I commend the celebration and exhibition to the people of the United States; and, in behalf of this Government and people, I cordially commend them to all nations who may be pleased to take part therein.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 3d day of July, 1873, and of the Independence United State ninety-seventh.

[SEAL.] U. S. GRANT.

By the President:

HAMILTON FISH,
Secretary of State.

It now turns out that the statement, that provision had been made for the erection of said buildings, communicated by the governor of Pennsylvania to the President of the United States, was unfounded in fact. No such provision had been made on the 24th June, 1873, and none such has been yet made. Of course we presume that the governor of Pennsylvania was imposed on. He owes it to himself and to the country to expose the authors of this imposition. I call attention to the fact, that the proclamation of the President contained no invitation to foreign powers to attend this exposition, and none that said exposition would be conducted under "the auspices of the United States."

The Secretary of State communicated, through our ministers and representatives abroad, the proclamation of the President. I quote the form of note sent by the Secretary of State to foreign ministers:

DEPARTMENT OF STATE, WASHINGTON, *July* 5, 1873.

SIR: I have the honor to inclose, for the information of the government of ——, a copy of the President's proclamation, announcing the time and place of holding an international exhibition of arts, manufactures, and products of the soil and mine, proposed to be held in the year 1876.

The exhibition is designed to commemorate the Declaration of the Independence of the United States, on the one hundredth anniversary of that interesting and historic national event, and at the same time to present a fitting opportunity for such display of the results of art and industry of all nations as will serve to illustrate the great advances attained, and the successes achieved, in the interest of progress and civilization during the century which will have then closed.

In the law providing for the holding of the exhibition, Congress directed that copies of the proclamation of the President, setting forth the time of its opening and the place at which it was to be held, together with such regulations as might be adopted by the commissioners of the exhibition, should be communicated to the diplomatic representatives of all nations. Copies of those regulations are herewith transmitted.

The President indulges the hope that the government of —— will be pleased to notice the subject, and may deem it proper to bring the exhibition and its objects to the attention of the people of that country, and thus encourage their co-operation in the proposed celebration. And he further hopes that the opportunity afforded by the exhibition for the interchange of national sentiment and friendly intercourse between the people of both nations may result in new and still greater advantages to science and industry, and at the same time serve to strengthen the bonds of peace and friendship which already happily subsist between the government and people of —— and those of the United States.

I have the honor to be, sir, with the highest consideration, your obedient servant,

Some time after this communication, the German Empire, Mexico, Ecuador, the Netherlands, and Hayti, communicated to the Secretary of State their acceptance of the invitation of the Government of the United States to take part in the proposed exhibition. So soon as the Secretary of State perceived that his communication was construed by the foreign powers into an invitation from the United States to attend the exposition, with a frankness that was commendable, he promptly wrote an explanatory letter, a portion of which I quote:

DEPARTMENT OF STATE, *November* 3, 1873.

To the Diplomatic Officers of the United States:

I regret to find that misapprehension has arisen in a certain quarter as to the meaning of the proclamation of the President of 3d July last, relative to the centennial exposition to be held in Philadelphia in commemoration of the independence of the United States. It is therefore deemed necessary to make the following communication for your information and guidance. It will be observed that the President in his proclamation has extended no invitation to foreign powers to participate in the exhibition. He was not authorized so to do; and while he desires to attract as much attention and interest as possible thereto, he carefully confines himself to "*commending*" the celebration of the centennial anniversary of American independence and the exhibition which is to be held in connection therewith to all nations who may be pleased to take part therein. It is presumed that you will not have failed to observe the guarded language of the President's proclamation, and the difference between it and that which would be used in extending an invitation to other powers.

I am at a loss to know how the faith or honor of the United States Government is up to this time at all connected with the failure or succe of this exhibition! This *contretemps*, arising out of the misconstruction by foreign powers of the President's proclamation into an invitation, was promptly corrected by the Secretary of State, and all these foreign potentates were officially advised that this exhibition was not an undertaking of the Government.

Now the pending bill proposes to change the nature and character of this proposed exposition, as hitherto expressed in its acts of incorporation, and make the Government its sponsor and paymaster. All this to be done by indirection.

Do Senators understand that by the express provisions in the secd act of incorporation it was provided that—

Nothing in this act shall be so construed as to create any *liability* of the United States, *direct* or indirect, for any *debt* or *obligation incurred*, nor for any claim, by the centennial international exhibition or the corporation hereby created, for aid or pecuniary assistance from Congress or the Treasury of the United States, in support or liquidation of *any debts* or *obligations* created by the corporation herein authorized.

Do they further understand that the pending act requires the President of the United States to invite foreign nations, and, in despite of Mr. Fish's explanatory note, to say that this exposition is to be carried on now "under the auspices of the United States?" If the bill passes, then the United States must provide the means to make it a success worthy of the New World.

There is too much of finesse and diplomacy in the new alliance proposed by this bill between this corporate enterprise for an international exhibition and the Government of the United States. Senators, do not be deceived. If it passes, and the proposed international exhibition takes place on the scale of magnificence contemplated by its friends, the Government of the United States will be called upon for five, and perhaps ten million dollars, and possibly more.

The Vienna exposition is said to have cost more than twelve millions, upon an original estimate of ten. Is ours to cost less? Are materials and labor cheaper in the United States than in Austria? Is the experience of Philadelphia, in the inauguration of such exhibitions, greater and more extended than that of foreign powers? Pass this bill as it is, and no one can now predict the amount of ultimate expenditure. All estimates of the cost of this exhibition are, and necessarily must be, at this time, purely conjectural. There are no data on which we can approximate it. What are the buildings to cost? What are the decorations and arrangements of the grounds to cost? What are the estimated general expenses of carrying on this exposition? What estimates for contingencies? We have been furnished with no answers to any of these pertinent inquiries. How much has been reliably subscribed? We hear of a subscription of a million by Pennsylvania; but that is hedged in by many contingencies, and clouded by so many doubts of constitutional power, that it is extremely unreliable as a subscription.

The senior Senator from Pennsylvania [Mr. CAMERON] says they only want three millions. How can he tell what they want until they ascertain the entire ultimate cost? That Senator once told us, that this centennial commission would never ask Congress for anything but a charter of incorporation and the engraving of their certificates of stock. He sincerely believed what he said; but results proved that he was mistaken. So it will be again. They ask Congress to give them three millions. The honor of the Government will, if Congress embarks into this business at all, require the expenditure of all the money necessary to make it a success. That may be ten, fifteen, or twenty millions.

This international exposition at Philadelphia does not touch the popular heart. It is an incongruous and unsuitable observance of this great centennial anniversary. It is mixing dollars and cents with the gratitude and patriotism which the advent of this great era in our American calendar awakens in every American heart.

Is Congress, in view of the nation's pecuniary embarrassment, with a deficiency of forty-four millions in our annual receipts, willing to give five, or even three, millions to this private enterprise? We have been compelled to cut down the Army and Navy, and to reduce the expenses in every Department of the Government. Increased taxation, or new loans, in time of profound peace, boldly confront us. The ordinary expenditures of the Government exceed three hundred millions per annum. The chairman of the Finance Committee of the Senate [Mr. SHERMAN] tells us that the United States public buildings in the several States, already commenced and under construction, so much needed by the public interest, may be required to be suspended, in view of our financial condition; and yet we are asked to contribute untold millions to a private corporate undertaking for an international exposition in Philadelphia, two years hence, whose corporators, by the very terms of the charter, are exempt from personal liability. If the Government appropriates three or five millions, the money is that moment beyond all Government control as to its expenditure; and touching which, their charter of incorporation declares in its tenth section:

And provided further, That no member of said centennial board of finance assumes any personal liability for any debt or obligation which may be created or incurred by the corporation authorized by this act.

But I desire to ask whence the power to pass this bill? Admit the high character of the corporators; concede, if you please, the patriotic object contemplated by this centennial board of finance. Under what clause of the Constitution can Congress make any appropriation? If under any express power, let it be designated. If not express, is it incidental? The ancillary power must always be subordinate to and limited by the end proposed to be attained by the specific grant of power. Of what express power is this the incident? The junior Senator from Pennsylvania [Mr. SCOTT] tells us he is willing to rest the question of power upon that clause of the Constitution cited by his venerable colleague, [Mr. CAMERON,] in 1872, when this act of incorporation was opposed by the then Senator from Illinois, (Mr. Trumbull,) who utterly denied that Congress had any constitutional authority to make that enactment.

I was absent from the Senate at the time of that debate. If I had not been, I should have voted against the bill. I am not aware that the Senator from Pennsylvania [Mr. CAMERON] cited or relied on the Constitution.

Mr. SCOTT. Yes; I am sure he did, for I well remember it.

Mr. STEVENSON. I beg the Senator's pardon. I find on looking over the Globe that he is right. The Senator [Mr. CAMERON] did, on that occasion, say:

A friend near me has just put in my hand the Constitution, which contains one clause, that we all understand perfectly well, that gives us the power. It provides that "Congress shall have power to lay and collect taxes, duties, and excises"—we do not ask anything under that—"to pay the debts and provide for the common defense and general welfare of the United States." All we require is under this last phrase—provide for the general welfare of the United States.

It is not the first time that this sweeping clause has been cited and relied upon for the exercise of a doubtful and dangerous power under the Constitution. Its proper punctuation, its true grammatical construction, and the extent of power delegated by it to Congress, have for more than eighty years been the subject of great conflict of construction by the most able, eminent, and patriotic statesmen. As early as 1791 it divided the country into two opposing schools of politics. It has been the battle-field upon which the advocates of a strong government and the friends of State rights have met in many a well-contested conflict of intellectual interpretation, with somewhat varying results.

The consolidationists maintained with great earnestness, that the words, "to lay and collect taxes, duties, imposts, excises," conferred one distinct, substantive grant of power to Congress, while the words "to pay the debts and provide for the common defense and general welfare of the United States" conferred another substantive power wholly independent of the first; and that the clause, therefore, contained two express powers of legislation, wholly independent of each other. Upon the other hand, the advocates of a strict construction, or of a limited government of enumerated powers, zealously insisted that the only delegation of power in this clause was "to lay and collect taxes, duties, imposts, and excises," and that its exercise was qualified and restricted by the words "to pay the debts, and provide for the common defense and general welfare of the United States." They maintained that the true intent and meaning of the clause, required the supplying of the words "in order," which are necessarily implied in this interpretation. The clause will then read:

"Congress shall have power to lay and collect taxes, duties, imposts, and excises," in order "to pay the debts, and provide for the common defense and general welfare of the United States."

Mr. Jefferson and Mr. Madison, with the statesmen of that school, insisted, that the power to lay and collect taxes was limited to the payment of debts of the United States, and a provision for the common defense and general welfare. But they further *maintained*, with a power unanswered to this hour, that the power of Congress under this clause was further limited by the enumeration of specific powers in the subsequent part of the same section.

This conflict of construction would obviously lead in its results to immeasurable difference between the Constitution limited in its power to the enumerated objects and expounded as it would be by the import claimed by both Senators from Pennsylvania and other advocates of a latitudinal construction of the phrase in question.

Mr. Madison says:

The difference is equivalent to two constitutions, of characters essentially contrasted with each other; the one possessing powers confined to certain *specified cases*, the other extended to all cases whatsoever. For what is the case that would not be embraced by a general power to raise money? A power to provide for the general welfare, and a power to pass all laws necessary and proper to carry these powers into execution; all such provisions and laws superseding at the same time all local laws and constitutions at variance with them. Can *less be said* with the evidence before us, furnished by the journal of the convention itself, than that it is impossible that such a Constitution as the latter would have been recommended to the States by all the members of that body whose names were subscribed to that instrument?—*Writings of Madison*, volume 4, page 128.

Mr. Madison was a member of the convention, and so active in its deliberations as to have earned for himself the title of the "Father of the Constitution."

Mr. Jefferson was equally emphatic in his concurrence that the words "for the common defense and general welfare" were a qualification and limitation, not only upon the power to lay taxes, but also upon the appropriation of the money when raised to national objects of "common defense and general welfare."

Hear him:

To lay taxes to provide for the general welfare of the United States, is to lay taxes for the *purpose* of providing for the general welfare. For "laying of taxes" is the *power* and "the general welfare" the purpose for which the power is to be exercised. Congress are not "to lay taxes" *ad libitum* for any purpose they please, but only to pay the debts and provide for the welfare of the Union. In like manner they are not to do anything they please to provide for the general welfare, but only to lay taxes for that purpose.

To consider the latter phrase not as describing the purpose of the first, but as giving a distinct and independent power to do any act they please which might be for the good of the Union, would render all the preceding and subsequent enumerations of power completely useless.

Any other construction would render all the preceding and subsequent enumerations of power useless. It would reduce the whole instrument to a single phrase, that of instituting a Congress with power to do whatever would be for the good of the United States; and as they would be sole judges of the good or evil, it would be also a power to do whatever evil they pleased. It is an established rule of construction, where a phrase will bear either of two meanings, to give that which will allow some meaning to the other parts of the instrument, and not that which will render all the others useless. Certainly no such universal power was intended to be given to them. It was intended to lace them up strictly within the enumerated powers, and those without which, as means, those powers could not be carried into effect.

Mr. Monroe, in his message of the 4th of May, 1822, insists that the power "to lay and collect taxes" is confined to purposes for "the common defense and general welfare," and, what is more important, that the power of appropriation of the money thus raised is coextensive with that power, and can only be applied to purposes and objects clearly for the common defense and general welfare.

Judge Story concurs with these distinguished statesmen, and says:

It is the truest, the safest, and the most authoritative construction of the Constitution. While the former construction has been maintained by some minds of great ingenuity and liberality of views, the latter has been the generally received sense of the nation, and seems supported by reason at once solid and impregnable.—*Story on the Constitution*, § 908.

Now, how can this appropriation be sustained under this power to lay and collect taxes, duties, excises, and imposts?

Judge Story says:

A power to lay taxes for any purpose is a general power; a power to lay taxes for certain specified powers is a limited power. A power to lay taxes for the common defense and general welfare of the United States is not in common sense a general power. It is limited to those objects. It cannot constitutionally transcend them. If the defense proposed by a tax be not the common defense of the United States, if the welfare be not general, but special or local, as contradistinguished from national, it is not within the scope of the Constitution.—*Story on the Constitution*, § 922.

Who can state that the corporate object of this proposed international exhibition, over which the Government has no control, is for the general welfare? Who will deny that it is local and not national?

Senators, we should heed the construction of the Constitution as expounded by Jefferson, Madison, Nicholas, and their compeers. Their ability and patriotism have never been questioned. It may be unfashionable at this day to announce that I am a humble but faithful adherent to the political doctrines of that school.

The resolutions of Virginia in 1798 were called forth by congressional enactments deemed utterly subversive of all the *limitations* contained in the Constitution. Mr. Madison's report in defense of those resolves followed in 1799. Those memorable State papers have been assailed, derided, ridiculed, and denounced. So have been the doctrines of a higher than human revelation. But I hesitate not to de-

clare, as the conviction of my judgment, that had the construction of the Constitution proclaimed in Madison's report been rigidly adhered to, we should have been spared many of the trials of the past, and delivered from many of the dangers which now threaten to annihilate the States and subvert our federative, duplicate structures into an unlimited consolidated government.

As early as January, 1794, this clause was relied on for a donation by Congress of money to foreign refugees. Upon that day a memorial of the relief committee of Baltimore, for the relief of San Domingo refugees, was presented to the House of Representatives.

Mr. Madison rose and said—

That the Government of the United States is a definite Government, confined to specified objects. It is not like the State governments, whose powers are more general. Charity is no part of the legislative duty of the Government; it would puzzle any gentleman to lay his finger on any part of the Constitution which would authorize the Government to interpose in the relief of the San Domingo sufferers. The report of the committee, he observed, involved this constitutional question: whether the money of our constituents can be appropriated to any other than specific purposes? Though he was of opinion that the relief contemplated could not be granted in the way proposed, yet he supposed a mode might be adopted which would answer the purpose without infringing the Constitution.

Mr. NICHOLAS concurred in sentiment with Mr. Madison. He considered the Constitution as defining the duty of the Legislature so expressly as that it left them no option in the present case.

Mr. BOUDINOT supported the question on constitutional grounds. He instanced several cases which had occurred and might occur, in which relief must necessarily be granted, and that without occasioning any doubt of the constitutionality of the business, such as granting pensions, affording relief to the Indians, supporting prisoners, &c. He alluded to the circumstance of the alliance between the United States and France, the connection between the citizens of the United States and that country, &c.

Mr. DEXTER stated sundry objections from the Constitution. It will not be pretended, he supposed, that the grant of moneys, on this occasion, was for the general welfare; it is merely a private charity; he was in favor of going into a committee on the subject.

Mr. MADISON in reply to Mr. Boudinot, who had stated several cases as in point, observed that those came within the law of nations, of which this Government has express cognizance; the support of prisoners, in a case provided for by the laws of nations; but the present question, he remarked, could not be considered in any such point of view.—*Elliott's Debates on Federal Constitution*, 1788 to 1836, volume 4, pages 441, 442.

Mr. President, I am only surprised that my friend, the Senator from Pennsylvania, [Mr. SCOTT,] whom we all know to be so good a lawyer, should rely upon that eighth section of the first article of the Constitution of the United States in support of the constitutional power of Congress to make this appropriation.

Mr. SCOTT. Will my friend permit me to plead in excuse—as he just stated that he follows Thomas Jefferson and James Madison—that I may have been misled by the apostles whose disciple he is? I find in the second volume of the Statutes at Large, page 730, this very brief act; and it applies particularly to the argument that has just been read about the power of the United States to appropriate money for charitable purposes:

That the President of the United States be, and he is hereby, authorized, to cause to be purchased such provisions as he shall deem advisable, and to tender the same, in the name of the Government of the United States, to that of Venezuela, for the relief of the citizens who have suffered by the late earthquake.

SEC. 2. *And be it further enacted*, That a sum not exceeding $50,000 be, and the same is hereby, appropriated, to be paid out of any moneys in the Treasury not otherwise appropriated, to carry into operation this act.

This act was approved May 8, 1812, when James Madison was President of the United States.

Mr. STEVENSON. The Senator form Pennsylvania replies to the reasoning of Mr. Madison by the citation of a precedent in an act of Congress appropriating $50,000, in 1812, to the citizens of Venezuela, who were then suffering from the effects of an earthquake. The Senator well knows the power to pass that bill was drawn from express grants to Congress in the Constitution, as Mr. Madison expressly said in the debate on the San Domingo claim, and not from the common defense and general welfare clause, upon which the Senator relies for power to pass this bill.

My friend asked me, too, if I had not offered a resolution at this session of Congress for the purchase of *marble busts* of Roger B. Taney and Salmon Portland Chase, to be placed in the court-room of the Supreme Court of the United States. Most certainly; and I rejoice to know that this tribute to the memory of those eminent jurists is soon to be an accomplished fact. Does the Senator desire to know whence this constitutional warrant for that appropriation? The same which authorizes Congress to build this Capitol, and supply and provide accommodations for the various departments of the Government in the discharge of their public duties.

The Constitution creates the Supreme Court of the United States, and it empowers Congress, "to constitute tribunals inferior to the Supreme Court."

Congress has exclusive jurisdiction in all cases whatsoever over such district as now is or which shall hereafter become the seat of government, by the cession of the States and the acceptance of Congress, not exceeding ten miles square, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and *other needful buildings*, and to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by the Constitution in the Government of the United States or in any department thereof.

Congress is therefore expressly clothed with this power, both to build and furnish all suitable rooms for the several departments of the Government, and the mode of doing so is exclusively intrusted to its discretion. So, too, the authority to grant pensions and medals to the officers of the Army and Navy for distinguished services, rests as an incident to the express power, to raise and support armies; to provide and maintain a navy; to make rules and regulations for the government of the land and naval forces.

Precedents of questionable legislation and of doubtful authority, are, I admit, to be found in past congressional legislation. Their past occurrence does not diminish their mischief. Precedents may evidence, but do not sanction at any time, a violation of the Constitution of the United States. The unyielding exactions of that instrument, are, like the divine ones from Mount Sinai, constant and continuing commands which no Congress should disregard.

Congress voted money to the sufferers by fire at Alexandria many years ago, and again, at a more recent period, to sufferers from the same cause at Portland; while the last Congress refused aid to the sufferers by the Boston fire for want of constitutional authority.

Precedents at all times are but shifting and unsafe standards of the boundaries of constitutional power in a Government like ours.

The debate on this centennial charter, in the past, not less than in the present application, for aid to that exhibition affords a striking illustration of their mischief. I have already cited the protest of the distinguished jurist, Mr. Trumbull, then a Senator from Illinois, against the unconstitutionality of the act of Congress incorporating the centennial commission for want of constitutional power. He feared it as a precedent.

Allow me now to verify the realization of that fear, by quoting for the benefit of my friend from Pennsylvania [Mr. SCOTT] a portion of that debate:

Mr. SCOTT. I do not *think* that there is even *any danger* of this being drawn on *as a precedent* that will startle the Senator from Illinois upon any other occasion, for it will not again be called for, as the Senator from Maine remarked, for a hundred years, and then it will not disturb the Senator from Illinois.

Mr. FERRY, of Connecticut. But it is a precedent for chartering a corporation, and may be drawn into a precedent for any kind of corporation in any State; and all such precedents take their origin in something good.

This warning of Connecticut's able and faithful Senator was disregarded and the act passed.

Had the behests of the Constitution been upheld by refusing the act of incorporation, which the Legislature of Pennsylvania was fully empowered to enact, our duty had been well performed.

Failing in that, the doubtful exercise of constitutional power on that occasion is now urged within the period of two years as a precedent for a more fearful and fatal infraction of that instrument. We are now told that the act incorporating this centennial commission—in despite of the express disavowals of governmental connection therewith—by authorizing the President to proclaim to foreign powers that the exposition would be held, commits the Government to the enterprise, and the honor of the Government requires the supply of all the money to make this exhibition a success. So much for precedents.

Senators, if Congress have power to create within the States artificial bodies and clothe them with certain powers of selling stock and holding property, free from individual liability, and as national enactments, above State control, over which the Federal Government has placed no limit, where is the power to end? The authority to create a United States bank, in former days, was placed on the ground that it was a necessary agency of the Federal Government within one of the express grants of the Constitution. No such claim is set up here. Congress creates this corporation in Philadelphia with a capital of ten millions. To-morrow you may erect others in the heart of the several States with land or stock as their capital. How long before the jurisdiction of the States will be absorbed by such corporations? If you can in this case exempt this centennial corporation from individual liability on its contracts, why may not Congress extend it indefinitely? Can it be imagined that a power so vast would have been left by the framers of the Constitution to doubtful inference? Hear Mr. Jefferson on this precise point. In a letter to Mr. Livingston, dated Philadelphia, April 30, 1830, he says:

The House of Representatives sent us yesterday a bill for incorporating a company to work Roosewell's copper mines in New Jersey. I do not know whether it is understood that the Legislature of New Jersey was incompetent to do this or merely that we have concurrent legislation under the sweeping clause. Congress are authorized to defend the nation. Ships are necessary *for defense*; copper is necessary for ships; mines are necessary for copper; a company is necessary to work the mines; and who can doubt this reasoning who has ever played at "This is the House that Jack Built!" Under such a process of filiation of necessities this sweeping clause makes clean work.—*Jefferson's Works*, volume 4, page 329.

Where is the limit if this bill passes? Other States and other cities will desire congressional appropriations to aid them in the celebration of our approaching centennial.

Should Virginia—whose eloquent son sounded the first note of freedom in her own House of Burgesses by the defiant utterance, "Give me liberty, or give me death," whose echo as it rang aroused the tocsin of resistance in every patriot's heart throughout the Colonies—should that venerated and venerable old Commonwealth, upon whose soil at Yorktown, on October 19, 1781, England finally succumbed and the sword of Cornwallis passed to Washington, ask you for an appropriation to celebrate the great centennial, how could Congress, after the passage of such a bill as this, refuse?

And then, too, Boston—with her eternal and glorious memories of Bunker Hill, Concord, and Lexington, where colonial valor struck from the mailed breastplate of English oppression the first living sparks of American liberty—how will you deny her claims to celebrate this glorious centennial?

New York, too—the great, the free, the glorious empire capital of the Republic, so full of revolutionary conflicts, hardships, and triumphs; the theater where the Constitution was adopted, where the first Congress sat, and where Washington was inaugurated—have not the Empire State and the Empire City claims as strong as those of Philadelphia, if Congress determines to embark generally upon appropriations for the celebration of this great centennial?

One appropriation to one corporation in one State, and where is the limit? One such precedent, and where can Congress stop? And yet gentlemen tell us this is a small affair. I tell you, Senators, it is anything else. Three, five, or ten millions of the public money is no small affair in the present condition of the monetary affairs of this Government. Increased taxation stares us in the face.

Kentucky has paid in internal-revenue taxes alone within ten years past $60,915,800.32, and within the past five years $35,253,130.90; Missouri is only a shade behind Kentucky, having paid in the past ten years $58,142,142.04. Both these States suffered in the loss of property during the war to the amount of millions, and both have just and unpaid claims for property seized and used by the Government to the amount of several millions more.

How can such justice be done? New York has paid during the past ten years an internal-revenue taxation of $403,960,219.51, Ohio during the same period has paid $169,915,839.37, and Massachusetts has paid $159,930,259.88, out of an aggregate taxation during the same time of $1,716,126,906.08. Under what plea shall such large tax-paying States pay tribute to this Philadelphia centennial commission, in which they have no immediate benefit?

I honor Philadelphia, with all her revolutionary memories. I venerate her enlightened philanthropy and her noble charities. I am proud of her prosperity and her public spirit. I know of her boundless hospitality. I recall the heroic and calm opposition by some of her orthodox statesmen to the recharter of the Bank of the United States, although located in Philadelphia, as not justified by the Constitution.

I desire and hope that this centennial exhibition shall be a brilliant success. Pennsylvania and Philadelphia can make it so; but I cannot consent that it shall become so at the expense of a violated Constitution.

Congress are trustees as well as custodians of the public Treasury. The Constitution is the power of attorney which limits their trust powers.

Senators, permit no impulse, interest, or passion to lead you beyond the letter or spirit of that instrument. We are all fallible. That charter was ordained by our fathers. They were wise, prophetic, far-seeing statesmen. They understood the work of their own hands. Its limitations and guarantees were intended bulwarks against the violence of party and the encroachments of power. They desired to place liberty on sure, solid, and lasting foundations. Let their sons never dishonor their memories by desecrating their work.

If the institutions of America ever perish, their downfall will be justly traced to our disregard of the barriers of the Constitution which its founders intended as the perpetual intrenchment of civil and political liberty.

Improvement of Galveston Harbor—Its Connection with Cheap Transportation.

SPEECH OF HON. ASA H. WILLIE,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

March 17, 1874,

The House, as in Committee of the Whole for debate only, having under consideration the bill (H. R. No. 1385) to regulate commerce by railroad among the several States—

Mr. WILLIE said:

Mr. SPEAKER: My purpose in seeking the floor is to offer some remarks upon a measure which deeply interests a large portion of two important and rapidly growing sections of this Union, the West and Southwest; I allude to the improvement of the harbor at Galveston, Texas. No measure having this improvement in view claimed the attention of Congress during the many years which elapsed between the date of the annexation of Texas and the late war between the sections. Galveston during that time was a city of small pretensions; her commerce insignificant and unproductive to the Government. Texas was, in population, one of the smallest of the United States, and her facilities for internal transportation limited and of a primitive character. The productions of no other State sought through her harbors an outlet to the sea; and for want of suitable approaches to her gulf-coast a large portion of the State found egress for its productions and ingress for its supplies through the ports and navigable waters of a sister State. But since the war Galveston has steadily and constantly increased in size and commercial importance until it has become a city of thirty-five thousand inhabitants, and eighth in importance of the exporting points of the Union. Texas has taken high rank in productions and population. Railroads have been constructed, until more than one thousand miles of them concentrate their ultimate termini at that city, and a vast section of the great grain-growing West through them and their connections finds its nearest and cheapest outlet to the sea through this our most important port on the Gulf of Mexico west of the Mississippi River. The wonderful present and magnificent future of our port, our State, and those States and Territories which seek through Galveston an outlet to the sea, when compared with their unimportant commercial past, render the improvement of Galveston harbor a matter of unusual interest. And when we take into consideration the fact that cheap transportation is the great absorbing question of the day, and that the section of the Union to which these States and Territories belong, in common with their sisters of the Northwest, are earnestly demanding of Congress that they shall not be excluded from the markets of the world by reason of ruinous freights and tolls, every measure which, like this, tends to reduce such charges, becomes of the highest interest, and addresses itself to this House with more than ordinary force.

Now, sir, let us see what steps have been taken by the General Government toward improving the approaches to Galveston from the sea, and what further improvement is demanded, the means by which it is proposed to be accomplished, the importance, necessity, and justice of the measure, and the reasons why it should receive immediate attention.

Congress first turned its attention to this matter in March, 1867, when it directed plans and estimates to be made of the most practicable and effective mode of improving the harbor and erecting a suitable breakwater. On the 11th of July, 1870, $25,000 were appropriated by Congress for the improvement of this harbor, and the Secretary of War was required to cause examinations or surveys to be made from the outer bar up to Red Fish Bar, on or nearest to the west shore, with a view to an improvement. Nothing seems to have been accomplished by reason of these acts of Congress, the money appropriated being used principally in building dredge-boats for use upon the inner bar and a bar within the harbor known as Red Fish bar. On the 10th of June, 1872, Congress appropriated $31,000 for this harbor, and in pursuance of its directions the Secretary of War placed Captain C. W. Howell, of the United States Corps of Engineers, in charge of the work, with directions to make a survey and report as to the feasibility of making a permanent improvement of the harbor and its immediate approaches from the sea. The object was to furnish data for a general plan for obtaining eighteen feet of water on both the inner and outer bars and for forming estimates of the probable cost of the same. Captain Howell proceeded at once to the discharge of this duty, and with the assistance of other competent engineers made a thorough survey, and based upon its result a plan of improvement which has received the approval of a board of scientific engineers appointed to examine it, and which commends itself to the good sense of every person who will give it an intelligent examination. Captain Howell's report marks him one of the most promising of young engineers; and his plans, if adopted and applied to other bars of a similar nature, will furnish an economical and ready means of opening other harbors, which have heretofore been in a measure closed to the commerce of the world, because no design of a practical nature for their improvement had been devised. This plan was reported to the War Department, and was by the Chief Engineer submitted to a board of three scientific and learned engineers, who in conjunction with Captain Howell were directed to examine and report their views upon it to the Department. This board indorsed with some exceptions all the suggestions of Captain Howell, and so reported to the Chief Engineer. These reports have been sent to Congress by the Secretary of War, and as each member can examine them for himself I do not propose to dwell at any great length upon their details. I shall only allude to them so far as may be necessary to enforce the main object of these remarks, namely, the propriety, policy, and necessity of an appropriation sufficient to carry out the plans proposed and commensurate with the great objects to be attained.

By reference to a map of the coast of Texas it will be seen that the island upon which Galveston is situated has its eastern extremity, known as Fort Point, opposite to Bolivar Point on the mainland. Between these two points is the only entrance for vessels from the Gulf into Galveston Harbor and Bay. Now, there are two obstructions to the commerce of Galveston. The one known as the "outer bar" is found just outside those points, in the direction of the Gulf; the other, called the "inner bar," is just within the entrance and between it and the city of Galveston. Between these bars, on the line of water travel, is Bolivar Channel, some forty feet in depth, and at the city extremity of the inner bar is a channel of sufficient depth to float vessels of the largest draught. Over these bars the depth of water at mean tide is not more than twelve feet. This depth over the outer bar extends for a distance of seven thousand and forty-one feet, and over the inner bar five thousand feet. The flow of water over these bars is unaffected by the current of any river whatever. Galveston Bay, which finds its outlet between these headlands, receives the waters of only two streams of any size, the San Jacinto and Trinity Rivers, and their mouths are thirty miles from the outer bar. The sediment brought down by these streams is deposited at the head of the bay, and hence we find no such matter entering into the formation of these bars. On the contrary, a perforation of them to the depth of sixty feet proved that they were composed of quicksand with some slight ad-

mixture of small shells, light and easily moved by the tides and currents.

The problem to be solved by the engineer in charge was how to control these shifting sands so that a depth of six feet of them at least should be removed permanently from the channels across these bars. It was evident that no amount of dredging could effect this object. The same causes which placed these sands there originally, and retained them in their places for years, would restore them after their removal, though the dredging should extend to the blue clay sixty feet below. But one method seemed to insure success, which was so to control the waves and currents that they should be made to remove and keep removed a large portion of the sandy deposits upon the bars. The engineer proceeded to ascertain the range of the tide, and the force and direction of the water currents into and out of Galveston Bay and along the shore of the Gulf, and the course and velocity of the winds at that point. He marked the changes which had occurred in the shore lines, bars, and channels for the last thirty years, and easily traced them to the influence of the winds, tides, and currents, as found to exist at the date of his investigation. One or two noticeable facts in reference to these changes may well be mentioned. The inner bar did not exist in 1841, at which time there was a depth of thirty feet of water where it is now situated. It continued to shoal from 1843 down to 1867, until at the latter date it had only nine feet of water upon it.

The outer bar had, with some temporary exceptions, the same depth of water during all that time; but its location had been removed since 1841 farther toward the Gulf. Four channels had in time existed over the outer bar, but one, nearest and along the line of Galveston Island, had entirely disappeared. Another, along the mainland east of the island, had become very shallow. One of the intermediate channels, known as the Cylinder Channel, which crosses the bar directly, had moved its axis a little north of its original position, and the curved channel between it and Galveston Island had shifted its axis in a contrary direction. These movements had been continuous and were still in progress. The northeast point of Galveston Island (Fort Point) had moved twelve hundred yards westward since 1841, and Bolivar Point, opposite, had advanced in a corresponding degree. Other changes had occurred, but they will not be noticed, as they can best be studied from the charts, and a knowledge of them is not necessary to my present argument.

The engineer also found that the annual range of tide was about six feet, and its daily range varied from fifteen hundredths to two and nine-tenths feet; that the east and southeast winds poured a flood of water into Galveston Bay, and the north and northwest winds depleted it; that easterly and northeasterly winds produced a littoral current in the Gulf carrying drifting sands to the west; and westerly, south, and southwesterly winds reversed this current, and carried the suspended sands in an opposite direction. He concluded that the outer bar must have been formed by this drift, and its shape given by the ebb and flood tide through the entrance to Galveston Bay. The scouring process by which the channel was maintained at its depth of twelve feet so many years, notwithstanding the deposits of the littoral currents, was due to the ebb-tide, assisted frequently by the force of the northers which prevail along this coast, and which drive the waters of the bay seaward with great velocity, and consequently with remarkable scouring effect upon the bar. In fact there seemed to be a constant war between the opposing forces of the littoral currents and the ebb-tides, the one depositing sand and the other removing it; and in the course of forty years this contest had not resulted in any decided or continued success either in deepening or shoaling the outer bar, and, uncontrolled by art, it was not probable that any material changes in this respect would be wrought by them in the future. To control these tides and currents so as to strengthen their scouring force and check or divert the deposit of drifting sand was the rational means of securing the desired depth of water on the outer bar. The velocity of all the currents littoral and across the bar, both when affected and when unaffected by the winds, and all other facts requisite to a scientific consideration of the subject, were fully ascertained.

The engineer was aided in his conclusions by the plans and results of one practical attempt at deepening the water in the vicinity, the success of which established the feasibility of improving the bar by controlling the tides and currents. In 1870 the inner bar was found to have shoaled until only nine feet of water existed over its crest. The city of Galveston, at an expense of $120,000 out of its own treasury, commenced a system of improvements by driving down wooden piles, thereby forming a jettee opposite Fort Point, which in the course of a year had deepened the water to twelve feet, all that was necessary so long as only that depth of water was found upon the outer bar. These works were of a temporary nature and limited extent. They had, nevertheless, accomplished much good. To construct others of more durable material, varied to suit the circumstances of the outer bar, and improve upon the style of construction where experience proved that it was defective and science taught that it was susceptible of improvement, were the dictates of wisdom. The scientific judgment of the engineer, based upon a thorough knowledge of the locality, led him to devise a somewhat similar system of improvement, and to apply the principle of jettees or training walls for the purpose of deepening a channel across the outer bar. He selected the Cylinder Channel as the most suitable one for improvement because it was shorter, crossed the bar more directly, and the currents of the ebb and flood tide followed its course more closely than those of the curved channel nearer to Galveston Island.

He submitted the following plan as the most feasible one for deepening this channel. He proposed to construct two jettees of cement-covered gabions, one beginning at Fort Point and the other at Bolivar Isthmus, and extending across the bar with the Cylinder Channel to 18 feet water in the Gulf. The gabions were to be 6 feet in diameter, and the same in height, two rows in each jettee, all to be fastened together by copper wire at the tops, and filled with sand Except on a short portion of their lines, the tops of these jettees would be below the plane of mean tide, and for the greater part they would be 5 or 6 feet below that plane. The jettee from Fort Point would be 20,800 feet long, and from Bolivar 16,200 feet. They would contract the area of the discharge over the bar from 411,184.23-100 square feet to 274,112 square feet. They were expected to act as training walls for the lower ebb-current, while the upper would pass over them. They were calculated to give a depth on the outer bar of 18 to 19 feet, and at the same time only confine and direct so much of the ebb and flood tides as might be useful, thus preventing in some degree the advance of the bar gulfward, which would occur if the jettees were built to the plane of mean low tide. It was thought by the engineer that these would serve to catch the drifting sands brought by the littoral currents until they were covered by it, and that afterward the sands would be carried over them rather than around their ends.

The expense of this improvement Major Howell estimated as follows:

12,333 gabions, at 30 cents	$369,990
77,480 cubic yards sand filling, at 50 cents	38,744
Total	408,734

He did not think it probable, but it was possible, that additional rows of gabions might have to be constructed, and the walls might require extension above the water, which would about double the expense. He thought it possible that the jettees might have to be extended from time to time to keep pace with the extension of the bar gulfward.

Such are the plans of the engineer for the permanent improvement of the outer bar. They are so plain and reasonable that any person, however unskilled in engineering, can easily understand how they will accomplish the desired object. I have set them forth somewhat in detail for this reason, and because they will enable the House to appreciate my motives for asking an immediate appropriation sufficient to complete them in accordance with the recommendation of Major Howell. He proposes no separate works for deepening the water on the inner bar, but thinks his Fort Point jettee will extend the head of Galveston Island to its position in 1841, when there were thirty feet water on this bar, and will have the effect of giving at least twenty feet of water across it.

These plans of Major Howell, though novel, seemed to the Chief of Engineers to be feasible. Should experience teach that they would secure the results anticipated by Major Howell, not only Galveston Harbor, one of the most important in the United States, would be accessible to vessels of the largest draught, but other harbors of great value to the country similarly obstructed would be opened to the commerce of the world at a small expenditure of the public money. For these reasons the Chief of Engineers determined to submit them to a corps of skilled and scientific engineers to pass upon their feasibility as well as the probable cost of their construction. This board, after careful examination, indorsed and ratified them fully as to their practical effect in deepening the bar; but thought it might be possible, though not probable, that some change might have to be made in the method of constructing the works so as to make them more durable, which would involve additional cost. They recommended that Major Howell's method of construction be tested by first constructing the inner end of the pier at Fort Point, and if found to succeed that the pier on the other side be built at the shore end, while at the same time a length of from three hundred to five hundred feet be put down near the bar extremity of the same pier to test its sufficiency in the most exposed position. They have no doubt but that jettees in the position of those recommended by Howell will give the channel the required depth. Their only hesitation is in saying that, constructed on his plan, they will bide the force of the waves and tides, and upon this they give no positive opinion. They do, however, make this important statement, that if Howell's plan should succeed it will supply the desideratum of a cheap method of construction which might be applied to many other localities where otherwise no attempts at improvement would be made in consequence of the heavy outlay they would involve.

The report of this board accompanies that of Major Howell, and they are both sent to the House by Chief Engineer Humphreys with his favorable indorsement and a recommendation that an appropriation of $60,000 for the coming fiscal year be made for the proposed improvement. This he does in accordance with the views of the board, for the purpose of building the inner end of Fort Point jettee. He states that nothing had been said in his estimates, already sent in, for rivers and harbors had not been received at the time these estimates were transmitted. I now propose to state in as brief a manner as possible some of the reasons why I think not only the sum of $60,000 but a much larger one should be appropriated for the in-

tended improvement of Galveston Bar. I maintain that a sufficient amount should be given to accomplish as much of the work as possible during the coming fiscal year, and that $60,000 will not answer the purpose. I think further that the amount of the work that this sum would complete will be of no benefit to the commerce of Galveston, and so far from benefiting the bar may be the means of damaging it. And finally, I am fully impressed with the idea that an immediate improvement is more forcibly demanded at this point than at any other on our coast.

This $60,000, according to the Chief of Engineers, is to be spent in constructing the inner end of the proposed pier on the Fort Point side. At the estimated cost of gabions and their filling, as made by Major Howell, this sum will build about fifty-four hundred and forty-five feet of the jettee, or but little over one-fourth of its entire length when completed. It will construct no portion of the Bolivar jettee; at least the engineer does not recommend that any portion of it should be used for that purpose. Let us suppose one-fourth of the Fort Point jettee completed, and what have we gained? We have certainly accomplished no deepening of the water on the outer bar, which is the great object of the survey and the work. This was to be accomplished by checking the deposits of drifting sand held in suspense by the littoral currents, and by confining the lower ebb current within narrow limits, and thereby giving it greater scouring power. Now, for the three-fourths of the distance across the bar these sands, whether drifting with an easterly or westerly current, will not be checked at all, but be left to settle upon that portion of the bar as at present. For the same distance on the bar the currents setting in and out of the bay will be unconfined, and their scouring power will be in no manner increased. We cannot, therefore, look for improvement from this length of jettee to that portion of the bar lying beyond its outer extremity. On the contrary the water may be rendered more shallow near the point where the jettee terminates. Observation in reference to the row of piling placed on the inner bar by the city of Galveston shows that while it has deepened the channel along the front of the jettee it has formed a bar beyond its outer end.

I shall not undertake to assign the causes which always produce a shoaling or formation of bars at the extremity of jettees. It is sufficient that the fact exists, and such a shoaling of this outer bar will almost inevitably result from a partial construction of the Fort Point pier as recommended. Even when both walls are completed, Major Howell thinks the bars will become shallow at their gulf extremity, and that they will have to be extended from time to time. But this will be a comparatively slow process, and the work can easily be made to keep pace with the extension of the bar gulfward.

Again, the littoral currents are caused by the winds along the coast. The engineer ascertained that these winds blew in such direction as to cause a current from the east three times as often as from the west. Now the sand on the bar, or most of it, is deposited by these littoral currents; and one of the objects of the walls is to arrest the lower portion of these currents and cause a deposit of its sands against the jettee. With the Fort Point jettee alone constructed the current from the east will deposit a large portion of its sands in the channel, or on the channel side of this jetty, and thus render the water more shallow instead of deepening it. Thus we see that, unless a sufficient sum is appropriated to keep the work steadily progressing, damage instead of benefit may result. If $60,000 only are appropriated at the present session, they must be followed up immediately with other and larger sums in order to complete the work and place its usefulness beyond all danger of being thwarted. This is not like some bars where dredging may be resorted to. There a small sum may enable us to deepen the channel in some degree; but in this nothing beneficial is accomplished unless the whole work is completed; and hence the greater necessity for a larger appropriation of money at one time.

It is evident that the smallness of the sum recommended for this improvement is prompted by the spirit of economy which has so suddenly possessed all departments of this Government since the late panic. On the 15th of last December this House adopted a resolution requesting the President to cause a revision of estimates to be made by the several Executive Departments and report to the House as early as the 5th of January, 1874, in detail what estimates for the next fiscal year could be reduced, and the amount of such reduction, without serious detriment to the public service.

On 7th January, 1874, the President sent in a message accompanied by a revision suggested by the various Cabinet officers for their Departments. These estimates embraced reductions of appropriations for most of the rivers and harbors of the United States. The total amount originally recommended for them was $15,464,540, and the revised estimates reduce this amount to $5,682,000, or to about one-third of the amount originally estimated for. As the Chief of Engineers' estimate for Galveston Harbor was sent in subsequently to this House resolution and to the making of the revised estimates above alluded to, it was of course intended as a revised and reduced estimate for the improvement contemplated. Now the average reduction on rivers and harbors, as we have seen, is two-thirds; so that we may fairly conclude that but for the reduction of estimates caused by the economical spirit suddenly springing up, Galveston Harbor would have been recommended for an appropriation of $180,000 for the coming fiscal year, or nearly one-half what Major Howell deemed sufficient to complete the work. This amount is about what could have been judiciously expended upon the improvement during the coming year, and what it should receive, notwithstanding the reduction which has been demanded. This demand for reduced expenditures on such works purports to proceed from the effects of the late panic, the shrinkage of values caused by it, and the cry for retrenchment that has gone up from all portions of the country.

Now, while the amounts to be expended upon rivers and harbors have been reduced in these estimates two-thirds, we find no reduction in salaries; little or nothing in the military establishment. The $36,799,429.11 of expenses in the Post-Office Department are only reduced $694,517.11, or one-sixtieth. No reduction takes place in the Pension Office, none in the Indian Bureau, and an exceedingly slight one in the General Land Office. Almost the only reduction of any importance occurs in the river and harbor estimates, as if this were the only matter in which the Government had been improperly lavish of money, these the only expenditures of which the people complained. Sir, the panic whose consequences called forth this resolution of retrenchment did not spring from the effects of river and harbor improvements carried on by the Government. On the contrary, much of the distress of the country was caused by insufficient appropriations for these purposes, and a consequent lack of water transportation to the sea.

As was well remarked by the president of the cheap-transportation convention, held here some time ago, the panic was not due to want of production, but want of transportation; inability to move the crops. The farmers had the products of the soil in abundance, but not the means of paying the extravagant charges asked for moving them to market. Had our rivers and harbors been properly improved by the General Government, these extravagant charges would not have existed; there would have been no demand for the bill now being considered by the House to regulate the tolls upon railroads; there would have been no call for unconstitutional legislation to remedy an evil from the effects of which the whole West and Southwest are suffering. And yet one of the remedies to be applied is to still further reduce the appropriations for rivers and harbors; still neglect their improvement, and by indirectly continuing the charges of transportation on them hope to relieve the people of the evils of extravagant freights.

The shrinkage of values superinduced by the panic, and which is alluded to in the House resolution, may have extended to everything else, but did not affect the prices paid by the farmer for the transportation of his produce and supplies. These were as high after as before the failure of Jay Cooke & Co. The price of his products fell perhaps as much because he could not raise the money to pay the enormous freights, which had known no diminution, as from any other cause. Why the people should demand a reduction in appropriations which tend to improve the water-ways and lighten the burdens of transportation, would, if true, be incomprehensible. But it is not so. The people do not insist upon any such false economy. If there be one cry more universal than another in this country, it is for cheap transportation. If there be one complaint more prevalent than another, it is that we have not sufficient safe outlets to the markets of the world.

While public meetings, conventions, Legislatures, and newspapers have demanded reform and retrenchment in almost every other subject of expenditure, not one word has been uttered against applying money in the interest of cheap carriage. To arrive at the best plan of effecting the desired result has puzzled the brains of our statesmen. None, however, have doubted that the deepening of our water channels, the natural outlets which are furnished us to the sea, will in a great measure effect the object, and in some degree lighten the burdens which oppress at least one great industry of the country more than all the taxes ordinarily imposed upon it. The people do not expect this to be effected without money and a liberal amount of it. They do not expect us by the mere idle form of passing an act to accomplish these improvements. They do not hope that we can by mere words of command remove the bars from our coasts and the snags and rocks from our rivers; but they do expect it to be done by hard work, which must be paid for by money freely and judiciously used. That administration which exhibits a balance-sheet showing a large amount in the Treasury by reason of withholding money from such laudable objects will not be indorsed by the people. It is better that the revenues of the nation be thus expended where they will produce a hundred-fold their value in blessings to the people than that they be hoarded, like the one talent of the servant in Scripture, barren of benefit to the Government or its citizens.

I repeat, then, that the estimates for rivers and harbors should never have been reduced, at least upon any general basis and merely for the sake of reduction. Many rivers and harbors can doubtless submit to lower estimates without injury to the country whose produce is floated over them. Some could answer all the purposes of their trade for another year without any improvement. There are also many local improvements, benefiting no large sections of country, whose wants need no present attention. These might be left for future legislation. But when a river or a harbor has connected with it the interest of one grand division of the Union, of millions of population and hundreds of millions of dollars' worth of the exportable products of our soil, it certainly demands the immediate, constant, and careful consideration of Congress. Such I regard the Ohio, Missouri, and Mississippi Rivers and their tributaries; the great chain of lakes on our northern boundary and the streams that connect them, and the important harbors on the Atlantic, Gulf, and Pacific coasts.

I propose now to show you in as concise a manner as possible the importance of one of these, the harbor of Galveston, to the General Government as a source of revenue, and to the people of my own State and of the West as an outlet for their magnificent wealth of productions, and an inlet for their supplies, and to demonstrate from these considerations the immediate demand for making this harbor accessible from the sea for vessels of the greatest carrying capacity; to point out how you can reduce in an important degree the burden of high freights for the benefit of a large and growing section of the Union, and secure for them some of the beneficial objects contemplated by the bill for regulating commerce among the States. The growth of the port of Galveston both in size and commercial importance I have already alluded to in the outset of these remarks. I will now go more minutely into statistics.

In 1865, at the close of the war, Galveston was a city of five thousand inhabitants. In 1870, when the Federal census was taken, it contained fourteen thousand inhabitants, and by an accurate census just completed it is shown to number over thirty-four thousand in population. It is five times as large as nine years ago, and two and one-half times as large as four years ago.

The following table shows the value of its exports and imports for the past five years, the fiscal year ending on 30th June:

Year.	Imports.	Exports.
1869	$366, 517	$9, 641, 112
1870	509, 231	14, 873, 732
1871	1, 255, 003	13, 789, 250
1872	1, 741, 000	12, 211, 933
1873	2, 426, 626	17, 716, 509

These comprehend only products exported to and imported from foreign countries. To these should be added the value of imports and exports in the coastwise trade. I am not able to give them for the preceding years, but for the year ending August 31, 1873, these imports amounted in value to $27,357,221 and the exports to about $20,000,000. So the entire imports of this port for the past fiscal year amounted to about $30,000,000, and her exports to about $37,000,000. These figures show that our foreign exports for that year were twice as great in value as they were five years before and that our imports had increased tenfold.

The following is a statement of the duties collected for the four years beginning with the year ending June 30, 1869, and ending with that which closed June 30, 1872:

1869	$184, 177
1870	268, 477
1871	611, 333
1872	682, 944

Showing that the revenues derived by the United States from that port have nearly quadrupled in the last four years.

Let us look at some of the articles exported and which go to make up these values. The principal export from Texas has been its staple production, cotton. Of this there were sent from Galveston to foreign ports during the year ending June 30, 1871, 133,736 bales, and about 160,000 bales to ports of the United States. I cannot state the exact amount shipped to all ports for that year, but for the year ending September 1, 1872, which is the commercial year, the total number of bales of cotton shipped from Galveston was 294,718. During the year ending September 1, 1873, we shipped 333,802 bales of cotton, an increase of about 60,000 bales, or one-fifth. Statistics show that since the date last mentioned we have received at Galveston for shipment down to the 11th of this month, a period of a little over six months, 316,267 bales. This is an increase of 40,000 bales in the receipts during the same time of the preceding fiscal year. A corresponding increase to the 1st of September, 1874, will make the receipts by that time amount in round numbers to 400,000 bales. Besides this we are exporting other articles which were but little known to our trade in former years, such as wool, hides, cattle, tallow, pecans, bones, beeswax, peltries, horn, hair, &c. The value of these exports during the last commercial year amounted to $5,000,000, and the trade in them is rapidly increasing.

This growth in population and commerce is due in a large measure to the extension and multiplication of the railroads, which, beginning in and running through some of the most productive country, have their ultimate and real termini in Galveston. At the close of the war there were not over three hundred miles of railroad lines connecting with Galveston; now we find more than one thousand miles of these, transporting the produce of our State to our island city. These roads afford facilities of transportation to a great portion of the settled regions of this State, and to some of the adjoining States. They have already directed much of the trade, which formerly sought egress through other ports to this favorite outlet to the sea. And every day increases the number of these roads and the distances to which they are completed; and the country toward which they are tending gathers new life at their approach, fills with population and brightens with every production suited to its soil and climate. This extension of railroads has brought us in proximity not only with all Northern and Northeastern Texas, but, through their connections, with Kansas, Arkansas, Northern Louisiana, Western Missouri, and Western Iowa, all of which must and will seek an outlet to the ocean through our harbor, if it is made accessible for the largest-sized sea-going vessels.

Galveston may now be regarded as the most accessible and eligible exporting point for all these divisions of our Union, embracing some of the best lands for cotton and grain growing, and grass for stock-raising, in the entire country.

Without going at length into statistics, I will take the apparently accurate computation made by the Kansas Board of Trade as to the aggregate productions in 1870 of a portion of the country, excluding Arkansas and Texas. By careful computation they show that for the year ending June, 1870, there were produced in this region 26,452,116 bushels of wheat; 631,353 bushels of rye; 89,236,854 bushels of corn; 24,367,214 bushels of oats; 1,429,946 bushels of barley; 1,856,138 tons of hay; 6,235,366 pounds of tobacco. In live-stock it produced, of hogs, 2,596,185; cattle, 2,595,176; mules, 116,585; sheep, 2,233,326; horses, 835,833.

These figures are far behind what the statistics of 1873 would show the products of this great country to be, so rapidly is it increasing and its resources developing. Add to this the grain, the cotton, and the cattle of Texas and Arkansas, and you may form some idea of the wealth of production within easy reach of the port of Galveston; and the surplus of which, with this one improvement of the bar so easily accomplished, will find there its surest immediate outlet to the markets of the world. Thus stands Galveston as compared with her former self in size, commerce, transportation facilities, and connection with the great wealth-producing West, and in all these she has exhibited progress that is excelled by but few other cities of the Union.

Let us now for a few moments glance at her rank as compared with the other sea-ports of the United States.

The report of the Bureau of Statistics for the year ending August 31, 1873, shows that the United States has eighty-one points of export and import, and that of these Galveston is the eighth in importance, being excelled in this respect by New York, New Orleans, Savannah, San Francisco, Boston, Philadelphia, and Baltimore, in the order of their enumeration. The following is a summary of the exports of each of these ports for the year indicated:

New York	$334, 101, 644
New Orleans	107, 556, 203
Savannah	32, 626, 586
San Francisco	34, 326, 965
Boston and Charlestown	30, 408, 323
Philadelphia	26, 167, 832
Baltimore	19, 769, 737
Galveston	18, 508, 904

This table shows that with the exception of New York and New Orleans there is but little advantage in the matter of exports in favor of either of them as against Galveston. Six of these cities are among the most populous in the Union; the largest, New York, containing nearly a million of inhabitants, and the smallest, San Francisco, one hundred and fifty thousand. Yet New York and Brooklyn together, although forty times as large as Galveston, export only eighteen times as much in value; Philadelphia, nearly twenty times as large, exports not quite one-half as much again; and Baltimore, eight times as large, excels it only $1,500,000 in the value of its exports.

Such ports as Chicago, Buffalo, Providence, and Detroit, containing from three to ten times as many inhabitants as Galveston, are far behind her in this respect.

These figures show the comparative grade of Galveston as an exporting point to foreign countries only. We must add, as I have already stated, the value of products which she sends to other parts of the Union, which will further swell her importance. Moreover, these figures are for the fiscal year ending in 1873. The present fiscal year will show at its close a vast increase in her exports over those of any preceding year, making cotton alone to reach, as I have said, to about four hundred thousand bales, worth at least $25,000,000.

But it is the commerce of 1875 that will receive the first benefit of the improvement if made immediately. Should the production of cotton increase for that year in the same ratio as for the past we may count with certainty upon five hundred thousand bales being shipped from Texas alone through the port of Galveston. To this must be added at least one hundred thousand bales being shipped through this port from Western and Southern Arkansas and Northern Louisiana, by reason of the railroads lately completed to our city connecting it with that fertile country.

But viewed in reference to imports, Galveston ranks fourteenth in the list for the year 1873, and with the increased exportation which awaits her in the near future, her rank and value as a distributing point must be proportionally advanced. Now what are the burdens to which commerce is subjected by reason of the present condition of Galveston bar, and what is the probable amount of benefit that will be derived from its immediate improvement?

The depth of water in the channel over the outer bar at flood-tide is not more than twelve feet six inches. This amount of water does not furnish passage for vessels of large size, and hence freight is not taken from the wharves at Galveston nor to them except upon comparatively small vessels. Sea-going craft drawing more than twelve feet must begin and end their voyages at the Gulf extremity of the outer bar, receive or discharge their cargoes, as the case may be, with the assistance of lighters, for whose services a charge must be paid.

If commerce had no other burden imposed upon it except these light erage charges, it would be so great as to imperatively demand a release. These charges amount to $2.50 per ton. This upon a bale of cotton is over fifty cents, and on the four hundred thousand bales which will have passed from Galveston to the other ports of the world, by the close of the present commercial year, it will amount to $200,000.

The amount of this tax upon incoming cargoes is not so easily ascertained, as their weight is not susceptible of computation, but the amount must be almost equal to what is paid upon outgoing cargoes. But it might be said that cargoes can be taken over our bar in sea-going vessels of a capacity and draught of water small enough to admit of their passing without difficulty. But the difference in price to be paid for the employment of such vessels over those of larger draught is even more than the cost of lighterage. I am informed that freights by large vessels, say such as cannot cross our bar by reason of their deep draught, are 25 per cent. less than by those drawing less than twelve feet of water. I see freights from Galveston to Liverpool quoted at 1¼ cents, and to New York ¼ cent per pound. There would then be a saving by the employment of the largest class of sea-going vessels of over 75 cents per bale on cotton for Europe, and 87½ cents on the same to New York. On the four hundred thousand bales, two-thirds of which are transported to European markets, and the other third to northern American ports, the saving will amount to about $450,000. All this saving is to the pockets of the farmer, the American producer; for cotton, having its fixed market price, sells for no more or less, no matter what may have been the cost of transportation from any particular port.

But these are not the only burdens of transportation by light-draught vessels and a want of sufficient depth of water on our bar. Large ships are deterred from visiting our port because they are compelled to lie at anchor without the harbor, and are thus exposed to the storms of the outer sea, when vessels within are entirely protected. Several have been torn from their moorings and driven long distances to sea within the last few years by storms which have visited our coast, while the shipping within the bar has been comparatively uninjured. Again, in making use of lighters, which we see is cheaper than the employment of smaller vessels for the whole voyage, cargoes, both incoming and outgoing, are compelled to break bulk, which involves a heavy expense in handling and in waste. There are other inconveniences and losses to which the producer is subjected by reason of the shallowness of our bar, which will readily occur to every one, and need not be enumerated. And then the risk and danger of loss of life and property in crossing a shallow bar, especially in tempestuous weather, must be of course considerable.

I have merely estimated the losses which our cotton exports and the imports for our own State suffer by the condition of our harbor. But this does not furnish us with one-half the reasons why it should be immediately improved. I have already shown that it is a natural and convenient outlet for a large portion of the best wheat-growing region of the West, competing with the Mississippi for five hundred thousand square miles of it; and for at least one-third, if not one-half, of the products of the region known as the "New West," it has no rival as a port of egress. Upon this subject let me call attention to an extract from the memorial of the Kansas City Board of Trade to the United States Senate Transportation Committee. After speaking of the immense productions of this new West, a partial statement of which I have already given, and the want of suitable and cheap transportation for them to the sea, they say:

> But these disabilities can be remedied. They are artificial, and result from causes which are susceptible of remedy, and which have been in a great part removed by private and corporate enterprise.
>
> And we are before your committee to-day because it is proposed to devise a general system of relief for the whole country, by opening up cheaper channels of transportation by the common fund of the nation; and because what is needed in this respect by us can only be done under national authority.
>
> There are two outlets for the products we have referred to:
>
> One by way of the Missouri and Mississippi Rivers.
>
> One by the harbor at Galveston, Texas.
>
> BY GALVESTON HARBOR.
>
> We shall consider them in the reverse order in which they are mentioned.
>
> From Kansas City to Galveston it is now eight hundred miles as the railroads are constructed, but which can be reduced within seven hundred miles, or just half the distance to New York. It is, as to cost of transportation, as if Kansas City was removed east to Columbus, Ohio. The question, as it addresses itself to us, is:
>
> Why should Kansas City and the country surrounding it, with its one hundred millions of annual production, be compelled to seek the market through Columbus, Ohio, any more than that Columbus should be compelled to seek her market by way of Kansas City?
>
> If the port of Galveston was made accessible for ocean-going vessels, the wheat and corn of the Missouri Valley could seek the ocean at 26½ cents per bushel, and pay the same rate it does to-day to New York at 52½ cents; adding a quarter of a dollar to the price of the 115,000,000 bushels of these crops produced in 1870, or more than $28,000,000 to the farmers of this New West every year.
>
> Then the country embraced in this central portion of the nation would be, as to foreign markets, as favorably situated as the States of Indiana and Ohio, and our rich lands increased in corresponding value.
>
> And why the national Treasury should not improve this harbor equally with those of the lakes and Atlantic sea-board is, we submit, not a question for discussion. Its need is all that requires to be established. And this we feel our illustration and the facts recited most conclusively establishes.

Now, with this harbor improved as proposed, the question of cheap transportation which has agitated the great West and South to such an extent will be in a great degree solved so far as this important portion of those two sections is concerned, and far more satisfactorily than by the bill now under discussion. One-half the freight on grain to the deep waters of the sea is saved; twenty-six and a quarter cents per bushel made to the farmer; $28,000,000 to the producers of the new West, besides the corresponding increased value added to their lands. Could the largest-sized vessels be brought to our wharves elevators would be erected, and cars for the transportation of grain in bulk constructed, and the farmers of Western Iowa, Nebraska, Western Missouri, Kansas, and all other sections located convenient to our port could put their grain in market with expedition and economy, and find remunerative returns for that which now rots upon their hands or is consumed for fuel. And why do they not send it to market now through this channel? Simply because the breakage of bulk, the necessity of frequent transfers and handling, the requirement that it shall be transported in sacks, entails an expense which more than overbalances the advantages to be gained by seeking the nearest sea-coast.

Now, I will not go into the losses upon any other article of export caused by this condition of our bar. The leading articles of cotton and grain, which are two of the greatest sources of wealth our country produces, are enough; and the relief to be afforded to the millions engaged in their production is argument sufficient to show the necessity of immediate action in this matter. Our commerce is daily suffering for want of this improvement. We cannot, of course, bring these benefits to bear upon the crop of cotton which is now being exported, but we may upon that which is now growing and which must go to market during the next commercial year. We may be in time to save to the western farmers some of their freights upon the growing crop of grain, but we shall fail to benefit them in the transportation of the crop of 1875 if we do not make the appropriation for the bar at the present session. Is the demand of the people of the South and West for cheap transportation for their products to go unheeded when the remedy lies in our power and can be applied, and that immediately and at so small an expense? Will this Congress take off a tax of more than $500,000 upon the cotton of one State, and a tax of $28,000,000 upon the grain-growing interests of the great West by the expenditure of $500,000; or will it from a spirit of pseudo economy see the people of one section submit to exactions for fear that another should charge it with extravagance, and because a panic six months ago frightened our statesmen out of their wits and made them seek remedies for existing evils in striking at what were blessings?

Wise rulers should ascertain the cause of distress among their people and remedy it by removing such cause, and when that cannot be removed altogether let it be remedied as far as possible. That is true economy which seeks to benefit the greatest number at the least expense, and that is wasteful extravagance which sees the people groaning under burdens and losses and refuses to furnish them the means of relief.

I have thus shown the wisdom and necessity of early action in this matter. I propose now to show that it is but a simple act of justice to our port and people that the appropriation should be made. All that has been said shows the justice of this expenditure; but I propose to further show that it is just, because the Gulf States, and especially Texas, have not hitherto been favored by the General Government in the matter of appropriations.

The following table shows the amount of river and harbor appropriations for each State since 1824:

Maine	$1,024,961 00
New Hampshire	40,000 00
Vermont	326,222 00
Massachusetts	2,899,708 98
Rhode Island	387,500 00
Connecticut	671,407 26
New York	6,149,434 46
New Jersey	141,963 00
Pennsylvania	725,217 28
Pennsylvania and Delaware	88,413 00
Delaware	2,439,758 70
Maryland	741,930 00
Virginia	463,500 00
North Carolina	900,978 92
South Carolina	108,000 00
Georgia	539,073 06
Florida	156,230 00
Alabama	450,997 60
Louisiana	2,791,800 00
Texas	75,000 00
Mississippi	486,600 00
California	635,095 00
Kentucky and Tennessee	912,200 00
Arkansas	300,000 00
Missouri	155,000 00
Iowa	3,081,200 00
Indiana	526,918 59
States bordering on the Mississippi, Missouri, Arkansas, Tennessee, and Ohio Rivers	4,230,640 00
Illinois	3,024,805 00
Ohio	2,090,937 64
Michigan	4,847,509 00
Wisconsin	2,158,057 77
Minnesota	412,500 00
Oregon	271,700 00
West Virginia	116,000 00
District of Columbia	50,000 00

This shows that the total amount appropriated by this Government for rivers and harbors for the past fifty years is $44,587,288.43, of which the New England States have received $5,349,799.46, the Middle States $9,544,786.39, while the States bordering on the Gulf of Mexico have received $2,314,847. Of this latter sum $1,684,350 have

gone to the improvement of the mouth of the Mississippi River; an improvement which is more in the interest of the Western than the Southern States. There have been only $630,497 applied to ports of the Gulf of Mexico for the exclusive benefit of southern commerce. The remainder of these appropriations has been devoted to the South Atlantic and the lakes, and western waters. The statistics show, too, that the lakes and the small streams running into them have received of the above appropriations $12,328,426, or over one-fourth.

I do not announce these figures in any spirit of complaint, for no money has been more beneficially spent by this Government than such as it has given for the improvement of rivers and harbors. It has cheapened transportation, stimulated production, increased commerce, enhanced the value of property, and poured untold treasures of wealth into the pockets of the millions who have been so located as to be within reach of the harbors and water-ways that have received these donations. For the benefits it has heaped upon the Atlantic and Lake States and the partial advantages conferred upon those bordering upon the Mississippi River and its tributaries, I rejoice, for they are component parts of our great Union. But while our elder brethren are receiving bounties let not the younger children be wholly neglected. We are comparatively small in population as yet, but our domain is almost infinite, and every foot of it is capable of high cultivation and of bringing forth the necessaries of life and the products which constitute the wealth of a nation. There is wealth in our soil, our grass, in our forests, and our mountain sides. It needs but the fostering care of the Government to bring it to an early development. There is no one way in which the kind care and encouragement of this Government can so economically, so speedily, and so effectually assist the growth and development of this great country as by opening an outlet for its productions to the sea, and relieving its commerce from the heavy exactions imposed upon it. Such a vast country, so fruitful, so important, consisting of three or four States, one of which is the largest in the Union, besides as many Territories, deserves a harbor which shall have all the advantages of depth of water which this Government can give it.

I have spoken principally of the present condition and demands of the immense country which finds one of its nearest and most convenient outlets to the markets of the world at the port of Galveston. I have said but little of the future of that section, because my object has been to show that we should take immediate action in the improvement. I have relied upon the immediate wants and demands of the country to show its necessity. But this improvement should be accomplished at as early a day as possible in order not only to meet the increasing demands of this section, but to accelerate its growth and develop its resources. The grand future of this new West is beyond calculation, and every step taken toward giving facility to its transportation hastens its development.

The State of Texas alone contains 274,356 square miles, capable of producing cotton, all kinds of grain and tobacco, rich in minerals, and subsisting millions of cattle upon her grasses alone. If this State alone were interested in this harbor it would have a country tributary to it four times as large as New England, and three times as large as all the Middle States put together—larger than the territory of States now containing over twenty million inhabitants, and itself capable of sustaining more than three times that amount. Her grain-growing region alone is as extensive as that which in the West produces three hundred million bushels of grain, and has a surplus of fifty million bushels for exportation. Her cotton-growing counties will soon produce a million bales of that valuable staple. I will not speak of her growing trade in cattle, hides, wool, canned beef, &c., but will leave to the thoughtful a calculation of what must be the future commerce in these articles of the largest and best stock-growing State in the Union. I will not say that all this commerce will be carried on through the port of Galveston alone, but I can say that it is now the only one to which any extensive lines of transportation are completed. Immigrants settle near these lines, and the country adjacent to them is building up more rapidly than any other.

Far be it from me to speak in disparagement of the other ports of our State. They all deserve the attention of the Government, and I earnestly ask in their behalf appropriations worthy of their present and future commercial importance. But Galveston is the only city of any size upon our sea-coast. Capital is heavily invested there now, and will continue to seek investment in a city whose future is certainly great and prosperous, rather than at points where success is dependent upon contingencies. It is the natural outlet of the great cotton-growing and wheat-producing sections of the State; it is the objective point of thousands of miles of railroad completed or in course of construction; it is to Texas what New York fifty years ago was to the country which first built it up in greatness and wealth. It will, in a few years, be the New York of a territory almost as extensive as that which now contributes to the magnificent commerce of that great city.

But Texas is scarce one-third of the region which must find its most convenient exporting point at Galveston. The new West to which I have already alluded furnishes four hundred and fifty thousand square miles of fertile land, whose products must in great measure find egress through this harbor. I will not attempt to forecast the destiny of this great region, but merely say that its soil and climate are suited to the raising of every species of grain, as well as to fibrous products, and that its surplus for exportation in the near future cannot be less than $500,000,000 in value. It is needless for me to say that the harbor of Galveston is now the nearest tide-water to be reached by products passing eastwardly from California on the Pacific Railroad. Nothing but the want of sufficient depth of water for the largest sized ocean-going vessels there prevents the productions and fabrics of Asia from finding through it their cheapest, safest, and quickest transit to the European world. And when the Texas Pacific Railroad shall have been completed, and by means of it the distance in land travel across this continent shall have been reduced more than a thousand miles, and commerce between the two ocean boundaries of our Union passing over it cannot be impeded by the ice and snows of northern winters, the great bulk of this important trade, whether it be destined for European or American ports, will pass over the bar whose improvement I am now urging upon the consideration of this body.

But, sir, I will not dwell further upon this subject, but merely recapitulate the reasons why it should receive the immediate attention of Congress, and an appropriation sufficient to complete the work be granted. I think that it is demanded, because if but partly completed the unfinished works themselves may be the means of lessening the depth of water at other points on the bar. I might add, also, a fact to which I have not heretofore alluded, that works partially finished are weaker and more easily destroyed than when complete. These may be washed away before the Government has an opportunity, with new appropriations, to complete them.

It is demanded in the interest of the revenues of the Government, to which our custom-house now contributes so largely, and which may be increased tenfold by removing the impediments to importation. It is demanded by the people of Texas, who ask to be relieved of an annual burden of $500,000 imposed upon the transportation of their products and supplies; more than enough to complete the entire work. It is demanded by a large portion of the people of the great West who are enduring a tax of $28,000,000 annually because they have not free access to the sea through this their nearest point of exportation. It is demanded for an early development of the great capacity of the trans-Mississippi world, its settlement, cultivation, and production of wealth. It is asked upon every principle of economy. It is demanded by the stern dictates of justice.

Other harbors whose approaches are in like condition demand that the plans proposed for this shall be thoroughly and immediately tested, so that if successful they too may be fully opened to the commerce of the world.

Will not Congress respond favorably to these demands with an appropriation which cannot be burdensome to the Government and which will confer upon the people of the Southwest blessings beyond all computation?

State of Louisiana.

SPEECH OF HON. W. T. HAMILTON,

OF MARYLAND,

IN THE UNITED STATES SENATE,

April 16, 1874.

The Senate having under consideration the bill (S. No. 446) to restore the rights of the State of Louisiana—

Mr. HAMILTON, of Maryland, said:

Mr. PRESIDENT, I propose to submit some remarks to the Senate, not specially, however, upon the bill now under consideration, but upon the whole question, and more to the question of the election of Senator in the State of Louisiana. I think it appropriate to address myself to that subject now as well as to the general question, because if this bill shall fail some action must be taken in reference to it. I had not the opportunity of submitting any remarks when the election of Senator was under the immediate consideration of the Senate and when it was debated by the honorable Senator from Wisconsin [Mr. CARPENTER] and the honorable Senator from Indiana, [Mr. MORTON.] I had not the pleasure of hearing these honorable Senators make their remarks on that occasion, nor of hearing the able speech of the Senator from Kentucky, [Mr. MCCREERY.] But being a member of the Committee on Privileges and Elections, and intending to give my views upon the questions connected with the senatorial controversy, I take this opportunity, as this bill in fact involves the whole subject and generally the condition of Louisiana, and as this must, if this bill eventually fails, come to the consideration of the Senate to determine whether that State shall be represented in this body, and if so, by whom.

I very much regret that I was not able to be present when the question of the admission of a Senator was under discussion and when those honorable Senators made their remarks on that question. I have, however, read them with care, and I trust with instruction.

The subject then under consideration, as also the subject now under consideration, is one of the most important that has ever addressed itself to the consideration of the Senate. It has no precedent, it has no parallel in our history. Therefore I trust it may receive that judgment which its originality, together with its gravity, so justly demands.

The highest, indeed the primary, power of the Senate is involved; that power which is to judge of the election and qualifications of its own members, a power that is confided by the Constitution to this body alone and without limitation, and from whose decision there is no appeal to any other tribunal.

The judgment is conclusive upon the States, upon every other department of the Government; and no legislation, or any other act of this body, can ever be drawn into question by reason of the exercise of this power, however wrongfully it may have been exercised.

True, there have been questions involving the elections of Senators before, which at the time gave great concern, enlisted the best talent of the Senate, secured investigations commensurate with the importance of the subject, and gave to our legislative annals reports which for ability, learning, and impartiality have not been surpassed.

But nowhere, Mr. President, can a case be found like the one before us. As the times differed from any preceding time, so do the facts in this differ from those in any preceding case. The facts of this case are thoroughly consistent with the times which gave it birth. It is the fit progeny of that wild, reckless, intriguing spirit of demoralization, usurpation, tyranny, absolutism, and corruption which still, unhappily, prevails more or less in large sections of the country, and still prevails to an alarming extent in the State of Louisiana and other Southern States in like condition with Louisiana.

Allow me here, although it has been detailed over and over again both in the reports and in the speeches of honorable Senators, to give a summary detail of the substantial and prominent facts in which this case had its origin, and which reflect very materially on the bill now under consideration in arriving at a correct conclusion upon it.

Henry C. Warmoth was the governor of Louisiana in the fall of 1872, having been elected in 1868, and his term of office was four years. A general election was held on the 4th day of November, 1872, for governor and other State officers, for one-half of the senate and for all the members of the house of representatives of this State. John McEnery, democrat, and William P. Kellogg, republican, were the opposing candidates for governor.

By the election laws, approved March 16, 1870, and in force on that day, the commissioners of election for each polling place, at the close of the polls, were obliged to seal up the ballot-boxes and deliver them to the supervisor of registration for the parish, or, as we call it, county. It was then the duty of the supervisor of registration to open the ballot-boxes, so delivered to him by the commissioners of the several polling or voting places in the parish or county, and to count the votes therein in the presence of the commissioners of election and of three citizen freeholders of the parish, and to make out lists of those voted for in triplicate, two of these lists to be sent to the governor with certain other of the papers and returns by different modes of conveyance, and the remaining or third list was to be retained by the supervisor himself. They were accordingly sent as required by the law, and Governor Warmoth came into the possession of all the official returns of that election.

The same election law then provided for a board, called a board of returning officers, consisting of the governor, lieutenant-governor, secretary of state, one John Lynch, and T. C. Anderson, whose duty it was to meet in New Orleans to "convass and compile" the statement or lists of votes made by the supervisors of registration, and returned by them to the governor. It was then the duty of the governor to "open in the presence of such returning officers" these lists or statements of votes made by the supervisors of registration, and after canvassing and compiling the returns of the election they were to file one copy in the office of secretary of state and the other to be published, declaring the names of the persons voted for, the number of votes for each, and the names of those who were duly elected.

The first meeting of this board of returning officers was held on the 13th and 14th November. Troubles at once occurred. Pinchback and Anderson, members of the original board, were disqualified on account of being candidates for office at the election. Wharton was appointed secretary of state by the governor in place of Herron, removed. Differences arose in supplying the vacancies, and the result was two sets of returning officers, each claiming to be the legal board, one headed by Governor Warmoth, and consisting of himself, Wharton as secretary of state, Hatch, and Da Ponte; the two latter, it being claimed, were duly chosen to supply the vacancies occasioned by Pinchback and Anderson being candidates at this election, and therefore by law disqualified from acting; the other board, headed by Lynch, and consisting of himself, Herron, (who still claimed to be secretary of state,) Longstreet, and Hawkins; the two latter, it being claimed, were duly chosen to supply the vacancies made by Pinchback and Anderson.

Application was made by both boards at once to the courts of the State. The court enjoined both boards from canvassing the returns. Afterward, on the 19th day of November, the court, Dibble, justice, decided the cause, enjoining the Warmoth board from canvassing the returns and dismissing the suit against the Lynch board. In the midst of the strife in the courts, with the bills, petitions, and orders, Governor Warmoth determined to get rid of both boards and of all the courts with them.

He did not submit the official returns to either of these boards, still retaining them in his possession; but upon the 20th day of November he approved an act that had been passed at the preceding session of the Legislature of that State repealing entirely the act approved March 16, 1870, under which the election had been held; and this act took effect from its passage. This act abolished the returning board as established by the act of 1870, and provided another mode of electing such board, namely, "that five persons to be elected by the senate from all political parties shall be the returning officers," &c. There then being no returning board of officers in legal existence to canvass the official returns of this election, and there being no session of the Legislature at the time so that the senate might proceed to elect the five persons as required by law to be the returning officers, the governor claimed the right to make the appointment of this board under that part of the constitution which authorizes him to fill vacancies occurring when the Legislature was not in session. Accordingly, on the 3d day of December, he appointed as such returning officers De Feriet, Wiltz, Isabel, Austin, and Taylor, and on the 4th day of December the governor submitted to them the official returns of this election in his possession in his office, and they canvassed and compiled the same on that day for senators and for members of the house, and by their certificate declared who were duly elected as such senators and members of the house, a majority of whom were democrats and liberals, and of which official proclamation was made on the same day by the governor.

The other board, consisting of Lynch, Bovee, (who was then restored by some judicial decision as secretary of state,) Longstreet, and Hawkins, claiming to act as a board under the act of 1870, proceeded to canvass the returns of this election, notwithstanding the repeal of this act. It is admitted on all hands that there was not a single official return before this board to canvass and compile. The returns were gathered from newspapers, from the statements of individuals who happened to be present when the votes were counted, from the previous political complexion of the parish and the number of republican votes cast at previous elections, besides counting votes never cast, upon the *ex parte* affidavits of colored men, that they were prevented from voting, many of which have since been ascertained to have been forged.

This board, as the result of its canvass, declared a large majority of the votes as cast for Kellogg for governor, and also declared who were elected senators and members of the house, a large majority of whom were republicans.

Mr. President, in this condition things stood on the 4th day of December, 1872, in the State of Louisiana. Permit me for a moment to go back. On the 20th day of November, the day the governor approved the act abolishing the old board of returning officers, he at the same time issued his proclamation calling an extra session of the Legislature to convene on the 9th day of December. Of course, all eyes were turned to this day—an eventful day to the people of Louisiana. It was well known that the members of the senate and house declared by the returning board appointed by Governor Warmoth, and recognized by him in his proclamation of the 4th of December as constituting the senate and house of representatives of the State of Louisiana, would meet in the State-house in New Orleans—the Mechanics' Institute—and organize as the Legislature of Louisiana; and Kellogg and his friends were powerless to prevent it. Therefore, on the 5th of December, E. H. Durell, a judge of the district court of the United States at New Orleans, passed an order directing the United States marshal to take possession of the State-house and to hold it subject to the further order of the court, and, meanwhile, to prevent all unlawful assemblages therein, &c. Packard, United States marshal, with a body of United States soldiers, seized the State-house under this order and so held it for weeks, refusing admission to any member not returned as elected by the Lynch board of returning officers. Therefore the members, or a majority of them, returned by the Lynch board met and organized in the State-house. Those, or most of those, returned by the Warmoth board (as it may be the better designated) met at the city hall in New Orleans, and organized on the 9th day of December.

Governor Warmoth recognized the meeting at the city hall as the regular and lawful Legislature of Louisiana and the place of meeting as the State-house. On the 11th of December the senate of the body meeting at the city hall elected five persons as returning officers, of all political parties, Messrs. Mitchell, Forman, Thomas, Hunsaker, and Todd—two democrats, two republicans, and one reformer—as required by the act approved November 20, 1872. The official returns were at once delivered to this board by the secretary of the board appointed by the governor, and which was now superseded by this election by the senate. This board at once proceeded to canvass and compile the official returns as transmitted to the governor by the supervisors of registration in the different parishes of the State; and found by this canvass that John McEnery was elected governor of Louisiana by about 10,000 majority, as also the balance of the democratic or fusion State ticket, and also found who were elected senators and members of the house, the result being the same as that found by the Forman or Warmoth board, and so declared in due form as required by law.

The body meeting at the State-house organized on the 9th of December, P. B. S. Pinchback, as lieutenant-governer, being president of the senate, and at once passed articles of impeachment against Governor Warmoth, declared the office vacant by reason of this impeachment, and that Pinchback was then the acting governor of Louisiana.

Among other things, the body (democratic) holding its sessions at

the city hall elected Mr. McMillen a Senator in Congress, to serve out the unexpired term of Mr. Kellogg, whose term of service would expire on the 3d day of March, A. D. 1873. At the same time the body (republican) holding its sessions at the State-house elected Mr. Ray a Senator to serve out the same unexpired term of Mr. Kellogg. The extra session closed, and the regular session of the Legislature began on the 6th day of January, A. D. 1873.

Both bodies met at the same places as before, one (the democratic) holding its sessions at the city hall, declared John McEnery to be duly elected governor of the State of Louisiana, and the other, meeting at the State-house, declared W. P. Kellogg as duly elected governor. Both qualified and both proclaimed themselves to be the governor of the State of Louisiana.

On the 15th day of January, the day fixed for the election of Senator, both parties proceeded to the election of a Senator to serve for the long term commencing on the 4th day of March, 1873. The one body, the democratic, elected W. L. McMillen, and the other body, the republican, elected P. B. S. Pinchback. Both came here with credentials, those of McMillen signed by McEnery and those of Pinchback signed by Kellogg, each representing himself to be governor, and in all other respects the credentials of both are in due form and attested by the seal or the pretended seal of the State; and the credentials of both were presented in March last and laid upon the table.

The credentials of McMillen and Ray, elected for the short term to supply the vacancy made by Kellogg, were presented in January and referred to the Committee on Privileges and Elections, and on the 15th day of that month the following resolution was passed by the Senate:

Resolved, That the Committee on Privileges and Elections be instructed to inquire and report to the Senate whether there is any existing State government in Louisiana, and how and by whom it is constituted.

On the 20th of February following a majority of that committee, through Mr. CARPENTER, submitted a report, and recommended the adoption of the following resolutions:

1. *Resolved*, That there is no State government at present existing in the State of Louisiana.
2. *Resolved*, That neither John Ray nor W. L. McMillen is entitled to a seat in the Senate, neither having been elected by the Legislature of the State of Louisiana.

With the report a bill was submitted for the establishment of a State government in Louisiana.

A long debate ensued upon the bill, and finally Congress adjourned without taking any action.

The credentials of both McMillen and Pinchback were at the beginning of this session referred to the Committee on Privileges and Elections. The credentials of Pinchback were brought to the consideration of this committee, and the one question then there considered was whether the credentials of Pinchback were sufficient in themselves to entitle him to a seat as a Senator in the first instance and without further inquiry. Arguments by counsel were heard for and against by the committee. No testimony whatever was taken. The committee were equally divided upon the question, and the whole subject was then remitted to the Senate for its judgment.

Mr. President, as a member of this committee I would have preferred, with our preceding investigation and with the knowledge we already possessed of the facts, both historical and those ascertained by the report of this committee made at the last session and to which I have referred, that we should have continued the investigation if any further was required for the more complete development of the case, and have made a full report upon the whole subject, with the hope that early and decisive action would be taken to determine finally the whole question in all its various relations and aspects. But the committee determined that the present should be limited to an examination of the credentials of Pinchback only and the legal effect thereof. And yet, notwithstanding this limitation to the full examination of the credentials and of their legal effect, we cannot avoid a question of fact *in limine*. Admit all the efficacy that the honorable Senator [Mr. MORTON] would ascribe to credentials in due form and signed by the legal authority; admit that it has been the uniform practice that such certificate of the election of a Senator was *prima facie* evidence of his right to a seat; admit that you cannot go behind this certificate and especially behind the solemn act of the Legislature in electing a Senator to examine into the election of members of that Legislature or any component part thereof, and in all which I most cordially concur with the honorable Senator, yet this is not that question and does not involve any of these considerations. The question rises higher and goes far beyond this.

The credentials presented by Pinchback represent that he was elected a Senator by the *Legislature* of Louisiana, and Kellogg, signing them, represents himself to be the *governor* of that State. Is both or either true? That is the question; nothing less, nothing more. If Kellogg be not the governor, then the credentials are no more than waste paper. If the body electing Pinchback be not the Legislature and Kellogg should be the governor, the credentials are but a shadow at best, and it may be a bald fraud. If neither Kellogg be governor nor this body a legislature, there is a pretentious fraud attempted to be perpetrated upon the Senate which its dignity, its character, power, and above all its constitutional duty, require that it be met at the threshold with stern rebuke. To send an individual here as the representative of a sovereign State who presents credentials not signed by a governor of the State, or who has not been elected by the Legislature of the State, does not comport with my idea of senatorial duty, either in the first or in the second instance. No studied evasion by going off into an inquiry into the component parts of a legislature, or who are its members, and which no one ought to pretend that we had the power to do, can divert the mind from the real question.

Then, Mr. President, to the real question: Was the body represented to have chosen P. B. S. Pinchback the legal and constitutional Legislature of Louisiana and was Kellogg the legal and constitutional governor of Louisiana at the time he signed the credentials of Pinchback?

The honorable Senator from Indiana [Mr. MORTON] himself admits the necessity of establishing at least one fact before these credentials would be considered as making a *prima facie* case. I put the question as he himself puts it, in his own words: "Was Governor Kellogg the governor of the State of Louisiana at the time these credentials were signed? If he was, that is the end of the argument; we may proceed no further." Therefore it is conceded by the honorable Senator, and as I have always held it, to be the undoubted right of this body to enter into the investigation of the fact whether the person representing himself to be governor is in fact the legal and constitutional governor before the credentials can have any consideration. He stops here. I hold that in this case we go a step further: that before these credentials have any efficacy whatever we inquire whether the body which these credentials represent as having chosen Pinchback as Senator was at the time thereof the legal and constitutional Legislature of Louisiana. The facts in this case inseparably connect them together.

The moment the honorable Senator begins his investigation to ascertain the status of his pretended governor who signed the credentials, that moment begins the investigation of that pretended Legislature which he represents as having chosen Pinchback. They both fall or they both stand on the same facts. And the honorable Senator has felt the force of this, for while disclaiming the necessity of establishing the legal authority of the body electing Panchback, he nevertheless enters into a labored exhibit of the facts upon which he relies to establish the legal validity of his body. I shall therefore consider them together, and I have no hesitancy in avowing that if in the investigation of the facts to ascertain whether Kellogg be the legal governor or not we find from the facts that Pinchback was not chosen by the legal and constitutional Legislature, his credentials, however they may be signed, must fail in establishing even a *prima facie* case.

Before, however, departing upon this wide sea of fact, in which I shall endeavor to show that these credentials of Pinchback were not only not signed by a governor, but that he was not elected by a Legislature, allow me, Mr. President, to advert to the facts and circumstances which the honorable Senator [Mr. MORTON] asserts to be conclusive upon the Senate in recognizing Kellogg to be the rightful governor of Louisiana. The honorable Senator says:

First. That he (Kellogg) has been in possession of the office for twelve months, and in every respect acting as governor.

Second. He has been recognized by every department of the State government, by the other State officers, and by the Legislature in various ways.

Third. He has been recognized by the courts of his State, high and low.

Fourth. That he has been recognized as governor by the House of Representatives.

Fifth. That he has been recognized by the President of the United States as governor of Louisiana.

Here are five recognitions of Kellogg as governor as specially given by the honorable Senator with elaborate comments, enforcing with his usual ability and earnestness that they are binding upon us and conclude us against making any inquiry into his election, or any other objection that has been taken to him as governor; that we are in fact judicially bound, and cannot go behind them.

Then, Mr. President, the honorable Senator has made an array of facts here that must have impressed at least his own mind with singular power. He has arrayed every fact that would either directly or by intendment give legal, official character to this man Kellogg.

But there is one great fact which the Senator has, with a studied care, omitted to mention, and that is *his* (Kellogg's) *election* by the *people* as governor. He has with great zeal and particularity entered into a minute and elaborate enumeration of the various titles by which Kellogg holds his position, but, in all, the honorable Senator does not pretend to say that an election by the people of Louisiana was one of them.

The Senator has read the constitution of Louisiana; he is presumed to know what it is generally by virtue of his office as Senator. Our constitutional relations to the several States make it our duty to know whether they enjoy republican forms of government. He well knows, as we all know, that the constitution of Louisiana provides for the election of governor by the people, and that no one can be the legal and constitutional governor without such an election by the people.

There are some things, and among which the Senator has named some as titles for Kellogg, which we are not bound to notice, but this is one thing that we are not only bound to notice but that we are presumed to know. I will say to the honorable Senator that he has not found in the constitution of Louisiana any provision authorizing the President of the United States to select a governor for this people

either by nomination or by recognition; the Attorney-General has no such power; no State officers, no court, either high or low, of the State or of the United States, possesses any right to decree one; the House of Representatives of the United States cannot by resolution or by recognition in any way make a constitutional governor for that people. And further will I say to the honorable Senator that he cannot find in that constitution a single word authorizing him or even this body to assert that the twelve months' possession of the office can make a legal and constitutional governor of Louisiana. No, Mr. President; nothing but an election by the people will do. Any person holding the office and exercising the duties of governor by virtue of any other title or claim is a usurper and a criminal.

But I will take the opportunity just here, Mr. President, before I proceed to the more regular discussion of this subject, to allude in a very cursory manner to the propositions laid down by the Senator as binding us to recognize Kellogg. I do it more now in order to attract the attention of the Senate to their general nature and character.

Now as to his first proposition, the "twelve months' possession." Here, *in limine*, is a question of fact. And it involves the inquiry as to what kind of possession, how obtained, the extent of it, and how maintained. This brings up the whole subject. And as the committee in this particular case took no testimony to ascertain anything, we must rely upon the best we have.

Fortunately for us we need not depend upon general current knowledge as contained in the newspapers of the day, however true all may be; but we have before us the highest known to this body and this country. I refer to the investigation made by the committee, of which the honorable Senator was chairman at the time, under the order of the Senate, to inquire whether Louisiana had a State government, and how and by whom constituted, and their report upon the same. Also, I refer to the message of the President of the United States made to the House of Representatives, with the accompanying documents, showing his own action and that of the executive department in the affairs of the State of Louisiana. Of course the Senator is familiar with all these facts, and indeed he refers to some of them to sustain him in his extraordinary assault upon the rights of the people of Louisiana. At this moment I shall only refer to him generally, as it may become necessary in the few comments I may now make upon the propositions of the Senator.

Mr. President, the honorable Senator from Indiana [Mr. MORTON] with great earnestness pleads the statute of limitations against the right of the people of Louisiana upon this floor to be represented by a Senator constitutionally chosen. "Twelve months" is regarded by him as long enough to bar all inquiry. The statute of limitations is a statute of repose, and the most beneficeht results have followed its proper application. In most of the States the statute can be plead in the case of a promissory note three years after it becomes due, if a single bill twelve years after it becomes due, and no person can be disturbed in his possession of land who has had such possession of it for twenty years; but in this case it must be a peaceable possession and adverse to the rightful owner. In common money transactions three and twelve years are required to give repose and bar the right; twenty years, in the case of lands where they are held peaceably and adversely, are required to bar the rightful owners. But, as claimed by the Senator, "twelve months" only are required to bar the people of Louisiana in having a right to representation upon this floor, and to conclude us from making any inquiry, and exercising our highest constitutional duty—to judge of the election of our members.

Mr. President, the contrast in time between the two and the relative importance of the subjects—one the ordinary transactions of individuals, and the other involving the government of a State—is so strikingly significant that it hardly deserves a further consideration. But admit, for the sake of argument, that in some cases even "twelve months'" possession, or even one month's possession, might be held to be a good bar, how does it stand with the one now before us?

The honorable Senator relies upon this possession as one of his facts to conclude us against inquiry. In order, therefore, to give to it its legislative force we should know what kind of a possession it is; how obtained and how continued and how maintained. And here, Mr. President, as a question of fact to touch it, shows that so far from being a possession to bar a right, it is but that possession which any common robber, plunderer, or usurper could enjoy when he had the force to hold it.

That honorable Senator will not deny that but for that order of Judge Durell to Packard, the United States marshal, to seize the State-house, and, with the aid of United States soldiers, to hold and to prevent the McEnery legislature from organizing on the 9th day of December, the McEnery legislature would then and there have organized; that it would have continued its organization and would at the proper time have declared John McEnery to be governor. The Senator will not deny but that from that day the State-house was seized by Packard and the United States troops, and from his inauguration and up to the present time, Kellogg has been retained in power and retained alone by the power of this Government; and I have the confidence to believe that the Senator will admit that if this power was withdrawn the Kellogg government would cease to exist; it would disappear amid the wild acclamation of a freed people, and the Kelloggs, Dibbles, Durells, Pinchbacks, and Longstreets would hide from their presence.

With this apparent and known and felt wrong admitted by all, what kind of a possession is this, think you, that should bind us? But more, what kind of a case must this be that requires a resort to such a possession in order to give it a standing again before this body?

I leave the "twelve months' possession" for the present with the single reflection, if the intrusion of a person into gubernatorial position through the instrumentality of a United States district judge, assisted by United States troops, and kept there for any length of time by the executive authority of this Government, which of course means the whole military power of this country, can be made into a legal and constitutional governor of a State, then is our constitutional form of government, and more particularly the constitutional relations of the States to the General Government, a sham and a cheat, and our boasted American liberty a signal failure.

Now, Mr. President, a word of comment upon this second position, namely, that Kellogg was recognized by every department of the State government, by the other State officers, and by the Legislature. Upon this it is only necessary to remark that all these derive their title to place from the same source that Kellogg himself does. Intruded into office by the same unjustifiable means, indeed, so far as this Legislature is concerned, I submit to the honorable Senator whether it was fair to cite any act of recognition by it as in any respect—morally, politically, or as a matter of law—binding upon this body, or which should in any degree influence its action?

This Legislature, the same body that was organized, not by virtue of an election by the people but under the mandate of Judge Durell; supported by the military power of the Federal Government, this body that counted the votes as returned by the Lynch board and declared Kellogg to be duly elected governor of the State of Louisiana, is to be impressed into the service of the honorable Senator to prove title in Kellogg, and which, more extraordinary still, he undertakes to say is binding upon us in determining the question before us. This Legislature, the body that elected Pinchback, whose seat as a Senator is now the very subject of controversy, is relied upon by the Senator in its recognition of Kellogg as governor to give official validity to the credentials of Pinchback signed by him, when the Senator knows that the legal existence of that very Legislature is denied, and is one of the proper subjects of inquiry in the case under discussion; for if that was no Legislature in fact, the whole case falls.

What, sir; can it be that the acts and declarations of co-conspirators can convert a wrong, a crime, into a meritorious duty? Can it be that a band of robbers can make sacred their right to hold the property they have plundered by the acts and declarations of each other? Kellogg will recognize the Legislature, and the Legislature will recognize Kellogg and the other State officers both, and they altogether will recognize each other as being the rightful authorities of the State! Could you expect anything else from either or all obtaining their places in the same manner and holding them by the same tenure? How else could it be expected that they should act in the successful prosecution of their conspiracy against the people and State of Louisiana?

No, sir; in the impartial investigation of this subject the Senator should excuse us from considering as evidence binding upon us the acts and declarations of the parties on trial in their own favor; for both the Legislature and Kellogg, it will be admitted, are on trial in the issue before us! The law, more gracious, will, if the Senator will not.

Mr. President, as to the third proposition—that Kellogg, has been recognized as governor by all the courts of the State, high and low: I would ask the Senator, is the election of a Senator to this body a political or a judicial question? Is the election and organization of a State Legislature a political or a judicial question; is its existence or the existence of a State government a political or a judicial question? What court, I would inquire, is to determine for us who has been elected a Senator? What court, I would ask, is to determine who is elected to the Legislature of Louisiana or who are to constitute that body? What court is to determine whether Kellogg was or was not elected by the people of Louisiana, or whether he is the legal governor of that State? Why, then, talk about the recognition of courts, whether high or low, if they have no right to judge, no right to try, no right to hear? If there be any legal validity or binding force in any act of recognition by any court without any right to hear, to try, and to judge, and nothing before it which can involve directly the right of any of these to place, let us be just to the court and to ourselves by conferring upon it, if we may, the power to investigate the whole question and then adjudge and determine upon knowledge derived according to the forms of law. No, the honorable Senator knows the courts have no such power. If there be one question that is well settled in the jurisprudence of this country it is that courts can have no jurisdiction over purely political subjects. What they cannot do directly, they cannot do indirectly.

Who are elected to the Legislature of Louisiana, who are members of it, its organization, and whether it be the rightful Legislature or there be no Legislature at all, or whether there be a State government at all, or one in conformity to the Constitution republican in form, are all political questions with which no court has any right whatever to interpose for any purpose.

Courts in the execution of their powers in the administration of justice presume a government; they follow the political power upon all political questions. Whatever that government may be, a government *de jure* or *de facto*, a government of this or that individual, the courts proceed without an apparent knowledge of the strifes or mu-

tations in the political world, and administer the law as they find it and as it may be given to them by the political power, whatever that political power may be. Constitutions may be upturned by the people; Legislatures may be changed, and there may be conflicting Legislatures and conflicting governments. The courts are helpless to do anything to remedy these primary questions of organization, and the only thing they can do is to attend to their own duties and follow the political power in being or abdicate their functions. The courts have their own duties to perform under laws already passed by the political power. They discharging their duties, if there be in the midst of strife in the political power of the State no executive power to execute their judgments, that is the fault of the political power. They may, in determining questions between individuals, reflect more or less upon the political power, as it did in this very case; but that does not, and cannot, affect the main question before us.

The courts in Louisiana are discharging their ordinary functions under the Kellogg government, whatever may be their opinions respecting it.

If the McEnery government had been installed in power these same courts would just be doing the same thing, and were the McEnery government to be established to-morrow in the place of the Kellogg, these same courts, unless interrupted, would go on in the regular discharge of their duties, notwithstanding their previously expressed opinions respecting its rightful authority, and simply because it is the potential political power which they cannot affect and which they are bound to follow.

In that very case relied upon by the Senator, the case of Luther *vs.* Borden *et al.*, (7 Howard Supreme Court Reports,) for the purpose of establishing the binding power of the decisions of State courts upon us in cases arising under the constitution and laws of a State, it is so clearly laid down that courts have no jurisdiction over questions purely political that I shall also direct attention to it.

Chief Justice Taney in delivering the opinion of the court says:

> Certainly, the question which the plaintiff proposed to raise by the testimony he offered has not heretofore been recognized as a judicial one in any of the State courts. In forming the constitutions of the different States, after the Declaration of Independence, and in the various changes and alterations which have since been made, the political department has always determined whether the proposed constitution or amendment was ratified or not by the people of the State, and the judicial power has followed its decision.

Also, he further says:

> Under this article of the Constitution it rests with Congress to decide what government is the established one in a State. For, as the United States guarantee to each State a republican government, Congress must necessarily decide what government is established in the State before it can determine whether it is republican or not. And when the Senators and Representatives of a State are admitted into the councils of the Union, the authority of the government under which they are appointed, as well as its republican character, is recognized by the proper constitutional authority. And its decision is binding on every other department of the Government, and could not be questioned in a judicial tribunal.

Mr. Justice Woodbury, in his separate opinion in the case, dissenting upon one branch of the case, but agreeing mainly with the majority of the court, says:

> But allowing the people to make constitutions and unmake them, allowing their representatives to make laws and unmake them, and without our interference as to their principles or policy in doing it, yet, when constitutions and laws are made and put in force by others, then the courts, as empowered by the State or the Union, commence their functions and may decide on the rights which conflicting parties can legally set up under them, rather than about their formation itself. Our power begins after theirs ends. Constitutions and laws precede the judiciary, and we act only and after them, and as to disputed rights beneath them, rather than disputed points in making them.

And again:

> Instead of controlling the people in political affairs, the judiciary in our system was designed rather to control individuals, on the one hand, when encroaching, or to defend them, on the other, under the Constitution and the laws, when they are encroached upon. And if the judiciary at times seems to fill the important station of a check in the Government, it is rather a check on the Legislature, who may attempt to pass laws contrary to the Constitution, or on the Executive, who may violate both the laws and Constitution, than on the people themselves in their primary capacity as makers and amenders of constitutions.

And again:

> But in relation to politics, they belong to politics, and they are settled by political tribunals, and are too dear to a people bred in the school of Sydney and Russell for them ever to intrust their final decision, when disputed, to a class of men who are so far removed from them as the judiciary; a class, also, who might decide them erroneously as well as right, and if in the former way, the consequences might not be able to be averted except by a revolution, while a wrong decision by a political forum can often be peacefully corrected by new elections or instructions in a single month. And if the people, in the distribution of powers under the Constitution, should ever think of making judges supreme arbiters in political controversies, when not selected by nor, frequently, amenable to them, nor at liberty to follow such various considerations in their judgment as belong to mere political questions, they will dethrone themselves and lose one of their own invaluable birthrights; building up in this way—slowly, but surely—a new sovereign power in the Republic in most respects irresponsible and unchangeable for life, and one more dangerous, in theory at least, than the worst elective oligarchy in the worst of times.

And again:

> If it be asked what redress have the people, if wronged in these matters, unless by reverting to the judiciary, the answer is, they have the same as in all other political matters. In those they go to the ballot-boxes, to the Legislature, or executive for the redress of such grievances as are within the jurisdiction of each, and, for such as are not, to conventions and amendments of constitutions. And when the former fail, and these last are forbidden by statutes, all that is left in extreme cases, where the suffering is intolerable and the prospect is good for relief by action of the people without the forms of law, is to do as did Hampden and Washington, and venture action without those forms and abide the consequences.

Under the Constitution of the United States the Senate is made the "*judge* of the *elections*, returns, and qualifications of its own members." The election of Senator must be made by the Legislature of the State. Is the *election* of a Senator a political or a judicial act? If it be a political act, and there is none to deny it, then where is the power in any court to inquire into it? What court shall judge of our act in this or any case? Whether right or wrong it must stand, and all courts are bound by it, and, besides, all the other departments of the Government. This body is the judge—the only and the final judge. Ah, but the honorable Senator may say that when he refers to the decisions of courts as binding upon us it is to fix the character of the body choosing Pinchback as the lawful Legislature of Louisiana, and, because of such decisions, to be received by us as the lawful Legislature. But is not this revolving in a circle? What court has a right to declare who constitutes the Legislature of Louisiana? How do they get their jurisdiction? The Legislature is an independent department of the government and a political body. To determine whether a body is a Legislature of a State is a political question which no court dare approach; it may administer laws passed by it, because at the time it may be the political power in being, and it is obliged to follow the political power.

Then it must be admitted that the election of a Legislature, its organization and its powers, are exclusively political. The election of a Senator by it is a political question, and there is but one *sole judge* whether the election was in form and made by the rightful body at the right time, and that is this body; and the decision of no court can in anywise control, or limit, or qualify its power to judge of that election.

In the case of Robbins *vs.* Potter, contesting Senators from Rhode Island, referred to by the Senator from Indiana to sustain his position upon this branch of the subject, Mr. Poindexter, representing the majority of the committee, while proceeding to show, both from the character and from the election and organization of the Legislature, and of its recognition in many ways as a Legislature, in order to confirm the position taken by the committee that the rightful Legislature elected Robbins, most specifically states the Louisiana case as it is now before this body. He says in that report:

> There was but one governor and but one senate in the State claiming to be a part of the General Assembly. If there had existed another body of men, however chosen, contending for the offices of the governor and Senators in the State, it will not be denied that their respective rights might be the subject of inquiry in deciding a contested election in the Senate of the United States.

So that in that case where there was just one governor, one Legislature—no rival or contesting body—all recognized by all departments of the State, by the courts, and by the people, yet that the rights of this body might not be impinged by any power whatever, it was thought proper, perhaps necessary, to assert its specific right in a proper case to inquire into all the elements of the election without being bound or confined in this inquiry by the opinion or action of any other body, however constituted or whatever its powers might be. And in corroboration of this admitted right by the majority of the committee, the minority of the committee, through Mr. Silas Wright, whose very name still impresses our age so lost to the past and the great names of the past in its own important and hurried events, made a report denying that the rightful Legislature elected Robbins, and that therefore he was not a duly elected Senator; and from which report I submit the following as illustrating the power of this body to judge in such cases:

> Still, notwithstanding the solemn declaration by a body conceded to be the Legislature of the State, Mr. Robbins produces to the Senate, and there is referred to the committee, a commission in due form, according to the laws and the practice of the government of Rhode Island, to show that Mr. Robbins had been duly elected a Senator to represent that State in the Senate of the United States. Will the Senate look behind this commission to determine whether or not it was properly granted? The undersigned believes that it is not only the right but the duty of the Senate to do so. The commission is only the evidence of the election of a Senator, and, if the Senate were to limit its inquiries to the proper form and authentication of the commission, it would only make itself the judge of the evidence of an election, not the judge of the election itself. The undersigned supposes that the evidence of an election to an office is in all cases *prima facie* only, and is susceptible of being controverted and contradicted before a tribunal competent to judge of the election; he therefore supposes that the regularity of the evidence of an election may be one thing, and that the election may be a different thing; and he concludes that, as the Senate is constituted, not the judge of the evidence of the elections of its members only, but "the judge of the elections" of its members, it may, and, in all cases of a contested election, where the contest does not arise as to the regularity of the evidence simply, should look behind the evidence and into the election itself, that it may determine what it is constituted the judge to determine, the fact of election, or, in other words, that it may determine whether the *prima facie* evidence laid before it is the real evidence of facts, or is subject to contradiction by the facts.

Again:

> We have already seen that the Constitution makes it the duty of the Senate to judge of the "election" of its members. Another provision of that instrument says: "The Senate of the United States shall be composed of two Senators from each State chosen by the *Legislature* thereof;" and the question now directly presented is, "Was Mr. Robbins chosen by the *Legislature* of the State of Rhode Island?" It would seem to the undersigned, with all deference to the opinion expressed by the majority of the committee, that the Senate cannot judge of the election of that individual unless it can look into and decide this question, and that to determine this to be an unauthorized interference on the part of the Federal Government in the domestic affairs of the government of the State of Rhode Island would be to determine that the Senate cannot in the most important point always involved "judge of the elections" of its own members; that it cannot judge whether or not they were chosen by the Legislatures of the States when the Constitution expressly requires that they should be so chosen.

Again:

> Hence it is concluded that the consequences above enumerated cannot follow the

decision involved in the present controversy, whatever that decision may be, as the question presented is not whether the persons who did act as the governor and senate of Rhode Island, or some other persons claiming the right so to act, were the proper persons to discharge the duties of those offices; but the question is, were the persons who did so act constitutionally and legally, even by any *prima facie* claim, the governor and senate of that State and, as such authorized to vote upon the election of a Senator.

So far as it is now seen from the investigation of this subject there never has been a Senator, beside the honorable gentleman, who has ever questioned or attempted to qualify the supreme power of this body to judge of the elections of its own members.

True we may consider in the investigation, if rendered necessary, not only whether it was a Legislature that elected, or whether, if a Legislature, it was the rightful one; and may consider the acts and conduct of other departments of the State government, the courts and the people, in relation to this Legislature in making up a full and deliberate judgment upon all the facts; but never that the acts of recognition or any other act of any other department, whether executive, judicial, or political, should be absolutely binding and conclusive upon us in determining the constitution of this body.

Then why this labored effort to show from the case of Luther *vs.* Borden that the Supreme Court of the United States will follow in its decisions of cases arising exclusively under the constitution and laws of the State the decisions of the State courts? It is not only right to do so, but the Supreme Court is obliged to do so, and give to such constitution and laws such construction as the State courts have given to them; but is that any reason that this body should be bound to follow either in a matter exclusively its own and entirely political in its nature, and with which neither State nor United States courts, supreme or inferior, have anything whatever to do. If courts have a right to adjuge either directly or collaterally that it is a rightful Legislature, the equal right goes along to adjudge that it is the wrong one, and if there be any validity in this judgment which commands respect or requires obedience it involves the absurd power in the courts of establishing or of abolishing Legislatures, and never before did any human being contemplate any such a thing; for the Constitution of the United States and the constitutions of the thirty-seven States respectively prescribe how these Legislatures shall be constituted, and that the separate houses of each shall be the judge of the elections and qualifications of the members thereof. This is a primary, fundamental law of representative government, to which all other departments of the Government and all courts must bow and which they cannot affect or impair, either directly or indirectly, by any act or proceeding whatever.

The whole scheme of recognition by other powers, as advanced by the Senator, is but an invention, if he will excuse the language, to avoid the real and substantial facts of this case.

Now, Mr. President, to the fourth proposition, namely, that Kellogg has been recognized by the House of Representatives. I ask how recognized? That House has the power to judge of the elections of its own members. It is said that it has admitted members upon credentials signed by Kellogg, and that is the recognition referred to. Can that be binding upon us? If so, it can only be for the reason that it acted before we did. Because, possessing the same constitutional power of judging of the elections of our own members, had we first determined the question by admitting McMillen or Ray at the last session of the last Congress, then the House, by parity of reasoning, would have been bound by our decision. This resolves the whole thing into a race for precedence upon the part of two independent branches of the Legislature. Can anything be more absurd? Each possessing an absolute power, either can bind and conclude the other by a race, it may be, which shall first exercise it. This is one of the recognitions relied upon and urged with an earnestness that would cause surprise did we not all know that the Senator engaged in any cause cannot be any otherwise than earnest.

Then as to the fifth and last proposition of the Senator, that Kellogg has been recognized by the President of the United States. Yes, Mr. President, I admit that he has been recognized by the President; he was put where he is by the intervention of the executive department of the Government, and is kept there to this day by it, and by nothing else.

Under the fourth section of the fourth article of the Constitution of the United States, and as authorized by the act of Congress of February 28, 1795, passed in pursuance thereof, the President intervened to protect the State against domestic violence or insurrection, for I do not care, with the views I am now urging, about standing upon terms or words, although it must be admitted there is nothing in the act of 1795 providing for any interference in cases simply of domestic violence—that is in words *eo nomine;* but for the sake of the argument I will take the construction of the Senator from Indiana that the act does confer this power.

The President in determining to intervene had the right to judge, and was obliged to judge. He could have recognized either the McEnery or the Kellogg government as the existing one, in order to prevent the violence, in observing any application made by them. He recognized the Kellogg. He could only do it for one purpose, and for one purpose alone: to prevent the threatened violence. He had to decide for himself in the exigency, and for the exigency alone. It being a political act, and authorized by law, the courts of course would observe it and follow it as far as the relation of things required. But the violence is the only thing staid; the right of things is not determined. Having decided and determined to act whether right or wrong, the President can exercise all the powers conferred by the law, and all are bound to obey. For illustration, he can call out militia to prevent or suppress the violence, and they are bound to obey. And this is the soul of the case in 12 Wallace, referred to by the honorable Senator from New York.

But, I would ask, can the act of the President go beyond the fact of violence and bind all other departments of the Government against the rightful parties, or against the real right of the matter? He may have selected the wrong one, as in my judgment he did. Does this fix upon the people of Louisiana this State government as a matter either of law or of right, not to be questioned in any way? The courts follow the act and its legitimate surroundings and consequences for the time, for they are controlled by the political power and must observe it. Could not Congress interpose and right the wrong if one is done?

Chief Justice Taney, in this case of Luther *vs.* Borden, says:

Undoubtedly if the President, in exercising this power, shall fall into error or invade the rights of the people of the State, it would be in the power of Congress to apply the proper remedy. But the courts must administer the law as they find it.

The power of Congress to interpose against the action of the President is here unqualifiedly asserted. If Congress therefore cannot be bound by this act; if not conclusive upon it, how can it be conclusive upon either the Senate or House, when each possesses the unlimited power to judge of the election of its own members? This involves no act of violence, but a cool examination of all the facts of the case. True the President, being the judge, has the right to suppress the violence, but the violence only. And this should never wrench from us our omnipotent power to determine who shall represent the State of Louisiana upon this floor. Never! never!

If the act of the President is the decisive and absolute and conclusive thing ascribed to it by the Senator, it must bind every other department of the Government, and fix as against the action of any or all the government of that State.

Justice Taney says no. The common fitness of things says no.

Mr. President, it is not binding upon the President himself. Does any one question but that if the President should to-day review his action and come to the conclusion that he had interfered wrongfully; that since a more complete development of the facts he is satisfied that the application to him was not made by the legally constituted authorities of Louisiana, but by pretenders and usurpers, he could to-day revoke his action, he could announce his convictions, and could proclaim to that pretended government—the Kellogg government—that he could no longer sanction its validity, and would no longer give to it his executive support? And then what, Mr. President? One thing would infallibly ensue, an immediate extinction of the Kellogg government; but whether such action of the President would be at all binding on the Senate in our relations to Louisiana is quite another thing. How soon could relief come to the despoiled and abused people of Louisiana could only the President be brought to this eminently just course of action.

[At this point the honorable Senator yielded for an executive session.]

THURSDAY, *April* 16.

Mr. HAMILTON, of Maryland. Resuming the remarks I was making yesterday, I now propose adverting to the establishment of what I shall call the Kellogg government, this embracing the Legislature, the governor, and other State officers now in power in Louisiana, and shall present some facts to see whether it is entitled to our recognition as the legal government of Louisiana. In doing this I will be obliged to disclose one of the most deliberate and cunningly devised conspiracies that the annals of history furnish, and that has, alas! been prosecuted up to this time with a success that a better cause could not attain.

As soon as it was found after the election in November that the McEnery government had a majority of votes cast for it and that it would be so declared, and that Governor Warmoth, the then rightful Governor of Louisiana, had ordered an extra session, at which this government would be organized and go into operation under the protection of Warmoth, Kellogg and his coadjutors full well apprehended that should this Legislature once meet under these auspices it was the end of them and of their folly, and at once took steps to prevent it. Satisfied that they could not depend upon their own people, they determined to embroil the General Government and secure its powerful aid to effect their nefarious purposes.

Accordingly, to prepare the way, Kellogg addressed a communication to Attorney-General Williams, dated November 27, 1872, from New Orleans. After giving a detailed account to the Attorney-General of the condition of affairs in Louisiana and the complications of parties there, he makes this notable suggestion:

I therefore respectfully suggest that General Emory, who I think appreciates the necessity and sympathizes with the republican party here, be instructed to comply with any requisition that the United States courts may make upon him in support of its mandates and to preserve the peace. As at present advised, I think General Emory understands that he is to use the troops in no contingency without instructions from Washington.

Then there were no mandates of any United States court to be enforced. Of course they were to be made in the future, and the Attorney-General was apprised of that fact, and the Government of the United States was notified that they should be ready for the exigency

whenever that mandate was ready to be put into execution. This communication also sought to impress the Administration with the sympathies of General Emory, commanding there, and desires that he be instructed to employ the troops of the United States in supporting the mandates which the United States courts may make.

It was November 27 when this communication was addressed to the Attorney-General, and not until December 5 was any mandate made. But can any one question that it was then determined that one should be rendered that would require United States troops to enforce? On December 3 the Attorney-General responded as follows to this communication; and remember this was before any mandate or decree of the court had been made:

DEPARTMENT OF JUSTICE, *December* 3, 1872.

S. B. PACKARD, Esq.,
United States Marshal, New Orleans, Louisiana:

You are to enforce the decrees and mandates of the United States courts, no matter by whom resisted, and General Emory will furnish you with all necessary troops for that purpose.

GEO. H. WILLIAMS,
Attorney-General.

Mr. BAYARD. Will the Senator permit me to ask him, to what does he consider that dispatch was responsive?

Mr. HAMILTON, of Maryland. To Kellogg's communication of the 27th of November. I see no other that it can be responsive to. That letter detailing the incidents of the condition of affairs in Louisiana was before the Attorney-General. Deliberation was had upon it, and upon the 3d day of December deliberately it was determined that the Army of the United States should be ready to enforce any mandate made by any judge of the United States court in New Orleans. Everything being matured then for carrying into execution this conspiracy, on December 5, at night, Durell, judge of the district court of the United States, directed the marshal to take possession of the State-house under the following order:

Now, therefore, in order to prevent the further obstruction of the proceedings in this cause, and, further, to prevent a violation of the orders of this court, to the imminent danger of disturbing the public peace, it is hereby ordered that the marshal of the United States for the district of Louisiana shall forthwith take possession of the building known as the Mechanics' Institute, and occupied as the State-house for the assembling of the Legislature therein, in the city of New Orleans, and hold the same subject to the further order of this court, and meanwhile to prevent all unlawful assemblage therein under the guise or pretext of authority claimed by virtue of pretended canvass and returns made by said pretended returning officers in contempt and violation of said restraining order; but the marshal is directed to allow the ingress and egress to and from the public offices in said building of persons entitled to the same.

E. H. DURELL.

On the 6th of December, being the next day, J. F. Casey, collector of customs at New Orleans, addressed a communication to the President. Casey says:

NEW ORLEANS, *December* 6, 1872.

President GRANT:

Marshal Packard took possession of State-house this morning at an early hour with military *posse*, in obedience to a mandate of circuit court, to prevent illegal assemblage of persons under guise of authority of Warmoth's returning board in violation of injunction of circuit court. Decree of court just rendered declares Warmoth's returning board illegal, and orders the returns of the election to be forthwith placed before the legal board. This board will probably soon declare the result of the election of officers of State and Legislature, which will meet in State-house with protection of court. The decree was sweeping in its provisions, and if enforced will save the republican majority and give Louisiana a republican Legislature and State government, and check Warmoth in his usurpations. Warmoth's democratic supporters are becoming disgusted with him, and charging that his usurpations are ruining their cause.

JAS. F. CASEY.

This appears to be rather a political matter. Mr. Casey's office was political; and his duties in New Orleans as collector of customs—and the practice seems to prevail everywhere wherever there is a custom-house or a navy-yard for the gentlemen in charge not only to attend to their duties in collecting the customs or the ordinary operations of the navy-yard as the case may be, but to attend especially to partisan politics; and Mr. Casey, as we know from past events, had very great experience in such matters. We remember that he was engaged in carrying up and down the river on revenue-cutters members of the Legislature whenever exigencies occurred by which their absence was more important than their presence in the performance of their duties. This, however, is a common thing in these days, and does not amount to a comment hardly, much less a sensation. There was a day when this was not so common, and when to do this would surely secure a vacancy in the place.

Mr. CONKLING. If it would not interrupt the Senator, I should like to know when that time was to which he refers. He seems to refer to some purer time.

Mr. HAMILTON, of Maryland. I refer to the days of Jefferson——

Mr. CONKLING. I supposed the Senator referred more particularly to the days of Jackson. [Laughter.]

Mr. HAMILTON, of Maryland. No, sir; not particularly. [Laughter.] I have referred to the days of Jefferson. I know of no instance in the days of Jackson that I can recall to mind, but there may have been some known probably to the Senator, because office-holders about that time began to think that it was their duty to hold their offices as long as they could and to keep the men in power that would keep them in place.

Here we have this mandate of this judge; the seizure of the State-house by United States troops, and Packard the marshal made the *judge* to decide who shall enter as members of this legislature, and who held it until the Kellogg government was organized. Is not this enough to put the honorable Senator from Indiana even upon inquiry at least, before receiving anything as entitled to our consideration from a government or any department of it thus installed in power? Is the Senate prepared to do so great a wrong?

Hear what an eminent judge, Judge Cooley, of Michigan, in a note to the last edition of Story on the Constitution, says:

In the case of Louisiana, in 1873, an inferior Federal judge, without a shadow of authority, and consequently in defiance of law, and for that reason supported by no presumption of correct motives, and with scarcely a pretense of observing even the usual forms, by the process of his court, aided by a military force, installed in power a State government, which he sided with as against rival claimants, *and in consequence of a pressure of business* in Congress precluding prompt attention to the case by that body, has been enabled to sustain this government in power until the present time. Mr. Justice Story has, with reason, predicted that "if a despotic or monarchical government were established in one State, it would bring on the ruin of the whole Republic. What government can be more despotic than one elected by an injunction, and continued in power by a military force, under the order of a judge, who, having no jurisdiction, is restrained by no law but his own arbitrary will?"

But let us pursue still further this record of wrong and of shame. The Kellogg legislature was organized under these auspices in the State-house on the 9th December. Articles of impeachment were at once presented against Warmoth. He by reason of it was suspended, and P. B. S. Pinchback assumed the authority of governor in his stead, and at once telegraphed the following to the President:

NEW ORLEANS, *December* 9, 1872.

President GRANT:

Having taken the oath of office and being in the possession of the gubernatorial office, it devolves upon me to urge the necessity of a favorable consideration of the request of the General Assembly as conveyed in the concurrent resolution of this day telegraphed to you requesting the protection of the United States Government. Be pleased to send the necessary orders to General Emory. This seems to me a necessary measure of precaution, although all is quiet here.

P. B. S. PINCHBACK,
Lieutenant-Governor, Acting Governor of Louisiana.

On the 11th of December the Attorney-General telegraphed Pinchback as follows:

DEPARTMENT OF JUSTICE, *December* 11, 1872.

P. B. S. PINCHBACK,
Acting Governor of Louisiana:

Requisition of Legislature transmitted by you is received. Whenever it becomes necessary in the judgment of the President, the State will be protected from domestic violence.

GEORGE H. WILLIAMS,
Attorney-General.

That 11th day of December is a remarkable day in the history of this whole matter. On the same day Pinchback addressed the Attorney-General by telegraph, as follows:

NEW ORLEANS, LOUISIANA, *December* 11, 1872.

Hon. GEORGE H. WILLIAMS,
Attorney-General:

I have the honor to acknowledge the receipt of your dispatch. May I suggest that the commanding general be authorized to furnish troops upon my requisition upon him for the protection of the Legislature and the gubernatorial office? The moral effect would be great, and, in my judgment, tend greatly to allay any trouble likely to grow out of the recent inflammatory proclamation of Warmoth. I beg you to believe that I will act in all things with discretion.

P. B. S. PINCHBACK,
Lieutenant-Governor, Acting Governor.

I rather guess "the moral effect would be great" to see men of the West and North, the white men of these States, marching down the streets of New Orleans with Pinchback at their head! The moral effect would be considerable, Mr. President, for the purpose of keeping him in power, put there by a United States judge and Marshal Packard.

On the same day Mr. Casey again telegraphed the President, as follows:

NEW ORLEANS, 11*th*, 1872.

President GRANT:

Democratic members of Legislature taking their seats. Most, if not all, will so in next few days. Important that you immediately recognize Governor Pinchback's legislature in some manner, either by instructing General Emory to comply with any requisition by Governor Pinchback, under joint resolution of Legislature of Monday or otherwise. This would quiet matters much. I earnestly urge this, and ask a reply.

JAMES F. CASEY.

On the same day Mr. Casey, signing himself "collector," telegraphed as follows to the President:

NEW ORLEANS, *December* 11, 1872.

President GRANT:

Parties interested in the success of the democratic party, particularly the New Orleans Times, are making desperate efforts to array the people against us. Old citizens are dragooned into an opposition they do not feel, and pressure is hourly growing; our members are poor and adversaries are rich, and offers are made that are difficult for them to withstand. There is danger that they will break our quorum. The delay in placing troops at disposal of Governor Pinchback, in accordance with joint resolution of Monday, is disheartening our friends and cheering our enemies. If requisition of Legislature is complied with all difficulty will be dissipated, the party saved, and everything go on smoothly. If this is done, the tide will be turned at once in our favor. The real underlying sentiment is with us, if it can but be encouraged, Governor Pinchback acting with great discretion, as is the Legislature, and they will so continue.

JAS. F. CASEY, *Collector.*

Then followed a dispatch from Kellogg himself to the Attorney-General, in these words:

NEW ORLEANS, 11*th*, 1872.

Hon. GEO. H. WILLIAMS:

If President in some way indicate recognition, Governor Pinchback and Legislature would settle everything. Our friends here acting discreetly.

W. P. KELLOGG.

Then, again, on the same day, both Kellogg and Casey united in a joint telegraphic dispatch to the President:

NEW ORLEANS, *December* 11, 1872.

President GRANT:

Warmoth has issued a proclamation declaring that his legislature has assembled in city hall. Not any of the regular republican members were present. In order to make a question in senate, he published the names of four regular republican senators as being present, but were in regular Legislature at capitol. His legislature is composed mainly of persons never returned as elected. There is danger of a collision, which can be avoided and quiet restored by an immediate compliance with requisition of regular Legislature made to you on Monday. Governor Pinchback has received no response to this requisition, which has encouraged Warmoth to believe that it has been denied. We earnestly request that, in view of the impending danger of collision, the requisition be complied with. There is a quorum of both houses of regular Legislature now in session at capitol.

WM. P. KELLOGG.
JAS. F. CASEY.

Thus ended the 11th day of December, 1872. Do you think the President felt a sense of relief when that day closed? Bullets hardly flew thicker and faster at Spottsylvania than did telegrams that day. There was manifestly trouble somewhere. These gentlemen who pretended to be the choice of the people found that the people objected to their pretenses. How does all this exhibition impress you, Mr. President? It impresses me thus: that these gentlemen, instead of depending upon their own people to support their manufactured government, solely relied upon the Government of the United States to do it for them. There is but one uniform, incessant demand or call in all this correspondence, and this call was for troops. The subject is too grave for any kind of levity, and yet one cannot but be amused at the very modest request of Pinchback that Federal troops be placed at his disposal to protect himself and his legislature, as the "*moral effect would be great.*" And as for Casey, he is in great alarm, and lustily calls for troops, and for the most extraordinary purposes, and the like of which I never before heard. "Our members are poor," says Casey, "and adversaries rich, and offers are made that are difficult for them to withstand. There is danger that they will break our quorum." Not by violence, Casey admits, where troops may be employed with propriety, but by the simple, unmartial, and undisturbing method of bargain and sale; and Federal troops were required to prevent this. If this be cause for intervention, what State is safe, and what would be the limit of our Army?

It might be considered exaggeration to say that the State capitals of Harrisburgh and Albany at times, if reports be true, would have required the whole Army alone; and without suggesting, one may well imagine what kind of an army would be required in this city if the same kind of abuses should prevail here that so much affected Mr. Casey.

But rising up to the great question, I here again reiterate whether in all this extraordinary correspondence there is not sufficient to put the Senate upon inquiry before any credentials or any action of any department of that government so established and so maintained should be recognized by us as having any validity or force whatever?

But to go on: The morning of the 12th December has dawned, and we observe a continuance of the same efforts, as the following telegram from Casey to the President will show:

NEW ORLEANS, *December* 12, 1872.

President GRANT:

The condition of affairs is this: The United States circuit court has decided which is the legal board of canvassers. Upon the basis of that decision a Legislature has been organized in strict conformity with the laws of the State, Warmoth impeached, and thus Pinchback, as provided by the constitution, became acting governor. The chief justice of the supreme court organized the senate into a court of impeachment, and Associate Justice Taliaferro administered oath to Governor Pinchback. The Legislature, fully organized, has proceeded in regular routine of business since Monday. Notwithstanding this, Warmoth has organized a pretended legislature, and it is proceeding with pretended legislation. A conflict between these two organizations may at any time occur. A conflict may occur at any hour, and in my opinion there is no safety for the legal government, without the Federal troops are given in compliance with the requisition of the Legislature. The supreme court is known to be in sympathy with the republican State government. If a decided recognition of Governor Pinchback and the legal Legislature were made, in my judgment it would settle the whole matter. General Longstreet has been appointed by Governor Pinchback as adjutant-general of State militia.

JAMES F. CASEY.

This was followed by a telegram from Pinchback to the President, as follows:

NEW ORLEANS, 12*th*, 1872.

President U. S. GRANT:

In view of the fact that H. C. Warmoth, assuming to act as governor after having been impeached and suspended from his office of governor in strict compliance with the courts and laws of this State, has issued a proclamation declaring himself as still governor of the State, and has assumed to convene an illegal body of men styling themselves a legislature, thus endangering the public peace and tranquillity and threatening domestic violence, I respectfully request that the commanding officer of this department be instructed, in compliance with the requisition of the Legislature, to aid and assist me in maintaining the public peace and protection and sustaining the legal State government.

P. B. S. PINCHBACK,
Acting Governor of Louisiana.

On the same day the Attorney-General sent the following response:

DEPARTMENT OF JUSTICE, *December* 12, 1872.

Acting Governor PINCHBACK,
New Orleans, Louisiana:

Let it be understood that you are recognized by the President as the lawful executive of Louisiana, and that the body assembled at Mechanics' Institute as the lawful Legislature of the State, and it is suggested that you make proclamation to that effect, and also that all necessary assistance will be given to you and the Legislature herein recognized to protect the State from disorder and violence.

GEO. H. WILLIAMS,
Attorney-General.

Then follows this dispatch:

NEW ORLEANS, *December* 13, 1872.

Hon. GEO. H. WILLIAMS,
Attorney-General United States:

The entire republican party of this State thank the President and yourself for action of yesterday in recognizing the legal and constitutional State government. This action has prevented the consummation of the most barefaced and outrageous election frauds. Every indication points to quiet and good order. The bogus legislature of Warmoth has adjourned *sine die*. Police reported last night to Governor Pinchback.

WILLIAM P. KELLOGG,
E. H. DURELL,
B. F. FLANDERS,
CHARLES CLINTON,
JAMES F. CASEY,
E. C. BILLINGS,
JOHN KAY, and many others.

Observe, Mr. President, Kellogg, the pretended governor, Durell, the judge of the United States district court, and Casey, the collector of the customs at New Orleans, thanking the President and the Attorney-General, not for discharging their duty, but in the name of and for the entire republican party of the State, in recognizing this State government.

Then follows, on the 13th December, this dispatch from General Emory to the Adjutant-General:

NEW ORLEANS, *December* 13, 1872.

Adjutant-General, United States Army, Washington:

There is imminent danger of immediate conflict between two armed bodies of men of some considerable numbers, one body of State militia, representing Governor Warmoth, holding an arsenal; the other an armed body of police, representing Governor Pinchback. I have been appealed to to interfere. Shall I do so; and if I interfere, to which party shall the arsenal be delivered? The parties are face to face with arms in their hands. I beg an immediate answer. I sent an officer to try what can be done by persuasion to suspend the conflict until an answer can be received. There will be no resistance to the Federal forces.

W. H. EMORY,
Colonel Commanding.

Then follows the response to General Emory:

WASHINGTON, *December* 14, 1872.

General W. H. EMORY, U. S. A.,
Commanding New Orleans, Louisiana:

You may use all necessary force to preserve the peace, and will recognize the authority of Governor Pinchback.

By order of the President.

E. D. TOWNSEND,
Adjutant-General.

The execution of this order closes the scene, as announced by the following:

NEW ORLEANS, *December* 14, 1872.

Adjutant-General, United States Army:

On the receipt of your telegram last night an officer was sent to the contesting parties to ask the evacuation of the arsenal and the dispersion of the armed forces. The demand was promptly complied with, and the arsenal turned over to the State authorities this morning. Everything now is quiet.

W. H. EMORY,
Colonel Commanding, Brevet Major-General.

Mr. President, after a careful and dispassionate consideration of this whole correspondence, to which I have just drawn the attention of the Senate, I ask how does it impress the mind? Can any fair mind fail to perceive and to admit that the Kellogg government was inaugurated by a United States court and maintained by the military power of this Government? Casey, whatever may be said about him by others, and I will myself be free to admit that he is better suited to be a collector of customs, and particularly in these times, than to be a Chief Justice of the United States, nevertheless puts the case clearly and strongly in his dispatch of the 12th December to the President, and which was at once, of course, communicated to the Attorney-General. He says:

The condition of affairs is this: The United States circuit court has decided which is the legal board of canvassers. Upon the *basis* of that decision a Legislature has been organized in strict conformity with the laws of the State.

This to the mind of Casey was good law, or law as a matter of course. And in this whole movement or conspiracy to get possession of the government of Louisiana no higher notions of law, be it said to the credit of Casey, seems to have directed the conduct of any engaged in it from its criminal inception to its sad conclusion. I shall not denounce Judge Durell for his criminal conduct in undertaking to determine who were State officers under the constitution and laws of Louisiana. Such a jurisdiction was never dreamed of before, much less attempted. By the action of this United States judge this Kellogg government was inaugurated into the power it now wields. Instead of speaking of it myself, I much prefer giving the opinions of gentlemen on the other side of the Chamber, and in their own language.

The able and impartial report of the majority of the Committee on Privileges and Elections, to whom was referred the resolution of inquiry as to whether Louisiana had a State government, and to which I have before adverted—that majority consisting of these distinguished Senators, Messrs. CARPENTER, LOGAN, ALCORN, and ANTHONY—used the following language in characterizing the action of Judge Durell:

Viewed in any light in which your committee can consider them, the orders and injunctions made and granted by Judge Durell in this cause are most reprehensible, erroneous in point of law, and are wholly void for want of jurisdiction; and your

committee must express their sorrow and humiliation that a judge of the United States should have proceeded in such flagrant disregard of his duty, and have so far overstepped the limits of Federal jurisdiction.

I also take great pleasure in giving the opinion of the honorable Senator, [Mr. MORTON,] chairman of that committee, who made a minority report as to the conduct and action of Judge Durell:

The conduct of Judge Durell, sitting in the circuit court of the United States, cannot be justified nor defended. He grossly exceeded his jurisdiction, and assumed the exercise of powers to which he could lay no claim. * * * *

But the pretense that in a suit to perpetuate testimony the court could go beyond the natural and reasonable jurisdiction, to decide who constituted the legal returning board under the laws of Louisiana, and to enforce the rights of such as it might determine to be members of that board and to enjoin others who were not, is without any foundation in law or logic.

In the Antoine case Judge Durell not only assumed to determine who constituted the legal returning board, but to prescribe who should be permitted to take part in the organization of the Legislature and to enjoin all persons from taking part in such organization who were not returned by the Lynch board as elected; and this assumption of jurisdiction was made in the face of the express provision in the act of 1870 that its benefits should not extend to candidates for electors, for Congress, or for the State Legislature. His order issued in the Kellogg case to the United States marshal to take possession of the State-house for the purpose of preventing unlawful assemblages, under which the marshal called to his aid a portion of the Army of the United States, as a *posse comitatus*, can only be characterized as a gross usurpation.

And yet, Mr. President, it was by means of the orders and injunctions granted by Judge Durell that this Kellogg government came into being at all, and its very existence has in the past, and still does, depend upon the Government of the United States. The whole of this correspondence breathes the spirit only of dependence upon the Federal Government, and is constant in its cry for its soldiers to support it. There is no dependence upon itself or upon its own people.

It was in the power of the President to recognize neither the Kellogg nor McEnery government; it was his duty to recognize neither if he believed, as a majority of the Committee on Privileges and Elections did, that neither constituted the legal and constitutional government of that State. He is only obliged to recognize the requisition of the legal Legislature or the legal governor, and not that of any body pretending to be the Legislature or of any person pretending to be the governor, and he is made the judge then for the time and occasion. The McEnery government made no requisition upon the President; it required none; it depended upon its own power. The Kellogg government did make the requisition. If the President felt that it was not the legal government, it was his duty to have denied all interference. Then the State and the parties would be left to themselves, as all other States in like condition, to settle by force those great questions that are beyond the reach of courts and of law. If violence should occur under such circumstances there is no remedy. The President cannot interfere without a requisition upon the part of the legally constituted authorities. If these did not call upon him and he refused the others upon the ground that they were not the rightful authorities, then, as I said before, the whole subject is with the State, to be settled by the strongest political power for the time being.

We had a recent illustration of what the President could do in the case of the State of Texas. Davis, the governor of that State, made application to the President to intervene to prevent the organization of a newly elected government which Davis announced to be illegal, and therefore as insurrectionary against the old established government. The President refused to respect it and assigned his reasons therefor. His commendable action here secured its just and beneficent results, and as the same kind of action in the case of Louisiana would have secured like results to the people of that State. The contending government called for no aid; it needed none; the people were with it. Thus Davis, not receiving the support of the President, was obliged to yield to the superior power of the other. He did so, and peace prevails in that State.

It should be understood that the Government of the United States has not the monopoly of force or the exclusive right to shed blood. State organizations are for some purposes. Their executives and legislatures and militia are intended for something. They can by force put down insurrections against their governments, and suppress violence and execute their own laws. They may make application to the President for aid, but they need not, and they never should until the last extremity. The rightful government of Louisiana never made the application; the rightful government of Texas did not make it. Had one been treated like the other we would not be embroiled in the troubles that now afflict us.

Had the President refused all interference in Louisiana affairs, does the Senator doubt but that the McEnery government would have been installed in power, and be in full political being to-day? Does not the whole case show such a condition of things in that State, and which we are bound to notice as Senators? Limited even as our range of examination is said to be, to the *prima facie* case as presented by the credentials, that so far from imparting to them or anything connected with the Kellogg government any legal validity, there is sufficient everywhere to stamp the whole as a usurpation, a wrong, and a fraud that will compare with any in history.

Now, Mr. President, let me call the attention of the Senate to another branch of this question, and to which the Senator [Mr. MORTON] directed considerable effort. I allude to that branch of it in which it is alleged that the people of Louisiana have submitted to the Kellogg government; have acquiesced in the condition of things in that State and now wish no disturbance of them, and as the Senator representing in part that State himself declared in his remarks upon yesterday. No free people, I assert, could ever submit to such a government, established as it was, with the power to resist it. The honorable Senator seems to intimate that they would sooner have a settled government than a rightful one. That is not the nature of his people, I take it, nor is it the spirit of any of our people where they possess the power to have their own rightful government.

I would like to see the attempt made to put such a Government upon the people of the State of Indiana. I do not mistake that people when I say that no United States judge would ever attempt to inaugurate such a government there, nor could any President of the United States be found willing to undertake to support it by his military power were it attempted. The free spirit of that people would never tamely submit to it, and the honorable Senator himself, if I know him at all, would be among the first to oppose a manly resistance. But with the poor, down-trodden, and oppressed people of Louisiana anything can be done. Torn with civil dissensions, oppressed with debt, impoverished by taxation, its society demoralized, its government in the hands of unscrupulous vagrants and adventurers and ignorant negroes, is there no pity for these people? Is there no power to redress their wrongs, and is there no one willing to interpose to save both white and black alike from the ruin that is coming upon all together?

Acquiescence, submission to such a government, Mr. President! Never, by a free people, so long as there is a single chance left for escape from it!

Let us see whether there is any fact in the whole case to show any tame submission; any evidence of that kind of acquiescence which should at all bear against them in their effort to secure their just rights.

Mr. President, I have given you some of the official evidence which preceded, accompanied, and followed the action of the Executive in the affairs of Louisiana, to show how the Kellogg government was established and maintained. I now propose to show by the same official testimony, from the same official communications from which is derived the evidence to which I have referred in my argument in the other branch of this case in order to show the establishment of the McEnery government, that there never has been any acquiescence whatever to the Kellogg government, except that which was compelled by the intervention of the President of the United States.

I begin with the following telegram from Marshal Packard to the Attorney-General:

NEW ORLEANS, *December* 11, 1872.

Hon. G. H. WILLIAMS,
Attorney-General, Washington, D. C.:

Evening Times of Saturday gives names of seventy-four pretended senators in Warmoth's senate. At its organization at city hall, to-day, six out of that number were not present, but falsely reported so. Eleven out of the twenty-four were returned defeated by the returning board, leaving only seven *bona fide* senators, democrats and liberals, actually present sitting as a quorum of the thirty-six senators of Louisiana.

S. B. PACKARD,
United States Marshal.

Then follows another telegram on the same day from Packard to the Attorney-General:

NEW ORLEANS, *December* 11, 1872.

Hon. GEORGE H. WILLIAMS,
Attorney-General, Washington, D. C.:

Warmoth has just issued two proclamations, published in extra Times: one declaring legislation of State-house illegal, and warning all officers to resist, and that he will resist its authority with all the power of the State; the other declaring the city-hall to be the State-house, where he says he will discharge the duties of governor. The pretended members of legislature returned by Warmoth's canvassing board are now in session at city hall. Warmoth's message is being read.

S. B. PACKARD,
United States Marshal.

I refer to this evidence because it is official. It is upon record in the executive department, and it is a record of their own showing that these people never tamely acquiesced in the authority of Kellogg or of that pretended government. Again, on the same page and on the same day, we have the following:

NEW ORLEANS, *December* 11, 1872.

Hon. GEO. H. WILLIAMS,
Attorney-General, Washington, D. C.:

The Warmoth legislature are now in session at the city hall, in defiance of the restraining order of the court.

S. B. PACKARD,
United States Marshal.

On the same day Governor Warmoth sent the following telegram to the President:

NEW ORLEANS, *December* 11, 1872.

THE PRESIDENT OF THE UNITED STATES:

Under an order from the judge of the United States district court, investing James Longstreet, Jacob Hawkins, and others, with the powers and duties of returning officers under the State election law, and charging them with the duty of completing the legal returns and declaring the result in accordance therewith, those persons have promulgated results based upon no returns whatever, and no evidence except *ex parte* statements. They have constructed a pretended general assembly, composed mainly of candidates defeated at the election, and those candidates, protected by United States military forces, have taken possession of the State-house and have organized a pretended legislature, which, to-day, has passed pretended articles of impeachment against the governor; in pursuance of which, the person claiming to be lieutenant-governor, but whose term had expired, proclaimed himself acting governor, broke into the executive office under the protection of United States soldiers, and took possession of the archives. In the mean time the General Assembly has met at the city hall, and organized for business with sixty

members in the house and twenty-one in the senate, being more than a quorum of both bodies. I ask and believe that no violent action be taken, and no force used by the Government, at least until the supreme court shall have passed final judgment on the case. A full statement of the facts will be laid before you and the Congress in a few days.

H. C. WARMOTH,
Governor of Louisiana.

January 3 we have the following from Pinchback:

NEW ORLEANS, *January* 3, 1873.

To President GRANT:

Several persons who claim to have been elected to the Legislature, in conjunction with H. C. Warmoth, the impeached and suspended executive, and John McEnery, late democratic candidate for governor, propose to meet in this city on next Monday, and organize a so-called general assembly, in conflict with the Legislature now in session at the State-house, and to inaugurate said McEnery as governor. To prevent a subversion of the present State government and to suppress riot, it may be necessary for me, as executive, to use police or other forces to prevent this revolution movement, and, in my judgment, under present orders, as contained in the telegrams to General Emory from the President, he would be authorized to furnish troops to sustain the State government. I have just ascertained that General Emory construes the orders already given to have been intended only for the particular occasion upon which they were issued, and unless further instructions are given he will decline responding to my demands for troops, and will interfere only in case of actual riot. I respectfully request that the order be repeated, or extended so as to fully cover the case, if maintenance of the State government and good order require me to make the demand on him.

P. B. S. PINCHBACK,
Acting Governor of Louisiana.

On the following day we have this telegram from the assistant adjutant-general to Colonel Emory:

HEADQUARTERS ARMY OF THE UNITED STATES,
Washington, D. C., January 4, 1873.

Colonel W. H. EMORY,
Commanding Department New Orleans, Louisiana:

Your dispatch, through General McDowell, has been laid before the War Department and the President, and you are hereby authorized to use your troops to preserve peace, should a contingency arise which in your judgment calls for it.

By command of General Sherman:

WM. D. WHIPPLE,
Assistant Adjutant-General.

And then follows, on the same day, this telegram, marked "private," from the Attorney-General to Marshal Packard:

JANUARY 4, 1873.

S. B. PACKARD,
United States Marshal, New Orleans, Louisiana:

I think there ought to be no forcible interference with any proceedings to inaugurate McEnery, if they are not accompanied by violence, and there is no attempt to take control of the State government.

GEO. H. WILLIAMS,
Attorney-General.

The following day H. N. Ogden, claiming to be the attorney-general of Louisiana, and elected upon the ticket with Mr. McEnery, telegraphed to the President as follows:

NEW ORLEANS, *January* 5, 1873.

Hon. GEORGE H. WILLIAMS,
Attorney-General United States, Washington:

Members of Legislature returned as elected by the State board, recognized by Governor Warmoth before the assemblage of the body at Mechanics' Institute, are compelled to meet to-morrow under our constitution, in order to preserve their status. Their assemblage will be peaceable, without arms, and with no purpose of aggression, but simply to organize.

The organization presided over by Pinchback has threatened violent interference, from which serious trouble may arise. That organization derives its authority from the attitude of the Federal Executive, and will be controlled by the President.

We trust that he will discountenance interference with this assemblage, which has a lawful object and is rendered necessary by the situation. Please see the President immediately.

H. N. OGDEN,
Attorney-General, Louisiana.

Then we have the following important communication from the Secretary of War, and sent from the Executive Mansion itself. General Emory was telegraphed as follows:

EXECUTIVE MANSION,
Washington, D. C., January 5, 1873.

GENERAL: The President directs that General Emory be telegraphed immediately that he inform Governor Pinchback that the troops will not be furnished to disperse any body of men claiming to be a legislature or otherwise assembling peaceably, and not obstructing the administration of the recognized government of the State.

Very respectfully,

WM. W. BELKNAP,
Secretary of War.

General W. T. SHERMAN,
Commanding the Army, &c.

So that, in addition to what we have already seen from the official correspondence that the McEnery government was fully organized at the extra session held in December, we have here now in this correspondence the fact of the determination of the McEnery government to organize at the regular session to begin in January, and the further fact from the Executive that there should be no forcible intervention to prevent its organization. If this be so, and we know it to be so from the President himself, why does any one, much less the honorable Senator, [Mr. MORTON,] talk about acquiescence?

This McEnery government accordingly organized the Legislature, electing the proper officers and proceeding to business. The senate elected the five persons to be the returning board of all elections in the State, as required by the act approved November 20, 1872. This board, known as the Mitchell board, proceeded to canvass the official returns of the late election which were laid before it by the secretary of the last board, known as the De Feriet board, appointed by Warmoth, and before which Warmoth had laid these official returns. The result was announced. McEnery was declared to be duly elected, as he most certainly was by a count of the official returns; he was inaugurated; the Legislature proceeded to elect at the proper time a Senator of the United States for the long term, commencing March 4, 1873, and elected Mr. McMillen. They could do nothing in the way of legislation without coming in direct conflict with the Kellogg government, then supported by the President. Their only course was then to remit the whole subject to the Congress of the United States.

Here they were until the close of the last session beseeching that something be done to relieve them from the Kellogg usurpation; the session closed without any relief. They suffered during the summer; they bore all with patience. As this session approached, they began to move; large meetings were held and appeals made to Congress; petitions signed by thousands were sent and now are upon your table; their representative men were here, their Legislature was recently in session, and all calling upon Congress that some measure of relief may be passed by which they may be rid of this criminal usurpation.

Mr. President, I ask you whether this can be considered an acquiescence which could be plead to bar any right? No, sir. If there be a people stirred and moved, it is the people of the State of Louisiana against this high crime not only committed upon them, but through them upon the whole people of the United States. If any people ever did struggle for their rights; if any people ever did demand their rights; if any people ever did refuse, without resorting to force, to submit, to acquiesce, to recognize any usurping government, it is this people of Louisiana. And shall we turn our backs upon them; shall we close our ears to their appeals; shall we shut our eyes to their sufferings; shall we abandon them in their distress; nay, shall we, as I lament to say the honorable Senator [Mr. MORTON] has indicated that he would, hand them over to a government not of their choice, not in their interest, alien to their feelings, possessed not of a single sympathy to touch their hearts, but with a bosom filled with rage, a soul stained with avarice, a mind contracted by hate and directed by malevolence, a nature instinct with an unbounded selfish greed and debased by every sort of corruption, which inspires alone their dread?

One simple duty would lift the burden from off these people. As the whole subject is remitted to us, one single, simple legislative expression by Congress that the Kellogg government is not entitled to any interference in its behalf, and instantly it would disappear, dissolve into thin air. The President asks that something be done by us. He will respect, I am satisfied, not any law only that we may pass, but he will go further in ridding himself of this perplexing trouble and respect our opinion. I am willing to believe that, if upon the close of this discussion we should reject the pretensions of Pinchback, admit McMillen to his seat in this Chamber, or adopt the amendment proposed to the bill now under consideration by Mr. BAYARD, the President would at once withdraw his support from the Kellogg government.

The honorable Senator would then behold how the people of that State acquiesced. The people there demand no interposition of this Government or of the President in their behalf. The McEnery government does not. Just withdraw your support from the Kellogg government; let the President do so, and it falls a shapeless mass to the ground. The people there will act as becomes a free people just emancipated and taught by the wrongs they suffered and endured to do unto others what others should do unto them. Peace and order and law will prevail once more, and all will be anxious to put that distressed State upon the high road to prosperity as was Virginia and Georgia and other States when the people had the opportunity of establishing their own governments and selecting their own public servants.

Mr. President, the Senator has I think gone out of his way to do honor to this Kellogg government. He has given to it praise that others might envy. And yet we can well appreciate the merit of this praise, his highest eulogy, when it is seen that it was all bestowed because, and because alone, it showed an aptitude in wringing taxes from that unfortunate people. The Senator points exultingly to the figures showing the large amount of taxes collected by the Kellogg government.

Mr. President, I will admit it all to be true. It is in perfect harmony with the character and objects of the Kellogg government. Money, of course, must be had. Not wise, humane, judicious, and just legislation, but money is the first object after power; and legislation to that end and that which would yield the largest amount was the first thing in the hearts of Kellogg and of his associates. Therefore one of the first acts passed by the Kellogg legislature was to enforce the payment of taxes and sell the property of delinquents. I give one of the provisions of the law passed March 14, 1873:

SEC. 8. *Be it further enacted, &c.*, That the tax-payers who are now or shall become delinquent by the non-payment of taxes on real estate, as is provided for in this act, and shall have been so returned upon the rolls of the tax-collector to the auditor of public accounts, the auditor shall publish in the official journal of the parish in which such delinquent resides, or by public notice when there is no official journal, by three insertions within ten days, the name, residence of, and amount due from such delinquent tax-payer, and such delinquent tax-payer shall, after thirty days, forfeit his right to bring suit or be a witness for or in his own behalf before any justice, parish, district, or State court, and every court having jurisdiction within the State shall deny and refuse to issue a civil process of any kind or nature whatever in his own name or for his own benefit, until he shall, if a resident of the parish of Orleans, have procured from the auditor of public accounts, or, -

a resident of a country parish, from the tax-collector thereof, a certificate setting forth that all such claims for delinquent taxes and costs thereon against said delinquent tax-payer have been paid.

Here we see sample legislation—that so much eulogized by the Senator—and in it we behold the condition of that people. Unable to pay their taxes, or unwilling it may be, to that government, we have an act of absolute outlawry declared against a whole people. Put out of the pale of the law, deprived of its agencies, excluded from its common benefits, and denied its protection, and all because the wretched citizen might not be able to pay his taxes and the State not able to find buyers for his property. Shame upon such legislation! Shame upon the motives that inspired it, and still greater shame that the men who perpetrate these high-handed outrages are kept in power by us, and by us alone! The honorable Senator may continue to enjoy the spectacle of taxes thus wrung from the people.

I will take the liberty of calling the attention of the Senate to the application of some of the taxes.

Kellogg has an organized military force in active service under the command of Major-General Longstreet, and with it was incorporated the metropolitan police force. He has a brigade fully armed and equipped, and to be paid. I read from the message of Kellogg, bearing date January 5, 1874, and addressed to the senate and house of representatives of the State of Louisiana, the following, to show in what kind of service this brigade was employed, and for the payment of which a portion, and a large portion, of these taxes are to be applied:

On March 6, a detachment of the brigade took possession of Odd Fellows' Hall, and dispersed an assemblage known as the McEnery legislature.

So that on March 6, under Major-General Longstreet, this brigade was required to disperse an assemblage of men called and known as the McEnery legislature.

On April 19, Colonel Flanagan, with a detachment of sixty officers and men, proceeded to Amite, parish of Tangipahoa, to prevent violent interference with the legally elected officers of that parish.

On the 25th of April, Colonel Flanagan, with a detachment of about one hundred and twenty-five officers and men, proceeded to Port Vincent, parish of Livingston, where the parish officers were prevented by an armed body from taking possession of their offices.

On May 1 Brigadier-General A. S. Badger proceeded to Saint Martinsville, parish of Saint Martin, with a detachment of one hundred and fifty men and one piece of artillery, for the purpose of suppressing disorder and of aiding civil officers. A large force under command of Alcibiade de Blanc, styling himself colonel of the Saint Martin militia, evacuated the town upon their approach. The Metropolitan detachment occupied the court-house and installed the legal officers, and Mr. De Blanc's command dispersed.

On October 4 Captain Joseph, with one officer and twenty-five men, were sent to Covington, Saint Tammany Parish, to afford protection to the authorities at the opening of the parish court.

We understand the meaning of all this. These troops were used to keep in place or to put into place men who were not elected and who could not peaceably or with the sanction of the people retain or assume these offices. Again Kellogg continues:

In all these expeditions the objects for which they were undertaken were accomplished, and the behavior of the troops while on duty has been at all times such as to merit high commendation.

You will probably be asked to reimburse the city of New Orleans for amounts paid the Metropolitan brigade while on service as State militia; also to make appropriation for the pay of the brigade as militia. These claims seem to me to be just, and I commend them to your favorable consideration.

Here we find where some of these taxes wrung from the people are to go—to support a soldiery in depriving them of their just rights and of their own selected officers!

The McEnery legislature was dispersed, says Kellogg. This, of course, was most important! Cannot the acknowledged ingenuity of the honorable Senator make it appear in some way that this dispersal of the McEnery legislature by a "detachment of the brigade" amounted to a recognition of the Kellogg government, so as to be binding upon us and conclude us against any inquiry into credentials signed by him? I may remark upon the other achievements of the "brigade," noticed in the extract I have had read, that it was engaged in turning out the local officers elected by the people and in putting in their place others who were not elected, but who were "counted in" by the Kellogg board of returning officers.

I will call attention once more to what Kellogg calls his "annual message," for the purpose of making the observation that there is not one word in it of the payment of any interest upon the debt, as stated by the Senator, or any other fair application of the moneys collected. That message proposes a compromise with the creditors of the State, in which they are to get but sixty cents in the dollar; and generally there is an exhibition in that message of wretchedness and penury in that State that is hardly credible.

The general view is not at all alleviated by a document just received dated February 4, 1874, purporting to be a reply of Kellogg to the protest of certain bondholders to the Louisiana funding bill so strongly recommended by him in his message. I will read an extract from it:

It is thus plain that we should have to collect for 1874 nearly $4,000,000 in cash. It does not follow that because this was done in 1873, it is easy or even possible to do it again. The results of the past year were obtained by the rigid enforcement of severe laws, and were attended with hardships so great that no person of ordinary humanity could witness them without the desire to relieve them; yet with the debt at its present amount we should be compelled to resort again to the same course. I stated in my message, and repeat, that I was and am utterly opposed to this for several cogent reasons, the most conclusive of which, to our creditors at least, being that a few more repetitions would result in our hopeless bankruptcy. During the past year large sales of real estate have been made in all parts of the State, and a large amount of property adjudicated to the State for taxes, penalties, and costs thereon. This is not the result of unwillingness to pay, but of sheer inability. Many, by straining every nerve, paid taxes in 1873, who cannot do so again at the rate of that year. In one parish alone sixty-five plantations were forfeited for taxes. All this land is of no use to the State government. It produces no income and is eliminated from the assessment rolls.

So the goose that has been laying golden eggs for Kellogg and for the benefit of this Congress is about dead—has been ripped open. These New York bondholders wanted their share of this money collected by Kellogg in the shape of taxes and so vaunted by him and by his friends on this floor.

No sooner did Kellogg announce that he had collected $4,000,000 of taxes—intended of course to strengthen him and his government here and give capital for just such speeches as that of the Senator, as other governors and officials have given blood and murder and Ku-Klux when needed here to further their objects—than the sharp-sighted bondholders saw it. Kellogg made a grave mistake; he gave money for his capital here; he should have done as others, given us blood, Ku-Klux, murder. New York bondholders care but little about the latter; he never would have heard from them had he dealt in these staple articles; but money—the last thing on earth to be mentioned as being in Louisiana—money, $4,000,000 of money, collected from taxes too, brought them to their feet at once and with a clamor too that unpaid bondholders only can make. And hence the reply of Kellogg that it was all a mistake, that it was all a delusion; there is no money in Louisiana, and none to be had. He might truly have said to these gentlemen that his message was not intended for them but for Congress only.

But let all this be as it may, Mr. President, give to the people of Louisiana their own government, a government in sympathy with them, depending upon them, to be supported and carried on by them, and they will in good time work out the just results. Mr. President, I regret that I have so long trespassed alike upon the time and patience of the Senate.

You will have observed that I have referred but little to the important testimony taken by the Committee on Privileges and Elections, relying more in the view I have taken of the case upon the executive communication to which I have so extensively referred. The able speech of the distinguished Senator from Kentucky [Mr. McCREERY] notes with great power some of the characteristic parts of that testimony.

The distinguished Senator from Wisconsin [Mr. CARPENTER] in his able report founded upon this testimony, and in the truly able and comprehensive speech lately made by him on this question, has exhausted the subject generally, and, indeed, in detail. My only regret is that the honorable Senator did not find it expedient to demonstrate the logical conclusions of his report and of his speech by submitting a resolution declaring it to be the sense of Congress that the McEnery government was the legal and rightful government of Louisiana, and calling upon the President to withdraw all military and other support from the Kellogg government.

Believing, probably, that he could not succeed in obtaining any available number of his republican friends to secure its adoption, he has thought proper to pursue another course and submit the bill now under consideration. Upon the provisions of that bill I do not desire at this time to comment. I am in favor of the amendment to it submitted by the Senator from Delaware, [Mr. BAYARD.] It announces what ought to be done, it declares the policy that this Government ought to pursue, and if that announcement be made to the Executive he will only be too glad, in my opinion, to relieve himself from the perplexities and wrongs of this Louisiana trouble—I may say Louisiana crime—by withdrawing at once the favor of the Government of the United States and the support of its military power from the Kellogg government; and this withdrawal alone and in itself, as I before remarked, will settle the whole question in a few months, and settle it in favor of those who are entitled to wield the destinies of that State in controlling their own domestic affairs.

Finance—Currency.

SPEECH OF HON. MOSES W. FIELD,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 8, 1874.

The House having under consideration the bill (H. R. No. 1572) entitled "An act to amend the several acts providing a national currency and to establish free banking, and for other purposes"—

Mr. FIELD said:

Mr. SPEAKER: I desire to call the attention of the House to a memorial of the citizens of Detroit presented a few days ago by my colleague, [Mr. WALDRON.] In presenting the memorial my colleague said:

I ask consent to present a memorial from the citizens of Detroit on the subject of the currency, and I take occasion to state that it is signed by nine-tenths of the merchants, manufacturers, produce dealers, railroad managers, and vessel-owners of that city; in fact every branch of commercial and business industry is repre-

sented in it. The memorial is the expression of nine-tenths of the active business men of the city of Detroit, and I believe I am justified in saying that it expresses, in the same proportion, the business sentiment of the State of Michigan. I ask for the reading of the memorial.

The memorial was read, as follows:

"*To the House of Representatives of the United States:*

"We, the undersigned, citizens of Detroit, Michigan, respectfully represent to your honorable body that we are opposed to any inflation of the currency, and are in favor of a return to specie payments at the earliest practicable moment."

This statement surprised me, for 90 per cent. is nearly the whole part, and I did not think any one hundred and forty-eight men could be selected wealthy enough and great enough to represent 90 per cent. of the entire business interests of that great city. Having resided in Detroit for many years, I am tolerably well acquainted with the gentlemen who signed the memorial, and can form a fair opinion as to their representative character; but desiring to be as accurate as possible, I have obtained other information with the view to ascertain whether the representations of my colleague were true. There are 148 signatures to the memorial, consisting of 16 bankers, 13 lawyers, 55 persons of unknown or no special business, and 64 business men and firms; and I find, instead of bearing the signatures of "nine-tenths of the merchants, manufacturers, produce dealers, railroad managers, and vessel-owners of that city," it did not in fact contain even one-tenth part of that numerous class of people, nor did it express the sentiment of one-tenth of "the active business men of Detroit" on the currency question. I feel it to be a duty, therefore, to correct the statement, particularly as I have since that time received and presented to the House a petition of the citizens and business men of Detroit in favor of an increase of the currency, and which I believe represents the true sentiment of a large majority of the people of my district upon this question.

My colleague not being a resident of Detroit, but residing in the village of Hillsdale, about one hundred miles distant, was doubtless imposed upon. It is not at all likely that he is acquainted with all the parties, nor with "every branch of commercial and business industry" in that city, and under such circumstances my colleague was easily deceived, and no doubt unwittingly made the exaggerated statement to which I have referred.

I do not make this correction with any intention to impugn the motives of the gentleman nor to intimate that there was any intention to misrepresent or overstate the importance and weight of the memorial. I have no doubt his statement was made on the representations of his Detroit correspondent. So much for that memorial; and with reference to others of the same character presented here from New York, Boston, and other cities, I have to say that if they are all as much exaggerated and overestimated as this to which I have referred, I warn members against being unduly influenced by them.

Mr. Speaker, in this debate we have heard it many times stated that our greenbacks are depreciated and that they are below par. The gentleman from Connecticut [Mr. HAWLEY] stated the other day that greenbacks were 12 per cent. below par. Now I wish to controvert and deny such statements; for they are not true. I admit that gold bears a premium and fluctuates with the price of foreign exchange in the market; but I deny that greenbacks are below par, for the simple reason that they are the lawful money of the country, and therefore must be at par. If it be true that greenbacks to-day are 12 per cent. below par, then, on the same theory, when gold coin was at 50 per cent. premium our greenbacks were 50 per cent. below par; when gold was 100 per cent. premium these greenbacks were worth nothing—a dollar of lawful money would not buy even a wooden nutmeg. According to this mode of estimating the value of greenbacks, when gold was 150 per cent. premium, the poor man, having ten dollars of good greenbacks in his pocket, would have to pay five dollars to have them taken off his hands.

I have received a letter on the currency question from a gentleman of large business experience, and whose views upon this subject will have great influence in this House and throughout the country, and I send it to the Clerk's desk to be read.

The Clerk read as follows:

WASHINGTON, *March* 24, 1874.

DEAR SIR: As recorded in the CONGRESSIONAL RECORD, in a debate one day last week, an honorable Senator inquired of another honorable Senator why greenbacks were 12 per cent. below par, and after repeating the question several times, he said the answers were not satisfactory.

This reminds me of an anecdote. Hon. Samuel L. Mitchell, of New York, a learned medical professor, was accustomed to ask his students to propound any question they might select, when one of them asked why there was always one black sheep in every flock. The learned professor immediately commenced giving what appeared to him as scientific reasons for the fact, but which did not appear to satisfy the students if they did himself. At the close of the lecture one of the students inquired if it was a fact that there was always one black sheep in every flock. It appeared that this idea had not occurred to the learned professor; but, to be sure, he immediately wrote to a number of farmers, making the inquiry, to which they all replied that it was not the fact at all.

If the learned professors who have been lecturing on political economy, in both Houses of Congress, on the assumption that greenbacks were below par, should inquire of practical business men if it was the fact, they would receive the same answer, and perhaps receive the additional information that 12 per cent. difference between greenbacks and gold is easy to calculate; but when, as in 1863, the difference was 100 per cent., and there being but a hundred cents in the greenback dollar, the whole dollar must have been wiped out, and, as in 1864, when there was 150 per cent. difference, the greenback must have been worth just fifty cents less than nothing. perhaps they might then inquire, when a dollar greenback was offered in payment for an article valued at fifty cents, and the greenback worth fifty cents less than nothing how the learned professors would make change.

Perhaps the same business men might also furnish the information that during the whole time the professors consider the greenbacks so worthless they, the business men, the merchants, the mechanics, the manufacturers, the farmers, all believed they were enjoying a higher state of prosperity than ever before known.

You will remember that soon after the act of February 25, 1862, making United States notes a legal tender, Secretary Chase proclaimed to the world that by that act gold was demonetized—was no longer money, but was a commodity, an article of merchandise; consequently, that law made legal-tender greenbacks, as far as law could make them, the measure of value, the monetary par.

Thus, gold being merchandise, its price can no more be the par and standard of value than the price of flour, the price of cotton, or the price of tobacco can be the monetary par and measure of value.

That greenbacks are the measure of value was again legally recognized by the law authorizing the issue of national-bank notes, redeemable in the aforesaid greenbacks; thus, beyond peradventure establishing them as the measure of value. Then, does it not follow that the 12 per cent. difference is so much premium on gold? And if so, should not the question be reversed, and ask why is gold 12 per cent. above par? To which I would reply that it was made so by the act of Congress.

You will remember that the bill passed the House of Representatives making the national credit or United States notes a legal tender for all purposes whatever, without exception. Pardon the expression of opinion that, had that bill become a law, it would have been practically impossible for gold ever to have risen above the par of greenbacks, for the reason that all the gold in the country would have been on the market without buyers, and the prosperity of our people at the present time would have surpassed any period in our history. But the gold monopolists and Shylocks of Wall Street took the alarm, and saw if that bill passed their vocation was gone, and came down upon Secretary Chase in such force and annoyed him with such persistency as, he said, "almost worried his life out," until he consented, and called upon Mr. Fessenden, chairman of the Committee on Finance in the Senate, having the bill in charge, and induced him to modify it by excepting that the interest on the bonds authorized to be issued by the same act should be paid in coin; and, to procure the coin, prohibited the receipt of said legal-tender money and required that gold only should be received for duties on imports.

To that extent Congress repudiated its own legal-tender money in the very act creating it.

Requiring all importing merchants to purchase coin to pay the duties, at such prices as the gold rings might think best to ask, I firmly believe is the principal if not the only cause of the premium on coin ever since.

Again, those favoring contraction and immediate resumption of specie payments argue that the greenback currency must be contracted still further to bring gold and currency on a par.

Is it possible that they do not know the fact, or do they shut their eyes to it, that the experience of the last ten years has exploded that theory?

Mr. McCulloch contracted the currency, as he proclaimed, solely for the purpose of raising greenbacks to the par of gold, and failed, as follows:

It appears from official returns that on December 31, 1866, the amount of currency was $1,591,787,780; June 30, 1869, it was reduced to $692,687,532, from which it appears that two-thirds of the currency had been called in; consequently, were his theory correct, the difference between gold and greenbacks should have been reduced two-thirds, when, lo! it stood 2 per cent. higher, namely: December 31, 1866, the premium was 34 per cent.; June 30, 1869, the premium was 36 per cent.

Again, as evidence that the quantity of currency does not affect the price of gold, it appears by the same returns that on June 30, 1864, the amount of currency was $786,532,835; December 31, 1866, the amount as aforesaid was $1,571,787,780; just double. How stands the premium?

June 30, 1864, it stood at 158 per cent. above greenbacks; December 31, 1866, it stood at 34 per cent. above greenbacks.

Were his theory correct, it would have been 316 per cent. above greenbacks, when, as above, it was only 34 per cent. Can proof be more positive?

Again, Mr. McCulloch began contraction by funding fifty millions of greenbacks in one week, causing a stringency in the money market; but the price of gold stood unmoved. Many more comparisons of the same character could be given; but do not these facts prove positively that since coin was demonetized the amount of currency has not affected the price of gold any more than it has the price of cotton, tobacco, flour, or any other commodity depending for its price on a foreign market?

If the foregoing conclusions are correct, it does not follow that all the arguments of the contractionists and immediate resumptionists are without foundation and mere fallacies?

In conclusion I would say that should Congress adopt the interconvertible principle, and let us be permitted to exchange at pleasure the currency, both greenbacks and national-bank notes, into convertible bonds, bearing a moderate rate of interest, the people will, in a brief space of time buy of the Treasury Department a sufficient amount of such bonds to enable the Secretary to purchase and cancel the whole foreign bond indebtedness, and thus not only reduce the rate of interest, but stop the drain of coin that goes as a tribute to enrich foreign nations and to impoverish our own.

Adopt the interconvertible principle, and I firmly believe it will act like magic in infusing new life, energy, and activity into the prostrate industries of our people; give employment to the suffering millions, start the springs of legitimate enterprise, and increase the products of labor to such an extent that our exports will soon exceed our imports, and pay off all foreign indebtedness, when the untold millions of gold we have sent to foreign nations will return to enrich our own.

Most respectfully, yours,

PLINY FREEMAN.

Hon. MOSES W. FIELD,
House of Representatives, Washington.

Mr. FIELD. Now, Mr. Speaker, owing to the abnormal condition of our trade with Europe gold is required for shipment to settle foreign balances. This, together with the demand to settle duties on importations, is the cause of the premium on gold; and if Congress should authorize greenbacks to be received at our custom-houses in payment of duties—a policy I am in favor of—I think the premium on gold would fall so that it would approximate in value to greenbacks. A good many gentlemen who have spoken here in favor of a speedy return to coin payments do not appear to comprehend the subject. Over one hundred acts of the British Parliament are recorded to fix and regulate the price of wheat, yet the price of wheat in the English market continued as "unstable as water," and the acts of Parliament remain upon the statutes dead letters and useless records of impracticable legislation; and so it will be repeated in this country should Congress attempt *by law* to regulate or reduce the price of gold coin in the open market, or force it into circulation while the demands of our creditors in Europe exceed the production of the precious metals from our rich mines.

The price of gold is fixed by the "higher" law of "demand and supply." It is therefore clear to my mind that in order to reduce the pre-

mium on gold and assure "specie payments" two things are absolutely indispensable, to wit, first, to lessen the demand for gold coin; second, to secure a large supply of the precious metals. Our markets should be glutted with gold; and the question is, how can that condition be reached?

If gentlemen really want "a return to specie payments at the earliest practicable moment," why do not they proceed to secure that condition in a philosophical and practical way? Pass two bills I have introduced (H. R. No. 2157 and H. R. No. 2531) and specie will become so redundant here within two years that it will be a drug in our markets.

The first bill provides for an increase of the currency by the issue of greenbacks in exchange for interest-bearing interconvertible United States bonds, and makes greenbacks a legal tender for all purposes, including duties on imports. This act would *prevent* financial panics, emancipate labor and promote the prosperity of the whole people. The other provides for an increase of the duties on imports, or taxation on foreign productions. Should this bill become a law it would turn the balance in foreign trade in our own favor, and draw the precious metals from Europe to enrich the people of the United States. The ocean steamers, instead of taking out $2,000,000 in gold every week, would bring into our ports a much larger sum, for the balances in foreign trade regulate and control the movements of gold.

Pass these two bills, and I will give bonds with good security that in less than three years our gold coin will fall below the par of greenbacks in the open market.

I suggest this scheme for the consideration of the House. It will secure the object with certainty, and the people of the United States will not be injured in carrying the plan into operation.

It is urged by some gentlemen in this discussion that an increase of the currency would promote "speculation" and "overtrading." Now, sir, how has it been in the past? In 1865, when we had over $2,000,000,000 of circulation, the people were in the habit of paying down in cash for nearly everything they bought. That was the practice of the country at that time, and the credit system was almost entirely wiped out; and I submit that when people pay in cash on the spot for what they buy *there is no speculation and no overtrading* in the operation.

It is asserted here, too, that an increase of the currency would inflate prices. Now, sir, I wish to call the attention of the House and the country to the fact that in 1868, when we had over $800,000,000 of currency in circulation, the prices of eighty-five staple or leading commodities in general use were actually lower in the aggregate than the prices of the same commodities in September, 1873. Meanwhile our circulation was contracted over $100,000,000. This fact is shown by the Report of the Bureau of Statistics, (see report on finances, page 520,) and I send to the reporters a tabular statement of prices, and ask that it be printed in the RECORD.

Comparative statement showing the prices of staple articles in the New York market at the beginning of September in the years 1868 *and* 1873.

Aggregate of prices in 1868 being $3.78 less than the aggregate of 1873.

Mr. Speaker, I ask gentlemen to examine this statement with care, and I call attention to the fact that the aggregate of the eighty-five commodities in 1868 is $3.78 less than the aggregate cost of the same commodities in 1873, when our currency was so contracted that there was not enough in the country to pay the internal-revenue and State, county, and municipal taxation of the United States for a single year. And the aggregate of the prices of the commodities enumerated in the foregoing statement in September, 1865, when the volume of the currency was $2,111,678,680, was only $13.85 more than the aggregate cost of the same commodities September 1, 1873, as will appear by the report of the Bureau of Statistics, (report on the finances, page 508.) Meanwhile the volume of the currency had been contracted over $1,300,000,000.

Mr. Speaker, it thus appears plain that the quantity of our lawful money in circulation has no effect upon the prices of the domestic products exchanged by the inhabitants. I shall not use the word inflation, for it is not our desire to inflate the currency. We advocate an increase by taking in large bonds and putting out an equal amount of small bonds called greenbacks, and there is no inflation in this exchange. We simply take in a certain sum of the national credit in one form and put it out in another form; and we gain something in the operation in the reduction of the interest.

The gentleman from New York [Mr. COX] had the disposition the other day, for pleasantry I suppose, to offer an amendment to the bill reported by the Committee on Banking and Currency, proposing to make every greenback dollar now in circulation three dollars. The contractionists and gold worshipers, failing in argument, now resort to sneers and threats of war; but those who stand up here and advocate an increase of our currency cannot be influenced or intimidated by threats of war, nor by attempts at burlesque or ridicule. I grant you that an act of Congress undertaking to make one dollar equivalent to three would be a wicked and shameful inflation of our currency; but when we propose to withdraw interest-bearing notes and issue instead non-interest-bearing notes for an equal amount, it cannot be called inflation.

Our contractionists amuse themselves by talking of what they call the Government paper-mill and printing-press. One gentleman sneeringly said it was proposed to grind out paper for the winds to blow over the country that the people may catch it and use it as money. Now, sir, these contractionists know, as every plowboy knows, that when the Secretary of the Treasury pays out greenbacks he pays them out for something, for material, for services, for public works, and for value received; therefore this paper-mill talk is meaningless and foolish.

Mr. Speaker, we have heard a great deal said here about "a coin basis." A great many gentlemen here from New England are clamorous for what they call "a coin basis" for our currency. You know, Mr. Speaker, that we have never had such a thing in the country as coin payments or coin currency. Prior to the issue of greenbacks, whenever the demands of foreigners called for a little coin, say $7,000,000, or $10,000,000, or $20,000,000, the fiction and swindle called specie payments was made apparent, and at such periods revulsion and general disaster and bankruptcy was the inevitable and invariable consequence of what is now called "a sound basis." The eyes of our people, through sad experience, have been opened to the swindling mockery and snare called specie basis, or one gold dollar kept in the bank-vaults to redeem five dollars in bank-notes on demand. What is termed a gold basis or coin payments is a scheme or device enabling bankers and money-changers upon each one dollar of their gold to issue three dollars, four dollars, five dollars, or ten dollars in their paper currency—their own credit.

Now, of course the banks cannot pay in coin the whole amount of their issue of notes, and therefore whenever general demands are made, only one in three or four or ten according to the ratio of coin to circulation could get anything, other holders get nothing; nevertheless, while the confidence of the community continues to keep the bank-notes in circulation, and no demand is made for coin from our creditors in Europe, there is no trouble, and the *confidence arrangement* runs smoothly enough and attracts very little attention. But the moment a great failure happens, large enough to create a shock to private credits, like that of the Ohio Life and Trust Company in 1857, or Jay Cooke & Co. in September, 1873, or whenever a large amount of coin is required to pay debts in Europe, the banks break with a great crash, panic ensues, carrying all before it into bankruptcy and wide-spread ruin.

Here is the lesson of our experience with the common but dreadful delusion and cheat called "specie basis" or specie payments. We have tried it often, and have as often been humbugged and ruined by it; and the system still exists in England, resulting, as you know, in at least one great financial panic every ten years. And yet gentlemen spend hours here in praising and extolling a system which, to say the least of it, is defective, and often out of joint. They "long for it," and grave statesmen stand up here and say we should "*prepare our house for the dreadful event.*" Always insisting that we should "*look to it*" and "*fix the time for it,*" they talk incessantly of the necessity of preparing for a hard-money basis for our currency, *but they never tell us why.*

Is it not singular, Mr. Speaker, that during this long debate no gentleman has told us *why* he wants a coin basis for our currency? *It is always assumed, but none tell us why*

Now, in providing money for the people, my opinion is that if this Government *must abandon the use of its own credit* and hire bankers to issue money for the people, I do not want a gold basis of one dollar for three dollars of bank-notes. I prefer a Government bond, dollar for dollar. Government bonds to cover the whole issue are a better basis, in my judgment, than any coin swindle that has ever been devised in any country. Some people have an idea that, as we have now suffered for five or six months, it would be desirable to suffer a few months longer and come down to what they call "hard-pan." They wish to "touch bottom," and then realize the fiction of specie payments.

But, sir, suppose Congress should order specie payments next month or next year. The Treasury might start the business, but it would not last ten days. Our creditors in Europe would soon glean from us the coin we possess, and that would end the farce of attempting what we have not the means to carry out. It would only put a little more money into the pockets of the merchants and capitalists of Europe who have claims against our merchants and hold our State, municipal, and railway bonds, the principal and interest of which are now payable here in lawful money. They would then collect gold instead of greenbacks, and therefore specie payments would give great satisfaction to all our creditors in Europe.

Now, Mr. Speaker, why should we waste time in making useless and visionary plans about resumption at the present time? The Government—the sovereign power—provides money for the people, and Congress determines what shall be legal tender and lawful money to pay debts within the country. It is not the business of Congress to undertake to create money for the people of other nations; and our money is not made for the convenience and use of the inhabitants of other countries. I have, even in Cuba, offered our gold coin in payment for breakfast at a country inn, and been insulted and treated as a swindler for so doing. I had to exchange my American gold for Spanish coin before I could continue my travels in the West Indies.

Now, money is for domestic uses, and more than a thousand dollars are employed in domestic exchanges and settlements where a single dollar is required for foreign trade. Why should we overestimate foreign trade? Why should we inconvenience ourselves and make paupers of the American people for a fanciful idea or to please Englishmen and others across the Atlantic? I think we shall have performed our duty when we provide a uniform, stable, and elastic legal tender, lawful money, for the people of the United States. Our greenbacks are the *people's money*, and the best money we ever had.

They call it irredeemable, but did you ever hear, Mr. Speaker, of lawful money being redeemed? It is nonsense to talk of money being redeemed. It is well enough to talk of the redemption of national-bank notes or bank rags; but the redemption of our legal-tender lawful money of the United States is not required, and the people will not acquiesce in the attempt now being made by bullionists and bond-holders to extinguish our greenback money. The greenbacks are our lawful money, and they pay the debts and mortgages of our people and settle all exchanges here at home. A *full* legal tender does not require any redemption, because there is nothing superior to it.

Mr. Speaker, some gentlemen think we may be inflated with an excessive volume of currency. Now on this point my opinion is that should Congress offer the people at par a bond bearing 3.65 per cent. interest, the same to be interchangeable with greenbacks on demand, I think we could not get too much money into circulation; for any excessive or unemployed money would pass into the Treasury in exchange for the convertible bonds, and should more money be required at any time for the convenient transaction of business it would flow out of the Treasury in exchange for the convertible bonds. It would assure fluidity or elasticity to the currency, and absolutely prevent financial panics within the United States. It is idle to figure up the quantity of money required by the people, because a larger amount is required at one season than at another.

By the act of February 25, 1862, Congress provided that greenbacks should be convertible to Government interest-bearing bonds at par. This was the condition on which the legal-tender act was passed, and was a part of the bargain with the people; but on March 3, 1863, this provision of the act was repealed. It was done at the request of the Treasury Department, but the bill sent up for the purpose was in the handwriting of Jay Cooke. Mr. Cooke had been hired by the Secretary of the Treasury to convert greenbacks into 6 per cent. bonds. Under the convertible clause of the act of February 25, 1862, the people would have done the business without the employment of a middleman, and consequently the service of Jay Cooke would have been wholly unnecessary; for as soon as greenbacks and other circulating notes became redundant and unemployed the people would have effected the conversion to interest-bearing bonds without the intervention of an expensive agent.

Having broken faith with the people in repealing the clause authorizing the conversion of greenbacks to Government bonds at par, now let Congress act justly by the people and at least authorize the conversion of greenbacks to a bond-bearing 3.65 per cent. interest, and should the people want the greenbacks again let the bonds be redeemed with greenbacks on demand. I have received a valuable contribution from a friend, and as it bears forcibly on this point as well as on the whole financial question, I will send it to the reporters to be printed with my remarks.

MUNCY, PENNSYLVANIA, *March* 30, 1874.

DEAR SIR: * * * * * * * *

In one word, I may say that your bill (H. R. No. 2157) meets my entire approbation, and I am delighted to know that there is one at least on the floor of the House who has *a plan* to meet the difficulties, and the courage to stand up in opposition to a moneyed monopoly and a monstrous tyranny, which the business men and wealth-producers of the country, *irrespective of party*, are determined shall be crushed out of existence.

The democrats and republicans in Congress who are aiding to uphold this moneyed tyranny under the miserable pretext of a desire to "resume specie payments," avoid "inflation," and rid us of an "irredeemable currency," without taking any other steps than a contraction of the currency to accomplish their professed purposes, will find themselves mistaken if they count on the support of the people. I would not support one of them, either democrat or republican, to save their lives.

The moment your proposition to make United States Treasury notes a *full* legal tender is adopted, they will be equal to coin and force it into general circulation, which will give us the only specie resumption *necessary* or *possible*. No sane man can possibly contend that one *full* legal-tender money needs redemption in another legal tender; consequently the objection to the United States note as an irredeemable or depreciated money is entirely obviated.

If inflation means increased values produced by *depreciation*, the adoption of your proposition destroys that. If inflation means a surplus of money or more than can be used in the legitimate business of the country, your convertible-bond proposition not only meets that objection, but enables the people to regulate the *volume* of currency for themselves far better than Congress or capitalists can do it. A surplus of par paper currency will no more produce inflation than coin.

Our business men's association hold that Congress must make United States money a *full* legal tender, as it must regulate the *value* of its issue of money. This prevents any *fluctuation* in the *value*.

We also hold that Congress cannot place any other limit on the *people's money* than the indebtedness of the Government *overdue*.

We also maintain that Congress has no lawful power to suspend payment on any Government loan, which by the plain letter of the contract is made payable in United States notes, *the same as coin, at their par value*, (dishonored and thereby depreciated by the act containing the terms of that contract.)

We do not believe that the honor of Congress or the country can be elevated by altering a contract after it is made, to benefit either money-lenders or the people; and therefore the act of March 18, 1869, should be repealed, as it perpetuates a debt payable in United States notes, compelling us to pay millions of useless taxation annually.

We are uncompromisingly opposed to banks of *issue*. First, because the *people's money* is safer than that of any individual, and the people are entitled to the *benefit* of the *circulation*; nor does it require redemption. Second, individual issues cannot be made a *full* legal tender, and therefore require redemption in a *full* legal-tender money. Third, because money not based on real estate as security, a first lien or mortgage on it, and backed by the revenues of a government, has no real value, or means of being retired. Fourth, because the prerogative to make money and regulate its value has been *delegated* to Congress; and this prerogative Congress cannot delegate to another. We are in favor of the sixth and seventh sections of your bill on the currency, because the act of 1869 is a gross fraud on the people, dishonorable to the country, simply intended to perpetuate our public debt and the national-bank *issue*, and the act of July 14, 1870, is useless.

There is no use in our trying to conceal from ourselves the fact that we are in the midst of a terrible conflict between the people and "great capitalists," who are enlisting newspapers and their correspondents in their service, and who have

threatened to fight us "inch by inch" in the United States Senate, in order to defeat the friends of an expansion of the people's money, and permanently establish a moneyed tyranny over us. They fear expansion lest they may lose control over the currency. Pay off the five-twenty bonds in par United States notes, and it will no more than place business on a *cash basis*, and make business men independent of money-lenders and note shavers, as they should be, and are determined to be; therefore their "inch-by-inch" fight, but the final result of this contest, cannot and will not be a doubtful one. We stand as seven to three. The contractionists and all who attempt to humbug us with a promise of resumption of specie payments in two or three years, hold their last offices. We do not want any other resumption than that of specie circulation on a *par* with a *full* legal-tender United States note, and *that we want now*.

They tell us that United States notes were only intended as a temporary arrangement, and that national-bank notes were intended to be a permanent swindle on us; and that to clinch us they passed the act of 1869 and the act of July 14, 1870. And Mr. MAYNARD says that we so pledged ourselves in 1868. This is an error. The republicans on May 20, 1868, pledged themselves to pay the public debt according to the letter and spirit of the laws under which it was contracted.

The democrats, July 4, 1868, pledged themselves to make United States notes par and pay the five-twenty and ten-forty bonds in those notes, and the bonds of 1881 in coin.

Yours respectfully,

WILLIAM BRINDLE.

Hon. MOSES W. FIELD,
House of Representatives, Washington.

Mr. Speaker, I shall vote, if I have an opportunity, for the bill I have introduced, (H. R. No. 2157.) I am willing, however, to vote for the bill introduced by my friend from Pennsylvania, [Mr. KELLEY;] but should that fail, I shall gladly vote for the bill introduced by the gentleman from Kentucky, [Mr. BECK.]

All these bills provide for the issue of a convertible bond, bearing interest at 3.65 per cent., in exchange for greenbacks at par; the convertible bonds to be redeemed in greenbacks at any time on demand, and all the greenbacks received in exchange for the interconvertible bonds to be used by the Secretary of the Treasury in paying the 6 per cent. gold interest-bearing bonds of the Government called five-twenties.

My colleague, [Mr. WALDRON,] in a recent speech, doubts the right of Congress to issue United States Treasury notes for currency; but advances the opinion that it may authorize individuals or corporations to make a currency, and calls United States notes (greenbacks) irredeemable currency, and thinks greenbacks an obstacle in the way of a resumption of specie payments. I cannot conceive of a greater fallacy than that the quantity of greenbacks in circulation is either a hinderance to resumption or a cause of the premium on gold. Any person at all acquainted with business affairs knows that when the amount of our circulation has been largely reduced the price of gold has advanced.

The Secretary of the Treasury (Mr. Fessenden) in his annual report, December, 1864, says:

> The experience of the past few months cannot have failed to convince the most careless observer that, whatever may be the effect of a redundant circulation upon the price of coin, *other causes* have exercised a greater and more deleterious influence. In the course of a few days the price of this article rose from $1.50 to $2.85, and subsequently fell, in as short a period, to $1.87, and then again rose as rapidly to $2.50; and all without any assignable cause, traceable to an increase or decrease in the circulation of paper money, or an expansion or contraction of credit.

Mr. Speaker, the gentleman argues that the Government should not undertake to issue Treasury notes for currency, but declares himself in favor of a currency to be issued by bankers.

The idea that Congress cannot make money, but may confer such power on individuals, is a great tax on one's patience and charity. Calling greenbacks an irredeemable and worthless currency while commending national-bank issues is presuming too much on the stupidity of the people.

The Director of the Mint estimates the gold coin in the United States at $135,000,000, and of this amount $87,000,000 is in the Treasury; and in his annual report the Director says, "the mines of the world produce annually about $100,000,000 of gold," and that "of this product about $25,000,000 is consumed annually in the arts, leaving only about $75,000,000 for the uses of currency for the inhabitants of the whole earth;" and the Director advances the opinion that "countries, however wealthy and prosperous, cannot even, with the aid of bills of exchange, maintain an exclusively metallic currency," and that "the use of paper money as an auxiliary to coin is more likely to increase than diminish in the future." No one of any party pretends that we can obtain sufficient coin, and all admit that we must supplement it with paper. This being a fact, how can any man who wishes to deal fairly with the people prefer for the purpose an individual or private issue to the people's money? The Government debt now *overdue* and payable in the legal-tender United States notes furnishes a good opportunity to provide the money the country requires. Unless the currency is very largely increased—so largely as to make it seek investment in the proposed three sixty-five convertible bonds—we will have, in my opinion, such a crash and wild panic as this country never saw; and it is close at hand.

Now, Mr. Speaker, in conclusion, what is the situation? Congress has since February 25, 1862, emitted bills of credit—greenbacks. They have performed the function of an "instrument of exchange" most admirably, and I cannot see why gentlemen are so anxions to get rid of them. The *credit of the nation* possesses intrinsic value as well as any metal, and it represents labor as well as gold because it is issued in exchange for labor. *Something* must be employed for a circulating medium, and why not use the *national credit* for the purpose? Gold is out of the question, for we have not got it. Greenbacks have worked well, and they are exceedingly popular. I prefer these Government bills to bank bills, public credit to private credit.

Monetary reform is the great need of the country to-day, and nothing short of the principle of interconversion of greenbacks and interest-bearing Government bonds at the option of the people will satisfy the demands of the producing classes. This reform will emancipate labor, promote the prosperity of the people, and *prevent* the possibility of financial panics within the United States.

Banking and Currency.

SPEECH OF HON. W. LOUGHRIDGE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 9, 1874.

The House having under consideration the bill (H. R. No. 1572,) entitled "An act to amend the several acts providing a national currency and to establish free banking, and for other purposes"—

Mr. LOUGHRIDGE said:

Mr. SPEAKER: I do not propose at this time to enter into the discussion of the question of finance at any great length. Much has been said upon it during this discussion; much of interest and much of value. The laws regulating finance are so intricate that men of equal intelligence differ widely, though I think as a general rule that the interest of men has much to do with shaping their judgment upon this question.

Some gentlemen here represent constituencies in the East composed to a great extent of capitalists in money and credits; while I and many others here represent constituencies composed of laboring men—producers and land-holders.

The interests of these classes of people seem to differ somewhat, and as a consequence we see in the votes and the action here involving the question a division to a great extent controlled by sectional lines.

In the vote the other day, on the bill to fix the amount of legal-tender notes, on the proposition to increase the amount issued to $400,000,000, the following States gave a majority against increase: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Maryland, Nevada, California, and Oregon. The following States gave majorities in favor of increase: New Jersey, Pennsylvania, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Tennessee, Kentucky, Missouri, Ohio, Michigan, Indiana, Illinois, Iowa, Kansas, Nebraska, and Minnesota. From New England but one solitary member voted for the increase.

The analysis of this vote is an interesting study to the statesman and to the financier. The question assumes the form almost of a sectional one, in which the peculiar interests of New England and New York seem to come into direct conflict with the interests of the large majority of the people of the entire country—the South, the West, and the Middle States. I regret, Mr. Speaker, that any great and vital question, as this one certainly is, should assume a sectional character.

But, Mr. Speaker, as a western man, identified with and representing in part that section, I cannot doubt but that what is claimed by the South, the West, and the Middle States is right, is just, and is absolutely necessary for the prosperity of those sections, and the unanimity with which the Representatives from those sections support this demand for more currency is evidence of the justice of the demand and the wisdom of the measure.

I shall vote, Mr. Speaker, to strike out the last section of this bill, which provides for gradual contraction of the greenbacks, and with that section stricken out, as I doubt not it will be, I shall support the bill.

As to that portion of the bill which fixes the volume of legal-tenders at $400,000,000, I have already voted for that principle in the bill which has passed the House.

The legal-tender note has all the elements of a good currency. It has the absolute confidence of the people; it has for its foundation the wealth, the power, and the credit of the Government. It was good enough to carry us through the most terrible crisis that this or any nation has ever experienced, and it is good enough still. The people are satisfied with it; the millions want it still. Men of wealth, capitalists, money-lenders, and bondholders are crying out against it; and from that class of people comes all the clamor against the greenbacks. They are the men who denounce the greenbacks as "printed lies." Not the poor men, not the laboring men, not the farmers, not the toiling millions; they are satisfied with the greenback currency and ask nothing better, if it must come through contraction.

This bill fixes the amount at $400,000,000, the amount issued originally, the legality of which has been fully sustained by the Supreme Court. Under the foolish, and I may almost say criminal, policy of contraction by Secretary McCulloch, $44,000,000 were withdrawn from circulation, but Secretary BOUTWELL holding that he had the

power and legal right to reissue the same, $26,000,000 of it has been reissued, leaving $18,000,000 in the Treasury, which will be reissued if this bill passes. So that this bill provides for no expansion or increase of legal-tenders over and above the amount heretofore fixed by law, and which, as I have said, has been sustained by the Supreme Court of the United States.

I am in favor of this bill so far as it abolishes the restriction upon banking, and thus makes banking under the law free to all who comply with the law. I am in favor of this feature of the law for two reasons: First, because the law as it stands, with the present restriction, is a monopoly created and sustained by law, extending special privileges to a favored few which are denied to the many.

I am opposed on principle—always have been, and always shall be—to the creation or the perpetuation of monopolies by law. It is contrary to the spirit and genius of our Government, and as far as possible should be avoided. The blessings and privileges of government ought, under our political theory, to descend like the dews of heaven upon all alike.

The privileges and the advantages of banking under the law are valuable to the citizen where he is in a condition to take advantage of them. That privilege is granted to a select few and denied to others. An odious distinction is thus created and perpetuated by the law among men equal probably in merit and in worth, and who ought to stand equal before the law.

If the General Government did not, by a prohibitory tax upon State banks, entirely prohibit citizens from banking under State laws, this monopoly of national banks would not appear so odious and oppressive as it does. But when that fact is taken into consideration almost any one is impressed with the belief that so great a monopoly of special privileges ought not to be further continued, and that banking privileges ought to be open to all on equal terms; or that the system should be abolished entirely and the currency issued directly by the Government, which plan, I incline to think, would be more acceptable to the people; and yet I am satisfied that at the present time a law of that kind could not obtain the sanction of both Houses, and therefore I do not desire to spend any time in discussing what is not practical, or rather what cannot now be attained. Practical wisdom leads us to legislate in view of facts as we find them and as they are.

In the second place, I am in favor of this bill, in so far as it increases the currency, because in my opinion the business of the country is suffering and all its industries paralyzed for want of a sufficient amount of currency for the needs of business, trade, and commerce.

The Government took into its own hands the responsibility of supplying the people of the United States and of all the several States with currency, and abolished all the banks which had existed in the States under State laws by imposing upon them a prohibitory tax. Congress by law fixed the volume of currency at an arbitrary amount or limit, and that amount is all taken up and the limit reached. The distribution of that amount of currency among the States, which ought to have been upon some principle of justice, was actually made in disregard of any principle of equality or equity, and in such manner as that its statement is enough to bring a blush to the cheek of any honest American citizen, as the following facts and figures will show.

The six New England States had a population, in 1870, according to the United States census, and have an area as follows:

	Square miles.	Population.
Maine	31,776	626,917
New Hampshire	9,280	318,500
Vermont	12,212	330,551
Massachusetts	7,800	1,457,350
Connecticut	4,674	537,154
Rhode Island	1,306	237,353
Total	65,048	3,507,825

The Southern and Southwestern States had in 1870:

	Square miles.	Population.
Virginia	40,504	1,225,163
West Virginia	23,000	442,014
North Carolina	50,704	1,071,361
South Carolina	29,385	705,000
Florida	59,268	187,748
Georgia	58,000	1,184,109
Alabama	50,722	996,992
Mississippi	47,156	827,922
Louisiana	41,346	726,915
Texas	237,504	818,679
Arkansas	52,198	484,471
Missouri	65,350	1,721,295
Tennessee	45,600	1,258,530
Kentucky	37,680	1,321,011
Total	839,000	12,971,210

The Northwestern States had in 1870:

	Square miles.	Population.
Ohio	39,964	2,605,160
Indiana	33,800	1,600,637
Illinois	55,410	2,539,891
Michigan	56,451	1,184,059
Wisconsin	53,924	1,054,670
Minnesota	83,531	439,700
Nebraska	75,995	122,992
Kansas	81,318	364,399
Iowa	55,045	1,191,792
Total	535,138	11,103,300

Now take the sections and compare the area, population, and amount of banking circulation:

	Area.	Population.	Bank circulation.
Six New England States	65,000	3,512,825	$110,489,906
Fourteen Southern States	839,000	12,971,210	36,630,217
Nine Western States	535,138	11,103,300	78,785,148

Thus it appears that New England has, compared with the Southern States, one-thirteenth the amount of territory, one-fourth the population, and yet has about three times as much banking currency. The Southern States have $2.80 *per capita* and New England has $31.40 *per capita*. And this taken, into consideration with the fact that a given number of people upon a territory of large extent require more currency *per capita* for the same amount of business than the same number upon a small extent of territory, and the above comparison shows the gross injustice and inequality.

The law as it now stands denies to the Southern States any additional currency, and New England Representatives vote almost as a unit against any increase and at the same time refuse to give up any portion of their surplus to go to the States having a deficit.

And thus we see thirteen million people spread over the vast territory of fourteen States compelled to carry on their business and all their industries with an amount of currency grossly deficient; and the Government not only refuses them the privilege of more currency, but it puts forth its iron arm and drives from existence all State banks, and prohibits the State from giving that relief which the Federal Government denies and which the State governments could give were it not for the prohibitory tax imposed by Congress upon the issues of State banks.

Now let us look at the Western States and make the same comparison. The following are the figures for 1870:

	Area.	Population.	Banking circulation.
Nine Western States	535,138	11,103,300	$78,785,148
Six New England States	65,000	3,512,825	110,489,906

Thus it appears that eleven million people in the great States of the Northwest, on an area of five hundred and thirty-five thousand square miles, have $78,000,000 of currency, while three million five hundred thousand people of New England, on one-eighth of the extent of territory, have $110,000,000.

The West has seven dollars *per capita*, while New England has thirty-one dollars *per capita*; and yet New England men will neither vote to redistribute and give up a portion of surplus they have, nor will they vote to increase the amount, that the West may have her fair proportion. Nay, sir, even we who propose to vote for such matter of just relief are to be ostracised politically and wither beneath the political ban of New England politicians, chief among whom is the gentleman representing the Hartford district in the State of Connecticut.

Suppose, sir, that we make a comparison between Connecticut and Iowa, the State I have the honor in part to represent; and I take the United States census for 1870, which of course is less favorable for Iowa than would be a census taken at the present time.

	Connecticut.	Iowa.
Area, square miles	4,769	55,410
Population	537,454	1,191,792
Wealth	$774,631,000	$717,644,000
Taxes paid for schools	1,856,275	3,570,000
Total taxes paid in 1870	6,064,000	9,055,000
Amount of banking currency	17,904,000	5,674,000

Thus it appears that Iowa has an area twelve times as large as Connecticut, a population more than twice as large, about the same

amount of wealth, pays one-third more taxes, and yet Iowa has $5,674,000 of banking currency, while Connecticut has $17,904,000; Iowa has five dollars *per capita*, while Connecticut has thirty-three dollars *per capita;* and one consideration which makes this inequality appear greater is, that the population and the business of Iowa is extended over a territory twelve times that of Connecticut, and it necessarily requires more currency *per capita* to do the same amount of business spread over an extensive territory than it does in small areas. Where the people are thickly settled within a small compass they are within reach of banks and exchange offices, and checks take the place and perform the functions of currency. So that, in justice, Iowa should have more currency *per capita* than Connecticut, but giving the same *per capita* it would give Iowa $37,000,000 instead of the amount she now has, $5,600,000; or, to reduce Connecticut to the same quota that Iowa has, it would give Connecticut $2,600,000 instead of $17,900,000, the present amount.

Now, sir, in the face of this gross inequality and injustice, and when we simply ask for justice and equality, the gentleman from Connecticut, the representative of banks and insurance companies, has the face to oppose any increase to the West; and opposes the measure with so much spirit that he declares that he shall, so far as he can, politically ostracise and destroy any man who shall have the audacity to favor the measure or any increase of currency, or who shall dare to disagree with him upon this question! These are the gentleman's words as I quote them from the RECORD:

> There is no man so good that I will vote for him for any office, from President down to constable, if he is unsound upon this financial question; there is no man so dear to me that I will not fight him from the word "go," until the election closes if he is unsound on this question.

And when it is remembered that to be in favor of authorizing the addition of one dollar to the currency is according to that gentleman to be unsound, the coolness of the gentleman's position becomes apparent in view of the thirty-three dollars *per capita* of his own State and the five dollars *per capita* of Iowa.

I doubt, Mr. Speaker, whether any person other than a Hartford man would have the face under such circumstances to make such a threat, and I must insist that it comes with a very bad grace from that quarter.

The gentleman intimates that upon this question he will form a new political party. Sir, if it is thought to be profitable and promising to the interests of eastern men to form such a party, we are ready to meet the issue. Let the gentleman organize his army of capitalists and money-lenders, and get up his organization to rob the producing and laboring masses of the country by contraction of currency, and thus pour wealth into the coffers of the rich, and we will see where he will come out.

The people of this country have never yet done injustice to capitalists; they do not intend to. Neither do they intend that, through Federal legislation, they shall be crushed and ground by the money-power of the country, and at the same time be denied the right of obtaining from their own local governments the relief necessary to save their industries from ruin.

Sir, there is an air and an assumption of superiority of wisdom and of honesty on the part of many of the advocates of contraction upon this floor which is, to use no stronger term, exceedingly unpleasant to those of us who see fit to differ with them in their financial theories. They seem to go on the presumption that all who differ with them in their Wall-street financial theories are either fools or knaves.

I respectfully suggest to those gentlemen that they may not know it all, and that wisdom may not die with them; that even in the rural districts of the West there may be some, perchance, who have made questions of finance a study, and who have some knowledge of the subject.

But aside from that, sir; aside from all vaunted and unseemly assumptions of superiority, we meet here as equals, as peers, Representatives upon this floor of sovereign people; and with all due respect for the opinions and theories of the minority on this question, speaking for myself, and I believe I speak the sentiments of the large body of Representatives from the West and the South, we propose to have such legislation as will secure justice to all sections of this great country. I am not here to carp at New England or to speak in a spirit of fault-finding or of criticism. I am a friend of New England; I admire her people, and as an American I am proud of her history. But I must be permitted, with all due and respectful deference, to suggest that outside of the boundaries of New England and connected with her in an indivisible union is a mighty empire of States, each and all of equal sovereignty, equal dignity, and equal rights, and that true statesmanship should look beyond the lines which bound States and sections, and take within its generous vision the whole country, North and South, East and West. This broad and catholic spirit of legislation iswhat the whole country has a right to expect, and is necessary for the prosperity and the harmony of the Republic.

New England will not consent to give up any of the banking capital she has over and above her fair quota; then let her Representatives, in a generous and just spirit, consent that the privilege shall be extended so that other States and sections shall have the same privileges and rights under the law that New England has.

We propose to have this measure of justice; we would be glad to have it with the aid of the East; but if not, then we will have it in spite of the East; for the star of empire has taken its course westward and rests over the Mississippi Valley; and sections and people that have been heretofore heard in weakness in these Halls, are here now in their proper strength; not to do any wrong, not to perpetrate any act of injustice, but to insist upon their rights, and to protect the interests of labor against the machinations and the power of capital.

Much has been said here by the opponents of this bill of the danger to the prosperity of the country consequent upon the passage of the bill, and dire calamities and financial ruin are predicted as the result of the violation of their theories of finance by any expansion of the currency.

This question has been discussed by many of those who favor contraction from the stand-point of theory almost exclusively. They take certain general principles laid down in the books by writers of acknowledged ability, principles which, as a general rule, are correct in the abstract, and upon these abstract principles they establish their theories, oftentimes entirely ignoring other principles and laws equally well settled, which may come in to modify or counteract the force of the principles upon which they have founded their theories.

The principles upon which these theories rest being in the abstract sound, if nothing comes in to control or modify their operation the theories built thereon would be found mostly to be sound; but unfortunately often when such theories are put to the test they fall to the ground practically; not because the financial principles upon which they rest are unsound, but because by the force and influence of other principles or laws which are brought into contact with them they are modified to a greater or less extent.

To illustrate: The proposition is considered a sound one that a solid body dropped from a point above the earth will descend in a straight line toward the center of the earth by force of the law of gravitation, and put to the test one day the theory is sustained by the result; and yet at another time some other law or force of nature may counteract the effect of the law of gravitation, and carry the descending body far from a perpendicular course.

So with the laws of trade and finance. A theory may by the force of certain laws of trade work beautifully at one period and under certain circumstances, and yet at some other period and under different circumstances the same theory may entirely fail in practice.

I do not, sir, quarrel with theories or declare want of confidence in the great writers upon the questions under consideration.

I deny that the principles laid down by the great writers upon finance are as a rule in antagonism with the theories advocated by the friends and advocates of the expansion of currency. Those writers deal, as I have said, in general principles, and not in details of systems.

Great financiers would regard it as unsafe to build a system of finance and shape it solely upon general theories. To do so and to insist upon carrying out such a system under all circumstances and in all countries and at all times might under some circumstances plunge a country into financial ruin and general bankruptcy.

We live, Mr. Speaker, in a practical utilitarian age. Practical knowledge is valued more than theory. I make no particular claim for the men who happen to be selected as the Representatives of the people; but I speak generally of the people. I have great confidence in the judgment and knowledge of the people, of the aggregated mind. I always think that all the people know more than any one man or any few men; and if some gentlemen I could refer to upon this floor would pay more deference and respect to the sentiments and judgment of the mass of the people, if they would pay at least the same respect to that judgment as they do to the opinions of men of other and past generations, it would show more wisdom.

I am one of those who believe that the world is not only growing better, but is growing wiser by experience. Each generation is wiser than that which preceded it, and the questions of trade and of finance, intricate as they are, are better understood now than at any former period.

You may take the papers upon finance coming to us every day in our mails—of which every member receives hundreds during the session, written by the people in all stations and walks of life and all parts of the country; merchants, manufacturers, professional men, laborers, and scholars—and I do not hesitate to say that in them you will find more true practical intelligence and sound sense than you can find in the musty volumes of the past, written by men of other generations; at least more that is valuable to the legislation of the present day, and because it is the knowledge acquired by observation and experience in practical life, and which has the advantage not only of what is good in the dead past, but also that which is valuable in the living present, and which takes into view the peculiar circumstances which exist in this country and among this people; a condition of circumstances which has no exact parallel in the history of the world; and we should endeavor to take a practical view of the condition and wants of the country, and enact such measures as will secure the greatest good to the greatest number. Not to legislate for any one class or any one interest, but for all.

The country is suffering in its business interests for want of a sufficient amount of currency to meet the necessities and demands of trade and of business. Industries are paralyzed, and stagnation is almost universal. It is confined to no section, but is felt in all. Hundreds of manufactories that ought to be, and have been, busy with life are standing idle; improvements of the country have almost

entirely ceased; men of activity and energy are standing still; tens of thousands of laborers are out of employment, and with a gloomy prospect for work in the future; the wages of labor are rapidly decreasing with the scarcity of the demand; the money formerly in circulation has been withdrawn from the channels of trade, and cannot be had for the demands of business. The prosperity of the country is palsied, and the mighty arm of industry is paralyzed.

What is the result of this? As might be expected the values of property have shrunk and will continue to shrink; the real-estate owner is becoming poorer every day, while the money-lender is daily augmenting his wealth; the debtor finds the debt he owes becoming more and more onerous day by day, in that it takes more property to pay it, while the creditors' notes and bonds augment in value; the creditor class thus becoming richer and the debtor class and the masses of the people becoming poorer. And this not by reason of the superior industry or energy of the creditor class, but by reason of the interference of the Government by law in favor of the capitalists, by contracting and limiting arbitrarily the volume of the currency, so that it cannot expand with the expansion of business, wealth, and population, as it ought to.

During the war the volume of currency was largely increased from time to time, until at its close the amount in circulation, including the seven-thirties and all the different issues which served the use of currency was about $1,700,000,000; and this amount had been, up to the close of the war, confined to the States not in rebellion. After the war the Southern States were opened up to business and the currency flowed into those States, and thus the territory, population, and business to be supplied by our volume of currency was largely increased. This in itself worked a contraction of the currency and made it more scarce in the Northern States. Yet notwithstanding this expansion of territory and population to be supplied—a state of facts which should have prevented any diminution of the amount of currency—the Government at once commenced to contract the amount, and pursued that course for years, until the distress of the people became so great and the complaints so loud that the Government was forced to cease the contraction. The result of that course of contraction was that the amount of currency was reduced to about $750,000,000. I believe the amount now in use is $767,000,000.

The result of this contraction policy is deleterious, and if the present condition remains unchanged the business of the country will suffer materially, the evils enumerated will be greatly aggravated, the value of money will daily increase in comparison with the value of other property, and upon the supposition that the present condition and course of things is to continue, a time will come before very long when property in comparison with money will bear but a nominal value, and when the man who has money can buy property at his own figures. This being the natural course of things, the money of the country will be hoarded; it will gradually leave the hands of the many and go into the hands of the few; it will be gathered into the coffers of the rich, and massed in the wealthy cities, as is now being done; and thus when the extreme is reached a crash will come, the result of which will be general bankruptcy and ruin. The rich few will be made richer and the masses of the people poorer.

This, Mr. Speaker, seems to be the gradual result in all countries; but when this result is hastened and aggravated by the Government it is deplorable indeed.

I have spoken of the East as having apparently a sectional interest in this question as opposed to the interests of the West, on account of the money and credits being held in the East. This is the case to a great extent, and the cause of it is obvious, and not all discreditable to the West; rather the reverse.

The West has immense wealth, but its wealth is mostly in property. The people of the West have earned money rapidly, but they have expended it in developing and building up a great and new country. Instead of hoarding their money, or investing it on interest, they have generously spent it to build towns and cities, open and improve farms, and in transforming a wilderness into cultivated, wealthy, and highly improved States. Instead of hoarding money, they have been developing the resources of a new country, and building up mighty States—borrowers of money for that purpose instead of loaners. As a consequence, they are poor in money but wealthy in property. While on the other hand the people of the Eastern States are money-lenders and creditors; their earnings not being needed to develop their country, they have invested their surplus in loans to individuals or to the Government, and as a consequence the difference in the two sections—the wealth of the one in money and credits, the wealth of the other in property.

I am not here, sir, to claim that the West, as a section, is poor. Her people are not paupers asking for favors from the East. It is a land of great wealth, of great resource, and of great power; and all that the people of that section are asking in this connection is, that the Government of the United States shall not discriminate by its laws against that section of the country, its interests and its property, by making laws the tendency and result of which shall be to add to the wealth of the East and detract from the wealth of the West. And they do not propose to allow this if they can prevent it.

The following tables, taken from the census of 1870, show the population and the wealth of each State east of the Rocky Mountains divided into four groups—the New England States, the Middle States, the Western States, and the Southern States:

States.	Wealth.	Population.
WESTERN STATES.		
Ohio	$3,235,430,000	2,665,260
Indiana	1,268,180,000	1,680,647
Illinois	2,121,680,000	2,539,891
Michigan	719,208,000	1,184,059
Wisconsin	702,307,000	1,054,670
Minnesota	228,909,000	439,706
Iowa	717,644,000	1,191,792
Nebraska	69,277,000	122,993
Kansas	188,892,000	364,399
Missouri	1,284,922,000	1,721,295
Total	10,536,449,000	12,964,696
NEW ENGLAND STATES.		
Maine	349,155,000	626,915
New Hampshire	252,624,000	318,300
Vermont	235,349,000	330,551
Massachusetts	2,132,146,000	1,457,351
Rhode Island	774,631,000	217,353
Connecticut	296,965,000	537,454
Total	4,039,870,000	3,387,924
MIDDLE STATES.		
New York	6,500,841,000	4,382,759
Pennsylvania	3,808,340,000	3,521,791
New Jersey	940,976,000	906,096
Delaware	97,180,000	125,015
Total	11,347,337,000	8,935,661
SOUTHERN STATES.		
Maryland	643,748,976	780,894
Virginia	409,588,133	1,225,163
North Carolina	260,757,244	1,071,361
South Carolina	208,146,989	705,606
Florida	44,163,555	187,748
Georgia	268,169,207	1,184,109
Alabama	201,855,841	996,992
Mississippi	209,192,345	827,922
Louisiana	323,125,666	726,915
Texas	159,052,542	818,579
Arkansas	156,394,691	484,471
Kentucky	604,318,552	1,321,011
Tennessee	498,237,724	1,258,520
West Virginia	190,651,491	442,014
Total	4,177,402,956	12,030,905

These tables show that the Western States, instead of being poor, are wealthy, and taken into consideration with the fact that this wealth is mainly in property shows the immense loss which necessarily falls upon that section by a contraction of the amount of currency, its arbitrary limitation in amount, and the consequent withdrawal of it from the channels of legitimate business for the purpose of being hoarded to await the inevitable decline in value of property, a state of things I have already referred to, and which we see at all the money centers to-day.

I have said that this hoarding process, now and for months past going on, is the natural result of the condition of things. And I say further that if there is no change by law, no means provided for additional currency, this hoarding of money will inevitably continue, with the results I have depicted.

It is the duty of this Congress to pass such laws as shall avert the impending evil; either by taking off the prohibitory tax upon State banks, and thus permit the States, by local laws, to authorize and regulate the issue of bank currency, or to authorize the issue of sufficient currency under national laws. But in whatever manner it is provided for the people must have more currency, for this only can revive the languishing industries of the country.

As was said by David Hume:

In every kingdom into which money begins to flow in greater abundance than formerly everything takes a new face. Labor and industry gain life, the merchant becomes more enterprising, the manufacturer more diligent and skillful, and the farmer follows the plow with more alacrity and attention.

And this, sir, is true, as the experience of mankind will substantiate.

Let the people be supplied with sufficient currency for their business, and energy and life will reanimate all the avenues of industry and all the channels of labor. For the Government to fail to do this would be a pitiful yielding to the influence and power of capitalists, and a crime against the laboring people of the country.

I do not desire, Mr. Speaker, to advocate any course which shall discriminate in favor of any class or any section. The people of the West are too generous for that; they do not need anything of the kind. They desire only protection to all interests. They see in contraction great danger to the interests of the West and of labor in general. And they believe it a very poor road to specie resumption. It

is practically on the old principle of throwing a poor debtor into jail and locking him up there until he pays the debt. While locked up he has no means or power to pay his debts. The more sensible way was to give him a chance by industry and work to make the money to pay the debt.

So the paralyzing of the industries of the country and drying up its channels of trade is a poor way to get to resumption and specie payments. Reason points to another road. No more contraction of the currency. Restore to the circulation what has by contraction already been taken from it, and let the country have sufficient circulation for the legitimate business of the country. Let this be done and the languishing industries of the country will revive, trade will flow with renewed vigor in its wonted channels, the country will become prosperous, and the energies of a great people will soon carry the Government through all its embarrassments.

This, sir, will be found the surest, the best, and the speediest road to specie resumption, as well as the surest and best guarantee of the public credit.

State of Louisiana.

SPEECH OF HON. A. S. MERRIMON,

OF NORTH CAROLINA,

IN THE SENATE OF THE UNITED STATES,

April 23 and 24, 1874.

The Senate having under consideration the bill (S. No. 446) to restore the rights of the State of Louisiana—

Mr. MERRIMON said:

Mr. PRESIDENT: I regret the spirit manifested by the honorable Senator from Maine, [Mr. HAMLIN.] It cannot be otherwise than somewhat embarrassing to one so young in this body as myself; and it seems to me that his objection to debate, and the purpose he manifests, are founded upon an improper ground. This discussion, considering its importance, has as yet consumed not a great deal of time. It is admitted by all that the measure under discussion presents more than one of the most important questions that have come before the Senate during the present session, or that can possibly come before it; and yet the honorable Senator proposes to cut off debate. Sir, the Constitution provides, the rules of this body provide, the practice of this body allows, justice requires, that every Senator shall have reasonable opportunity to express his views upon the commonest question; and duty, it seems to me, demands that each shall express his opinions, if they shall or are likely to contribute to throw any light upon a subject of such vital importance as the one now under consideration is conceded to be. If the venerable gentleman shall persist in the course which he has suggested, and shall make the motion he proposes to make, I do trust that for the sake of justice to the people of Louisiana and to the country, whatever may be the views Senators may entertain about the merits of the controversy, it will not be allowed to prevail. My honorable friend complains that each successive speaker reproduces something that has been brought before the Senate on a former occasion. Why, sir, such reproduction of fact and argument is none the worse for that. It is very essential in all debates that the same matter should be presented in different ways, in various lights; and in that way great good is accomplished in preparing the minds of Senators to vote intelligently upon the question which may be under discussion. It is not only so here; it is so in all deliberative bodies. In courts of justice, everywhere, the same practice prevails. Notwithstanding the suggestion of the Senator, I trust that I shall have sufficient fortitude to proceed in my own way to say what occurs to me as proper to be said in reference to the questions under discussion.

Mr. President, I feel a very deep and earnest interest in the measures now under consideration. They concern specially, and materially, and under circumstances of the most striking and painful character, a State in that section of the Union which I in part represent in this body. They affect a particular State specially, but the great fundamental principles underlying the bill, and the proposed amendment to it, affect not only that State but the whole Union, and go directly to the integrity of our system of government. In a matter of so much moment, it seems to me that every American citizen must or ought to feel a deep personal interest, and especially ought this body, who are charged in a great measure with the peculiar guardianship of the Constitution and our system of government developed by it, to take a very high and anxious interest in it when we are called upon to declare in what way these measures are to affect that State and the Union.

I cannot conceive of a subject more interesting to the American people, collectively and severally, than that of their Government—its nature and character, and the manner of its administration. It is indeed a matter of supreme moment to them. It affects their lives, their liberties, and their fortunes. These prosper and flourish on the one hand when it is well administered; they languish and perish on the other hand when it is ill administered.

The American people love and revere their system of government. They have been educated to believe, and the great mass of them do believe, that their system is the best ever devised by the wit of man, when it is properly and faithfully administered; and an unexampled national experience and prosperity of nearly a century goes to attest how well-founded are such general popular convictions.

There are times, Mr. President, when American Senators cannot afford to be mere political partisans. There are occasions of high moment affecting the integrity, the nature, the life of the Government, when they should cast party considerations to the winds and allow their judgments and their actions to be governed only by the highest and purest patriotism. It is in that spirit that I desire to speak to-day. I do not wish to be understood as speaking as a partisan or in the interests of any party, or section, or faction. I desire to speak only in the interests of truth and my country accordingly as I understand those interests.

If free government as embodied and defined in the Constitution of the Union and of the several States composing it, is worth preserving, then indeed must the present distressed and deplorable condition of the State and people of Louisiana excite the profoundest sympathy and engage the most serious attention of the national Legislature. Our system of government is on trial, and in a matter that concerns it vitally. The facts show that the people of the State of Louisiana are to-day living under what I think may be justly called a military despotism. I propose to show on this occasion that the person who undertakes to exercise authority in that State as governor and his associates are mere usurpers, in defiance of the constitution and laws of that State and the United States, and that they are sustained in such usurpation only by the military power of the United States, prostituted to that illegal and unconstitutional purpose. If this view is correct, then is it not profoundly astonishing and alarming that so much indifference is manifested about the matter in this body? Such indifference is unjust, it is unwise, it is in the face of the best and dearest interests of the American people; however honestly intended, it imperils the Constitution and our whole system of government, and is unfriendly to it. So far from wanting to run away from such an investigation so momentous, I say and insist that we ought not to stop until the matter is decided as it ought to be, according to truth and right.

In order, Mr. President, to have a proper understanding of the condition of the State of Louisiana and to determine the measure of relief which Congress ought to grant in that behalf, it is necessary to have a correct notion of our system of government; and to that end I propose to examine in a very summary way the nature of that system.

Anterior to the Declaration of Independence, what are commonly called the thirteen original States were colonies and belonged to the Crown of Great Britain. Those thirteen Colonies derived all their rights of government from the constitution and laws of Great Britain. They exercised political power by virtue of the charters and authority granted by the Crown in pursuance of the laws of that country. The legislation and practices of the mother-country in reference to the Colonies became oppressive and offensive to the people. Those oppressions continued to be practiced in such a way and to such an extent as to become "too intolerable to be borne." They were practiced in some localities with more rigor than in others, but all the Colonies alike felt the effects of the unfriendly legislation of the mother-country, so that a common and unalterable purpose pervaded the minds and hearts of the colonists to obtain redress for such grievances. Their first aim was not independence of the mother-country, but to obtain redress of their wrongs under the constitution and laws of England. That redress was not granted; on the contrary, grievances were aggravated and increased, and the result was that as each colony was of itself unable to obtain redress by moral or forcible means, they made common cause, and accordingly they sent delegates to a Congress of the Colonies which assembled first in the city of Philadelphia on the 5th day of September, 1774.

That Congress styled themselves "The delegates appointed by the good people of these Colonies." When they had assembled and organized as a deliberative body, they did not take steps then immediately with a view to independence, nor did they desire to be understood to be, nor were they, an entirely revolutionary body. Their purpose was organized remonstrance against the wrongs inflicted by the mother-country. They sat for a considerable length of time—until the 26th of October next after the time of their assembling—and devised remonstrances against the action of the mother-government, but when they adjourned they recommended that another Congress, to be appointed by the several Colonies, should assemble on the 10th of May, 1775. Delegates to another Congress were appointed by the several Colonies, and they did assemble in Philadelphia on the 10th of May, 1775. The redress which the first Congress had sought at the hands of the mother-government was not granted. On the contrary, the oppressions inflicted upon the Colonies continued to increase, and to these were added insult. The second Congress became at once a revolutionary body. There was open, flagrant war. There was then a revolution recognized and acknowledged. The mother-country had taken steps by war measures to subvert the Colonies and to hold them in subjection and compel them to perform and discharge the obligations which it had forced upon them by arbitrary legislation and practices.

The contest thus inaugurated by the Colonies, at first not with a view to independence, continued until independence was secured.

That contest was not the contest of any individual Colony; it was the contest of all the Colonies co-operating together, and it was molded and directed mainly by the action of the Continental Congress, which had indeed become a revolutionary body. Pending the struggle thus inaugurated, the spirit of revolution pervaded the minds of the great mass of the colonists. In many localities they were ripe for independence, and first in my own State, on the 20th day of May, 1775, at Charlotte, a large number of people in mass convention declared themselves free and independent of the Crown of Great Britain, and took measures to that end. The Congress having theretofore resolved that it was necessary, with a view to preserve the liberties of the Colonies, to declare independence, and to make open war for that purpose, agreed upon the Declaration of Independence, and on the 4th day of July, 1776, that immortal instrument of liberty was passed and signed by the Delegates in Congress.

This declaration was not the separate act of any one of the Colonies; it was the act of all for all and for each, and a point which I wish to make here is this: that the Colonies were never separately independent. There was never in this country at any time separate independence on the part of the Colonies, or any of the States after they became States of the Union. They had a common cause, they had a common purpose, and they proposed to consummate that purpose by common effort and thus secure a common destiny. The independence which they declared and assumed before the face of the world was a joint independence, but for the benefit of each separate Colony as well as for all. As this is a point which I regard as material as tending to show a necessity and purpose of nationality from the beginning, I beg to refer of one or two clauses in the Declaration of Independence confirmatory to this view. I have said the Colonies became independent as one people. That independence was for the benefit of each Colony; but that independence was to be asserted and made good and consummated by the co-operation of all the Colonies; and hence in drawing the Declaration it was said:

> When in the course of human events, it becomes necessary for *one people* to dissolve the political bonds which have connected them with another and to assume, among the powers of the earth, *the separate and equal* station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that *they* should declare the causes which impel *them* to the separation.

It seems to me that it is manifest that they were not only acting collectively, but that they understood that they were acting collectively; that it was a joint Declaration of Independence, and war against the mother-country, and that independence was asserted jointly, but for the benefit of each colony in its separate existence. I cite the concluding paragraph of the Declaration of Independence in further confirmation of this view:

> We, therefore, the REPRESENTATIVES of the UNITED STATES OF AMERICA IN GENERAL CONGRESS assembled, appealing to the Supreme Judge of the World for the rectitude of our intentions, do, in the Name, and by the Authority of the *good People of these Colonies*, solemnly PUBLISH and DECLARE, that *these United Colonies* are, and of Right ought to be, FREE AND INDEPENDENT STATES; that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved; and that, as FREE AND INDEPENDENT STATES, they have full Power to levy war, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which INDEPENDENT STATES may of right do. And, for the support of this Declaration, with a firm reliance on the Protection of Divine Providence, we mutually pledge to each other our Lives, our Fortunes, and our Sacred Honor.

By that instrument the Colonies, for their joint and several benefit, declared that they were sovereign and independent; but it was a simple declaration of independence. It will be seen and noted that they prescribed no rights or obligations as between themselves. They prescribed no specific means by which that independence which they asserted by that instrument should be maintained, and made good and effective. There was thereby created no general government, not even a league, by and through which they might accomplish the purposes that they signified their intention to accomplish. But war was then flagrant; a common interest drove them together, and impelled them to unity of action. It seems to me a very remarkable illustration of their high patriotism that they adhered to their common interest so steadily, so successfully, without, literally without, a national government or a national head; they went on and maintained the war for seven years and asserted independence successfully. But even at the moment of the Declaration of Independence, I believe it was seen that a general government was absolutely essential in order to attain the great ends they had in view, and from time to time the statesmen of that day, often acting with those engaged in the military service, co-operated to organize something like a federal head, a government, or a league for the purpose of exercising power for the common benefit of all the Colonies.

The Colonies were first called "United States of America" in the Declaration of Independence. After that they were styled, in Congress and elsewhere, "The United States of America."

In pursuance of the purpose, however, in which they had embarked in the manner described, a national league, commonly called the Confederation, was agreed upon between the Colonies.

The Articles of Confederation did not provide a government; it was a league, a confederation; and the rights of the several Colonies, then called States, were reserved to themselves by express provision in the Articles of Confederation. The first article provided as follows:

> The style of this Confederacy shall be "The United States of America."

It was called a "Confederacy." The second article shows the fixed purpose to retain the separate absolute sovereignty and independence of the several States. Article 2 provides:

> Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right which is not by this Confederation expressly delegated to the United States in Congress assembled.

These Articles of Confederation conferred upon Congress very limited powers. They only provided for a Congress; there was no separate executive power provided; nor was there any judicial power established by them. The whole power conferred by the States in the Confederation was lodged in Congress alone, and the powers conferred operated only upon the States as States; they did not operate upon the people at all. Even in the matter of raising revenue the Congress did not have power to levy taxes upon the people; it only had power to declare that certain amounts of money were required and to signify these wants in a proper way to the States, and it remained to the States to say whether they would supply the same or not.

The Articles of Confederation, I repeat, simply established a league between the United States. It did not in fact assume or purport to be a government. It was a mere agency, and ill-contrived, to accomplish the great purposes necessary to be effected by a national government or a government at all. It lacked many of the most essential elements of government. I think, in fact, it was not contemplated that it should be a government, but that it should be an agency to answer the then present purpose in the achievement of independence. But the great men of the country of that time saw and felt very sensibly the want of a national Government with power, and capable of supplying means, to develop a vast undeveloped country at home, to resist aggressions from abroad, and to maintain that independence and liberty which had been asserted successfully under adverse circumstances and at the cost of many precious lives.

After an experience of a few years and after long discussion and great and complicated troubles, in and out of Congress, the Congress of the Confederation recommended to the several States the propriety of electing delegates to a convention to frame a *constitutional government* for the United States; and that their purpose was to create a government appears by what I shall read from their proceedings. It was provided by Congress in these words:

> Whereas there is provision in the Articles of Confederation and Perpetual Union, for making alterations therein, by the assent of a Congress of the United States, and of the Legislatures of the several States; and whereas experience hath evinced that there are defects in the present Confederation, as a mean to remedy which several of the States, and particularly the State of New York, by express instructions to their Delegates in Congress, have suggested a convention for the purposes expressed in the following resolution; and such convention appearing to be the most probable mean of establishing in these States a firm NATIONAL GOVERNMENT:
>
> *Resolved*, That, in the opinion of Congress, it is expedient that, on the second Monday in May next, a convention of Delegates, who shall have been appointed by the several States, be held at Philadelphia, for the sole and express purpose of revising the Articles of Confederation, and reporting to Congress, and the several Legislatures, such alterations and provisions therein as shall, when agreed to in Congress and confirmed by the States, render the *Federal Constitution adequate to the exigencies of government, and the preservation of the Union.*

It thus appears that the Congress of the Confederation at that time did not understand or appreciate the fact, for it did not exist, that they represented a government at all. They saw and recognized the necessity for a national government, and the great desire was that a national government should be established, and hence they say in the preamble to the resolution, "the most probable means of establishing in these States a firm national government;" and in the resolution itself, "to render the Federal Constitution adequate to the exigencies of Government and the preservation of the Union."

In pursuance of that resolution the several States appointed delegates to meet in such convention as that suggested, and a convention did meet in the city of Philadelphia for the purpose specified in the resolution just read. That convention when it assembled devised and submitted to the people of the several States of the Union the present Constitution of the United States, except the amendments thereto.

Can any one doubt that at the time this convention assembled every State in the Union under the Confederation was absolutely sovereign and independent? I am sure there is no doubt about it. It is manifest they were. The Articles of Confederation purported to be a mere league, and they were bound to each other only by a pledge of faith. The articles provided obligations, provided rights; they declared the Union, but they provided no means for enforcing rights and obligations, nor did they provide any means for maintaining the Union, unless the several States should see fit to furnish the same, of whatsoever nature; there was nothing pledged to that end except merely their good faith, and the history of those times shows that frequently this was ill-kept.

The Federal head, the Congress, by virtue of the powers with which it was invested by the Articles of Confederation, did not even claim to assert rights against the States, or to do anything except by the sanction of the States. I think it is clear beyond controversy that by the Declaration of Independence and under the Articles of Confederation the States were absolutely sovereign and independent; but this agency of the States—the Congress—and the several States themselves, and the people, saw that there was an absolute and overruling necessity that they should have not merely a Federal league, but a great national Government, clothed with all the essential powers and immunities of government.

And let me here remark, Mr. President, the present Union was not

the production of speculation and theory; it was not a system of government devised by a political philosopher or a theorist. It had its origin in the necessities that grew out of the contest for independence. It was the circumstances that surrounded the Colonies that forced the Union that established independence; joint dependence gave rise to necessities, wants, interests, and ties that resulted naturally and logically in the establishment of the Constitution. The Constitution and the Union was the logical sequence of independence. It was not the offspring of the brain of any of the great men of that day; it was not the offspring of the brain of a great statesman of this country or of any country; it was a great political necessity experienced by the people of every section of the Confederation. It grew out of the necessities of the States as States and of people as persons; it was virtually devised, certainly ratified, by the people; it was the creature of the circumstances that surrounded the American people at that time; it was devised, established, and sanctioned by the American people as the shield and bulwark of their liberties. How precious it ought to be to them!

The framers of the Constitution recognized the fact that, by virtue of the Declaration of Independence, each State was sovereign, and sovereign to all intents and purposes. North Carolina, for example, by virtue of that Declaration, and especially after it was made good, was as sovereign as Great Britain or France or Russia or any power on earth. The same remark applies to each of the thirteen States at that time. They were each absolutely sovereign and independent. But, as I said a moment ago, they saw the necessity of having a great national Government to promote their common general interests. That such was their purpose appears manifest in the resolution which I have just read passed by the Congress of the confederation. They suggested that a national Government was necessary. In pursuance of that suggestion the people through their properly constituted authorities appointed delegates to a convention to frame a constitution for a national Government, and the convention assembled, and to that extent the people ratified the suggestion.

What, then, did that convention do? What could it do? What could the people of the several States, after the convention had taken action, do by way of ratifying what it had framed and presented to them? They were absolutely sovereign, and they could do just what they pleased. Every State was as sovereign as any power could be politically. Was it not competent for any State to surrender a part of its sovereignty for the purpose of creating another government for particular purposes? And was it not competent for that State to say how much of that sovereign power it would delegate to and vest in another government for its own benefit jointly with other sovereignties? And if it was competent for one State to say so, was it not as competent for another State to say the same thing; and did they not do that very thing? The answer to these questions is manifest. The Convention that framed the Constitution saw the necessity, not only of having the co-operation of all the States for general purposes manifestly national, but saw too that it was necessary that that national government should have ample power to execute such purposes and to all these ends, certain absolute and sovereign powers, and hence it provided them. Each one of the States was content to see a national government organized; to see conferred upon that national government certain sovereign and absolute powers of government which that national government might exercise as thoroughly and completely as any sovereign power on earth could. But it was competent for the States to fix the measure of such delegated power and define the limit of national sovereignty, for the States were absolute in their power; they could fix the limit and provide that it should never be departed from or passed over.

What, then, did that convention do in this respect? They provided a *national government*—not a league, not a confederation merely—but a national government, a government absolutely sovereign within its sphere, which operated upon the States in some respects, and in other respects operated directly upon the people of the States as American people; and hence comes the expression "the American people," a common people, one people in those national respects. That convention also invested the General Government with certain powers which were common both to the State and General Government.

I will make a simple reference to one or two of the powers conferred upon the General Government which operate upon the States as States, and others that operate directly upon the people, in order to give a clearer view of the nature of the General Government.

There is a provision in the Constitution that each State should have certain representation in Congress, that each State should have two Senators, and thus the States as States make up the Senate of the United States. In that way it operated directly upon the States and recognized the State government as a State government. There were certain other provisions which conferred upon Congress power to pass laws operating directly upon the people, as for example the provision which empowered Congress to levy taxes for the support of the Government and to accomplish any purpose within the scope of the Constitution.

There were other concurrent powers, powers common to both the State and Federal Government. The States by virtue of the Constitution might pass insolvent laws; Congress might by virtue of the Constitution pass a general bankrupt law, in which case the insolvent laws would be superseded.

So then we see that the Constitution, framed by the convention which assembled in Philadelphia for the purpose, did what? It provided that in certain respects the several States should retain their absolute and independent powers and sovereignty, and in reference to those powers they should be as absolute and sovereign as they were before the Constitution was framed, as they were on the day the Declaration of Independence was adopted; that as by certain other powers which were conferred upon the national Government by them, they created a national government, and in those respects the national Government was to become as absolute, as sovereign and independent, and as powerful as the States themselves in reference to the powers which were reserved to them; and in reference to certain other powers, that the States and the Federal Government should exercise them concurrently.

So it must be plain that the convention framed a mixed government. The States reserved all power not conferred. That was so by plain construction; but the people of the United States fearing that there might be some doubt about that, and that in time the General Government might become too powerful, provided in an amendment to the Constitution, as originally framed, that—

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Then how does our system of government operate? It seems obvious that the State governments have in certain respects absolute sovereignty, and powers accordingly, and with which the Federal Government has no power whatsoever to interfere. What are some of those rights? If the State government is republican in its nature, the people may frame it as they will. They may provide how the chief executive shall be elected, how the Legislature shall be elected, how the judges shall be elected or appointed, how the counties in the State shall be laid off, how county officers shall be elected or appointed, and the Federal Government has no power whatever to interfere. All these matters were reserved to the States, and in these and many other respects they were left absolutely sovereign, and Congress cannot interfere with them in any way or manner whatsoever.

Then there were certain other powers which were conferred upon the Union. One was the power "to levy war." Can there be any doubt that the Union is absolutely sovereign and possesses absolute power in the matter of levying war? Again, Congress has power "to coin money." Is there any doubt that the Federal Government is absolutely sovereign in the matter of coining money, that Congress has the power of regulating the manner of electing members to the lower branch of Congress, and the times of electing Senators by the State Legislatures, and that such power is absolute? In those and many other respects the Union is as absolutely sovereign and powerful as the States are sovereign in the respects that I have just mentioned as pertaining to them, and in all the powers reserved to them. Thus we have a mixed government; we have a mixed system of government. The States are sovereign in their sphere; the Federal Government is sovereign in its sphere. Each government is of the other and for the other; each government is in aid of the other. In certain respects they are absolutely distinct, distinct sovereignties, and absolutely sovereign according to the prescribed distinctions; and in certain other respects, they are sovereign all together. I think our Government may be styled essentially a mixed government. It is essentially *imperium in imperio;* it is a government within a government. And it follows as a consequence that the allegiance of the citizen is double; it is in certain respects to the State; in certain respects to the Federal Government. This allegiance is in entire harmony with this system of government.

But these distinctions are essential to its very nature; they are essential to its existence. Suppose the States were stricken down so that local government should cease absolutely; suppose all State lines and laws and power and sovereignty should be wiped out; is it the opinion of any sensible person that this Government could last a great while? Would it be possible for Congress to go on and legislate for the State of North Carolina, for example, or that territory embraced by the State of North Carolina, regulate its counties, its county affairs, its cities and towns? There would be no end of legislation; local and sectional interests and strifes and jealousies would spring up that would result in the early destruction of the nation. The truth is—and the more I think of it the more I am convinced of it—the State system of this Government is the great groundwork of our American system of government, and essential to the existence of freedom. Strike that down, the State governments and our system and our liberties must perish. The sovereignty of the State within its sphere is as essential to the existence of our system of government as the existence of the Union itself. I do not believe that if the States were torn loose from the Union they could exist and maintain their liberties for any considerable length of time; and, on the other hand, I do not believe that if the States were destroyed, either directly or by frittering their powers away, and we had a vast consolidation, the Union, as such consolidation, could exist or last for any considerable length of time. These distinctions of political right, these limitations upon the State governments and upon the Federal Government, are essential and vital features in our system. We are bound to preserve them if we are patriotic and desire to see our institutions perpetuated. Then whosoever would break them down, destroy them, or impair their usefulness must be deemed unfriendly to our system of free government; they are false to patriotic duty, they are enemies to the people!

Now, Mr. President, to come a little nearer to the point before the Senate. I have said that in the formation of a State government the manner of electing the governor and the other officers commonly called the State officers, the Legislature, and the judiciary, is a matter that peculiarly belongs to the State government. Congress in the exercise of powers that refer to the States must then do what? They must recognize the officers of the State government, the governor and the other State officers and the Legislature and judiciary of the State, as those officers are ascertained to be according to the constitution and laws of the State. Congress has no power, in any conceivable view, to go into a State government to inquire whether so many fraudulent votes were cast for a person for governor and so many legal votes for another, or whether a certain member of the Legislature was elected fraudulently or otherwise. Those are questions that pertain to the State alone, and which the proper State authority must determine. Congress must ascertain what governor was elected according to the constitution and laws of the State and by the proper lawful constitutional authorities of the State; but it cannot review, ignore, or overrule the determinations of the State authority, and for the plain reason that touching these matters the State has absolute power and jurisdiction. In the same way it is essential that Congress shall ascertain what particular body is the Legislature of the State as ascertained to be the Legislature of the State by the constituted lawful authorities under the constitution and laws of the State; and when it becomes necessary to come in contact with the judiciary, as in a conceivable case it might be, Congress is not to recognize whom it pleases, but it must recognize that judge, it must recognize that court, which is ascertained to be such by the constitution and laws and authorities of the State government under that constitution and laws.

Hence, in the election of a United States Senator, the Senate by virtue of the power conferred by the Constitution of the United States cannot go on to inquire whether a particular member of the Legislature was elected or whether he received so many fraudulent votes and so many votes that were not fraudulent. It has nothing to do with that matter. All that the Senate in that case can do is to ascertain whether a particular person was ascertained by the Legislature to be elected a member of that body; and when that is ascertained, that is the end of it. So Congress has no power to inquire whether a person acting as governor of a State, recognized by the constitution and laws of the State as the governor, was elected by fraudulent votes or otherwise. The question of how the election was held, whether fraud was practiced or force was employed at the election, Congress cannot undertake to determine; these questions pertain to the State authority alone; their decision is final, and for the reason stated. That is a matter which belongs particularly to the State authorities; and when they have determined it, whether they have determined it right or wrong, Congress is bound to recognize and act upon their determination, whether it please or does not please Congress. So, I say, in determining whether a Senator applying for admission into this body has been elected, the Senate cannot inquire into the validity of the election of the several members of the Legislature choosing him. It can only inquire whether that Legislature elected the Senator, sent him forward here as Senator according to the laws of the United States, and whether it was the Legislature of the State, as ascertained by the authorities of the State, according to its constitution and laws. It might possibly happen that the authorities of the State government are so corrupt that they would tolerate a Legislature under color of law which is false in fact; but Congress cannot control that; the Constitution and the law do not presume such a state of things, and if they did the proper State tribunals are supreme in such matters.

Let me illustrate by my own case. Suppose when I applied for admission here it had been suggested that half of the members of my Legislature were elected by fraudulent means; could any one who understands the Constitution of this country pretend that the Senate would have a right to go back of what had been ascertained by the authorities of the State and see whether that was so? Surely no such proposition would be advocated seriously by any one. So that in reference to that matter the Congress of the United States is concluded by what the State authorities under the constitution and laws of the State have adjudged to be the facts. If the Legislature, for example, is charged with ascertaining who is elected governor at a particular election and his governorship should come into question in any way before the Federal authorities, or Congress particularly, Congress cannot go on to inquire whether he had received so many legal and so many illegal votes; Congress cannot go on to inquire whether so many men were driven away from the polls, or as to the fairness or unfairness of the election. That is a matter which pertains exclusively to the State. It is one of those sovereign powers which are reserved to the State; Congress has nothing to do with it; and when the authorities of the State, I repeat, under the constitution and laws of the State, have ascertained a particular person to be governor, Congress is obliged to accept that fact. Whatever may be our opinions about the validity of the election, about the manner in which it was brought about, we have nothing in the world to do with that. All that Congress can inquire into is, was this particular person claiming to be governor ascertained by the constitution and laws of the State to be the governor of that State; and if that is ascertained, that is the end of it.

There are some instances in which acts of Congress operate directly on the people, and where it becomes of very great importance for one branch of Congress particularly to ascertain whether an election was conducted honestly and fairly or otherwise. When a member is elected to the other branch of Congress, he is elected in pursuance of the laws passed by Congress, unless in the case of absence of laws passed by Congress, under laws passed by the several States. In that case, when two or more persons present their credentials to the other House of Congress, it becomes competent and necessary under the Constitution of the United States that the House should inquire into the fact whether the election was fair and whether the votes cast were fraudulent or otherwise. That is one of the cases where the Constitution operates directly upon the people. But in the case of a Senator, the Constitution operates upon the State and it becomes necessary to ascertain the State government, the proper authorities of the State government, and when this is determined there is the end of power. And in this way alone are the State authorities—officers—to be recognized by the Federal Government for all purposes under our system of government.

My purpose in thus referring at some length to the Constitution and the theory and system of our Government, both State and Federal, is to arouse thought upon the subject of our Government as well as to fix the ground work of what I desire to say in reference to the bill under consideration. This country has been in a state of revolution for the last fourteen years. We have wandered far from constitutional limitations. The people have in a great measure lost sight of the Constitution and the supreme importance of it; and what is worse, and if possible more alarming and dangerous than that, the guardians of their liberties seem to have grown wild, and when they want to accomplish an end they do not stop to inquire whether it is constitutional or otherwise; if they have the physical majority they go on and do it. I think the time has come when Senators particularly, in some measure the special guardians of the Constitution, in considering questions of the present kind, should cast aside party considerations, should remember that we are trying to free ourselves from the effects of a revolution, to get back to the landmarks of the Constitution, and to start anew upon that instrument, which I think is essential to our existence for any considerable time as a nation of people. I want the Senate to think about the Constitution; how it bears upon this question and upon many other questions which affect particularly my section of the country at this time, and not set precedents that they and the country may regret in the future. Louisiana suffers to-day; Arkansas suffers to-day; South Carolina suffers to-day; Alabama and other States suffer to-day from flagrant violations of constitutional rights; but this day of suffering will pass away, I trust in God, by and by; but the time will come when the other States of the Union may suffer in the same or like manner or in a worse way, if we set dangerous precedents, as I think we are about to do in this case.

Sir, it is the high duty of the Senate, it is the high duty of Congress, by every possible means to get the Government back to its old moorings under the Constitution, to let the Constitution operate once more so that it can be said, and not only said but that the people may feel, that they have a constitutional government and that it operates in fact and truth for the benefit of everybody, whether he was engaged lately in war or otherwise. Why, sir, we see a spirit of persecution manifested in many quarters against those people who fought in the South during the late war against the Union. I am sorry that there was any cause for fighting; I wish there had been no fight; I did not desire the war; I did all I could to avert it; but the circumstances of the country were such as to make the war almost inevitable; it was the natural consequence of an unhappy controversy that both the North as well as the South were responsible for. Why should the statesmen of the Union, now that the war is over and for years past, go wild over the fact that this country had a war? The war, terrible and bloody and disastrous as it was, especially to one section of the Union, was a great event it is true, but nothing uncommon in the life-time of a country. It comes in the course of natural events. By and by it will be said that it was one of the wars in the life-time of the American Republic. That is not the only war this country will have. We shall see war after war in the great future which awaits the country. The war that we have passed through, will be spoken of as a mere event in the life-time of the nation. And what is our duty as American citizens and as sensible men and statesmen? It is to put the war behind us, to put its follies, its crimes behind us, and let us learn lessons of national virtue and patriotism from it, and endeavor to restore the Government to the firm hold under the Constitution that it had on the American people anterior to the late war. It ought to be the policy of the Government, its statesmen, its people, to win back the affections of those who fought against the Government. They need the help and protection of the Government; the Government needs and wants their help, and above that their affections.

If, then, our system of Government is such as I have endeavored to show it to be, what is the relation of Louisiana at this moment to the Union? Let us examine.

Louisiana came into the Union years after it had an existence. The territory which is now embraced in the State of Louisiana belonged anterior to the 30th of April, 1803, to France. The United States acquired the territory of Louisiana by treaty, dated April 30, 1803. And I wish to call the attention of the Senate to a particular provision in that treaty, which goes to show that the United States are

under not only the common obligations to the people of Louisiana that they are to other States of the Union, but that there is an express, solemn treaty stipulation resting upon them, in addition to the obligations they owe to the other States of the Union. I will read the clause of the treaty to which I refer. It was provided in the third article of the treaty that—

> The inhabitants of the ceded territory shall be incorporated into the Union of the United States and admitted as soon as possible, according to the principles of the Federal Constitution, to the enjoyment of all the rights, advantages, and immunities of citizens of the United States; and in the mean time they shall be maintained and protected in the free enjoyment of their liberty, property, and the religion which they profess.

So that I say there is not only the common obligation resting upon the Union to protect the State of Louisiana when protection becomes necessary, that rests upon the Union to protect other States, but that obligation is intensified, if possible, by this express, solemn treaty stipulation; so that it is our business now to be anxious and to be as expeditious as the nature of the case will allow to re-establish that State in the Union and the people of it in all their rights under the Constitution and under this treaty.

After the territory that is now embraced in the State of Louisiana (and a vast extent of territory besides was acquired by the treaty just mentioned) an act of Congress was passed, on the 20th of February, 1811, by which it was provided that the inhabitants of a certain portion of that territory now embraced by the State of Louisiana might call a convention and form a constitution. The convention was required by that act first to determine if they would form a constitution and State government, and if so they were first to adopt the Constitution of the United States, and secondly to make a constitution republican in its form and send the same to Congress. If Congress, at the next session after such action should be taken by the people of that territory, should not disapprove such constitution, in that case Congress pledged itself to admit the State of Louisiana into the Union as one of the States and upon an equal footing with the other States of the Union. A convention was called in the State of Louisiana in pursuance of the enabling act of Congress, and that convention complied in all respects with the act of Congress, and the constitution formed by it was presented to Congress, and by an act approved April 8, 1812, the State of Louisiana was admitted into the Union as a member thereof on an equal footing with the original States; and this act provided for representation in Congress, and made all such provisions as were necessary to enable the State of Louisiana to take every possible benefit of the Union.

Thus it was determined by Congress at that time that Louisiana was a State; that it was a State with a government republican in its form, and admitted into the Union, and it has continued a member of the Union from that day to this; and it has always maintained a republican form of government.

I wish here to call attention to an expression or a manner of expression which, with all respect, I regard certainly as an impropriety; it is certainly illogical. It seems to me that gentlemen generally in this debate have treated the officers of the State of Louisiana as the State government. I submit that that is not so. The government of Louisiana is embodied in the constitution of the State. That constitution, and the laws enacted in pursuance of it, provide for certain officers; but the officers do not make the government republican or otherwise in its form. They are the mere instruments by and through which the government and its affairs are administered; and they have nothing to do with the form of government. The form of government is established and defined by the constitution itself; and the officers of the government are the mere instruments through and by which the constitution and laws operate. So that all that has been said about whether Louisiana has a republican form of government is beside the case. The constitution is there, the laws are there; and Congress has said repeatedly that it was and is republican in form; and in that respect harmonizes with the Constitution of the United States; and we need not waste one moment of time in discussing whether it is republican or not. It is republican. That is not the controversy here. The controversy is as to who lawfully administers this government, and who are its properly authorized officers and agents, and to be recognized as such.

I said a moment ago that Louisiana had remained in the Union ever since 1812 as one of the States composing it, and I meant all I said. It is true the people of Louisiana engaged in the late war, and they undertook to pass what they called an ordinance of secession. I need not tell a lawyer that that ordinance was absolutely null and void. It had no effect in the world any more than if I were to sit down to-day and write an ordinance dissolving Congress; for neither by the constitution of the State of Louisiana nor by the Constitution of the Union was any such power reserved to that State or conferred in any way whatsoever. That ordinance was null, and at most only a revolutionary measure, and the State continued in the Union, and in the Union to all intents and purposes, and has continued so for all purposes from the 8th of April, 1812, until this moment. The mere fact that the people of Louisiana, or any considerable portion of them, engaged in war against the United States did not destroy the State government; did not destroy any right the people of Louisiana had under the Union or in the United States until they should be proceeded against according to the Constitution and laws for offenses against the United States; and it did not destroy the official character of the officers who filled the offices under the constitution and laws of Louisiana. Their acts as officers during the whole war were good *de jure* as, well as *de facto* to all intents and purposes, so far as they harmonized with the constitution and laws of the State of Louisiana in harmony with the Constitution and the laws of the United States; and therefore (and I insist that this is good, sound law, and I challenge reasonable contradiction) every act done by the governor of Louisiana, done by the Legislature of Louisiana, by every judge of Louisiana during the whole war not in aid of war and hostile to the Union, that was in harmony with the constitution and laws of Louisiana and the Constitution and laws of the United States, was good to all intents and purposes for the benefit of every human being in the State of Louisiana, for the benefit of every human being in the Union, whenever those acts harmonized with the constitution and laws of that State in harmony with the Constitution and laws of the United States. With all due respect to everybody, I challenge any one to point to any clause of the Constitution which in terms or by reasonable construction confers upon the United States, or any power under them, the power to destroy a State government or suspend the constitution and laws of any State for one moment. The notion that such a power exists contravenes the essential features of our system of government; it is destructive of them. So far from the truth of such a proposition, the Government of the United States is bound perpetually to uphold the State governments under the Constitution and laws.

Some one may ask, "Is it possible that you say a rebel officer could do a lawful act, that a man who had been guilty of treason against this Government could do a legal act?" Mr. President, I do so insist, and confidently. I say that an official act done by an officer who has been guilty of treason while in office is just as good to all intents and purposes for the benefit of the Government and those who are to have benefit under it, as if it were done by him who had adhered to the Government all his life. Let me make that clearer by supposing a case. If it were possible, let me suppose that the Chief Justice of the Supreme Court of the United States had done an act of treason one week ago. To-day he sits upon the bench and delivers an opinion in a case the most important that could come before that court. Next week he shall be tried and convicted of treason and executed. Will anybody who knows pretend that such a decision of the Chief Justice would be invalid because he had been guilty of treason? Such an idea is shocking to the legal mind!

I say, therefore, that the State of Louisiana has never been out of the Union; and believing in the principles that I have advocated, I believe that every reconstruction act which was passed by Congress was absolutely null and void and in violation of the spirit and letter of the Constitution.

Mr. EDMUNDS. It is yet, then, is it not?

Mr. MERRIMON. My friend, I have no doubt, is ready to ask me is it possible that you say the acts of reconstruction are all void, and reconstruction must go to pieces and fail?

Mr. EDMUNDS. I merely asked the honorable Senator, if they were void then, are they not void yet?

Mr. MERRIMON. No, sir.

Mr. EDMUNDS. I am happy to hear that.

Mr. MERRIMON. They are not void; and it may be as well to state now the reason why they are not void. I have a good reason for saying they are not void. I say that the reconstruction acts at the time they were passed were unconstitutional and void. I say that neither the President nor the Congress of the United States had constitutional authority to depose the officers of the several States of the South, for the States remained in the Union; and if every officer filling the offices of the several States was a traitor, his acts in harmony with the constitution and laws of the States and in harmony with the Constitution and laws of the United States were good to all intents and purposes. If they were guilty of treason they might be tried and convicted and executed, but still their acts as officers were good according to the Constitution and laws of this country and according to all laws with which I am acquainted.

But my friend asks, are those acts void yet? I say no. Why do I say so? I say that reconstruction was revolutionary in its character, and I say that a revolution can be accomplished and made good in this country and under our system of laws as well as in any other country and under any system of laws. The reconstruction acts were passed; they were accepted by the people of the South—it is true they were forced upon them; they organized State governments under them, and they are estopped to say that they have not accepted these revolutionary acts and policy of reconstruction and are bound by them. The people of every State that adhered to the Union during the late war have accepted those acts and acted upon them, and so have the States, and they are estopped. Not only have the people of the whole Union in that way recognized these laws and acted upon them, but every department of the Government has recognized them. Congress passed them, and thus recognized them. Congress has repeatedly recognized them in sundry ways since their passage. The Executive of the Government has recognized them, and all the officers of the executive department and the judiciary of the country have recognized them. The reconstruction measures have become a revolution accomplished, they have been successfully carried into effect and the American people submitted to them—accepted them—and they are bound by them, they are estopped now to say that they were not valid; and they are as valid and binding as the Constitution itself

until they shall in accordance with the Constitution be changed or modified, if this were possible at all.

There is a high precedent in the history of the country from which we derive most of our laws and our notions of government for this opinion of mine. I refer to the revolution in England of 1688. In that case the whole government was changed. That was a peaceful revolution. A new Parliament was authorized and organized by the order of a foreign usurper, new judges were appointed, and without the spilling of blood a new government for England was inaugurated. The English people submitted to it, and accepted it, and made it good; and the usurper became by the successful revolution as much and as thoroughly the King of England as any king that ever reigned, and that Parliament was as good and valid as any Parliament that ever sat in Great Britain.

Mr. EDMUNDS. If I do not interrupt my friend in a matter of history, though I do not remember the circumstance myself as he may, I should like to ask him if on the restoration of King Charles II the Parliament of King Charles, instead of recognizing the revolution, and validating it, did not on the contrary proceed on the idea that the times of Cromwell and the republic, if you call it such, for a little while, had been utterly in violation of the constitution of Great Britain and of its government; and did they not take up the old laws as they stood before, and then grant their amnesties and special acts of restoration?

Mr. MERRIMON. I make no question as to the suggestion of my friend. I have no doubt there are many instances in history like the one the honorable Senator suggests; but that fact does not destroy the force of the precedent I cite. I have no doubt that a revolution might take place here to-day, indeed, I believe that a revolution is about to take place—has taken place—in the State of Louisiana, and that while this Congress may recognize it, another Congress may not. I believe, I undertake to say, that if this Congress shall go on and allow the Kellogg usurpation to remain in the State of Louisiana, upheld there by the military power of the United States, it will be an act of revolution in our Government. The people of Louisiana may be forced to submit to it; the people of the Union may be forced to submit to it temporarily; but another Congress will come, another Executive will come, and they may not recognize this usurpation; they may not submit to it; they may overthrow it and make provision for bringing the guilty parties to tardy justice.

That is one of the very arguments I want to urge upon the Senate in favor of taking proper and legitimate constitutional action in this matter now. Because some revolutions are not recognized, because some revolutions are not acted upon, that is no reason why some other revolutions shall not be acted upon and accepted by the people as binding upon them. I have given an instance where in England the English people of all classes did submit to it and without the sword, and the action of the revolutionary government became the regular government of the country, and as well established as any government that ever prevailed in England. So after a great civil war in this country revolutionary reconstruction has been accomplished and recognized and made effectual in the way and manner I have described. The invalid acts of Congress had the effect to render the revolution orderly, if a revolution can in any proper sense be regarded as orderly. The revolution, I repeat, is valid, and for the reasons I have stated.

In 1868 under these reconstruction laws the people of Louisiana formed a new constitution which was republican in its character and so recognized by Congress, and they elected officers under that constitution; a Mr. Warmoth was elected governor. Various other State officers were elected; a Legislature was elected; and a judiciary of the State was provided. These officers, or most of them except the Legislature, continued in office until 1872. In the mean time the Legislature had passed certain election laws. When the general State election of 1872 was held there were two candidates, a gentleman by the name of McEnery on one political party ticket, and a gentleman by the name of Kellogg upon the other like ticket, and there were two like tickets for State officers and for members of the Legislature.

The election was held. Immediately afterward, it was suggested that there had been fraud perpetrated in it. The votes were counted, as I insist and shall endeavor to show, by the proper legal authorities of the State government; and according to the authorities and laws of that State it was ascertained that McEnery was elected governor and his associates on the same ticket were respectively elected to the State offices, and a majority of the Legislature on the same ticket, and they were all duly inaugurated in office. Kellogg, and those associated with him on his ticket, seeing that they were beaten, and knowing and taking advantage of the disordered state of affairs in Louisiana and the South generally and the revolutionary state of feeling throughout the Union, declared and proclaimed his purpose not to yield to the ascertained result of the election. Thereupon he assumed to be governor of the State of Louisiana; he issued his proclamation to that effect, and he and his associates on his ticket were inaugurated by force as the officers of the State of Louisiana, and the Legislature which he insisted was elected upon his ticket was inaugurated as the lawful Legislature of that State. In effecting such usurpation he was upheld and sustained by the President, who sent United States troops to his aid, and as most manifestly appears without any authority, and, on the contrary, in violation of the Constitution and laws, whatever may have been his good intentions.

What I have thus stated is substantially true. Was Mr. Kellogg elected and inaugurated according to the constitution and laws of Louisiana? Were the other gentlemen on the State ticket on which he ran elected to be State officers, and inducted into office? Was the legislature known as the "McEnery legislature" elected by the people? And not only that, but were they *ascertained* to be elected according to the constitution and laws of Louisiana? If so, then they are the lawful officers and Legislature of that State, and Congress is bound to recognize them, and they are entitled to be sustained under the Constitution. If, on the other hand, they were not *ascertained* to be so elected, then they are mere usurpers.

I have heard lawyers here all the time say, that at all events the Kellogg government, whether regularly ascertained to be elected or not, was a *de facto* government. With all respect I deny it. I say, and shall endeavor to show, that Kellogg and his government are not *de facto* the governor and officers of the State of Louisiana. Would anybody pretend that I was *de facto* governor of the District of Columbia if I were to go before a magistrate and take the oath prescribed for governor of this District, and taking a few hundred armed men at my back should proclaim myself governor and administer the government of the District of Columbia? Would any lawyer say in that case that I would be *de facto* the governor of the District of Columbia? He would be regarded as insane if he maintained such a proposition. I should in that case be a mere usurper, and my acts would be absolutely null and void. And so, if Kellogg has not been ascertained by the constitutional authorities of the State of Louisiana to be elected according to the constitution and laws of that State, he is not the governor *de facto;* he is a mere usurper; and those who purport to fill the other State offices are mere usurpers; their legislature are mere usurpers, and their acts are absolutely null and void, and they will remain null and void forever, unless the proper constitutional authorities hereafter shall see fit in the interest of the public good to confirm them.

An officer *de jure* is one who comes into office according to the constitution and laws. An officer *de facto* is one who comes into an office under the color of law, but who upon inquiry is ascertained not to have been elected according to law. A usurper is not an officer *de facto*, and it is impossible that he should be. If one should go into the State of Maryland to-day, take the oath prescribed by the constitution and laws of Maryland for the governor of Maryland, and should take an army at his back and proclaim himself governor and administer the constitution and laws of the State ever so well, ever so wholesomely for the people, he would not be a governor *de facto;* he would be a mere usurper, his acts absolutely void, and they would remain void always, unless the properly constituted authorities of the State should, in the interest of the public good, see proper in a legal way to ratify them; and I say the same of Kellogg, if I can show that Kellogg was not elected; and not only that, if I can show that even if he were elected, if he even got a majority of the votes, that he was not ascertained to be elected by the constitutional authorities of Louisiana, I shall have shown that he is a mere usurper, sustained by illegal force; and he is there to-day not only a usurper, but forcing on the people of Louisiana a despotism by the armies of the United States.

Now, sir, in order to see exactly how things stand in Louisiana it is very essential to refer to certain provisions of the constitution of that State, and I beg to do so even if I do it at the expense of being a little tedious. By the constitution of Louisiana, that State has three co-ordinate branches of government—an executive branch, a legislative branch, and a judicial branch. The constitution provides, among others things, in reference to the executive branch in these words. I read article 48:

> The supreme executive power of the State shall be vested in a chief magistrate, who shall be styled the governor of the State of Louisiana. He shall hold his office during the term of four years, and, together with the lieutenant-governor, chosen for the same term, be elected as follows:

What "follows" is very material.

> The qualified electors for representatives shall vote for governor and lieutenant-governor at the time and place for voting for representatives. The returns of every election shall be sealed up and transmitted by the proper returning officer to the secretary of state.

These are very material words, and I will read them again:

> The returns of every election shall be sealed up and transmitted by the proper returning officer to the secretary of state, who shall deliver them to the speaker of the house of representatives on the second day of the session of the General Assembly then to be holden.

And this is material also:

> The members of the General Assembly shall meet in the house of representatives to examine and count the votes. The person having the greatest number of votes for governor shall be declared duly elected; but in case of a tie vote between two or more candidates, one of them shall immediately be chosen governor by joint vote of the members of the General Assembly.

Thus it will be seen that the constitution of Louisiana provides for a governor; it prescribes the manner in which he shall be elected, and it prescribes the body that shall have jurisdiction to ascertain that he is elected. What is that body? The Legislature of the State—not the courts. That is a political question, and by express provision of the constitution does not and cannot belong to the judiciary—a fact necessary to be remembered and well considered in the present inquiry; but further, the Legislature is charged with the duty of ascertaining who was elected governor, and their decision is final. So no proceeding could be instituted before any court of jus-

tice that could determine that question one way or another. The decision of the Legislature in that behalf is just as final and just as absolute as the decision of the supreme court of Louisiana in a matter of which it had complete jurisdiction. There are other provisions that I wish to read. I read now article 51:

The governor shall enter on the discharge of his duties on the second Monday in January next ensuing his election, and shall continue in office until the Monday next succeeding the day that his successor shall be declared duly elected and shall have taken the oath or affirmation required by the constitution.

I read now article 60:

He shall nominate, and by and with the advice and consent of the senate appoint, all officers whose offices are established by the constitution, and whose appointments are not herein otherwise provided for: *Provided, however*—

And this is material—

That the General Assembly shall have a right to prescribe the mode of appointment to all other offices established by law.

I read also article 61, which is material:

The governor shall have power to fill vacancies that may happen during the recess of the senate by granting commissions which shall expire at the end of the next session thereof, unless otherwise provided for in this constitution; but no person who has been nominated for office and rejected by the senate shall be appointed to the same office during the recess of the senate.

I read also article 66:

Every bill which shall have passed both houses—

Meaning both houses of the Legislature—

shall be presented to the governor; if he approve, he shall sign it; if he do not, he shall return it with his objections to the house in which it originated, which shall enter the objections at large upon its journal, and proceed to reconsider it. If, after such reconsideration two-thirds of all the members present in that house shall agree to pass the bill, it shall be sent with the objections to the other house, by which it shall likewise be reconsidered; and if approved by two-thirds of the members present in that house it shall be a law. But in such cases the vote of both houses shall be determined by yeas and nays, and the names of members voting for or against the bill shall be entered on the journal of each house respectively. If any bill shall not be returned by the governor within five days after it shall have been presented to him, it shall be a law in like manner as if he had signed it; unless the General Assembly, by adjournment, prevent its return; in which case the said bill shall be returned on the first day of the meeting of the General Assembly after the expiration of said five days, or be a law.

These are the provisions in reference to the governor, material in the pending inquiry. I now read certain provisions of the constitution in reference to the Legislature. I read article 15:

The legislative power of the State shall be vested in two distinct branches; the one to be styled the house of representatives, the other the senate, and both the General Assembly of the State of Louisiana.

I also read articles 16 and 17:

ART. 16. The members of the house of representatives shall continue in office for two years from the day of the closing of the general elections.

ART. 17. Representatives shall be chosen on the first Monday in November every two years, and the election shall be completed in one day. The General Assembly shall meet annually on the first Monday in January, unless a different day be appointed by law, and their sessions shall be held at the seat of government.

I also read article 27:

The members of the senate shall be elected for the term of four years; and when assembled, the senate shall have power to choose its own officers, except as hereinafter provided.

I also read articles 33 and 34:

ART. 33. Not less than a majority of the members of each house of the General Assembly shall form a quorum to transact business; but a smaller number may adjourn from day to day, and shall have full power to compel the attendance of absent members.

ART. 34. Each house of the General Assembly shall judge of the qualifications, elections, and returns of its members: but a contested election shall be determined in such manner as may be prescribed by law.

I read also article 46:

Returns of all elections for members of the General Assembly shall be made to the secretary of state.

I read also article 131:

The seat of government shall be established at the city of New Orleans, and shall not be removed without the consent of two-thirds of the members of both houses of the General Assembly.

I read also article 120:

The General Assembly may determine the mode of filling vacancies in all offices for which provision is not made in this constitution.

Mr. President, the Legislature of the State of Louisiana, under and by virtue of its constitution, was absolutely sovereign, except in so far as their powers were limited by the constitution of Louisiana and the Constitution of the United States. They had absolute power to make their election law as they would, so that it harmonized with the constitution of the State of Louisiana and the Constitution of the United States; and I maintain that for all material purposes the election laws which they passed, unwise as they were in some respects, were in harmony with the constitutions of that State and of the United States. In pursuance of their duties the Legislature of the State, about which there was no controversy, passed an election law, and it is material here inasmuch as so much has been suggested about the purpose of Governor Warmoth to control the election in 1872, so as to elect that ticket which he supported, to see when these laws were passed and under what auspices.

The first election law, called the registration act, was passed March 16, 1870. On the same day the law regulating the manner of election was passed. These acts were passed by a republican Legislature; they were passed more than two and a half years before the election of November 4, 1872, was held. The first law was the registration law. That was the law which provided the machinery for ascertaining who should vote. The voters of the State were required to register their names before the voting day came, so that they might have the evidence of their right to vote ready at the time the ballot-box was opened on the 4th of November, 1872. Then the act called the election law provided the way and manner by which the vote should be cast, by which the voters should go to a particular place and their votes should be received by a particular officer. Notwithstanding these election laws have been abused so much by the friends of the Kellogg usurpation, they were passed by a Legislature that was overwhelmingly republican; they were passed during an administration that was overwhelmingly republican. The governor was republican; all the State officers were republican; the Legislature was republican; the judges were republican at the time these acts were passed; and the election in 1872 was held under and in pursuance of these acts. Notwithstanding they have been so much denounced, now that it turns out that somebody was elected who was distasteful to certain parties, I undertake to say that these election laws provide with great precision and a degree of care by no means common for a free and fair election. The leading feature in it that I object to is that it authorizes the governor of the State, by and with the advice and consent of the senate, to appoint a registrar of voters. He might appoint an officer who was friendly to him, and that registrar might deny many persons the right to vote; but it cannot be taken that the law would operate in that way. Suppose, however, it would so operate, did the Legislature have the right to pass it? Nobody has controverted that it had. However objectionable that feature of the law may be, the Legislature had power to pass such a law; and it did pass it; and it was valid to all intents and purposes, however a dishonest and corrupt governor might prostitute it; and if he should do so, that does not warrant Congress or any other power than a lawful power to ignore his act.

But I repeat that, when I came to read this law, I was astonished, after what I had heard on the floor of the Senate, at the vast multiplicity of provisions for the express purpose of providing an honest and fair election. The truth is, that republican Legislature did a great deal better than I had given them credit for. It was a fair law; it was a just law. It is true, a dishonest governor might prostitute it; but so it is true that a dishonest judge may prostitute his office; a dishonest Senator may prostitute his office here; but the Constitution and laws do not contemplate that he shall do it; nor did the constitution and laws of Louisiana contemplate that Governor Warmoth should prostitute his office in the exercise of that high power by appointing a dishonest man registrar of the voters of the State of Louisiana.

But, then, it is said that this act was in conflict with the Constitution. The honorable Senator from Wisconsin [Mr. CARPENTER] said so, and I will now advert to this view of the matter. I have great respect for the legal knowledge and ability of that Senator, and I heard and read his able speeches with great pleasure; but, with all respect to him, I dissent from his position to which I am now going to make reference. He said that the constitution of Louisiana provided that the returns of all elections should be made to the secretary of state. That is true. I have just read the clause of the constitution which so provides. Then he said this election act was void because it provided that the election returns should be made to the governor of the State. I maintain that this provision of the act that the returns should be made to the governor is perfectly valid, and harmonizes with the constitution. What is the provision? I will reread that article of the constitution so that we may look at it clearly all together. I read again article 46:

Returns of all elections for members of the General Assembly shall be made to the secretary of state.

Now I read section 54 of the election law:

Be it further enacted, &c., That the governor, the lieutenant-governor, the secretary of state, and John Lynch, and T. C. Anderson, or a majority of them, shall be the returning officers for all elections in the State, a majority of whom shall constitute a quorum, and have power to make the returns of all elections. In case of any vacancy by death, resignation, or otherwise by either of the board, then the vacancy shall be filled by the residue of the board of returning officers. The returning officers shall, after each election, before entering upon their duties, take and subscribe to the following oath before a judge of the supreme or any district court.

That is all of the act material for the present purpose. I understood the honorable Senator to say that that provision was void because it required that these returns should be made to the governor. It does require the returns to be made to the governor, but only for the purpose of transferring them to the proper authority to open and canvass them. This act constitutes the governor and certain other officers and persons *the returning officers of the election*, and I say that it was perfectly competent, however unwise, for the Legislature to make the governor the returning officer or to make him one of a board of returning officers. Why not? Can anybody point to any limitation in the constitution that prohibits it? I have looked in vain for any such provision.

Mr. CARPENTER. As I recollect the provision of the constitution, it is that the returns shall be made to the secretary of state who shall lay them before the house on the convening of the Legislature, transferring them to the speaker of the house, and that the two houses shall count the votes for governor. That makes the secretary of state the custodian of the returns at first, and it is then his

duty to keep the returns until the Legislature meet and to hand them to the speaker, and then the Legislature count the votes for governor. This law not only provides that they shall be sent to a different person, but provides that he shall do a totally different thing with them. Instead of sending them, as the secretary of state under the constitution must, to the Legislature, he must lay them before a canvassing board, and they do the canvassing. It provides not only a different person to whom they shall be sent, but totally different machinery for canvassing the votes, as I recollect the constitution and the act.

Mr. MERRIMON. The honorable Senator is mistaken about that. I concur with him that the constitution is plain that the returns are to be made to the secretary of state and the secretary of state is to send them to the Legislature; but the question between us is as to who is to send them to the secretary of state. Certainly the returning officers; but who are they?

Mr. CARPENTER. They are to come up from the polls.

Mr. MERRIMON. But who is the returning officer? This act provides that the governor and the other persons named shall be the returning officers. There are a number of persons connected with the holding of elections: first, the registrar, then subordinate registrars; then there are the inspectors of election who hold the ballot-boxes and receive the votes. Then they are sealed and taken to another officer at the county seat, and then they are sent from the county seat to this board of officers composed of the governor and others, who by this very act are constituted *the returning board*. What do they do? The returning board canvass the vote. Having canvassed it and made proper statements of it according to the provision of the law, what do they then do with the returns? They send them to the *secretary of state* just as they did in this case and as the constitution plainly requires?

Mr. CARPENTER. Not at all. Under that law, as I understand, they do not send the returns which come to them at all. They send simply a statement of the result of their work; and in practice the Legislature did not have the returns, as I understand; they had this statement sent from the secretary of state. I speak of what was done by the Warmoth board.

Mr. MERRIMON. I have had some experience in the matter of elections, and know something of the manner of holding elections. They are held substantially the same way in most of the States. There are first the inspectors of the election. They have the control of the ballot-box; they receive the votes and put them into the ballot-box, and when the election is over they open the box and count the votes or seal the boxes and send them elsewhere to be counted. When the ballots are counted they are not sent to the county seat, but they send the statement of the vote—the calculation, list of voters, &c.—as officers have made the same up. In this case they did not pursue that course. In this case they sent votes and other papers all up to the returning officers—*the returning board*. They counted the votes, they opened all the papers sent up by the subordinates from the election places, they cast the vote up, and having ascertained the result to be in a particular way, they sent a properly certified copy of that result, as they ascertained it to be, to the secretary of state, and he sent that to the Legislature according to law.

Mr. CARPENTER. Does the Senator understand that the ballots are sent up under that law?

Mr. MERRIMON. I do not think they are.

Mr. CARPENTER. The officers who conduct the election at the polls, as I understand, after the polls are closed, at the time fixed by law, are to open the boxes and to count the votes. Then they make out a certain statement showing how many persons have been voted for and how many votes they have each received. Then they send the poll-list &c., making up what they call their return. That goes under the constitution to the secretary of state, whose business it is to keep it close, sealed, I take it, until the convening of the Legislature, and then he lays those returns before the Legislature and they canvass them. Now, under the statute, they are not sent to the secretary of state; they are sent to the governor, and the governor does not keep them and lay them before the Legislature as the constitution requires, but he lays them before a board created by that act—a totally different method of ascertaining the result of the election. Then that board when they determine who has been elected send a certificate or statement of that fact to the Legislature—a totally different process.

Mr. MERRIMON. But the point I make is, that it was competent for the Legislature to pass an act providing that the governor and these other officers and persons might constitute the returning board. They might make up that last body that was to ascertain how the vote was cast, immediately preceding the time when their work, completed in that way, was to be sent to the secretary of state to be sent by him to the Legislature. The constitution, when it says that the returns shall be sent to the secretary of state, does not mean that the ballots shall be sent there. It does not necessarily mean that the scrawls kept of the voters should be sent. It means that when the vote cast has been ascertained in a particular way, the returning authorities provided by the statute shall send a certificate of their action to the secretary of state, and the secretary of state shall transfer that action thus ascertained to the Legislature, and under that they may ascertain who is elected governor. That is my construction, and I think that is consistent with the statute and the statute with the constitution.

I suppose that the honorable Senator put his objection possibly upon another ground, to wit, that the Legislature had undertaken to create this office and fill it. Suppose they did that. I say it was perfectly competent for them under the constitution to do it. Why do I say so? I say so for this reason:

He—

Meaning the governor—I read from article 60 of the constitution—

shall nominate, and, by and with the advice and consent of the senate, appoint all officers whose offices are established by the constitution—

There is the limitation—

appoint all officers whose offices are established by the constitution, and whose appointments are not herein otherwise provided for.

Now see what follows:

Provided, however, That the General Assembly shall have a right to prescribe the mode of appointment to all other offices established by law.

Mr. CARPENTER. "Prescribe the mode," not to make the appointment itself.

Mr. MERRIMON. I cannot so construe the words. At all events the words that I have quoted bear this construction, and it is not unreasonable, for there is no question that the Legislature had power to pass an act creating the office and by the same act prescribe the mode of appointment. The constitution does not say the governor shall appoint, for the power conferred upon him is to nominate to offices established by the constitution. Who, then, is to fill, according to the mode prescribed by the constitution, State offices created by the Legislature? Is it the secretary of state? Is it a judge? It may be either, or, as I say, it may be themselves. That is not a strained construction. It is not a construction that is so unreasonable that it will not be tolerated. It is not such a construction as warrants Congress in tolerating such a revolution and such a tyranny and despotism as we witness in the State of Louisiana.

So, then, I say the act was valid in that respect.

But there was another election act passed; and it is not material whether this act was valid in the respect just discussed or otherwise. Suppose I concede for argument's sake that that provision is void, still it is not material. After the election was held, Kellogg and Warmoth and McEnery engaged in legal controversies about it. They had various lawsuits, some in the State courts and some in the Federal courts. It is admitted that the Federal court had no jurisdiction. Nobody claims that the Federal court had any jurisdiction whatsoever; and therefore I put all that it did out of the case. I shall not waste a word upon that. The action of Judge Durell was extrajudicial and absolutely void, and has nothing to do with ascertaining the facts and the law in the matter now properly before the Senate.

As I have said, McEnery and Kellogg and others engaged in legal controversies. They kept up litigation for some days after the election, and great complications prevailed about the vote; but it turns out that in the spring of 1872, before the elections, the Legislature of Louisiana passed a new election law. It was sent to the governor, but he did not see proper to approve it as he was bound by the constitution to do, as I have shown by one of the articles of the constitution which I have read to the Senate. He was required to approve the act before it became a law, or else it became a law by the lapse of time, unless he should receive it too late before the adjournment of the Legislature to return it within five days before such adjournment, in which case he might approve it at any time after adjournment. This election law passed in the spring of 1872, modifying and changing the election laws of 1870, was not approved by the governor immediately, but he kept it until he approved it under the circumstances I shall now mention. Finding that Kellogg and his friends were trying to take advantage of the result of the election by every possible means, lawful or otherwise, the governor approved the election law that was passed in the spring of 1872. It is not denied—I have not heard anybody deny it yet—that he had the right and the power as governor to approve that law at the time he did approve it. He did approve it on the 20th of November, 1872. That was a few days after the election had been held on the 4th of the same month. That law was in all respects valid; I have not heard it questioned; and on looking into the constitution, I do not believe it can be questioned.

What did that law empower Governor Warmoth to do? Let us see. The controversy, as the Senate must see, has been about the returning board ascertaining how the election was held and casting up the votes. Now let us see what that law provided in that respect. It abolished the old returning board; that is, the board composed of the governor and other persons described in the statute which I have read, and provided as follows:

That five persons, to be elected by the senate from all political parties, shall be the returning officers for all elections in the State, a majority of whom shall constitute a quorum, and have power to make the returns of all elections. In case of any vacancy by death, resignation, or otherwise, by either of the board, then the vacancy shall be filled by the residue of the board of returning officers. The returning officers shall, after each election, before entering on their duties, take and subscribe to the following oath before a judge of the supreme or any district court.

That is as much of the section as is material for my purpose. This act was approved the 20th of November, 1872. It had been passed, however, in the spring before, and it was approved by the governor after the election had been held under the election law of 1870. As

the governor had not approved it during the sitting of the Legislature, the senate did not proceed to elect the returning board so provided in this statute. Then, according to the constitution and laws of the State, the governor, *the senate not being in session*, was bound to appoint the returning board so provided for.

Mr. WEST. If it will not interrupt the Senator, as that point interests me very much, I should like to have his views as to the authority of the governor of the State of Louisiana under the law to appoint an officer to what may be called an original vacancy; whether that applies to positions that are created by statute and have never been filled? I do not wish to be understood as controverting the Senator's view, but I should like to have his legal opinion on that subject.

Mr. MERRIMON. It is manifest according to the constitution of the State of Louisiana that officers are to be appointed in two ways. The officers provided by the constitution are to be appointed by the governor, (unless otherwise provided in the constitution,) who nominates them to the senate, and the nomination is to be approved by the senate. Then there is an express provision that in case there shall happen a vacancy at any time during the recess of the senate the governor shall have power to fill such vacancy, and there is no limit on this power. Then according to the language of the constitution, as well as according to its manifest policy, it does not contemplate that there shall be a vacancy in any contingency, and by construction and by the very necessity of the case in the absence of the Legislature the governor must appoint, else an occasion would exist where there would be a vacancy and there would be no competent power to fill it. So I say, by the express terms of the constitution, as well as by all rules of constitutional construction and by the policy of the constitution of Louisiana, the governor is to fill the vacancy under the act in question. That is my view of it. The law being that way, now let us see what the governor had power to do. I will read article 61:

> The governor shall have power to fill vacancies that may happen during the recess of the senate by granting commissions, which shall expire at the end of the next session thereof, unless otherwise provided for in this constitution; but no person who has been nominated for office and rejected by the senate shall be appointed to the same office during the recess of the senate.

There is an express provision that where a vacancy shall occur in the absence of the senate the governor shall appoint. I ask any one to say whether this vacancy did not occur during the recess of the senate? And is it not manifest that the governor had power to fill the vacancy? I think so.

Mr. WEST. The language is "happen."

Mr. MERRIMON. What is the difference between the two words in this respect?

Mr. WEST. One is an accident; the other is an event.

Mr. MERRIMON. I think I have shown that in every point of view it was competent for the governor to fill this vacancy that occurred in the very words of the act, in the recess of the senate. I have not known the power of the governor in this respect to be questioned before in the Senate, and I believe the Senator from Wisconsin takes the view that it was perfectly competent for the governor to make such appointment, and the whole committee took that view, composed of Senators CARPENTER, LOGAN, ALCORN, ANTHONY, Trumbull, MORTON, and Hill—all of them lawyers of great ability and great experience. The whole of them, as appears by the report itself, concur in the view that it was competent for the governor to fill that vacancy.

Then what did the governor do in the exercise of that power? On the 20th of November, 1872, in the exercise of the power to appoint; he appointed what is known in this discussion as the "De Feriet returning board." As soon as that board could be organized they got possession of the returns of the election. Although it was suggested that there might have been some foul play with those returns, between the time they came into the hands of Warmoth and the time they passed into the hands of the De Feriet board, it is not contended seriously that any such fraud was shown. The election returns passed into the hands of this lawful board. It became the duty of that board by the constitution and laws of Louisiana to ascertain who was elected.

And what did they ascertain upon counting the vote? They canvassed the vote with great care and scrutiny, as appears by unquestioned testimony, and ascertained according to law as I have shown, following the matter all the way along, that McEnery's majority over Kellogg was 9,606 votes, and that the majority of the McEnery ticket both for State officers and for Legislature was upon an average 9,606. Having ascertained that, their return was made to the secretary of state, just as the constitution required, and they sent the return that they had agreed upon to the secretary of state, showing the fact that the McEnery legislature was elected by this majority, and proper commissions were issued as the law directed to be done.

Those who received certificates of election in strict accordance with the constitution and laws of Louisiana desired to assemble in the capitol of the State and proceed according to the constitution and laws with the duties devolved upon them by the constitution. But when they went to the State-house they found it in the possession of United States soldiers, and they were placed there by order of the President of the United States, and the members of the Legislature—those ascertained to be such by the constitution and laws of the State of Louisiana in the legal and lawful way, as I contend—were denied by this military power of the United States the authority to go into the State-house and organize themselves in that particular place. They, however, went to another house in the same city and did organize themselves into a legislature. It has been suggested that it was not competent for them to do that. I deny the truth of such a suggestion. I deny it, because in one of the articles of the constitution which I have read it is provided—not that the State-house shall be particularly the place of meeting, but that the place of meeting of the Legislature of the State of Louisiana shall be the city of New Orleans, and they might meet in the State-house or they might meet in any other house that was convenient there for them to meet in, if for any reason they could not meet in the capitol. Suppose the capitol had been burned down, will anybody be so silly as to say that in that case the Legislature could not go to another house in the city of New Orleans and sit? In this case the capitol was held by military power, and they were as thoroughly excluded from assembling in it as they would have been if the house had been burned down, in which case no one would pretend that the Legislature might not sit elsewhere in the city.

But the McEnery legislature, as it is called, did sit in the city of New Orleans. They organized according to the constitution and laws of the State of Louisiana. There was a quorum elected and duly assembled accordingly, as is provided by the constitution in reference to the senate and house of representatives, and when they were assembled there, the secretary of state sent the returns with which he was furnished by the De Feriet returning board to the Legislature, and the Legislature proceeded strictly according to the law, and ascertained that McEnery had received the majority which I have mentioned; and not only that, but it was ascertained who composed the Legislature of the State of Louisiana.

It is suggested that some of the members of the Legislature there were elected by fraud. That does not appear; but suppose that was so, they were nevertheless ascertained by the lawful returning board to have been duly elected, and they were *prima facie* members of the Legislature, and they continued to be such until the Legislature, in pursuance of the law providing for contested cases, should ascertain that they were not elected. That the De Feriet board so ascertained, I refer the Senate to the report of the committee. It there appears that what I have stated took place, and that this majority was ascertained in favor of McEnery and the McEnery legislature and the other State officers. This is my view of it.

Now let us see how the matter stands with the committee. I have already called attention to the composition of the committee. The committee is composed of able Senators—men whose integrity, whose ability, whose veracity, cannot be questioned by anybody; and now let us see what they say about it. The committee say that the De Feriet board was the lawful board. I will read some extracts from their report. On page 26 the committee say:

> One of two things is certain: The governor's approval of the new election law on the 20th of November gave it effect on that day or it did not. Assuming that the approval on that day was regular, the new law absolutely repealed all the laws under which the Warmoth board and the Lynch board were pretending to act, and of course abolished both boards, without regard to the question which was the legal one. All that had been done in the election of November, 1872, in pursuance of the old laws—that is, the registration, voting, and returns—was as valid after the act of November 20 as before. If the canvass had been made by the proper board under the old law and in all things completed, the rights of parties based upon that canvass would not have been affected by the repeal of the laws. But the act of November 20, taking effect after the returns were made and before they were canvassed, transferred the duty of canvassing to the new board created by the act.

[At this point the honorable Senator yielded to a motion for an adjournment.]

FRIDAY, *April* 24, 1874.

Mr. MERRIMON, (resuming.) When yesterday I yielded to a motion to adjourn, I was endeavoring to show that an election was held in the State of Louisiana on the 4th day of November, 1872, according to the constitution and laws of that State, and that in pursuance of an election act approved by Governor Warmoth on the 20th day of November, a few days after the election, he appointed what has been commonly called in this debate the De Feriet returning board, that that board according to law canvassed the vote polled at that election, and according to the canvass they ascertained in due form that the McEnery ticket, which embraced candidates for State offices and for the Legislature, was elected by a majority of nearly 10,000 votes. In support of that statement, I cited the evidence taken by the Committee on Privileges and Elections. In further support of it I also cited an extract from the report made by the committee in this case; and I desire now to read further extracts from the report with the same view. I read an extract from the 27th page of the report. The committee say:

> In the opinion of your committee there can be no doubt—conceding the validity of the act of November 20—that it transferred the duty of canvassing the returns of the last election to the board to be elected under the provisions of the act. The act provided for such election by the senate, and, taking effect in the vacation of the Legislature, created offices to be filled thereafter by the senate. This is what is styled in that State an original vacancy, which, happening in the vacation of the Legislature, the governor is authorized to fill by appointment; and it is said that the courts of that State have repeatedly recognized the right of the governor to make such appointments.

So it appears by the clause of the report which I now read that a committee composed of such lawyers as I directed attention to yesterday, have ascertained that according to the constitution and laws

of Louisiana, as well as according to their own opinion based upon the law and facts of the case, which is entitled to great weight, the De Feriet board was in all respects a legal one, and had the power and right to make the canvass of the vote which they did make. I also read an extract from the report on page 44:

Your committee are, therefore, led to the conclusion that if the election held in November, 1872, be not absolutely void for frauds committed therein, McEnery and his associates in State offices, and the persons certified as members of the Legislature by the De Feriet board, ought to be recognized as the legal government of the State. Considering all the facts established before your committee, there seems no escape from the alternative that the McEnery government must be recognized by Congress, or Congress must provide for a re-election.

And again, on page 45, the committee say:

If the Senate should be inclined not to go behind the official returns of the election, then the McEnery government and legislature must be recognized as the lawful government of the State, and McMillen, if regularly elected by that legislature, should be seated in the Senate in place of Kellogg. But your committee believe that this would be recognizing a government based upon fraud, in defiance of the wishes and intention of the voters of that State.

That is the view bearing upon this point of the committee constituted as I have before described.

I now wish to cite the opinion touching this point of another distinguished member of that committee, distinguished not only as a Senator and a member of that committee, but distinguished I believe throughout the nation as one of the ablest lawyers in it. I read from the minority report of Senator Trumbull. On pages 53 and 54 he says:

According to the official returns, the fusion State ticket, headed by McEnery for governor, received an average majority of about ten thousand votes, and a large majority of the persons elected to the Legislature were of the same party; and but for the illegal interference of the United States authorities, as is stated in the report of the majority, the McEnery government would have been peacefully inaugurated.

How skillfully the plan was laid to overthrow the legitimate State government, set aside an election, and inaugurate the Pinchback and Kellogg administrations and legislatures, and how well Judge Durell was supported in all these revolutionary and illegal proceedings by other United States officials, will appear by reference to a few facts disclosed in the evidence.

On page 63 he says:

The credentials of William L. McMillen are signed by Mr. McEnery, as governor of the State, with the seal of the State attached. He was elected by what is known as the McEnery legislature, which, including senators holding over, consisted of a quorum in each branch of the persons elected according to the official returns as canvassed by the De Feriet board. The result of that canvass was duly proclaimed by Governor Warmoth, together with the list of the names of the persons elected to the senate and house of representatives, certified by Jack Wharton, who was at the time the acting secretary of state. The official returns also show that McEnery was elected governor by some 10,000 majority. These returns were before the committee, and their tabulation, showing the results above stated, were proven to be correct. It is true the members of the McEnery legislature did not meet at the time and place fixed in the governor's proclamation, and the facts show that it was out of their power to do so, for the reason that the Mechanics' Institute, in which they were called to assemble, was then occupied by United States troops, acting under the orders of a United States marshal in the execution of a void order of a United States court, which prohibited their assembling and organizing as a legislature in said building. The fact that when thus prevented from assembling in the Mechanics' Institute, the members got together as soon as practicable in another building in the same city and proceeded to organize, cannot vitiate their proceedings any more than if the Mechanics' Institute had burned down before the time for assembling had arrived. It is difficult to conceive upon what principle McMillen is to be refused his seat, unless the election in Louisiana in November last be declared void, and Louisiana to be without a State government, propositions to which the undersigned cannot give his assent. He believes the De Feriet board had color of authority at least to make the canvass of the returns for the Legislature; that Wharton was *de facto* secretary of state at the time, and the proper person to make out the list of members on which the Legislature is organized according to the laws of the State; but whether this were so or not is not perhaps material, because the official returns from the parishes were before us, and we know that the results at which the De Feriet board arrived were substantially correct. It is the fact that certain persons received a majority of the votes cast; that is of the substance of the election. The canvass of the returns is but machinery, and whoever receives a majority of the votes polled at an election for an office ought not to be deprived of the benefit of it unless in obedience to some positive statute.

Thus we have the opinion of this able committee, a committee that cannot be charged with having any political preference for McEnery or his associates on his ticket, for on looking to the political status of the committee I find that every single member of it was a republican and whose integrity as a republican partisan cannot be questioned. Not only does it appear in a legal and official way by the action of the De Feriet board who were elected to be the officers of the State of Louisiana at the election of November 4, 1872, according to the constitution and laws of the State, but after the Legislature had organized it proceeded to provide for another returning board commonly called in this debate the "Forman board." That board took the same returns and examined them carefully, the whole of them, and came to the same conclusion that the De Feriet board had come to, and reported to the Legislature that the same parties were elected who had been ascertained to be elected by the De Feriet board. I mention this fact with a view, if it were necessary, to strengthen the position that the McEnery ticket was ascertained to be elected in every conceivable view of the case.

But, sir, I now pass from the committee and come to the opinion of individuals whose views are entitled to very great weight. I take up first the views expressed in his first speech on the pending bill of the Senator from Wisconsin, [Mr. CARPENTER.] He said touching this subject, in his speech on the 29th and 30th of January, 1874, on page 42, as follows:

We had before us in the committee the original returns which were laid before the De Feriet board by Governor Warmoth. Of those returns there are two or three bushels, I suppose, and we had them in our committee. We sent a subpœna to Louisiana and they were brought here. Mr. Ray was before the committee, and Mr. McMillen was before the committee, and Mr. Pinchback was before the committee conducting their respective sides of the case, and they all agreed that those were the returns, and agreed that those returns showed the result which had been arrived at by the De Feriet board; that McEnery had 9,606 majority. There was no contest about it.

This is material, and it seems to me very strong in support of my views.

That Senator, in his speech of March 4 on the same subject, says as follows:

The returns, filling two or three large boxes, were produced before the committee. Mr. Ray, Senator-elect and certified by the Kellogg government, and Mr. McMillen, Senator-elect and certified by the McEnery government, appeared before the committee and were permitted to act as counsel on their respective sides of the controversy. Some suggestion was made in regard to the integrity of some of the returns. The committee directed them to be submitted to the inspection of Ray and McMillen; and on a subsequent day, and after such inspection, Mr. Ray called the attention of the committee to that point, and all that appears in the testimony is the following:

Mr. Ray, recalled as a witness, on page 1005 said:

"The WITNESS. I desire to call the attention of the committee to a statement at a suggestion made by one member of the committee yesterday. I examined and found, and if the committee will act as experts they will find, that the commissioners of elections in several cases in the parishes have their names forged to the affidavits. For instance, there is one from Madison Parish, [exhibiting the papers,] and so in the parish of Grant also, and in the parish of Point Coupee, and the parish of East Baton Rouge, which, if the committee will examine as experts, they will find it very evident in some cases that they were forged."

The Senator continuing says:

These four parishes, according to the official returns, gave Kellogg 213 majority over McEnery. Conceding these to be forgeries, all that any board canvassing the returns under the laws of that State could do would be to reject them; in which case McEnery's majority, as shown by the returns, would be 10,190.

The McEnery canvassing boards, as they were authorized to do by the statute, rejected the returns from five parishes on the ground of fraud. The Lynch board estimated that these five parishes gave Kellogg a majority of 3,326, and they estimated that the four parishes from which some of the returns were, in Mr. Ray's opinion, forged, gave Kellogg a majority of 3,969. Deducting the estimate of the Lynch board of Kellogg's majority in these four parishes, and in the five parishes, the returns of which were rejected by the board which canvassed them, from McEnery's majority, 9,906, and McEnery would still have a majority of 2,611.

So it will be seen that it is impossible, if these returns are to be considered, to establish Kellogg's election. And the Lynch board, which declared Kellogg to be elected, acted upon testimony wholly apart from these returns; testimony which the Senator from Indiana, in the report from which I have read, declares they had no right to take or consider.

Thus, Mr. President, it seems to me indubitable that the State of Louisiana was a State in the Union, having a republican form of government; that it had all the officers required by its constitution and laws; that it had an election law which in all material respects harmonized with the constitution of that State; that in pursuance of that election law officers were appointed for the purpose of holding the election; that a peaceable and quiet election was held on the 4th day of November, 1872; and that afterwards a returning board, commonly called the De Feriet board, organized according to law, ascertained by the vote polled at that time that the McEnery ticket, embracing all the State officers and the Legislature, was elected by the large majority of nearly 10,000 votes. How any one, looking at the facts, looking at the law, desiring to subserve the interests of that State, having a patriotic desire to uphold our system of government, both State and Federal, can come to any other conclusion than the one at which I have arrived in this respect, is something beyond my comprehension; and the fact that it is possible that another view could prevail in view of the facts proven, in the minds of respectable gentlemen is something, that shocks and alarms me. It really tends to produce the impression upon my mind that we are not only in the midst of revolution, but that revolutions, parties, and factions—ambitious, designing, corrupt, and wicked men—are to take control of the State and Federal governments, and rule them in the future to suit their own purposes and interests.

But, sir, it is said that this election was void on the one hand; it is said on the other hand that it was not void, but that the Kellogg ticket was elected. I think it worth while to examine these two positions briefly and see if they can be even plausibly maintained.

Why is it said, in the first place, that the election was void? It is insisted that it was void because there was glaring, manifest fraud. But I challenge any Senator to point to any fraud perpetrated in that election of which this body can take cognizance or which could in law vitiate an election in the State of Louisiana when that fraud should have been inquired into by the proper authorities of that State. The election laws of that State harmonized with the constitution. It is true they charged the governor with a very high power. They allowed the governor to appoint a registrar of the voters, and through him he appointed supervisors of the election all over the State in all the parishes. But can it be denied that the constitution allowed that? If the constitution allowed it, and the act of the Legislature in pursuance of the constitution charged the governor with that high power is it to be said because he prostituted it merely with a view to political ends that that vitiated his act? Such a precedent as that never has been established in this country before, and such a position has never been seriously contended for before within my knowledge. I cannot say that I have seen anything in this vast volume of testimony that warrants the inference that Warmoth did exercise that power in a way that was unusual for governors and persons intrusted with such power to exercise it.

And then, again, this act was passed by a Legislature in 1870 hostile to the McEnery ticket, hostile to McEnery politically, and to all per-

sons who sympathized with him; it was passed by a Legislature overwhelmingly republican; it was approved by a republican governor in harmony with the republican party throughout the nation; so that it cannot be pretended that these laws were passed in the interest of those who it is alleged controlled this election.

But, sir, what are the special grounds assigned for vitiating the election? First, it is said that Warmoth, being governor, exercised this high power and influence to control the result of the election. It seems to me that that suggestion does not deserve a passing consideration; it has no legal weight whatsoever. Then it is said that Warmoth was equal to 20,000 votes in the State of Louisiana by reason of his position as governor and by reason of his control of this office of supervisor of registration. Is an election to be declared void because the governor of a State sees proper to wield his personal and political influence to bring about a particular result in an election? He had the right to exert his influence to bring about that result. Do we not see such influences employed and such practices prevailing in every election that takes place in the Union, whether it be an election for President or for governor, or for any other officer? When a presidential election takes place, we all know that the power of the Executive in this country is used in various ways, very often illegally, for the purpose of controlling elections. We know, and some of us have felt, the power of a republican administration when a State election was to come off, which in the exercise of power and patronage controlled the votes by thousands in the States; but did anybody ever pretend that, because a republican President had seen proper to use his influence and his patronage with a view to bring about a result that he thought right and proper, therefore it vitiated the election?

But then it is said that Warmoth joined the democrats; that he became what is commonly termed a "liberal republican," and that in connection with the Greeley movement in this country, just before the last presidential election, he formed an alliance with the democrats. The McEnery ticket was called by some the fusion ticket, and it is said that a fusion was formed between the political friends of McEnery and Warmoth, and by that fusion, and by these other means to which I have adverted, they controlled the election, and therefore the election is void. Is anybody so absurd as to say that a reason of that sort is to vitiate an election, upset a State government, inaugurate a military despotism, and warrant the Federal authorities in sustaining a downright usurpation there? I trust not. I trust that no such doctrine as that can prevail even in these revolutionary times. Suppose that Warmoth did do what is so charged, suppose that he and McEnery, if McEnery is a democrat—I do not know what his politics are; I suppose he is a democrat in politics; I never saw the gentleman; I do not know him—suppose that McEnery and Warmoth went into the executive office and there made a deliberate agreement, and, to use a common phrase, "joined teams" to carry the election, they had a perfect right to do it. Suppose that I saw proper as a democratic Senator to join a portion of the republican Senators in this body to carry a measure through the Senate which I believed calculated to promote the best interests of the American people, have I not a right to do it? If by that combination of democrats and republicans we should carry that measure and it should become a law, could anybody pretend that it was not a law because we had entered into such a combination? And yet it is contended that this election is void upon a ground like that!

In order to show that I am correct in what I say as to the objections set up in opposition to the election of McEnery, I beg to call the attention of the Senate to one or two extracts from the speech of the Senator from Wisconsin, [Mr. CARPENTER.] In his speech on the 29th and 30th of January last, on page 45, he says:

> Now, Senators may ask me, and my colleague has in conversation two or three times asked me, to point out particularly the testimony that shows this.

Shows what? That the election was carried by fraud and by force, and that it was void. It seems that the colleague of the Senator from Wisconsin had become anxious upon the subject, and the Senator whose speech I am now quoting from having made the majority report of the Committee on Privileges and Elections touching this matter, he goes to him for information, and he asks him "What evidence did you have before you that led you to this strange conclusion, to take this important step, to declare there was no election in the State of Louisiana whereby that State is without officers?" This is what he says he said to him:

> Now, Senators may ask me, and my colleague has in conversation two or three times asked me, to point out particularly the testimony that shows this. Well, it is one of those facts which appear, I think, satisfactorily, from the whole case. It is not a fact which could in the nature of things be testified to positively by any one witness. The testimony does show, however, that all the men that had charge of the election were Warmoth and McEnery men. It shows that the polls were so established in the republican parishes that they were next to inaccessible; and it shows, too, that every obstacle possible was thrown in the way of the registration of republicans. In the nature of things, the extent of effect produced by any one of these causes can only be estimated; it cannot be the subject of direct proof; and this is just the case which can be investigated only by legislative, not by judicial methods. My belief is—

And this is very important—

> *that if any judicial court to-day had jurisdiction of the question in Louisiana, the result of that election, as held, that is to say, the result of the ballots actually cast, would be shown to be that McEnery was elected;* but I am equally well persuaded that the result misrepresents the will and the intention of the people of that State on that election day, and that it was in consequence of these frauds and obstacles in the way of registration, and the fraudulent location of voting places, that Warmoth was able to carry that State by from six to nine thousand majority in favor of McEnery. I believe that if my colleague will take that testimony, and wade through it, and devote as many hours as I have days to the examination of it, he will be thoroughly convinced, as I am, that such is the case, although he may not be able to point to any particular sentence in proof of it.

Mr. HOWE. Will the Senator allow me to say a word in that connection?

Mr. MERRIMON. I will, sir, with pleasure.

Mr. HOWE. I did put that question to my colleague repeatedly before I had had time to examine the evidence laid before the Senate by the Committee on Privileges and Elections. Listening as well as I could to such discussion as came from the Senator from Indiana, and from my colleague, I really did come to entertain a very strong impression—I could hardly say it was a belief—that at the election in November, 1872, Mr. McEnery did receive a majority of the votes; and that if law was enforced in Louisiana he ought to be declared the governor of that State; and that if this Congress had any responsibility in the premises, it was not to order a new election, but to declare that Mr. McEnery had been elected, and to see that he was installed. Since that time, however, I have paid a great deal of attention to the report and to the evidence accompanying that report submitted to the Senate by the Committee on Privileges and Elections, and I feel bound to say to the Senator from North Carolina and to the Senate, and to all persons concerned, that my conclusion from a very careful examination of that report is, that when the sun set on the 4th of November, 1872, a majority of the ballots in the boxes at the several voting precincts in that State were in favor of William P. Kellogg for governor. I say that is my conclusion from such evidence as we have. I am entirely satisfied—I have not a rational doubt—but what if you add, as any court of law having jurisdiction of the subject-matter would add, to the ballots in the boxes the ballots outside which were offered but were excluded unlawfully from the boxes, Mr. Kellogg had a majority of very many thousands for governor of that State. I say the evidence upon this point is not very conclusive, and for the very good reason that no effort was made by the Committee on Privileges and Elections to establish what was the actual result of the voting. Their attention was absorbed upon another inquiry, to wit, which of those two organizations was, *prima facie*, the right one.

Mr. MERRIMON. After a like examination of the report, I do not see any ground upon which I can come to a like conclusion; and that is one thing which does alarm me about this case and the state of things in Louisiana. I wish that the honorable Senator from Wisconsin who interrupted me a moment ago [Mr. HOWE] had the opportunity now to go on and tell the Senate what particular facts led him to his conclusion. I should be exceedingly pleased, I should be gratified, I should be intensely satisfied if that honorable Senator could point me to any fact that would lead my mind to the conclusion at which he has arrived; for then I would see the propriety of the action of the Executive of the United States, and the necessity why Congress should pass a joint resolution indorsing his conduct and putting this controversy to rest forever.

Mr. HOWE. Well, Mr. President, I have not that opportunity now; I do not propose to take it at any time; but I can state to the Senator, if it will be a satisfaction to him, two or three little circumstances attending this report which have gone very far to establish the conviction which I have just stated.

Mr. MERRIMON. I trust I shall have the pleasure of hearing the Senator on another occasion.

Mr. HOWE. On another occasion?

Mr. MERRIMON. Yes, sir.

Mr. HOWE. I do not know whether I shall speak at all on the subject; but I offer to answer that invitation.

Mr. MERRIMON. I trust he will; for if he has that conviction I want to be convinced in a matter of this character. I have already disavowed all partisan feeling; I only look to the best interests of Louisiana, to the best interests of the Union, and to the best interests of all the States composing the Union. I want to arrive at the truth, and I have examined this report anxiously with that view.

Mr. HOWE. Right in that connection will my friend indulge me for a moment?

Mr. MERRIMON. Yes, sir.

Mr. HOWE. I have no doubt that is the case with the Senator and I believe I am equally exempt from any party bias. I know if I looked at the interest of the republican party, if I desired to promote its ascendency especially, I would rather have a democratic administration in Louisiana to instruct the American people than to have a republican administration there, for I believe they would do more to make the people of the United States hate democracy than any republican administration is likely to make the people of the United States love republicanism.

Mr. MERRIMON. And I suppose the examples set by Mr. Kellogg and Mr. Warmoth in their administrations respectively are evidences of that fact—two administrations that have disgraced not only the State of Louisiana but the American people, so that Louisiana affairs have become a by-word and the laughing-stock of civilization; and yet their administrations are to show the fact that a democratic administration would go far to satisfy the American people that democracy was wrong and republicanism as illustrated by these administrations right!

But, sir, I was going on to point out the grounds on which it is said by some gentlemen that the election was void and by others that

Kellogg was elected. I read from the minority report of the committee, signed by the Senator from Indiana, [Mr. MORTON.] On page 78 he says:

In the report of the majority of the committee it is alleged that the election on the 4th of November was so grossly fraudulent as to make it void; that if it had been fair, Kellogg and the other candidates on the republican ticket would have been elected by a large majority. Without concurring in the opinion that the election was void, I entertain no doubt that it was an organized fraud of the largest dimensions, and that a decided majority of the people of Louisiana sympathize with the Kellogg government and earnestly desire to see it maintained.

There is this remarkable and striking fact in the report of the committee, in the minority report signed by the Senator from Indiana and also in the other minority reports, that while this suggestion of fraud is made in the broad, round, and declamatory manner to which I have called attention, not a single Senator has pointed to a fact showing fraud such as would vitiate a constable's election, much less the election of a governor and the State officers of a State whereby a State is to be disorganized and ruined, as the State of Louisiana is likely to be by the result of the election of 1872. Let me refer again to the speech of the Senator from Wisconsin, [Mr. CARPENTER.] He says:

The testimony does show, however, that all the men that had charge of the election were Warmoth and McEnery men.

That is no evidence to show that the election was void for fraud or any other cause. Will anybody pretend that the fact that all the persons who were engaged in holding the election were republicans would vitiate it? It is puerile, with all respect, it seems to me, to make such a suggestion. Suppose the officers who held the election were all "fusion men;" suppose they were all Warmoth men; unless you can show that they stuffed the ballot-boxes, that they refused to allow lawful voters to vote, that they did some other act which is recognized by the law as fraudulent and as calculated to destroy the efficiency of the election, it amounts to nothing. The law does not recognize partisans as such in directing how an election shall be held. The honorable Senator says further:

It shows that the polls were so established in the republican parishes that they were next to inaccessible; and it shows, too, that every obstacle possible was thrown in the way of the registration of republicans.

Where is the evidence of that? If they were going to rely on this point, it was very material to sustain it. It was material for them in making this charge to cite testimony to support it; and unless that is done it goes for nothing. As to the location of the polls, the law allowed it, and if the law allowed them to establish voting precincts twenty miles apart, and the Legislature in the exercise of its power saw proper to do it, it had a right to do it; and if the Legislature appointed an officer to designate the voting places and he saw fit to fix them a long distance apart and he did so according to law, he had the right under the constitution of Louisiana to do it. But it is said it was inconvenient for the colored people in many places in that State to go to the polls. It was just as inconvenient for them as for the white people; and besides it is generally known all over the South that the colored people never fail to go to an election and will go any distance to get to it. They are infinitely more ready and active and anxious to vote than the white people; and they never fail to vote whether the distance to the voting place be long or short; whether it rains or shines they go; so that I apprehend the republican party lost nothing by any provision of that sort, in that election. He says further:

In the nature of things the extent of effect produced by any one of these acts can only be estimated.

And yet we are called upon to declare an election void, to overturn a State government, to provide nothing for that people, on the ground that it is *estimated, that it is suggested*, that it is inferred—estimated—that there was fraud in the election sufficient to vitiate it! The Senator from Indiana when he comes to this point, being an able lawyer, one capable in all respects of not only making a point and knowing its importance but how to sustain it, puts this short paragraph which I have read to the Senate as the ground upon which he says Kellogg was elected. Why did he fail to state facts to support that proposition? Is it not strange, is it not remarkable that he failed to do so? And because he did not do so, is not the inference strong, irresistible, that he could not do so? On examination of the facts, I undertake to say that there was no fact which warranted any such declaration except the general fact that they say it was well known to the American people that the republican party in Louisiana had twenty thousand majority if the votes had been cast fairly. Why, sir, do they undertake to say that the people in this country are not going to change from radical notions? I thank Heaven that I see very decided evidences of a change of opinion. The people are tired of revolution. They do not intend, in my opinion, to sustain a revolutionary party in this country for a long while yet to come; and we find this party going to pieces; it is in a state of disintegration; the people are falling off from it daily and weekly and monthly, and I trust that at the next general election it will be overthrown forever.

The truth is, the republican party is over as a party of principle anyhow. It was founded upon opposition to negro slavery. Negro slavery has been abolished by the sword, and constitutional provisions securing that end have been incorporated in the Constitution. Congress has taken action in that behalf, and legislative measures have been passed which provided for carrying them into effect. This great party is at an end, therefore. It is over as a party of principle. It has no living principle to-day that does not appertain to any party in this country. It ought to be dissolved; it will be dissolved. It has done all the good it can do. I shall not say what other party may take its place, but its day is over! For my part, I am for the Constitution, and against any party that is against it. It is supreme with me, and above parties.

Mr. WEST, (in his seat.) Amen!

Mr. MERRIMON. I am glad to hear my friend say, "Amen." I trust it will be as I wish. But, Mr. President, I say that it is not surprising that there was a change of public sentiment in Louisiana. Look at the Warmoth government. Why, sir, if I had time I would go into some details to show what effect it produced upon that State; what impoverishment, what humiliation, what disgrace that administration brought there, until it was the laughing-stock of civilization. All the decent republicans wanted to get rid of it, and no wonder that they did. Was it surprising, therefore, when they had an opportunity to vote for a man of different principles making different professions, a man of good repute, that they should seek an opportunity to vote for him? Was it surprising when Warmoth with his power and influence as the governor of the State joined the democrats he should be able to carry ten or fifteen thousand republicans with him, whether they were colored or whether they were white? There is nothing astonishing in that; it would be surprising if it had been otherwise. If Warmoth desired to do it; if he had the motive to do it no matter what that motive was, he had the right under the constitution and laws of Louisiana to use his political and personal influence to secure the ascendency in that State of an honest administration of the government.

Now, sir, I wish to read to the Senate what the late Senator from Illinois said upon this subject. Senator Trumbull said this:

It is, however, said by a majority of the committee that the election of November 4 was so tainted with fraud as to render it wholly void, and they recommend the passage of a law for holding a new election under the authority of Congress.

If it were admitted, as it is not, that Congress has authority to inquire into the fairness and regularity of a State election, it is denied that there was any such fraud in the late Louisiana election as would justify setting it aside. It was confessedly one of the most quiet and peaceful elections ever held in the State, and the evidence shows that it was substantially free and fair.

The vote polled—

I should be glad to have my republican friends to hear this, as it comes from a republican—

The vote polled was twenty thousand larger than ever before cast in the State, and against more than two-thirds of it no complaint of unfairness is even alleged.

Again he says:

It has been said that the colored voters were all republicans, that the colored population of the State outnumbers the whites, and that therefore if the election had been fair the republican ticket must have succeeded; but the census of 1870 shows that there were in the State one hundred and fifty-three more white than colored males over twenty-one years of age; and it is also in evidence that from eight to ten thousand colored persons voted the fusion ticket, while the number of whites who voted the republican ticket is not believed to have exceeded half that number.

That is the report of a gentleman charged to investigate this matter, one who devoted weeks to the investigation and consideration of this matter, a man whose integrity cannot be questioned, a man whose reputation for legal learning is known throughout the Union and in foreign lands, a Senator of this body, and with all that a republican, who had no interest in making this report that should bring disgrace and dishonor on his party.

Mr. WEST. I should like to ask the Senator whether he quotes the testimony of Mr. Trumbull as giving the exact statement according to the census of the division of races in the State of Louisiana?

Mr. MERRIMON. I certainly quote it just as he stated it; and I thought I could not cite a higher authority here than the finding of Judge Trumbull in a solemn report of this character.

Mr. WEST. It has been demonstrated on this floor that Mr. Trumbull did not go far enough in his investigation of the census; and if the Senator wants to quote the census on us let him produce the census here.

Mr. MERRIMON. My friend has had the opportunity to do it.

Mr. WEST. I did it; and it did not show what you say.

Mr. MERRIMON. I have not shown anything about it myself. But, sir, here is the solemn report of one charged to this end, and I take it that the bare suggestion of my honorable friend is not to go against such a report and finding unless he produces his authority for saying that Judge Trumbull erred as to the census report, and he does not even suggest that if there was an error that it was at all a material one.

But, Mr. President, what I want to put to the Senate, what I want to put to the country, what I want to put to every lover of free government, wherever he may be, is, are the American people, is the American Congress, ready to overturn a State government upon such a flimsy pretense as this, and thus inaugurate revolution and thus sap the foundations of our whole system of government? I trust not, Mr. President. I trust that the Senate will examine carefully and cautiously into this matter and come to a correct conclusion; and if the Senate and Congress will not do it, then I propose that those who stand by the Constitution and right shall appeal to Cæsar; we will appeal to the American people, and I have the strongest confidence that they will pronounce a just and patriotic judgment at the ballot-box, which will be, I know, a judgment of condemnation.

Then, Mr. President, it appears that there was no fraud which vitiated the election in the State of Louisiana.

But to go back to the principle upon which I rest what I have said, suppose there was fraud there, what right has the Senate to inquire into that fact; what right has Congress to inquire into that fact? I endeavored yesterday to show that Congress in its relation with the State as a State was bound to recognize the authorities of the State, ascertained according to the constitution and laws of that State. I think I may appeal to the judgment of every disinterested person to say whether I have not shown that, according to the constitution and laws of Louisiana, the McEnery ticket was elected, and therefore that McEnery is to-day the lawful governor of that State, and his associates on that ticket compose the other State officers, and that the McEnery legislature is the true and lawful Legislature.

But, sir, there is another point to which I wish to advert. Upon what does the "Kellogg government," so called, rest its right to administer the government of Louisiana? Suppose I now concede for argument's sake that he got a majority of the votes—though there is no evidence going to show it—was it ascertained by any lawful authority that he was elected? Was it ascertained in any way that he was elected? The Senator from Indiana [Mr. MORTON] admits his election and his right depend upon the action of what was called the "Lynch returning board." But it is not pretended that it had any lawful existence or authority whatever. It had no semblance of authority whatsoever for any purpose. Nevertheless the Senator from Indiana, [Mr. MORTON,] the only member of the Committee on Privileges and Elections who sustained the right of the "Kellogg government" in any view, rests the right of Kellogg upon the action of the "Lynch board." Let me refer to its formation and character briefly. In the first place, it was absolutely unlawful. It was not appointed by the governor or the Legislature, or by any statute or any lawful authority; it was self-constituted. Lynch himself belonged to a board of which there was never any quorum, and though he was at one time of a board that did have authority, he was but one member of a board composed of five persons, and he was in no way charged with authority to appoint any one. The Senator from Indiana admits as much in his speech. But let us see what the committee say in reference to that board on which the so-called "Kellogg government" rests its right. The committee in their report say:

> On the 6th of December, 1872, the Lynch board—Bovee, (who was then acting as secretary of state in place of Herron,) Lynch, Longstreet, and Hawkins—pretended to have canvassed the returns of the election, and certified to the secretary of state that Kellogg had been elected governor; Antoine, lieutenant-governor; Clinton, auditor; Field, attorney-general; Brown, superintendent of education; and Deslondes, secretary of state; and also certified a list of persons whom they had determined to be elected to the Legislature.

Now notice what follows:

> There is nothing in all the comedy of blunders and frauds under consideration more indefensible than the pretended canvass of this board.
> The following are some of the objections to the validity of their proceedings:
> 1. The board had been abolished by the act of November 20.

So it never had any existence. It was abolished.

> 2. The board was under valid and existing injunctions restraining it from acting at all, and an injunction in the Armstead case restraining it from making any canvass not based upon the official returns of the election.
> 3. Conceding the board was in existence, and had full authority to canvass the returns, it had no returns to canvass.
> The returns from the parishes had been made, under the law of 1870, to the governor, and not one of them was before the Lynch board.

Could anything surpass the willful, wicked, and corrupt purpose and spirit of Bovee and Kellogg and their associates, manifested by what I now read from the report:

> It was testified before your committee by Mr. Bovee himself, who participated in this canvass by the Lynch board, that they were determined to have a republican legislature, and made their canvass to that end. The testimony abundantly establishes the fraudulent character of their canvass. In some cases they had what were supposed to be copies of the original returns, in other cases they had nothing but newspaper statements, and in other cases, where they had nothing whatever to act upon, they made an estimate based upon their knowledge of the political complexion of the parish of what the vote ought to have been. They also counted a large number of affidavits purporting to be sworn to by voters who had been wrongfully denied registration or the right to vote, many of which affidavits they must have known to be forgeries. It was testified by one witness that he forged over a thousand affidavits and delivered them to the Lynch board while it was in session. It is quite unnecessary to waste time in considering this part of the the case; for no person can examine the testimony over so cursorily without seeing that this pretended canvass had no semblance of integrity.

So it appears the board which undertook to ascertain the so-called "Kellogg government" was elected, never had any lawful existence, any more than if half a dozen gentlemen in the gallery were to undertake to organize themselves into a board to count the vote this day. But, furthermore, it appears beyond question or contradiction—it has not been denied anywhere, it cannot be denied—that if the Lynch board were lawful, they had no votes or returns of votes to canvass—absolutely nothing recognized by the law. And yet we find gentlemen so far carried away by some consideration, I cannot imagine what it is, that they are willing to dishonor and degrade and outrage the State of Louisiana, and injure the people there and imperil our system of government, by holding in office a usurper whose rights are predicated upon such grounds. Sir, if Congress will not rebuke and overthrow such usurpation, I appeal to the American people to rebuke it. I trust in God they will rebuke and condemn it at the next election in a way that shall never be forgotten, and that they will put the seal of their condemnation upon those who now have it in their power to put it down and will not.

But, Mr. President, in order to show where we stand, suppose I concede for argument's sake that the election was void. I do not so believe; I have endeavored to show why I believe the election of McEnery was good and lawful. I think I have adduced reasons which show that it was at all events an election held under such circumstances as that the United States are bound to recognize the McEnery government.

There is a fact that I was about to omit, and I will now advert to it a moment. It is intimated that there were fraud and force all over the State. The committee report that there was no such fraud or force. They say that a more peaceful election was never held; that it was exceedingly quiet; and, more than that, Marshal Packard had his forces all over the State guarding and watching every ballot-box to see that every republican voter voted. And the large vote polled—the largest ever cast in that State—at the election shows conclusively that no considerable number failed to vote.

Mr. WEST. Yes; but how about the votes that came out?

Mr. MERRIMON. I do not know anything about that; it does not appear that any votes came out improperly.

Mr. WEST. Nor anybody else.

Mr. MERRIMON. Where is the evidence that they did come out? There is no evidence here. There is no evidence in the report. And does my friend want his bare suggestion to carry away the judgment of the Senate and country, and thereby make people believe they were taken out when there is no evidence of the fact? But the votes cast out by the returning board only added to the majority of the McEnery ticket. The small number of fraudulent votes detected by the returning board were cast out at the expense of the Kellogg ticket, and no one has pretended that these votes were improperly cast out of the canvass.

But, as I said, suppose the election was void, as some gentlemen here contend, what follows? That the Congress of the United States, that the arms of the United States, are to sustain a usurpation there, and thus overthrow the State of Louisiana, establish anarchy and despotism there, and jeopardize our system of government, State and Federal.

Never; never! I will not consent to it. It shall not be done with my vote. If it is done, it shall be done against my vote and my solemn protest in this high place. But what is the result if the election was void? Suppose that no election had been held there, what would have been the result? Will it be said there is an interregnum? No such thing. The people of Louisiana in framing their constitution provided against that, and in a most effectual manner. Let me call the attention of the Senate to a provision in their State constitution. Article 51 of the constitution of Louisiana provides in these words:

> ART. 51. The governor shall enter on the discharge of his duties on the second Monday in January next ensuing his election, *and shall continue in office until the Monday next succeeding the day that his successor shall be declared duly elected and shall have taken the oath or affirmation required by the constitution.*

So that by this provision of the constitution the governor holds over until his successor is duly inaugurated.

I will read also article 122 of the constitution of that State, which provides in these words:

> ART. 122. All officers shall continue to discharge the duties of their offices *until their successors shall have been inducted into office*, except in cases of impeachment or suspension.

That being the constitution of Louisiana, if no election was held in 1872, as contended by the Senator from Wisconsin, what is the inevitable consequence? Manifestly that Warmoth, dishonored and disgraced as he is, much injury as he has done to the people of Louisiana, much disgrace as he has brought on the American name—Warmoth and his associates are to-day the lawful officers of the State of Louisiana. So that there is no pretense for the position taken here that Louisiana is without a State organization. Warmoth lives; or if Warmoth does not live, Pinchback lives, and the other officers that were his associates in office live. The Legislature in existence before 1872 has expired; but the absence of a Legislature does not necessarily disorganize the State government.

Then those who insist that the election is void must fall back necessarily, logically, inevitably upon the ground that Warmoth to-day is governor. I should regret to see the State cursed further with his administration; but, evil and bad as it was, I would infinitely prefer seeing him reinstated as governor to seeing the Congress of the United States give its assent to a continuance of that outrageous usurpation which prevails in that State at this time. I shudder at the precedent which I fear is about to be set by Congress in upholding the Kellogg usurpation. It is monstrous and dangerous to the last degree; it is revolution effected by faction! Where is to be the end of it? If one faction may thus usurp the Government another and another may, until government shall give way to universal anarchy!

It is said, however, that Warmoth was impeached. I deny it. If there was no election, then the "Kellogg legislature," as it is called, had no existence. The Assembly there which called itself a Legislature was no more the Legislature of Louisiana than if three or four hundred persons were to array themselves in this Hall and the other Hall of the Capitol and say they constituted the Congress. Their acts were absolutely void; they had no effect whatever. So that War-

moth is there to-day, in the contingency I have mentioned, the lawful governor of that State, and there is no escape from that conclusion if there was no election.

I have been astonished at the course of argumentation pursued by some honorable Senators here. The honorable Senator from Indiana [Mr. MORTON] the other day startled me by talking about red-handed murderers in Louisiana striving to control the action of Congress and force themselves upon the people of Louisiana. He pointed to the occasion of a riot in the streets of New Orleans in which some of the McEnery authorities fired on certain parties and they were killed, and he said they were murderers, red-handed murderers. O, sir, that was empty declamation. It did not frighten or alarm anybody, nor do I believe that it convinced anybody. A statement without facts to support it is absolutely nothing; it is worse than nothing. What were the facts? I have shown that McEnery was elected; I have shown that he was duly inaugurated governor; I have shown that the McEnery legislature was the lawful Legislature; and I say that he had the right, and it was his duty, to fire upon that mob and destroy it, if need be to the extent of taking the life of every man there. Suppose a man comes here to-day into the city of Washington and takes the oath of office and proclaims himself governor, and is backed up by a mob on Pennsylvania avenue, will anybody deny that the lawful governor could bring ont the police, that he could summon every citizen and require the mob to disperse, and if they did not do it, shoot them? He would have the right, nay, it would be his duty, to shoot, destroy, such mob if they would not disperse, and to accomplish that purpose he might use arms of all sorts. He would have the right to use force, and to use it to the extent of taking life. I say McEnery was the lawful governor of that State at that moment, and he had the right to disperse that mob; he had a right to take the State-house, and, if need be, take the life of every man who was resisting, and it was his duty to do it as governor in upholding the constitution and laws of Louisiana. What would be thought of the governor of New York if he would allow a usurper, claiming to be governor, backed by a mob, to take the State-house and occupy it to the exclusion of himself and the other State officers and the Legislature? He would be false to his oath, to the constitution, to the people, and dishonored and disgraced forever if he should allow such usurpation.

But, sir, a word more in reply to the Senator from Indiana. He talked about "red-handed murderers." Let us see about that. This usurper was there with a recognized State government, as he called it; he had armed men around him; he had the Army of the United States at his back; he had the President with the whole Executive power of the Union sustaining him; he had judges and juries to do his pleasure. If there was the "red-handed murder" that the Senator talked about, why did the "Kellogg government" not indict these murderers, try, convict, and execute them for such murder? The answer is plain: they did not dare to attempt such prosecutions; they well knew and felt that their own acts were unlawful; that they themselves were the guilty parties; and when they came to taking human life by solemn judicial proceeding their own acts, rights, and purposes would be scrutinized, and these could not stand the test of judicial scrutiny. I repeat, McEnery was warranted by the constitution and laws in dispersing that mob and taking the lives of the rioters when they refused to disperse at his command. And I go further, and say that Kellogg and his associates are usurpers and rioters, and are probably guilty of treason against the State of Louisiana, and may be indicted and convicted for the same hereafter.

The Senator from Ohio [Mr. SHERMAN] made a suggestion the other day to the Senator from Delaware, [Mr. BAYARD,] when the latter was discussing this subject, that amazed and shocked me. He said in a tone of great seriousness and calmness—for awhile I wondered if he was jesting—is it a fact that six or eight members of the "McEnery legislature" deserted that legislature and went over to the Kellogg legislature? I do not know how the fact was. I do not care how the fact was. If they did it, it only shows that they were faithless and ready to degrade and dishonor themselves. But suppose it was the fact, did that make the Kellogg legislature lawful? Suppose half of them had gone or the whole of them had gone and joined that usurpation, it could not legalize it for one moment. I am not willing to consent to usurpation. I will not consent to usurpation, whether it is usurpation by one party or another party. However it is done, it is the high duty of the Senate to condemn it by their votes.

Mr. President, the Senator from Wisconsin [Mr. CARPENTER] who introduced the pending bill has labored earnestly in its support, and his ability and zeal command my cordial respect and admiration. But with all due respect for him, I cannot support his bill. Because, in the first place, as I have shown, McEnery is governor; because, in the second place, if, as he says and insists, there was no election in 1872, then Warmoth, by the express words of the constitution, is the governor; and because, in the third place, even if there were no State authorities there, the bill goes a bow-shot, in providing for an election, beyond what I think Congress has power to do under the Constitution and our system of government. There is in my judgment no power in Congress arising by express provisions of the Constitution, by reasonable construction or by necessity, under our system of government, State and Federal, which authorizes it to pass the pending bill.

And I wish I had time to enlarge somewhat on this point. I am willing to concede that in one contingency Congress may pass a law authorizing the people to reorganize a State. If by possibility (and there is such a possibility) a State government in the Union should be absolutely deprived of State officers so that the government of the State shall be left without officers to operate its government, in that case I contend that Congress could grant the people relief. But how? Simply by passing a law authorizing the people of the State to hold an election *according to their own constitution and laws*. That is all that Congress can do; it is all that Congress is bound to do; and it has that power by the tenor and spirit of the Constitution, not by its express letter. The power arises by the tenor of the Constitution and by the nature and theory of our Government; and I wish I had time, without trespassing too long on my friend from Minnesota, [Mr. WINDOM,] to enlarge on this idea. I repeat, in the contingency I have mentioned Congress could pass a law authorizing the people of a State thus deprived of State officers to hold an election in pursuance of their own constitution and laws, under the auspices of their own local authorities, to supply officers to the State government until the next regular election.

This bill, however, provides that an election shall be held under the auspices of the United States, and provides in all respects an election law without reference to the laws of the State. It proposes to send a military governor into the State of Louisiana, and virtually to reconstruct the State of Louisiana after the manner of the reconstruction acts. I cannot subscribe to that doctrine, and I have many reasons why I cannot, upon which time will not allow me to enlarge now.

I can support the proposition of the honorable Senator from Delaware, [Mr. BAYARD.] I do not like that proposition as well as I might some others. In my judgment the proper course for Congress to take in this case is to pass a joint resolution declaring that according to the constitution and laws of the State of Louisiana McEnery and his associates are the properly ascertained officers of the State of Louisiana, and recognizing them as such, and that it is the duty of all the authorities of the United States to uphold and sustain them according to the Constitution and laws of the United States. If Congress should pass such a resolution as that, I have no doubt the President would approve it and be governed by it. I do not suppose that he has any motive to keep Kellogg there longer than he can ascertain the will of Congress. If he withdraws the troops and McEnery is acknowledged to be governor, it will be easy for him to make a requisition on the President to prevent domestic violence, if need be, and the destruction of that State and the whole machinery of its government. If such a resolution were passed the Louisiana troubles would be settled in twenty-four hours, constitutional government would be restored and law and right would triumph over faction and usurpation.

A word more, and I will not trespass longer. In the outset of my remarks I consumed a great deal of time in referring to the Constitution and our system of government in this country. I did so deliberately; I did it on purpose. I love and revere the Constitution; I feel interested for the Constitution. I am the more anxious about it because I see and know that it has been repeatedly and flagrantly violated: that to violate it has become common; that it is in constant peril. It has been ignored from time to time in most material respects. Even now I fear a majority are about to commit a vital breach in it by sustaining the usurpation in Louisiana. We have been in a state of revolution for fourteen years. The representatives of the people have been drifting away from it; the people have been drifting insensibly away from it. I desire to see the country come back to it. I would be glad if I could inspire a spirit of inquiry on this subject. I want to see the Constitution indeed the supreme law of the land, and observed and obeyed by those in authority and everybody else. We do not think enough about it. It is essential to our existence; it is the sheet-anchor of our hopes as a free people. The State governments are essential to our liberty and our system of government. The Federal Government is as essential. Each is of and for the other; each is essential to the other; and both are essential to free government and civil liberty. Our whole system of government is essential to the preservation of American liberty. If we strike it down by sustaining this Louisiana usurpation, it may be stricken down in another respect and in another; and if one faction or party may do it, another may, and such revolutionary practices may continue until finally we shall have no Constitution and no Government, and the American people may pass into an absolute state of anarchy. Whatever may be the interests of selfish and ambitious men, the highest earthly interest of the American people is to uphold and sustain their system of free government. To do this they must sustain their organic law—their Constitution! The Constitution is the great bulwark of the people against unholy ambition, anarchy, and despotism. If the American people will preserve their liberties and transmit them to their posterity, they must first preserve their Constitution and their Government under it inviolate.

Witness the force of the example set by the usurpation in the State of Louisiana. Only a few months ago a defeated candidate in Texas undertook to assert his pretensions by arms. What was the first thing he did after he determined not to recognize the ascertained result? He appealed to the President to give him the Army to aid him to establish usurpation in Texas; just as Kellogg had and has done in Louisiana. Look at the state of things in Arkansas. The governor there has been ousted by an armed force, and there is anarchy there to-day.

Look at Alabama, at the controversy now pending here touching that State disorganized and confused by factions. Look at other States in the South. If in the South you now set this dangerous precedent and its consequences, let Congress, let the country, be assured that the time will come when like calamity shall overtake States in other sections of the Union. Revolution goes forward, and the longer it is tolerated the harder it is to suppress it. The spirit of revolution has become aggressive in this country; it ought to be checked; it can only be done successfully by a strict adherence to the Constitution. The people ought to frown upon those who will trifle with or consent in any way to a breach of that sacred charter of American liberty.

The Constitution—and by the constitution I mean the constitutions of the States and of the Federal Government all acting in harmony—constitutes the life and the hope of the American people, and all the hope they have for the perpetuity of their liberties. I do not want to see these sacrificed; I do not want to see them lost. I desire to see the States preserved in all their integrity and their sovereignty. I desire to see the Federal Government preserved in its integrity and sovereignty. I desire to see the Union founded upon and sustained by the constitutions, State and Federal; then we shall have that liberty, that purity of government, national and local prosperity and happiness which our fathers intended that the American people and their posterity to latest generations should enjoy. There is no desirable Union, there is no true liberty, without the Constitution. The Constitution and the Union are inseparable; each will perish in the end without the other.

Civil Rights.

SPEECH OF HON. T. M. NORWOOD,

OF GEORGIA,

IN THE UNITED STATES SENATE,

April 30 *and May* 4, 1874.

The Senate having under consideration the bill (S. No. 1) supplementary to an act entitled "An act to protect all citizens of the United States in their civil rights, and to furnish the means for their vindication," passed April 9, 1866, the pending question being on the amendment of the Senator from Ohio [Mr. THURMAN] to the amendment made as in Committee of the Whole, to strike out the second section—

Mr. NORWOOD said:

Mr. PRESIDENT: Believing in the "eternal fitness of things," and that everything should be done "decently and in order," I have always endeavored to adapt my speech to the solemnity of the occasion and the dignity of the subject to be considered. And though I shall faithfully attempt to adhere to this salutary rule, it is with a painful consciousness that it is impossible for me to rise to the grandeur of either the occasion or the subject. And nothing sustains me but the ambition to share with the Senator from New Jersey the imperishable honor of bringing about the happy consummation foreshadowed by him on yesterday, when the white man and black, the mulatto and quadroon, the coolie and Digger Indian, shall be gathered together, a united family, in one unbroken circle, around one common soup-bowl and using the same spoon, while shielded by the Stars and Stripes and regaled by the martial measure and inspiring strain of—

John Brown's soul is marching on.

"When the morning stars first sang together for joy" it might have been worth some dollars to the American people and the balance of mankind, if there be any, had the republican party been present. And though a matter of minor consideration, perhaps, it might also have saved much blood. For when the Almighty said, "Let us make man," this Senate would have given its advice, and with equal certainty, would never have consented to man's creation, except in accordance with the Declaration of Independence. That party would have caucused on the question and have resolved "to fight it out on that line if it takes all summer." The flowers of the field might vary in splendor and beauty; the lion might be made monarch among beasts; one star might differ from another star in glory; but absolute equality, moral, mental, physical, political, social, in churches, in theaters graveyards, every where in the world and out of it, must be ordained among men, women, and children. Differences in color, differences in form and capabilities, were and are all mistakes, and we are now engaged, with such decent respect for the opinion of the Author of these errors as the necessity for votes next fall will allow, in making the necessary correction.

A famous sculptor once left his studio in charge of his servant. The servant, conceiving his genius superior to that of his master, attempted an improvement in a favorite statue. The master returned to find his idol—the labor of years—converted into a *torso*. But skeptical would he be, indeed; ignorant of the progressive strides made in this country in the decade past, must he be, who doubts the success of this small creative job. Nine years ago four million slaves were set free; the next year, clothed with civil rights; the third, armed with the ballot, like blind Polyphemus with his club; the fourth, makers of laws, of governments, and rulers of men, their former masters. Within this brief time they were graduated in the school of republican statesmanship, passing at a bound to the degree of doctor of their learned laws; and in ten States the whites were dismissed from office, and these learned republican doctors were set up on end like ten-pins, and put in charge. History furnishes no parallel to this triumph in the plastic art since God made man of clay.

There is but one recorded instance which the boldest fancy would dare suggest as a fit comparison, and that is, the redemption of the Jews from Egyptian bondage in a single night. But in that one fact only is the comparison good; for though they were under the guidance and instruction of Omniscience for forty years, they did not make the advance in statesmanship which the "man and brother" attained, under the new dispensation, in forty days. Of the six hundred thousand who went out from Egypt, but two were found worthy in forty years to give and administer law. The republican party manufactured over six hundred thousand law-givers in forty minutes. The Jews were instructed by signs and wonders, by miracles, and in the Decalogue, and that by the Almighty himself. The negroes were regenerated without any instruction, and by the republican party. Moses was taken by divine appointment from his bulrush cradle, and educated for many years to fit him to be a ruler; but the "man and brother," while standing in the corn-field, hoe in hand, and without any warning of the approaching calamity, was made a republican statesman by act of Congress. His superior wisdom was needed by the republican party to guide their councils, and they called him, like another Cincinnatus, from the plow, and placed him at the helm of State. How this wonderful change was wrought in these political neophytes in the twinkling of an eye, making them masters of the science of republican statesmanship, whose tortuous ways and eccentricity have set at defiance all human learning and experience, it is impossible to conceive, except upon the supposition that a miracle was performed, or on the more reasonable hypothesis that Providence, foreseeing their inevitable destiny to become republican statesmen, benevolently prepared for their easy advent, by grading and leveling the dominant order of statesmanship to the full measure of their natural capacity. But it is only just to say, before leaving this comparative view, that in the opinion of some exegetes, who are not republicans, if the redeemer of the Jews, instead of trying to elevate them in moral stature, instead of seeking to fit them for a high and great destiny, had only desired their votes to prolong His rule, the negroes might not have so far surpassed the Jews in intellectual growth and statesmanship.

But while history fails to furnish a parallel to this transformation, fiction and fable are not so much at fault, and yet even they can furnish but few such instances.

One not familiar with the achievement; who has not studied its exquisite tracery and stood in awe while contemplating its colossal grandeur; and remembering that out of the smoke, the din and roar of surging battle the negro sprang into the sunlight of freedom, would, without due reflection, suggest in comparison; the rising of the goddess of love and beauty from the depths of ocean, more radiant in loveliness than her own bright chariot of pearl, or the springing of Minerva—the embodiment of wisdom—full-armed from the head of Jove, cleft by the forger of the thunderbolts of war. But in these we see only an illustration of the perfection of the new-born statesman, while the power and devotion of his creator are lost to view. To catch a glimpse of the burning passion of the republican party for their colored equal; and of the heavenly art displayed in his divine transformation; and to faintly realize the depth of darkness from which in an instant he was raised to the level of republican statesmanship, we must recur to the moment of transition, when the cold, dull, marble statue, at once the creation and the adoration of Pygmalion, transfused with the fervor of his passion, and rapturously quivering into life, gracefully glided into his amorous arms, matchless in form and moving, the paragon of beauty.

There is much of resemblance also in the brief but touching biography of the noted Solomon Grundy:

He was born on Monday,
Christened on a Tuesday
Married on Wednesday,
Took ill on Thursday,
Worse on Friday,
Died on Saturday,
Was buried on Sunday

And the biographer, at this point, plaintively tells us that "this was the end of Solomon Grundy." [Laughter.]

These were the seven stages in the brief but eventful life of Solomon Grundy, and our colored friends have with equal rapidity passed six stages, and the morning of the seventh is about to dawn. One day, a slave; the next, a freeman; the next, invested with civil rights; the fourth, a voter; the fifth, a ruler; the sixth, a citizen—for let it be remembered that they were voters and rulers before they were citizens—and the seventh, to be placed on social equality. Surely these are glories enough even for the republican party. The world has watched its handiwork and marked with increasing wonder, the steady improvement so visible in each production of its magic power, even down to the unveiling of its *chef d'œuvre* in the execution of Louisiana.

This grand achievement lacks nothing but originality. The original of this excruciating model, though inferior in the execution, is superior in conception. It exhausted the combined genius of the three greatest sculptors of the city of Rhodes. It is the statue of La-

ocoön and his tender children slowly but surely meeting death under the contractile power of a serpent's coil, and in the temple of his worship, because he offended a jealous heathen god by giving warning of approaching danger, and striking in defense of home and country. The Greeks even of to-day proudly boast of the chryselephantine statue of Jupiter, the masterpiece of Phidias, himself the master of all masters in all ages of the world. And as long as under republican rule and interpretation, self-government means one-man power; as long as freedom means despotism; the bayonet means the ballot; vice means virtue, and ignorance statesmanship, the republican party can point despots and tyrants, with exultant air, to the satrapy of Louisiana as the pride and glory of republican civilization.

But let us indulge the hope—as "it is pleasing to man to indulge in the illusions of hope," however faint—that there is nothing ominous to the republican party, on either its white or colored side, in the sudden birth, the rapid growth, and the speedy demise of the lamented Solomon Grundy. There is a terrible resemblance in their birth and growth; but we must remember that the lamented Grundy married early, whereas this prodigal youth—the republican party—remains not only single, but is singularly unique, being unlike anything created or spontaneous; though for eight long years he has been coquetting with and affianced to the American branch of the Ethiopian family, commonly known as the "colored people." Rather prodigal, I say, he has been, though he started in life on high moral ideas, and, like the brakeman on the East Tennessee and Georgia Railroad, he promised, in the beginning, to run his train "on high moral principles." But he has fallen from grace. Between ventures in Credit Mobilier stock, Jayne contracts, Sanborn contracts and other moiety contracts, custom-house rings, District rings, railroad schemes, the business of manufacturing States and statesmen, robbing his southern neighbors, and other speculations and peculations, he has become diseased in reputation. He is reputed to be dividing his time and honors between philanthropy when it pays and public plunder as a trade. His Uncle Sam has lost confidence in his finances, his friends are falling off, creditors are sweeping his estates, and his colored inamorata charges that he has trifled with her affections, and threatens to abandon him, unless he will call in the high priest (Congress) at once, and solemnize the marriage.

And now, Mr. President, these "two high contracting parties" are before us for the sixth time to be made one political flesh; and as the iron tongue of Time has called the hour of twelve meridian on the first Monday in December of each year for many weary years, we have seen this sorrowful bride, melancholy as Evangeline seeking for her long-lost Gabriel, enter this Chamber with slow and mournful step and head with modest droop, and thus march down yon aisle and stand before that hymenial altar to fulfill her nuptial vow. From the sidereal precision with which she has annually swept within our view, one with poetic fancy might have imagined her a planet of the sun, if the close pursuit of her numerous bridesmaids, robed in white illusion, had not at once suggested the coming of a comet with its nucleus in total eclipse. Unpoetic as I am, I have thought that astronomers are wrong, who say, the seventh of the weeping Pleiades is lost. She has not been lost. Her brightness was only obscured, and it was reserved for the telescopic eye of the republican party, eight years ago, while sweeping heaven and earth in search of votes, and turning heavenward, for the first and it is thought the only time, to discover her in right ascension and surpassing glory, and to fix itself in selfish adoration on her charms.

If the entrancing power of one wandering Pleiad can thus move the greatest power of the globe, well might Job inquire, "Canst thou set bounds to the sweet influences of Pleiades?"

Here, again, I have said, is this lonely pilgrim weeping and waiting for that tardy groom and that tardier nuptial joy. Ranged beside her again stand her ever-faithful bridesmaids clothed in white, symbolic that in this union, as in a ray of light, all color will be absorbed, and this dark bride shall be pure white. Foremost and first among them is one bearing over her serene bosom the general motto "Without distinction of race, color, or previous condition of servitude." Beside her is another adorned with the motto "Equal enjoyment of the accommodations, advantages, facilities, and privileges of cemeteries." But time will not allow a notice of them all. My eyes, however, fall on one who is rather advanced in years, but bearing herself with all the innocence and playfulness of childhood. Her levity really is in pointed contrast with the sober, solemn bearing of all the rest. Upon the brow she wears a wreath of flowers, slightly faded, however, about like Atalanta's after she stooped to take the golden apples. From her seeming familiarity with the bride it might be supposed she could say of her as the Teuton said when asked if he knew a certain member of the porcine family, "We were raised together." Her zeal to have the nuptials solemnized is shown by being adorned with two mottoes, either most æsthetic, appropriate, and suggestive, whether adopted from "internal suggestion, or the bias of jurisprudence." The one reads, "Full and equal enjoyment for the bride in circuses and menageries, especially of the clown, for Motley's the wear.'" The other, "A little learning is a dangerous thing."

But tempting as is the loveliness of this scene to make me linger and dwell upon its ever-springing beauties, I must pass on. I have risen as the friend of innocence to solemnly protest against these bans. This trusting Ethiopian for eight years of unrequited faith has been the victim of misplaced confidence. That scape-grace has deceived her trusting heart from the beginning of their courtship. He has broken, time and again, the honeyed vows he has so often made to her. The first tender pledge by which he won her heart has not been kept. He promised if she would obey, love, and honor him, and elevate him to offices of profit, he would give her "forty acres and a mule."

This promise he has not only broken, but he has added deceit to perfidy. For strolling forth with her, hand in hand, in the Land of Flowers, under the glimpses of the moon, in the sweet spring time of nature and of reconstruction, among blossoming oranges, and feeling like Adam and Eve in paradise, but looking like a lovely brace of Diana's foresters, and carrying in his other hand all his worldly goods, his lares and penates—the immortal carpet-bag—after passing out of sight, he tenderly pressed her hand and bid her pause, as he had come to set the boundaries of her land. Then gently placing that sacred depository of the reconstruction acts and his extra striped shirt upon the ground, and untying therefrom the cotton string which a few nights before he had borrowed from a colored friend while he was sleeping, and murmuring meanwhile his oft-repeated protestations of devotion to his fair betrothed, whose chuckle spoke, responsively, her great delight, he drew forth four streaked stakes, such as Jacob used when he walked forth to swindle Laban out of his flocks, and measuring off a rood or two of land, stuck down the stakes and told her that was her domain. Then sadly lingering, as only lovers can when doubts arise,

If e'er again should meet those mutual eyes,

with touching tenderness they exchanged fit emblems of their mutual regard and trust. In token of her own she gave, at his request, a paper with emerald finish on the back and bearing on its face a printed promise of his Uncle Sam "never to pay five dollars to the bearer," while he, determined that the family reputation for plighted faith and non-performance should never be dishonored at his hands, gave in return an autographic manuscript which breathed the depth of his devotion, and then he went his usual devious way in darkness to his den. That manuscript, upon interpretation to that bewildered baron, was found to read as follows: "As Moses lifted up the serpent in the wilderness, so have I lifted his last five dollars out of poor old Joe." [Laughter.]

The energy displayed by this prodigal is the old courtship of Justice Shallow seeking to confer the honor of his *armigero* and *Cust-alorum* on Mrs. Anne Page. That learned pundit did not discover the charms, the graces, the social equality of Mrs. Anne until Sir Hugh Evans generously suggested that she possessed the attractive virtue of seven hundred pounds. "Seven hundred pounds, and possibilities, is good gifts," said that hymenial diplomat. Eight hundred thousand votes and possibilities are a mighty ally, says the republican Machiavelli. And here lies the secret of this billing and cooing. The eight hundred thousand votes cannot be had unless the owner of them be received on social equality. The doweragess must go with the dower. But when he takes her for better or for worse it remains to be seen whether he will secure the gifts and possibilities.

Let us suppose the wooing twain made one; and the bride, blushing modestly, receives the congratulations of exultant friends. The friends retire, and the happy groom and bride are left alone; he to dream of glory, of power, of empire, through the dower and expected possibilities, she of equality at *fêtes* and executive receptions and senatorial entertainments, and in hotels, theaters, circuses, churches, and cemeteries. Ecstatic over his matrimonial success, he revels in contemplation of the triumphs by which his freedom a century ago was won; he regales her with an eloquent rehearsal of the heroic deeds done at Concord, Ticonderoga, Monmouth, Trenton, Savannah, and Yorktown. At the close of this patriotic rehearsal the bride yawns, and lovingly inquires when the next circus will come to town. Passing at a bound from the Revolution of '76 to the war of 1861, he tells his beloved of the glorious triumphs in arms which were begun for and resulted in her liberation. He is eloquent in portraying the injustice of Providence in permitting her to be enslaved, and grows complacently grand in demonstrating that he, despite Providence, struck off her chains and set her free. Then, "turning to see the smile her cheeks put on," as in trusting innocence she reclines on that fountain of philanthropy, his gushing bosom, he finds his beloved fast asleep and sonorously snoring.

Being a ruler and the head of innumerable money-coteries—vulgarly known as "rings"—whose gravitating center for twelve years past has been the pocket of his wealthy Uncle Sam, he has credit, of course, and establishes his respectability by taking a bridal tour. They visit their Long Branch—formerly known as Louisiana, but which has recently been let by him to a military commission consisting of the Federal Executive and judiciary to make experiments in testing the relative merits of a despotism and a republic. True, the enraptured tourists will not see the Executive there in person, but the brightness of his glory will gleam in his bristling bayonets. But they will be measurably compensated for this loss, in beholding his judicial lieutenant (Durell) playing the role of Bottom, the weaver, kindly attended by his prompter and keeper, (Kellogg,) who constantly coys his amiable cheeks. Jumping or kicking down all barriers set upon him, the creature strays at large, bearing in blazoned capitals between his ever-lengthening ears his advertisement, so comforting to this young man's heart: "States made to order; despotisms guar-

anteed." Visiting their Newport—South Carolina—they see Moses and his profits; not the Moses of old, nor the prophets of old, but Moses of the negro millennium and the profits of insatiable Mammon; not Moses of the Red Sea, but Moses in the dead sea—the sea of dead thrift, dead consciences, dead hopes, dead hearts, everything dead or dying except the crawling, squirming, slimy, icy worms that fatten on the body of this death.

But while our prodigal hero is treading this primrose path, his leasehold estates are falling away. Judgments are rendered against him in Ohio, New Hampshire, and Connecticut by tribunals from which there is no appeal, except by the novel remedy insisted on by the Senator from Wisconsin, to poll the jury, set aside the verdict, and order a new trial by act of Congress.

The fall terms are approaching, other trials are pending, and if defeated he must vacate other and much larger premises. With true knightly chivalry he has hitherto refrained from calling on his bride for help, lest she might suspect the alliance was mercenary. But the time for delicate forbearance is past. His needs are inexorable. In accents as tender as old Rip's when stealing his bottle from Gretchen's pocket, he confesses his bankruptcy unless she will redeem him. The Congress-made statesman as tenderly replies that she intends, like other republican statesmen, to "place her votes where they will do the most good." In vain does he invoke to his aid the tender memories of the past, and portray in frightful colors his ruined condition should she desert him. The forty-minute statesman cruelly responds with the worldly philosophy of Mr. Pickwick, that she goes with the strongest side. Inspired by despair he rises "to the height of his great argument." He recounts again in fervid eloquence the glories of Ticonderoga, of Brandywine, of Cowpens, and of Yorktown. The machine-made statesman unconsciously revealing her rich stores of historic knowledge, sharply retorts that brandy and wine have been his ruin, and upbraids him because he had never told her before that he owned any cow-pens. [Laughter.] As a last hope, he strikes for the tenderest chord in a mother's heart—the love of her offspring. He points to their dead—to Georgia, Virginia, and Texas, those dismal babes who were sown in corruption, but raised in incorruption. He points to their sick infants, Arkansas, North Carolina, and others, and finally, as "hope elevates and joy brightens his crest," he reminds her of their beautiful, blooming, lovely, lively republican twins, Louisiana and South Carolina.

The miracle-wrought statesman, asserting her rank of doctor of the learned laws rejoins in language at once characteristic and pathological, that she cares nothing for their dead; that their sick babes would soon die, and that the twins had crushed his spinal column while carrying them in his arms on offensive exhibition to the world.

Mr. President, our hero is not happy. He determines on a divorce, and straightway rushes to his guardian senatorial uncle. The case is stated with all the indignant emphasis of one who feels he has been swindled, and he raves of his loss. The counselor perceiving the situation, gives his opinion that the husband is entitled to the property of his wife—that he can hold her and all she possesses. The ward, aroused, appeals to know if a divorce be possible. The guardian, equal to the occasion, pockets that opinion, draws forth another, and demonstrates that the wife at the time of the union was clearly *non compos mentis*, and that marriage being but a civil contract must be supported by a consideration. And as the consideration—the votes—for which he had conferred social equality and the blessings of "full and equal enjoyment of menageries and cemeteries" had wholly failed, the contract is void. He advises the unhappy Jeremy Diddler to repair to Chicago, organize himself into a convention, and dissolve the bonds.

Mr. President, let no one suppose from the illustrations I have given of the degree of intelligence possessed by the colored people that I mean to ridicule their ignorance. My purpose is far from that. No one deplores their benighted condition more than I do. Were they intelligent, educated, they would not be the tools and dupes they are of wicked adventurers. They would spurn their serpent-like approach with indignation and contempt. Education would be to them Ithuriel's spear to unmask these ugly and venomous toads who carry not even that precious jewel in their heads.

No, sir; I have thus spoken of the average intelligence of the negro race in the South—and which I might have illustrated in a thousand ways—to lay bare the folly, the wickedness, the crime of raising them from Egyptian darkness and semi-barbarism to the high, the responsible, position imposing duties and intellectual effort to which the genius and training of the Websters, Clays, Calhouns, the Adamses, Hamiltons, and others not unworthy to be named with them, were only equal, and none superior. It was a crime against civilization and liberty which has no parallel in the course of time, and done solely to perpetuate party domination.

But the democrats, and especially those from the South, are continually charged by the republicans with prejudice against the negroes. If they mean to say that we are so far prejudiced as not to be willing to accord to them all the rights of citizenship which we claim for ourselves, it is not true. But if it means that we are opposed to social equality, it is true of both democrats and republicans, and any profession of a republican that he is not opposed to social equality with the negro race is sheer hypocrisy.

When he spreads the feast, and beauty and wit are summoned to revel for a season in the luxury of intellectual foil, why is it that the perfumed messenger of hospitality visits not, like pale Death, with equal pace the door of the noble black man? Is it because there are none eloquent and witty among this million of republican statesmen? Verily, no! The eloquence of one now no more has so often rung in this Chamber in depicting the high oratory and intellectual power of the colored man, that its weird echo still lingers upon these walls. And whenever a democrat in the other wing of this Capitol thrusts his spear in the side of this hollow horse, the republicans stuff at once and set upon his legs some son of Ham to reply, and the republican press the following day regale the whole country with full particulars of the native, cannibalistic art by which the democrat, in the space of five minutes, was torn in pieces, devoured, and digested by his voracious adversary.

Is it because the colored man can boast no genealogy; or can display no family tree; or wears no coat of heraldry? Certainly not. It is the pride and boast of every true republican that he has no genealogy, and it requires a trip across the Atlantic, at the public expense, to subdue his contempt for all armorial distinction.

Is it because there are none brave among them? The republican party has often assured us that in the late war "the colored troops fought nobly," and the Senator from New Jersey repeated the declaration in our hearing on yesterday. It is true, that interwoven with the dreadful realities of that struggle, there is much of fiction and romantic episode; many imaginary instances of inspiring heroism, displayed by the colored troops. Fact and fiction are lamentably mingled in inextricable confusion. But there is one exceptionable instance of daring and of death, and so notably established on the testimony of a single eye-witness, that the Senate must remember it, and it is worthy of recounting even in this august presence. I see that the quick perception and historic learning of this body have already anticipated my discovery, and I would even now forego the thrilling narration, but for the fear, that some future Munchausen might charge me with prejudice against the objects of the Judiciary Committee's special devotion, should I decline to furnish so valuable a contribution to his peculiar style and school of history. I refer, as you know, to the Balaklava charge made by the colored troops, at the witching hour of dawn, on empty stomachs—bayonets fixed, nipples uncovered—and under command of a general of renown, on the 29th of September, 1864, at New Market Heights. The historian—who was the general then commanding, and who seems to have been the only survivor of those colored troops—tells us the story with charming simplicity and with the eloquence of unbridled fancy. He says, that being himself in the rear, where he intended to remain, and wholly uncertain whether the charge would be feebly to the front or with frantic heroism to the rear, he ordered, as a precaution for personal security, the nipples of the guns to be uncapped, and offering up the prayer of Falstaff, "God, keep lead out of me," he gave the order "Charge!" [Laughter.] He says that there fell, within a parallelogram just ten feet wide and three hundred yards in length, the exact number of five hundred and forty-three of his colored associates, or one man to every twenty and three-tenths inches; that as soon as they fell, mounted on his fiery Pegasus, like feathered, or "Harry" Mercury, he marched solitary and alone to one end of that slaughtered heap, and fixing one eye weepingly pendent over the dead and cocking the other fiercely on the enemy—the one tearful as Niobe's, the other glowing like fiery Mars'—he rode, with arms akimbo, through that parallelogram, over that hecatomb of his companions, to the farther end—his horse meanwhile dancing a minuet in the benevolent endeavor to find ground on which to plant its reverential feet.

This was an exploit worthy of deification. Pity it is it had not been performed in the pre-Homeric or Hesiodic age, as that generation, so appreciative of horse gymnastics, would have deified and translated the heroic actor, and he would now be enjoying the beatitude of hero-worship in the constellation of Aries or Taurus; or, happier still, he and that horse might now be a bright, particular constellation in themselves, under the proper name of Equus-anthropos, which lovers, at parting, would designate to gaze upon at the tender hour "when twilight dews are falling fast," and renew their vows of devotion.

But why that humane general should have ridden that tender-hearted horse over the dead bodies of his colored associates, instead of making a brilliant flank movement along that geometric holocaust, such as only he can when moving on a custom-house, I have fatigued my imagination in the vain endeavor to discover. Perhaps, like Mrs. Malaprop, he was trying to ascertain the "perpendiculars" of the slaughter; perhaps it was to accommodate the angle of his vision; perhaps to test the sensibilities of that horse. But conjecture is all in vain. It was simply one of those direct forward movements over the bodies of one's friends, so often witnessed in political strategy, and never known in military tactics, that it must remain a moral wonder until lapse of time and oft repeating shall consecrate it as a truth, or until some cruel Œdipus shall rise to solve the riddle and destroy its artful inventor.

But gallant as was that fatal charge, and heroic and solemn as was that perilous equestrian exploit, they pale into paltriness in presence of the sublime sequel to this military evolution as given in the simple story of this historian. He says that having finished that horse *courante*—consisting of a coupee, then a high step, then a balance—he sounded a solemn halt, faced mournfully about, fixed his eyes again as already described, gave the order, "Attention, General!" and in chronic absence of the Bible, drew from his holster-case a pocket edition of the

Massachusetts Pilgrim's Progress issued under the Maine liquor law, and kissing one end devoutly with his face turned upward, he administered to himself a solemn, corporal, and general oath, that so long as his surviving colored companions would vote to make him governor of Massachusetts or a Representative in Congress, he would spasmodically devote the idle moments of the remainder of his political and official life, in a feeble effort to secure to them the great constitutional right to attend "without distinction of race, color, or previous condition of servitude" every theater, circus, and menagerie in the United States of America and the Territories thereof. [Laughter, and manifestations of applause in the galleries.]

The PRESIDENT *pro tempore*. Order! Applause is out of order. The Chair will remind those persons occupying the galleries that if the rules of the Senate are violated the galleries will be cleared.

Mr. NORWOOD. He then sealed his oath by pressing his feverish lips once more to the bibulous end of that cherished volume, and calling in the eye which had meanwhile stood sentinel on the enemy, he dismissed himself from the parade.

Such is a tame picture of the heroism displayed on that tearful day. Truly and wittily has it been said that history is *his* story! But true in every essential, or false in every particular, as may be the grandiloquent description of that charge, it serves my purpose with equal force. For I am not trying to sift the truth from history. I am arraigning the republican party for the manner in which they treat the colored freemen of America in refusing to recognize them in all the social relations of life, while endeavoring by national legislation to force the poorer class of whites, who are their constituents, into social equality with the blacks. For, sir, this is the true issue made by this bill, and they cannot blink it under the flimsy pretext of securing civil rights.

Do the republicans refuse social equality to the negroes because there are none among them intellectual or learned? Why, sir, a few months ago a colored man delivered in the House of Representatives a dissertation on civil rights so full of classic lore, historic research, and illogical conclusions, that base envy has even hinted the name of more than one republican Senator as the author of that production. Besides, many of them fill eminent chairs of learning, professorships in colleges, and petty offices by grace of executive patronage. Indeed, in every locality in the Southern States where it is necessary to gain the votes of the many through the influence of a few retainers, a tub is thrown to the whale, and here and there, with a rarity that is chillingly exceptional, we see a colored man beguiled, through the gift of a petty office, into the flattering delusion that he is held in cordial regard by the republican party.

And when the inaugural ball came off last year in that grand structure which "rose like an exhalation from the deep," "as by the stroke of the enchanter's wand," when at night—

> The nation's capital had gathered then,
> Her beauty and her chivalry, and bright
> The lamps shone o'er fair women and brave men—

what post of honor and distinction was there assigned to these dusky children of the sun who by their votes had raised their leader, that day inaugurated, to his toppling, dizzy height? Why did we not then behold some of those fair jeweled arms, weary with the weight of their glittering wealth, also adorned by a few of these charcoal diamonds so much treasured at the polls by the pale masters of those ceremonies? And of the thousands who on that night "chased the glowing hours with flying feet," dancing, like Miriam, in joy at the nation's redemption from the enemies of the colored race, why was it that there skulked and flitted here and there but a baker's dozen of the nation's wards, who came, too, in such "questionable shape" and in such Caucasian disguise, that Nott and Gliddon, had they kept the door, would have resigned their posts from mortification and disgust in the desperate effort to determinine their ethnology? And yet these few, as they floated and spun in sequestered knots among that white multitude, were, to their joy on that occasion, like a dead fly in the apothecary's ointment.

Were the managers of that festivity southern men and women? Were they democrats? Were the invited guests southerners only? Were there no republican fathers and sons, mothers and daughters, in that exclusive assemblage? Tickets were distributed to Senators and Representatives to be issued by them to their friends and constituents "without distinction of race, color, or previous condition of servitude." And which Senator here, with blandest suavity, or even by act perfunctory, solicited the pleasure and honor of the company of his friend, Scipio Africanus, or of his sister, Miss Cleopatra Congo, or even of his distant relative, Miss Angelina Octoroon?

Why did not some enterprising statesman in the republican party, with eyes fixed upon the White House—if possibly there be one among them who has sunk so low—pluck the ripened opportunity so golden in promise and thus seal to himself a million voters?

Republican Senators wish to compel common carriers to open their cars and ships to all comers alike; in other words, to force the whites to this intimate association and close contact, or to stay at home or provide their own conveyance. The poor are here to be the victims. The rich can gather up their velvet trains and sweep contemptuously by the poor whites and negroes banked and huddled together, and take luxurious refuge in a palace car. Thus money is to establish class and caste. The millionaire—the shoddyite who during the war risked one and gained four—like another worm that retires and rests secure in its own cocoon, can fold himself with dignified reserve in robes of silk, and with complacent smile wave, as with a golden wand, the black man to a respectful distance.

Here in the shadow of this Capitol we see in miniature the working of this law. Here, too, we see how the honorable Senators who favor this theoretical equality carry it out in practice. Two lines of street-cars come to the doors of this tempie where worship the devotees of social equality, hooded and consecrated under the name of "equality before the law." Over one the fare is five, over the other seven cents. Over one passes no dead-head; the car blazes with the warning, in offensive prominence, "No one rides free over this line." This is not only the anti-dead-head, but it is also the more expensive line. The other company not only charge but five cents for a single ride, but, moved by that vicious custom which has almost become a law, they issue to all Congressmen free passes for the year. Over this line ride the poor, both white and black, but where does—not the ungodly, but—the Congressman appear? When he has finished his sublime philippic against the tyrant, Prejudice, and folded his toga around his towering form and steps forth a walking advertisement of social equality, or, if he prefer, "equality before the law," he moves of course, with logical instinct, straight to the black man's car, and demonstrates in practice all he has taught by precept. Strange to say, his instinct—unmixed with prejudice of course—carries him the other way. This seems strange to the unsophisticated. No doubt it does to the black man, who is just beginning to discern the delicate shade of distinction drawn by his republican friends between himself and a ballot-box. He knows they stuff the box with ballots, but he is just beginning to realize, from his unsatisfied appetite, that they have been stuffing his small capacity with soft sawder, or, in his own expressive language, with "soff sawdust."

But it would be grossly unjust to intimate that the honorable friends of the colored man avoid the avenue line because he is ever to be found aboard. There must be other reasons. No doubt they ride on the Metropolitan line because it is anti-dead-head. No Senator ever rides as a dead-head. He would scorn himself; yes, scorn any man who would offer to pass him as a dead-head. He would as soon submit to have his salary increased as to be classed among the dead-heads. And I do not know a subject on which all Senators, except eight or ten, are so desperately resolved and determined as in their opposition to an increase of salary. Nothing short of mandatory instructions from their constituents could overcome their heroism on this subject. He will not use the avenue line because he would be a dead-head. His money would remain in his pocket. "The love of money is the root of all evil," and he resorts to this delicate device to drop his salary along the highways as a contribution to the poor—the railroad companies in the land. His refined sensibility is wounded at the thought that his traveling colored companion, who pays, should see him riding free, and he scrupulously avoids giving offense to a brother. This is kind, it is noble, it is heroic and self-denying, it is the very essence of Christianity; and because it is the essence of Christianity, or a great moral idea, the advocates of social equality avoid the avenue line.

Thus we see that the prejudice is not peculiar to the democrats. It belongs to us all. It is nature, it is instinct, it is reason. But I will go one step further in this direction and then turn to another branch of this subject. Let us suppose a case. And without doing violence to the hypothesis, we will suppose that after some champion of this bill to establish social equality has by his vote conferred upon his poor white constituents the honor of free association in schools with negroes, those constituents should meet in convention and resolve, that they have taxed his patriotism long enough and will not impose upon him the burden of serving them in Congress any longer, but will permit him to take rest in the bosom of his family and among his colored associates, even against his earnest protest that he is willing to sacrifice himself further in their behalf. Fortune meantime deserts him and he becomes poor—for even a congressman, after his term is ended, may become poor—and from necessity, has sent his daughter to a mixed school. When she attains sweet sixteen a young gentleman of African descent, of untainted blood, who can trace it back in its ethnological purity as far as Noah and the flood—educated and refined, exquisite in dress as Beau Brummell, as worthy to lead the fashion as Beau Nash, wealthy as a moiety contract, a custom-house ring or District ring can make him, and appreciating the advantages of civil rights, calls to ask of that ex-champion of social rights the honor of his daughter's hand. Does any one doubt from which extremity of that ex-champion the instant reply would come—whether from his head or his heel? He would not reply categorically; but with a few vigorous utterances, not strictly canonical, he would impinge on that astonished Adonis with both ends in action like a supple-jack and battering-ram combined.

But, turning, he finds his sweet sixteen in spasms, and on inquiry for the cause, he hears a tale that makes him cry with old Brabantio, "Who would be a father?" She tells that doting father, that civil-rights advocate, that political trader, who in trying to buy the negro vote cheap has sold his daughter dearly, that the ejected gentleman is her affianced lover; that she has doted on him from her youth up; that in the same school where her philanthropic father placed her at ten, close at her side sat, day by day, for years, that idol of her heart; that her first lessons in Peter Parley and Ovid's Art of Love rippled in melodious accent from his angelic lips—

O, it came o'er my ear like the sweet south,
That breathes upon a bank of violets,
Stealing, and giving odor—

that when to the theater and to church she went, the Apollo of her bosom followed and took a seat near by, and thus and thus he had won her heart.

And finally, in love's rhapsody and with Cassandra's inspiration, she forewarns him that her life, like his political party, must be a failure, and, like Ophelia's, end in "muddy death," unless he will bless the bans, and after death lay herself and darling side by side in the same grave-yard beneath a damask rose and a lovely black-jack—or *quercus nigra*—as emblems of their homogeneous union, and chosen by his poetic soul as the happiest type of civil rights. [Laughter.]

Let us pause for a moment and consider whether this advocate for civil rights would thus act. If there be one who would not, let him avow the fact. If any white man would under any circumstances consent to such an alliance by a member of his family, let him declare it and put himself in Coventry. If he would not, the conduct of the champion is true to nature. But would it be logical from his standpoint? He denies that he has any prejudice to the negro race! Then why not intermarry with them? He has no feeling of hostility! Then, all other things being equal, why oppose his marrying a relative? The question admits of but one answer, and that is the answer that God has put in the mouth of every white man since he created man in his diversity. That answer is, it is repugnant; it is loathsome; it is unnatural. The feeling, the prejudice, the repugnance are universal. Such an alliance is unnatural; and what is unnatural is forbidden, and what is forbidden is unlawful. I say this prejudice is universal. Climes do not change it. Education does not subdue it. Christianity does not abate it. Civilization but intensifies it, and science has demonstrated its wisdom and its benefit to the physical, intellectual, and moral power and greatness of the white race. It had its birth at creation, has survived the ages, the graves of empires, the subjugation of races, and will ever live and perish only with the last expiring man. The question of its universal existence no more admits of doubt or argument than the proposition that black is not white, or that the races are distinct.

But it is said, "Admit it, then what of it? We do not mean that blacks and whites shall marry." Well, if you do not, then be consistent, be logical. Let precept and example be in harmony. If you would not marry them, then coerce no conditions in life among the poor, who cannot protect themselves, by which you increase the danger of such relation. You would not encourage marriage between the two races, but you compel them to associate in every *social* condition. You tell your child not to gamble, but that he must associate with gamblers. You tell him not to drink, but he must affiliate with drunkards. You instruct him not to lie, but chain him neck to neck with liars. You caution him not to make companions of negroes—not to marry one—but you tie him side by side in the tenderest age of life with negroes. And thus you tell him the negro is as good as he. You make them playmates, partakers of common joys and sorrows, associates at school, associates in pleasure, associates in church, in public conveyances, at meals, when traveling, and lay them away to sleep their last sleep side by side. Every act is a declaration of social equality, and every word is a denial of your acts.

How such a father shall at the lips of his own child escape the condemnation pronounced against the hypocrite will turn on either his being a greater hypocrite or the preferable alternative of his being a natural fool.

Woe be unto the political party which shall declare to the toiling yeoman, the honest laboring poor of this country, "Your children are no better than a negro's. If you think so, you shall not practice on that opinion. We are the rulers; you are the servants! We know what is best for you and your children. We, the millionaires—we who are paid out of your pockets, will take your money and will send our children to select high schools, to foreign lands, where no negroes are; but you, you who are too poor to pay, shall send your ragged, hungry urchins to the common schools on such terms as we dictate, or keep them away to stray among the treacherous quicksands and shoals of life; to wander on the streets and learn to syllable the alphabet of vice and crime, or stay at home and, like blind Samson, in mental darkness, tramp, barefoot, the tread-mill of unceasing toil."

To constrain the traveling public to distasteful situations; to compel the pleasure-seeker to stay at home or submit to annoyance greater than the pleasure; to make a battle-ground of public schools, or drive the poor away from their doors—these iniquities are not enough for the republican party. They must take one step more; they must torture the living by stepping into the graves and disturbing the rest of their cherished dead. They say to the poor man whose departed loved ones must be buried in the public cemetery, and may be at the public cost, "Bury your dead where we say, or throw them out in the potter's field like dogs; bury your wife, your child, side by side with the negro, or any one we name." And if in time the bloody scythe of Death has filled the ground until, in files, the sleeping soldiers of the Cross lie elbow touching elbow, and the files must be now doubled, you command the sexton to open the grave of the poor man's wife or child and bury a negro there, though he died by the hangman's rope for a crime that should debar him Christian burial, or he shall forfeit his money to the villain's kin and waste in a prison cell.

If I have thus far treated this subject with too great solemnity, may I not indulge the hope that the Senate will extend to me its charity, at least until I may be heard? One less reverential might deport himself in the presence of this dignified question with some degree of levity. Far be that from me. But when a few days ago the Senator from New Jersey [Mr. FRELINGHUYSEN] solemnly rose and as solemnly announced that this interesting nuptial ceremony was temporarily postponed, because one was absent who desired to participate in the joy of the occasion, I felt funereal, because the Senator looked funereal. It is natural to some men to feel funereal, and it is natural to some men to look funereal. And if I have thus felt and spoken on this momentous occasion, were it deemed necessary or even conventionally appropriate to offer any suggestion by way of extenuation, I could only point to a temperament somber enough indeed by nature, but greatly heightened in lugubrious tone by the colors of the dark and gloomy subject which has for several years commanded and received our profoundest consideration and respect.

For, sir, we are engaged in determining a question of the greatest moment to the American people.

The great question is how we shall maintain "equality before the law," or, expressed in equivalent terms, how the republican party can get the negro vote and thus be saved. Upon the correct solution of this political conundrum may turn the destiny of this and all republics. Happily for this generation and the fate of unborn millions—the genius of the republican party, hitherto equal to every undertaking which could work disaster to the country, has not been found wanting in grand conception to lift from the gloomy future its Cimmerian veil. Light breaks in upon us, and torturing shadows flee away. The whole country breathed with freedom and delight on hearing it announced, through the report made by the Senator from New Jersey, that the Senate Judiciary Committee, after a laborious and anxious session extending over several months, had solved the most perplexing national embarrassment of this or any other age, by the eminently wise and profound conclusion that the easiest, most dignified, and patriotic measure which they can devise is, that Congress shall enter, without delay, upon a general cemetery and hotel business.

Sir, I shall not commit the folly of entering upon any extended argument in the vain hope of adding anything in support of the able report of that committee; nor will I perform a work of supererogation by enumerating the inestimable blessings to flow in perennial stream to the American people, if the republican party, or even the dominant majority of the present Congress, should resolve on establishing a cemetery, even though, as with everything else within their reach in the United States, they should appropiate the advantages and enjoyment of that peaceful institution exclusively to their own use. Such an act would be so singularly patriotic, and so signalized as their only peaceful step, that it would be hailed with unanimous acclaim by an indignant but grateful people.

It requires but a casual reference to the report of the committee to show that my encomium on that production is but too tame and feeble. The Judiciary Committee have discovered what Christians and pagans in all ages have vainly sought to know. Their labor for months has not been in vain. They have penetrated the veil, have held converse with dwellers in the mystic land—but not with that host of republicans which no man can number, who are wandering on the Stygian shore without oboli, and unable to cross, because Charon refuses to take their irredeemable currency—and have returned to earth with the joyful tidings that there is happiness in the grave. They tell us in their report that there is such a bliss as "enjoyment of a cemetery," and with a broad philanthropy never known to man before, they have declared their unselfish desire, most felicitously expressed by themselves, (as I quote,) that "all persons within the jurisdiction of the United States shall be entitled to the full and equal *enjoyment* of the accommodations, advantages, facilities, and privileges of *cemeteries*." [Laughter.]

It may be that this discovery is not original with the Judiciary Committee of the United States Senate. It may be that suicides, (and by this word I mean not to intimate the fate of the republican party,) finding no happiness in this life, are given a glimpse of the joy to be found in a cemetery, and philosophically rush to its embrace. But it is only just to the Judiciary Committee that I should state, they tell us there is joy only in a cemetery "supported by general taxation." What joy there is in anything in this world, or out of it, that springs from general taxation, puzzled my understanding before I read the report of the Judiciary Committee. Had I been left to my unguided reason to learn why there is enjoyment in a public cemetery and none in solitary burial, with the provisions and aims of this bill before me, I would have supposed it is, because in one we would have "the full and equal privilege" of colored society, while in the other we should lie "in cold obstruction" and in cheerless solitude.

But, happy committee, who have made the comforting discovery that there is one spot on this sad earth where general taxation brings joy to its inhabitants! And happier, still, should be the American people, as, under republican rule, they are enjoying more "general taxation" than any people on the face of the globe. What joy has not that party in reserve for us? They have given us the joy of reconstruction—the joy of Holden, of Scott, of Bullock, of Reed, of Smith, of Ames, of Warmoth, and Kellogg, and, greater than all, of

Durell; the joy of ten States burdened with irredeemable debt; the joy of one State politically dead; the joy of another under acknowledged despotism; the joy of a third in the throes of internecine war; the joy of an irredeemable paper currency; the joy of financial disaster; the joy of ceaseless investigation of their public officers; the joy of innumerable "rings" whose radii reach every nook in the land where a copper can be stolen; the joy of taxation by wholesale and by detail; the joy of negro dominion and white subjection; and now they propose to honor us with "equal and full association" with negroes, and to give us as a final bequest, to be enjoyed after death, the "*enjoyment* of a *cemetery!*"

The history of the party itself is a demonstration that it needs a cemetery. Argument would but weaken the conclusion. The people see it. They have long felt it. A dozen or twenty States stand willing and eager to donate liberally their ground. Indeed, sir, the people themselves, in proportion as they are zealous for the public good and have been watching the movements of that philanthropic party and school of statesmen in their concentric and eccentric "rings," have been, in like degree, generously moved, themselves, to inaugurate this mortuary enterprise. They have determined, that these statesmen, white and black, who have signalized themselves by such distinguished service—a service, sir, in which they have made a voluntary sacrifice of everything except themselves—shall by the coming of the grand centennial celebration of our nation's birth, find "free and equal accommodation" in the hospitable chambers of a retired sepulchral home, "without distinction of race, color, or previous condition of servitude," where they may "rest from their labors," and enjoy, in eternal seclusion, the earnest prayer of every patriot, that "their works do follow them."

These republican statesmen have heard the sentence pronounced upon them by the people, the tribunal of last resort, and they know it will be carried into execution as surely as the day appointed shall come. But the Judiciary Committee, with that repugnance to being buried alive so natural to all politicians, have reported this cunningly devised measure for the purpose of avoiding the sentence. This bill, to bury negroes and whites together, is but an indirect and covert attempt to drive the people to adopt the system of cremation. The committee, however, need not be alarmed as to the method by which their party will be taken off. The people care little or nothing for the manner of their departure. All they desire is, that they will not "stand on the order of their going, but go at once." Whether they complete the work of suicide which they have been slowly committing for nine years past, or whether they wait to be buried alive, or to take their first upward tendency and flight in the fumes and ashes of cremation, is with the people a matter of trifling moment. And I think I may safely say, speaking as one of the people, that on petition to them by a delegation or two of the money-kings of Boston and New York, whose influence seems to be more potent with the American throne of grace than the expressed will of the laboring masses, the people would kindly reduce the judgment passed to bury the republican party alive to that of incremation.

The question is, how shall we save the republican party? But the answer to the question, I confess very frankly, passes my understanding. It involves too much erudition in surgery, therapeutics, antiseptics, and prophylactics, for my limited store of learning. When the President sinks back in despair before its impossible solution, the case may be considered without remedy. He was deeply and painfully impressed with the necessity for immediate and omnipotent help, and after most thoughtful deliberation concluded there was but one remedy, one hope—and that was by unloading. He commenced, but finding, even if he could finish the work within his natural life, that at the end there would be nothing left of his party but the cart, mule, and negro driver—the only innocent things he could find about it—he stopped, ordered up the tail-board, and is now driving heroically on to the chasm.

An earthquake produced an abyss in the forum of Rome, which her citizens endeavored in vain to fill. A noble youth who had endeared himself to his country by many deeds of valor, hearing that the abyss, which threatened the destruction of Rome, could never be closed without a sacrifice of human life, clad himself in full armor, mounted his charger, and leaped into the chasm, which closed, and his country was saved.

Between the two sections of this Union the thunderbolts of war have made a deep and bloody chasm. The good and true patriots have vainly tried, for ten years past, to close it up. The evil genius of the republican party has thwarted every attempt. But the country has found, at last, a Curtius in the hero of the Northern Army. That leader has performed many martial acts for which he is cherished in the hearts of the majority of his countrymen. But his patriotism never shone with such effulgence as at this moment, when we behold him with closed eyes and clenched teeth, driving his cart loaded with his party and the bondholders recently mounted behind, full tilt into that bloody chasm to save his country from destruction. The desperation of the imminent leap would excite enthusiastic admiration, did we not know that the tragic performance is of necessity and not of choice. The blending in one red burial of party and cart, negro and mule, would make every patriot sad, but for the pleasing consciousness, that their loss will be their country's gain. And when we remember how luxuriously they have lived, reveling in purple and marble halls, and spending in lavish waste the profusion of a nation's wealth, our pity might be aroused that those, who have so much to make them cherish and cling to life, will so soon and forever pass out of view, did we not know that they will go full-handed, and will leave nothing behind but a bankrupt estate, and creditors divided in feeling between indignation at the loss of their debts and joy at riddance of the debtor.

It is also equally clear that Congress should without delay enter upon the enterprise of keeping a hotel. The power of Congress to keep a hotel is plainly given in and by the words "to promote the general welfare;" or may be drawn from the Declaration of Independence; or the preamble to the Constitution so often cited in support of propositions equally as clear as this, by the honorable Senator from New Jersey.

Peace and order are necessary to the general welfare. And without consuming time in demonstrating, exegetically or pathologically, the far-reaching influence of gastronomic equilibrium, I may rest content, in this enlightened presence, with a statement of the general proposition, that no plan more philosophical, humane, and patriotic than the one recommended by our Judiciary Committee, could possibly have been devised for the purpose of preventing sectional rebellion and civil war. For history, which is but a panorama of arms and human gore, does not contain one single well-authenticated instance of a people rising from a full and hearty meal, and rushing, prior to digestion, into insurrection.

But still more salutary will be this wise enactment, because without it absolute "equality before the law" cannot be maintained.

The objective aim of this republican statesmanship is at the rebellious spirit of the keepers of hotels in all America. It is to guarantee abdominal equality to all guests, black and white. To do this, Congress itself must act in carrying out the law. This is a body of delegated powers. *Potestas delegata, non potest delegari.* The power of Congress to keep a hotel being a special delegated power, we cannot delegate that power to another. It will be necessary, therefore, to organize a special committee, which, without intending to infringe upon the prerogatives, which, in this great work, belong exclusively to the Judiciary Committee, I, with all deference, suggest, might be called "The United States Grand Eclectic, Peripatetic, Special Committee on Education, Grave-yards, and Hotels." [Laughter.] From this grand committee a sub-committee can be appointed, to be called the dining-room committee, to be adorned with white aprons, white cravats, and roundabouts; to be armed with stomach-pumps; and having their hair parted in the middle, to signify their high justiciary office and commission to make an equal victualary division to both whites and blacks, and thus "to establish justice and insure domestic tranquillity." They must superintend the seating of the guests; first a black, then a white, like spots on a checker-board, and take their stand as vestal virgins behind the chairs of the colored guests. And to insure "full and equal accommodation to all," (in the felicitous language of the committee,) whenever Java coffee and loaf sugar, linen napkins, ivory-handled knives and silver forks, boned turkey, and hams, with champagne sauce, be given to the whites, this vigilant committee must see to it, that bean coffee and brown sugar, cotton napkins, buck-handled knives and two-tine forks, bacon and greens, rancid butter and ancient eggs, are not given to the blacks. [Great laughter on the floor and in the galleries, with indications of applause.]

The PRESIDENT *pro tempore.* Applause is out of order, and if it be repeated in the galleries the Chair will order them to be cleared.

Mr. NORWOOD. And if at any time after the guests are seated, and the committee have inquired if all are ready, and the chairman has given the word "Go," they should detect any voracious white rebel disregarding the will of the republican party and the majesty of this law, and attempting to evade its equitable and just intent by smuggling in more than his share, the sub-committee should promptly warn him of their high mission to enforce "equal and full accommodation" in that hotel; and that unless he desist, "equality before the law" will be maintained by active and exhaustive use of a stomach-pump, enforced, in case of resistance, by the *posse comitatus* of the Army and Navy of the United States. And while I would do nothing to arouse a feeling of jealousy growing out of personal ambition for priority or precedence in the organization of this sub-committee, I would merely suggest, that the Judiciary Committe, who have given the details of this intricate and delicate enterprise most careful consideration, and no doubt sent for persons and papers, should be presumed to possess more accurate knowledge on this gustatory service than any other members of the Senate.

The Judiciary Committee have also wisely concluded that Congress shall keep a school, or rather many schools. The power of Congress to regulate the public schools is found in the grant of power to declare war. The power to declare war is unlimited. Congress can declare war with or without cause. It may make war as well against friends as foes. In support of this proposition I have only to cite its course foward the southern people for the past eight years. This being true, Congress can unquestionably declare war between white children and black children in the public schools. I maintain further that it can, thereafter, declare war among the parents, white and black, of those innocent, little children. I advance a step still beyond. I maintain that as the power to make war necessarily carries with it the power to destroy, Congress can go further and even destroy the public schools! In support of these conclusions I plant myself, with confidence, upon the report of the Judiciary Committee of the Senate

That Congress should go into the school business is even still more clear. No constitutional lawyer at least will hesitate to give his hearty assent. I am proud to say that on this one branch of the committee's report the whole people of the United States are agreed with a unanimity never surpassed, and only equaled by the vote of the Pickwick club, that Mr. Pickwick might travel and pay his own expenses.

Yes, Mr. President; let Congress establish and regulate at least one public school, and let it be opened in this high Chamber. Let the first text-book in the curriculum be the Constitution of our country. After that, let us study the mysteries of the volume of humanity. Its lessons we can better learn by looking inward, for they are written on the tablets of our hearts, more enduring than stone, and as truthful and unchanging as the decalogue. We can next turn to history and learn the philosophy of its teachings. If its ponderous volume make us shrink from entering upon the labor of the search, we still can find extracted and in condensed form its richest treasures. Buckle, Mill, Comte, Huxley, Spencer, and a score of other masters, in the quiet of secluded life, far removed from the bias of party, the fever of political strife, from sectional hate, from selfishness, and the insidious motive to gain or retain power, have taught us the hygiene of government, whose laws we can no more disregard than we can violate with impunity a law of physics. And if there be one law whose truth is demonstrated, it is that legislation, wise or unwise, in all free popular governments, is the reflex of social order, of social progress or decay; and that social order or public opinion never can be created or controlled by coercive legislation.

Laws not founded on public will and favor either drop still-born, or being only irritating thorns, nature soon throws them off. No wise statesman ever runs counter to well-defined popular feeling or opinion. He does not attempt to overcome it by compression from without, or by prisons and dungeons. He applies his remedy within. He moves on the fountain head, and saves himself the mortification of certain failure in attempting to dam up a never-ceasing stream that swells and rises and gathers power from obstruction. So will the republican party do if it act wisely. It is entering on the dangerous experiment, one which tyrants in church and state have tried without success, of forcing a people to change opinions. And though the contemplated law, I regret to say, is intended to be sectional in its operation, to bear and grate upon the South, still it makes war upon a feeling common to the white race of our common country. The late Senator from Massachusetts declared in his place in this Chamber that it exists in Massachusetts as strongly, though not so widely, as elsewhere in the Union.

Let us look for a moment at the existence and very gradual decline of this sentiment in the New England States.

Connecticut made a blow at the slave trade as early as 1774; patrolled free negroes, as if they were slaves, as late as 1797, and punished for educating "persons, not inhabitants of the State, of the African race" as late as 1833.

New Hampshire abolished slavery over eighty years ago. In 1815 she forbade by law the enrollment of negroes among her militia; and this law was retained on her statute-book till 1855.

Rhode Island abolished slavery in 1784, but as late as 1844 her people expressed their prejudice against the negro in terms not to be misunderstood. It was by solemn statute which forbade the joining in marriage any white person with any negro or mulatto, under penalty of $200, and making the children of such pretended marriage illegitimate.

And the last I shall notice is Massachusetts.

In 1705 Massachusetts forbade by statute the marriage of whites with negroes or mulattoes, punishing the ministers or officers officiating, by fine of $250, declaring the marriage null and void, and degrading the issue by fixing on them the stain of illegitimacy. The title to that act is singularly suggestive to us now. It read, "An act for the better preventing of a spurious and mixed issue," and contained these words:

> If any negro or mulatto shall *presume* to smite or strike any person of the English or other Christain nation, such negro or mulatto shall be severely whipped, &c.

This law, in a careful revision of her code, was solemnly re-enacted in 1836. And Chancellor Kent asserts that, as late as 1848, in no part of the country except in Maine, did the African race, in point of fact, participate equally with the whites in the exercise of civil and political rights.

If New England with all her philosophy, with all her Christian charity, and with so very few of the black subjects on whom to bestow that abounding charity, and without any irritating obstruction, has not been able to overcome her prejudice in more than half a century, how does she expect us of the South, goaded and embittered as we have been by strife continually aroused between whites and blacks by intermeddling carpet-baggers and hostile congressional legislation, to subdue our life-long antipathy to social equality among the races?

"Thou hypocrite, first cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye." Unless you do, "your righteousness shall not exceed the righteousness of the scribes and pharisees."

The injustice of this bill is manifest and gross. Owners and lessees of hotels, railroads, and so on, are to be punished only because they act in obedience to public sentiment; because they respect a feeling common to republicans and democrats. Whether their guests be black or white would not give hotel-keepers a moment's thought if public sentiment were different. But they know that no hotel could maintain itself, which should throw open its doors to blacks as well as whites. Yet these men who are guilty of no offense, but are merely carrying out the universal sentiment of the American white race, are to be made the victims and suffer, vicariously, for what the public do. This cruelty would be a refinement on that of the wolf, which devoured the lamb for what the wolf himself had done. For republicans and democrats both, by refusing to patronize hotels where negroes are received on equality, compel the proprietors to exclude the blacks, and now the republicans propose to punish such proprietors for complying with this general demand of the traveling public.

I shall now consider this question in the light of the Constitution, and inquire whether such legislation be warranted by that once sacred instrument.

Mr. Justice Swayne, in deciding a case which arose in Kentucky under the thirteenth amendment to the Constitution, (reported in 1 Abbott, Circuit Court Reports, page 44,) used the following words:

> What is unwarranted or forbidden by the Constitution can no more be done in one way than in another. The authority of the national Government is limited, though supreme in the sphere of its operation. *As compared with the State governments, the subjects upon which it operates are few in number. Its objects are all national.* It is one wholly of delegated powers, and * * * *whenever an act of that Government is challenged, a grant of power must be shown or the act is void.*

These words announce no new construction, but they are valuable as emanating from a judge generally believed to be latitudinal in his opinions of the extent of Federal power, and as one of the three justices who dissented from the opinion of the majority in the cases from Louisiana commonly called the Slaughter-house cases.

The power of Congress to pass this bill must be shown by those who advocate its passage. It is not pretended that Congress, prior to the adoption of the last three amendments, had the power to enact such a law; nor is it claimed that any but the fourteenth amendment confers such power. On this amendment the supporters of the measure rest the case. It reads:

> All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.
>
> * * * * * * * *
>
> SEC. 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

To determine this question it is necessary to understand clearly—

First. What are the privileges and immunities that belong to a citizen of a State, as such citizen?

Second. What are the privileges and immunities of a citizen of the United States, as such citizen?

A correct analysis of these respective classes of privileges and immunities must show to which class the rights or privileges and immunities to be enforced by this bill belong, and that result must necessarily determine the question as to whether they are the proper subject of congressional control.

There was a time when there was no other citizenship than that of a State. That time was between the 4th day of July, 1776, and the 17th day of September, 1787. This proposition no one will deny. It is equally clear that between those dates there were no privileges and immunities other than those conferred by and derived from citizenship of a State.

Before the Constitution was adopted citizenship of a State was an entirety. A citizen of New York, or Georgia, owed allegiance to but one government. That government was his State. He could look to but one power on earth for protection That power was his own State. From that State he derived and enjoyed every kind of privilege and immunity which could belong to him as a citizen. But the privileges and immunities which he possessed were only such as were bestowed by the law of his State. Hence the privileges and immunities of the citizens of the several thirteen States varied, and none were exactly alike unless their laws were the same. And this important fact was wisely considered by our fathers in framing the Federal Constitution. They foresaw that the full benefits had in view and to flow from the Union of the States could not be realized unless the advantages of citizenship in each State should be open to participation by the citizens of the other States. Hence they inserted the second section of the fourth article of the Constitution, that—

> The citizens of each State—
>
> Not the citizens of the United States—
>
> shall be entitled to all privileges and immunities of citizens in the several States.

Now, what were and are the privileges and immunities referred to here? They are clearly such and only such as each State could and might confer on her own citizens. And what were they? They were such as belonged to the citizen of each State before that State became a member of the Union under the name of the United States. They were such as the organic and statute law of that State allowed, or might afterward allow—no more, no less—and had Georgia not changed her constitution or her laws from 1787 to this time, the privileges and immunities of a citizen of that State would be to-day just what they were then. To attempt to enumerate them would be worse than folly. It would be an attempt to state every right which a citizen of a free

government enjoys. It would be to designate every benefit which is derived from Magna Charta, the Bill of Rights, the common law, and the statute law.

Mr. Justice Washington, in Corfield *vs.* Coryell, 4 Washington's Circuit Court Reports, answered the question, "What are the privileges and immunities of a citizen of a State?" by a statement whose generality shows that his mind shrunk instinctively from the impracticable labor of enumeration, but whose comprehensiveness is so just that from the day of its utterance to the delivery of the decision in the Slaughter-house cases, no court has attempted a correction, and all judges, who have had the question under consideration, have adopted it as their own definition. He said:

> We feel no hesitation in confining these expressions to those privileges and immunities which are, in their nature, fundamental; which belong of right to citizens of all free governments, and which have at all times been enjoyed by the citizens of the several States which compose the Union from the time of their becoming free, independent, and sovereign. What these fundamental principles are it would perhaps be more tedious than difficult to enumerate. They may, however, be all comprehended under the following general heads: "Protection by the government, the enjoyment of life and liberty, with the right to acquire and possess property of every kind, and to pursue and obtain happiness and safety; subject, nevertheless, to such restraints as the government may justly prescribe for the general good of the whole."

Such is his language, and the Supreme Court of the United States, *including the three justices who dissent*, approve the definition. And just here I will make a remark that it will be well to bear in mind as we proceed. It is this: I take it as granted, without argument, that no one, lawyer or layman, will deny that every privilege named in this bill before the adoption of the fourteenth amendment, was derived by those who enjoyed them exclusively from the States of which they were citizens. To keep a public inn; to bury the dead; to construct and manage railroads and other modes of conveyance; to open and manage a theater, are privileges conferred by each State. They belonged to the citizen of each State before the Union was formed; they have been granted by the States ever since the Union was formed. They have been regulated, modified, enlarged, given, and taken away by the States exclusively.

Having advanced thus far, it may be assumed as incontrovertible that all the privileges and immunities enjoyed by citizens of a State at the time the Constitution was adopted, except as modified by State statute, remain as his possession, or as the heritage of his children under the State, unless it can be shown affirmatively that they have been taken away or modified by the Federal Constitution. If the Federal Government claims that any of these rights have been surrendered to its control, the affirmative must be shown by express grant in the Constitution. If it assumes control over any one of these privileges, on being "challenged," in the language of Justice Swayne, it must give the pass-word—it must show written authority.

Let us ascertain whether and to what extent, if any, the control or protection of the privileges and immunities of citizens of a State were transferred to the Federal Government.

We have already seen that the citizenship of a State was not entirely changed, if at all, to that of the United States on the adoption of the Federal Constitution. We have also seen that the great fundamental privileges and immunities of citizens of the respective States remained under exclusive control of the States after the Union was formed, unless it shall appear that in express terms their control was transferred to the United States Government.

I repeat, that citizenship is an entirety. No one can be a citizen of two independent governments which are absolutely sovereign. Citizenship necessarily implies allegiance and obedience. It necessarily implies protection. If the government be absolute and in every essential sovereign, the control over its citizens and subjects must be equally unlimited. But should the government be not absolute and sovereign, but limited and qualified, its control over its citizens and subjects must also be limited to its qualified authority. If it be established to accomplish certain, special, designated objects and no others, its control over the life, liberty, and property of the citizen must be limited to a control which is necessary to accomplish those objects. And should there be any privileges and immunities, any rights or freedom of the citizen, whose control is not necessary to the accomplishment of those objects, the government thus limited cannot exercise control or jurisdiction over those rights and privileges. To illustrate: if the Federal Government had not power to declare war, levy taxes, or regulate commerce, it could not control the citizen's person for the Army or Navy, nor his money, nor his produce; and these would clearly remain under State control.

It would really seem unnecessary to go further than this to show the utter absurdity of the proposition contained in this bill. The objects of the Federal Government, says Mr. Justice Swayne, "are all national." "The subjects upon which it operates are *few in number*." Is it a *national* object to regulate theaters, hotels, cemeteries? Is it a *national* object to see that a negro shall sit in the same coach with a white man? Is it a *national* object to provide that a negro shall sit at the same table with a diplomat on a Potomac River steamboat? Is it a *national* object to regulate manners or to control prejudices?

But, again, Mr. Justice Swayne truly says that the subjects upon which this Government operates are *few* in number compared with those under State authority. If Congress shall regulate the management of theaters, cemeteries, hotels, pray tell me what is there on earth, within the States, that Congress cannot regulate? Where is the limit? Can it not regulate fairs, circuses, hippodromes, menageries, and organ-grinders? The Judiciary Committee must believe that Congress has this power, because they report in favor of regulating theaters and other places of public amusement.

Without levity or jest I state it as a legal proposition, that if Congress can protect the citizens of the United States in the manner here proposed, it can protect them in the enjoyment of every general privilege and immunity known to an American citizen, whether it be derived from citizenship in a State or of the General Government. More than this, Congress can punish for interference with any general privilege or immunity of a citizen by any person, no matter whence that privilege or immunity be derived. And if this can be done, then this result logically and inevitably follows: that the assumption of jurisdiction to protect these rights of a citizen necessarily ousts the jurisdiction of every State over the same subject-matter. By the Federal Constitution, since the adoption of the fourteenth amendment it is one of the immunities of every American citizen that he should not twice be put in jeopardy of life and limb. And when the Federal Government assumes jurisdiction of any cause, civil or criminal, the State cannot act, and an offender once punished by a Federal court cannot, for the same offense, be punished by a State court. A power delegated to Congress is not reserved to any State. *E converso*, every power is reserved except those expressly delegated. A State may exercise certain powers which are delegated to the General Government, but only so long as Congress declines or refuses to exercise the power. A State may establish rules of bankruptcy if Congress remain silent. But when Congress establishes a rule of bankruptcy, the State law is instantly made inoperative. But Congress has no jurisdiction over subjects such as these named in this bill, unless it can be shown that the privileges and immunities referred to by the fourteenth amendment include those general privileges and immunities which a citizen of a State possesses.

But I will resume the direct line of argument I was pursuing.

Whether the citizen of a State, before the fourteenth amendment, was also a citizen of the United States is not essential to a correct and clear solution of this question. For if a dual citizenship did exist, it is clear, from conclusions already arrived at, that neither could in the nature of things be an absolute entirety. As before remarked, no man can owe entire allegiance to two sovereigns. No American citizen could owe undivided obedience to, and claim every protection which belongs to a citizen or subject from, two distinct governments at one and the same time. If there is a dual citizenship, the obedience due to either, and the protection guaranteed in return by either government, must necessarily depend on the nature and extent of the respective governments. If the control of either government is restricted by limitations, the protection afforded to its citizens must necessarily be limited in like manner and to the same extent. If one be permitted to exercise only certain delegated powers, the control over the citizen by the other must be the complement of the whole power of the two. This brings us to a point at which we can see the conclusion, which, it seems to me, is logically inevitable. And to arrive at it, it is only necessary to analyze the Constitution of the United States to find what rights are therein guaranteed, and thus determine the second inquiry, to wit: What are the privileges and immunities of a citizen of the United States as distinguished from those of a citizen of a State?

To my mind they are as separate and distinct as is the government of a State from that of the United States. They are so well defined that a child can learn by rote and designate on its fingers the privileges and immunities of a citizen of the United States. It seems to me, that no case can arise in which any man can be at a loss to tell in a moment whether redress for violation of any privilege or immunity must be sought in a State or a Federal court; for the conclusion to which I arrive is, that all the privileges and immunities of a citizen of the United States are designated and named in and derived exclusively from the Constitution of the United States.

Before I proceed in further consideration of this proposition, let me briefly recapitulate

The privileges and immunities of citizens of the original thirteen States were, prior to the Federal Union, such as they possessed under their own State, and were, therefore, subject to the exclusive control of the States respectively. When the Union was formed, the privileges and immunities of the citizen remained the same, except that a few others were conferred by the formation of the Union. Those privileges and immunities (excepting the few thus added) still remained under State control, except a few which were confided to the General Government. But the regulation of any rights of the citizen by the General Government was restricted in proportion as that Government was itself limited in its authority. The authority given to the General Government was strictly and expressly limited; and it could exercise no control over the *life, liberty*, or *property* of a citizen of any State, or *of a citizen of the United States*, (if such citizenship existed prior to the fourteenth amendment,) except for certain enumerated purposes.

But to resume. I say the privileges and immunities of a citizen of the United States are distinctly designated in and derived from the Constitution. Let us examine this proposition closely—test its strength; for on its soundness depends the safety of our dual, complex government and the existence and perpetuity of State-rights,

unless the people of the States grow alarmed at the dangerous power conferred by the fourteenth amendment and tear it from the Constitution.

The Supreme Court, including the three dissenting justices, say in the Slaughter-house cases that the fourteenth amendment declares, if it does not create, a citizenship of the United States separate from that of a State. The necessary sequence to this proposition is, that there must be privileges and immunities of a citizen of the United States different from those which belong to a citizen of a State. For if there be two citizenships, there must be also two classes of duties and obligations imposed on the citizens of the respective governments. There must be also different laws under the two governments, as otherwise there would be two governments enforcing the same laws, to the same extent, for the same purposes, and against or for the benefit of the same persons; for the citizens of the States are now the same persons as citizens of the United States. This would evidently be not only an absurdity, but would, in effect, make the two governments one. But the governments being separate and distinct, the objects of either being separate and different, the powers of one being the complement of the powers of the other, and these powers being different, it must also follow that the privileges and immunities of a citizen of the State, which are but the result of the laws of the State, must be different from his privileges and immunities as a citizen of the United States, which are the result of the Constitution and laws pursuant thereto. And it must also be true, *that the protection of the privileges and immunities derived from citizenship must be given by the government from which they are derived; for it would be manifestly absurd to say, that the rights derived by a citizen from one government are under the protection of another.* To show that this is true, we have only to ask, What are the privileges and immunities of a citizen of the United States who does not reside in any State? What are his rights as a resident in a Territory—in Colorado? It is clear that they are not those which a citizen of New York derives from citizenship in that State. Nor can he possess the privileges and immunities conferred by the local law of any State until he comes in person, or by interest, within the territorial jurisdiction of that State. He may avail himself of some of the privileges and immunities enjoyed by a citizen of a State, but this must be done within the limits of that State. The local law in New York which confers benefits on her own citizens does not extend to and protect and benefit him as a resident of Colorado.

Again, a citizen of New York may enjoy certain privileges under her local law in that State which citizens of other States do not. New York may prohibit the traffic in spirituous liquors, while the citizens of New Jersey may sell them without restraint. New York might enact that the right to vote shall depend on a certain degree of education, while in the Territory suffrage might be unrestricted. But the resident of Colorado, if native or naturalized, is a citizen of the United States, and he has certain rights as a citizen. He cannot be said to possess the rights which flow from citizenship in any State, because he is not a citizen of any State. The rights referred to in the fourth article, second section, are not his. He has the right to go into any State and to have while there equal protection with every citizen of that State, but this right is only potential, to be exercised at will, and is but a single privilege at best. But he has other privileges and he has immunities which are something in possession, something he enjoys hourly, that go with him at every breath he draws. For instance, one right is protection to life, liberty, and property. But no State affords him this protection. He looks to some other government, and as a citizen of that government is entitled to its protection.

Now, it is clear that all citizens of the United States possess the same privileges and immunities. In their relation as citizens of the Federal Government, are not the rights of all citizens precisely the same? No one can deny it. Then, as we have seen that the rights of a citizen of the United States residing in a Territory are not the same as the rights of a citizen of the United States residing in a State, whence does the difference arise? It arises from the difference between citizenship of a State and citizenship of the United States. It comes from the difference between the two classes of rights which spring from those separate citizenships. The citizen of a Territory *may* have as many privileges and immunities as a citizen of a State, but he cannot derive them from, nor would they be under the control of, the same government. As a citizen of the United States residing in a Territory, Congress may confer on him very enlarged rights, but it would be done under the power of Congress to establish all needful rules and regulations for the government of the Territories. But these rights he would not possess as either a citizen of a State or of the United States. He would acquire and enjoy them as a resident of the Territory under the laws Congress might adopt for its regulation, but an alien resident there might enjoy the same rights. His rights as a citizen of the United States would remain the same, and such as even Congress cannot impair. His right to bear arms, to freedom of religious opinion, freedom of speech, and all others enumerated in the Constitution would still remain indefeasibly his, whether he remained in the Territory or removed to a State.

And these and certain others are the privileges and immunities which belong to him in common with every citizen of the United States, and which no State can take away or abridge, and they are given and protected by the Constitution. For the Constitution is the charter of the United States. It is the be-all and end-all of that Government, and as all laws of the United States must be in conformity to the Constitution, it is literally true that no citizen of the United States, *as such*, can possibly possess a single privilege or immunity which does not flow directly from the Federal Constitution.

And here the privileges and immunities of a citizen of a State, and his privileges and immunities as a citizen of the United States, divide. His rights as a citizen of a State are general, full, almost numberless. They embrace all that free republican government can confer, and they are limited only by State laws, organic and statute. Those belonging to him as a citizen of the United States are special, few, and some of them are but a part of what he possessed as a citizen of a State before the General Government was formed. The one are as the Atlantic, broad, expansive, generous, free, unrestrained except by its own bounds. The other is like the Gulf Stream, originating in the Atlantic, flowing through the Atlantic, and ending in the Atlantic, narrow in its scope, confined within fixed limits, and contracting or expanding only as the waters of its origin and its home will allow.

And now let us see what are these privileges and immunities of a citizen of the United States. A few of them were created by the formation of the Constitution; some were transferred from the State to the United States for protection and control; and, if I am correct, some were secured by the fourteenth amendment. All these are, of course, protected by the operation of the Constitution. Perhaps all the privileges and immunities of a citizen of a State, which were created by the Constitution, are the following:

Free transit through all the States; the right to reside in any State; to carry his property to any State; to acquire property in any State, and enjoy in any State all the privileges and immunities which the laws of that State confer on its own citizens; of access to the seat of the Federal Government; of access to all sea-ports and centers of trade; to have the benefit of the public acts, records, and judicial proceedings of other States; riparian and littoral rights; immunity from *ex post facto* laws; from attainder; from laws impairing the obligation of contracts; from having anything but gold and silver coin made a tender in payment of debts by a State; from the laying by any State of imposts or duties on imports or exports except what may be absolutely necessary for executing its inspection laws; from the laying of any duty on tonnage by a State.

One of his privileges is protection from injury to person or property on the high seas and in foreign lands, but this protection was simply transferred from the State to the General Government. It was not created by the Constitution.

The following are most, if not all, the privileges and immunities of a citizen of the *United States:*

The right to the writ of *habeas corpus;* of peacable assembly and of petition; to the free exercise of religious belief; to freedom of speech; to a free press; to keep and bear arms; to life, liberty, and property until deprived thereof by due process of law; to trial in the State and district wherein the alleged crime shall have been committed; to a public and speedy trial; to be confronted with the witnesses against him; to compulsory process for attendance of his own witnesses; to have counsel on his trial; to be informed of the nature and cause of the accusation; to trial by jury; immunity from bill of attainder; from *ex post facto* laws; from capitation or other direct tax, unless in proportion to the census; from tax or duty on articles exported from a State; from preference to the ports of any State over those of another by regulation of commerce or revenue; from paying duties on vessels bound to or from one State to another; from conviction of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court; from the establishment of any religion; from troops being quartered in his house in time of peace or in time of war, unless in a manner to be prescribed by law; from unreasonable searches and seizures; from trial for a capital or otherwise infamous crime unless on presentment or indictment of a grand jury; from being put twice in jeopardy of life or limb; from being compelled to testify against himself; from having his property taken for public use without just compensation; from excessive bail; from excessive fines; from cruel and unusual punishment; from the condition of slavery or involuntary servitude, except as a punishment; from being deprived the right to vote on account of race, color, or previous condition of servitude.

I do not assert that these are all the privileges and immunities of a citizen of the United States as distinguished from his rights as a citizen of a State, but I do say that any others, whether few or many, will be found enumerated in the Constitution of the United States. Before the fourteenth amendment was adopted the first class of privileges and immunities enumerated above belonged to citizens of the States by operation of the Federal Constitution. Some were permanently secured to him by inhibition on the State, as, for instance, immunity from attainder, *ex post facto* laws, and impairing the obligation of contracts, while some were conferred by the Constitution, as transit through and residence in other States, protection to person and property in other States.

I wish to notice, at this point, the construction placed on the fourteenth amendment by the three dissenting justices in the Slaughter-house cases, and by the Judiciary Committee of the Senate in their report on the petition of Susan B. Anthony and others for the right of suffrage, submitted to the Senate January 25, 1872.

On page 95, 16 Wallace, Mr. Justice Field, delivering the dissentient opinion, says:

> The first clause of the fourteenth amendment changes this whole subject, and removes it from the region of discussion and doubt. It recognizes in express terms, if it does not create, citizens of the United States, and it makes their citizenship

dependent upon the place of their birth, or the fact of their adoption, and not upon the constitution or laws of any State or the condition of their ancestry. A citizen of a State is now only a citizen of the United States residing in that State. The fundamental rights, privileges, and immunities which belong to him as a free man and a free citizen now belong to him as a citizen of the United States, and are not dependent upon his citizenship of any State. The exercise of these rights and privileges, and the degree of enjoyment received from such exercise, are always more or less affected by the condition and the local institutions of the State, city, or town where he resides. They are thus affected in a State by the wisdom of its laws the ability of its officers, the efficiency of its magistrates, the education and morals of its people, and by many other considerations. This is a result which follows from the constitution of society, and can never be avoided, but in no other way can they be affected by the action of the State, or by the residence of the citizen therein. They do not derive their existence from its legislation, and cannot be destroyed by its power.

The amendment does not attempt to confer any *new privileges or immunities* upon citizens, or to enumerate or define those already existing. It assumes that there are such privileges and immunities which belong of right to citizens as such, and ordains that they shall not be abridged by State legislation. If this inhibition has no reference to privileges and immunities of this character, but only refers, as held by the majority of the court, in their opinion, to such privileges and immunities as were before its adoption specially designated in the Constitution, or necessarily implied as belonging to citizens of the United States, it was a vain and idle enactment, which accomplished nothing, and most unnecessarily excited Congress and the people on its passage. With privileges and immunities thus designated or implied no State could ever have interfered by its laws, and no new constitutional provision was required to inhibit such interference. The supremacy of the Constitution and the laws of the United States always controlled any State legislation of that character. But if the amendment refers to the natural and inalienable rights which belong to all citizens, the inhibition has a profound significance and consequence.

The Judiciary Committee say:

The clause of the fourteenth, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States," does not, in the opinion of the committee, refer to privileges and immunities of citizens of the United States other than those privileges and immunities embraced in the original text of the Constitution, article 4, section 2. The fourteenth amendment, it is believed, did not add to the privileges or immunities before mentioned, but was deemed necessary for their enforcement as an express limitation upon the States. It had been judicially determined that the first eight articles of amendment of the Constitution were not limitations on the powers of the States, and it was apprehended that the same might be held of the provisions of the second section, fourth article.

The dissenting justices say:

The amendment (fourteenth) does not attempt to *confer any new* privileges and immunities upon citizens.

The committee say:

The fourteenth amendment, it is believed, *did not add* to the privileges or immunities before mentioned, (article 4, section 2,) but was deemed necessary for their enforcement as an express limitation upon the States.

The justices and committee are in accord in holding that no *new* privileges and immunities were conferred by the fourteenth amendment.

Is this opinion that no new rights were conferred strictly true? In one sense it is; in another it is not. No new rights are enumerated; the amendment simply refers to existing rights, and in this sense no new privileges were conferred; nor has it taken away any rights. It has declared, simply, that certain existing rights should not be abridged by States, and nothing more.

But in another sense, and in the sense referred to by the dissenting justices and the committee, the fourteenth amendment, while not technically conferring new rights, has given additional protection to existing rights. And in this sense the fourteenth article is not only not "vain and idle," but is comprehensive and efficient, as I shall now endeavor to show.

The Supreme Court, in an unbroken series of decisions, has held that the first eleven amendments to the Constitution were limitations on the powers of the Federal Government. And, without referring to all the many cases, I will quote a paragraph from the decision in 3 Howard, (Permoli *vs.* First Municipality of New Orleans:)

The Constitution makes no provision for protecting the citizens of the respective States in their religious liberties; that is left to the State constitution and laws; nor is there any inhibition imposed by the Constitution of the United States in this respect on the States.

And so it has been held as to all of the first eight of those articles of amendment. Whether these decisions be a correct reading of the Constitution is not material; but one fact cannot be denied, which is, that these decisions were the law of the land. Being rendered by the Supreme Court, a supreme co-ordinate branch of the General Government, no power on earth, except itself, could change the law fixed by those decisions without first changing the Constitution.

In view of this law, how is it possible to maintain, that no *new* privileges or *immunities* were conferred by the fourteenth amendment? Before its adoption any State might have established a particular religion, or restricted freedom of speech and of the press, or the right to bear arms, compelled a prisoner to testify against himself, imposed excessive fines and bail, inflicted unusual and cruel punishment, and so on. A State could have deprived its citizens of any of the privileges and immunities contained in those eight articles, but the *Federal Government* could not. But can a State do so now? If not, why? If the fourteenth amendment did not confer *new* privileges and immunities on the citizens of the States as citizens of the United States, or, what is virtually the same, did not give additional guarantee of existing rights, what prevents a State now from forbidding him to bear arms, or from taking his property for public use without just compensation, or from doing any of the acts which the Federal Government cannot do because of the first eight amendments to the Constitution? The reason is, that the citizens of the States have *new guarantees* under the fourteenth amendment; and though new privileges were not thereby conferred, additional guarantees were. It matters not whether they were technically citizens of the United States before the adoption of the fourteenth article or were not. If they were, which is the stronger view for the dissenting justices and the Judiciary Committee, still they did not have these guarantees which they now possess. The Federal Government could not legally invade them; but what of that, if the State could? A citizen of a State could not be deprived of his property without just compensation by the Federal Government, but he could by another government, to wit, his State. As a citizen residing in Wisconsin he could not be made a witness against himself by the Federal Government, but by the State of Wisconsin he might. Even if there were citizens of the United States, in the proper sense of the word, citizens, before the fourteenth article, they did not have many, very many, immunities which that amendment has secured.

The people of the United States thereby laid upon the States the same inhibition which they laid seventy years ago on the United States. They by that article declared, "that we are henceforth citizens of the United States as well as of our respective States; we enjoy certain rights or privileges and immunities secured to us in and by the Constitution of the United States as against their power and interference; but some of them are at the mercy of the States by the law of the land, by the Constitution itself, and we therefore declare that these privileges and immunities shall not be taken away or abridged by any State." And the instant the fourteenth amendment became a part of the Constitution, every State was that moment disabled from making or enforcing any law which would deprive any citizen of a State of the benefits enjoyed by citizens of the United States under the first eight amendments to the Federal Constitution. And as the first eight amendments were a prohibition on the General Government as to the privileges and immunities of the citizens of the States named in those amendments, so the fourteenth amendment was and is a prohibition on the States, forbidding them to abridge the same privileges and immunities. So that the citizens of the American Republic, without reference to State lines or national boundary, are entitled to enjoy every privilege and immunity which is named in the Constitution.

This construction makes the operation of the State and Federal Governments harmonious. No conflict of authority between the two governments can possibly occur with a pure and honest judiciary. It will be only necessary to look to the Constitution to determine if a privilege or immunity of a citizen of the United States is abridged by a State, and a tyro can answer the question.

The dissenting justices say, (page 96, already quoted,) "with the privileges and immunities thus designated or implied"—*i. e.*, in the Constitution—"*no State could ever have interfered* by its laws, and *no new constitutional provision was required to inhibit such interference.* The supremacy of the Constitution and the laws of the United States always controlled any State legislation of that character." And they therefore say, that if this was the object of the fourteenth amendment, "it was a vain and idle enactment which *accomplished nothing* and most unnecessarily excited Congress and the people on its passage."

This opinion, as I have shown, is at variance *in toto* with repeated decisions of the Supreme Court, that every privilege and immunity named in the first eight amendments to the Constitution were under control of the States. And their conclusion is so far from being correct, that the converse of their proposition is the acknowledged law. The States could have interfered. The Judiciary Committee in the report referred to above recognize this law, and to that extent disagree with the dissenting justices. And had the words "and no State shall make or enforce any law which shall abridge the privileges and immunities of citizens of the United States" been omitted, while the amendment would not have been altogether "vain and idle," still the privileges and immunities which I have enumerated above, as those secured by the first eight amendments to the Constitution, would have been left subject to abridgment and even abrogation by the States.

I have said, that, if this be the true and correct construction of the fourteenth amendment, our complex system of government will still move on in harmony. But should the views of the dissenting justices and of the Judiciary Committee, and of those who favor this bill, be right, let us look at some of the consequences which will inevitably flow from that construction.

The first I shall call attention to is marked and startling. The justices say:

A citizen of a State is now only a citizen of the United States residing in that State. The *fundamental rights, privileges, and immunities* which belong to him as a free man and a free citizen now belong to him as a *citizen of the United States*, and are *not dependent* upon his citizenship of any State.

The italics are my own. If this be true, what rights that are in any sense those of a free man and a free citizen can a man derive from a State? Not one. What government must protect him in the enjoyment of *every* right, privilege, and immunity which he can possibly have as a free man and a free citizen? *But one.* For it is clear that the government which confers entire, full citizenship, and confers with it certain rights and privileges, must also be the power to protect them. Therefore, every fundamental right of a citizen of a State (who, it is said, is only a citizen of the United States residing in that State) is under the protection of the United States Government. This is one of the inevitable consequences of the opinion of

the three dissenting justices. But this is not all; it is not half. If this be law, then the fourteenth amendment has destroyed the government of every State in this Union. It has struck down the legislative power, paralyzed the executive arm, and swept the State judiciary, in its appellate authority, from the earth. Like Aaron's rod, this one article has swallowed up all others. Every decision from every appellate State court under this construction is now subject to review by the Supreme Court of the United States, whenever any fundamental right of a citizen may be involved. The right to life is fundamental. The right to liberty, to property, is fundamental. And when a citizen's life is in danger he has the right to appeal to the Supreme Court of the United States. When his liberty or property may be involved, the same right of appeal is his. The way is open from every *piepoudre* court of the hundred thousand in the States and Territories to this Capitol. More than this. If these rights are under Federal protection, whenever Congress sees fit to exercise the power for their protection, the authority of the State is forever gone. The exercise of jurisdiction by the Federal Government and by a State over the same subject-matter at the same time cannot exist, and the State must, by the Constitution, yield. But I will not further enlarge. Illustrations innumerable might be given of the unlimited power which Congress has to protect the fundamental rights of a citizen, if the opinion of the dissenting justices and the Judiciary Committee be the true construction of the fourteenth amendment. I will give but one.

Let me briefly state the premises. The fourteenth amendment, it is said, protects every fundamental right of a citizen of a State, and Congress has the power to enact any law which they may think appropriate to protect those rights and to punish the invader or offender. One of these fundamental rights is personal liberty and security from personal harm. The person of every citizen in the United States is, therefore, under the direct protection of Congress. Well, a man's nose is a part of his person. It is a prominent part, and one which every American citizen cherishes with such devotion, that he follows it right or wrong, straight or turned awry, whether it leads him to his own business, or to intermeddle with the affairs of others. And I know of no part of an American citizen which, on being invaded, he will defend quicker, or with greater indignation and to the last extremity or the last ditch. Now, should any one with malice prepense pull the nose of a colored citizen of the United States, residing in the State of New Jersey, to what power should he apply to protect that nose? I always thought he must go to a State tribunal and proceed for "assault and battery." But under the new reading of the Constitution by the minority of the Supreme Court and the Judiciary Committee, he must apply to Congress to throw their protecting arms around that nose and shield it from invasion. He reads the argument of the Senator from New Jersey, and being convinced thereby that his protection is within the power of Congress, he applies to that Senator to protect his nose. The honorable Senator introduces a bill, as in duty bound both by his logic and his obligation to his colored constituents, to be entitled "An act for the protection of the noses of American citizens from invasion and depredation," and he rises to advocate its passage.

If I misstate the line of argument he would follow, as I understand it, from his position, I beg to be corrected. His first premise would be, that the fourteenth amendment protects every fundamental privilege and immunity of all citizens of the United States; second, that citizens of the States are but citizens of the United States; third, that personal security is a fundamental right; fourth, that pulling a man's nose is a violation of his personal security, and, therefore, Congress has the power to protect his nose. But this of itself would be a very dry presentation of the case, and he could go further and demonstrate the necessity for action by Congress. The organ invaded is by all dearly treasured, and with very many it is a most prominent feature and an index of character. Geographically speaking, it may be called a white man's promontory and a colored man's plateau. Many physiognomists contend that it is *the* organ and index of character. And hence the importance of protecting it in its normal state. For should it be pulled often, it would be elongated and destroy the man's identity. His friends could not recognize him, and the detective police could not identify him. Besides, when the index to character is destroyed, the owner of the index loses his character. His character is changed, and he thus sustains a double injury. And unless this foul invasion be stopped by act of Congress, the man's nose, like that of Solomon's beloved, would become "as the tower of Lebanon that looketh toward Damascus." And thus we see that Congress, if it should see proper, can pass "An act for the protection of the noses of American citizens from invasion." If this be not a logical sequence, I will thank any member of the Judiciary Committee to set me right.

Surely the people of the States did not mean such results as this when they adopted that amendment. They meant something practical, something sensible. They did not mean to lay the knife to the throat of each State in this sweeping, suicidal manner. They did not mean for Congress to swallow up the State Legislatures, for the President to be the ruler of the United States, and governor of each State besides; and for the Federal judiciary to supplant entirely and forever all State courts. They did not mean that every case of petit larceny should be drawn to the Supreme Court of the United States. I am amazed when I see gentlemen confessedly learned in constitutional law prying into the fourteenth amendment to discover such infinitesimal power as this. I would not be more surprised were I to walk forth some day after a long drought and see one of my honorable friends sitting and eagerly watching for the bob of his cork, while fishing in a dry well for minnows, and using as his hook an anchor of the Great Eastern baited with a copy of the Congressional Globe.

A construction more dangerous to the existence of the States than this cannot be conceived. The most devoted federalist, the most ardent advocate of absolute consolidation, could not go further in his wildest dreams and desire for one government, one power, complete unification.

The minority of the Supreme Court were not unaware that their view of the fourteenth amendment excites alarm in the minds of constitutional lawyers for the safety of the States; for Mr. Justice Bradley says, (page 123, 16 Wallace:)

> But great fears are expressed that this construction of the amendment will lead to enactments by Congress interfering with the internal affairs of the States, and establishing therein civil and criminal codes of law for the government of the citizens, and thus abolishing the State governments in everything but name; or else, that it will lead the Federal courts to draw to their cognizance the supervision of State tribunals on every subject of judicial inquiry, on the plea of ascertaining whether the privileges and immunities of citizens have not been abridged.
>
> In my judgment no such practical inconveniences would arise. Very little, if any, legislation on the part of Congress would be required to carry the amendment into effect. Like the prohibition against passing a law impairing the obligation of a contract, it would execute itself. The point would be regularly raised in a suit at law, and settled by final reference to a Federal court. As the privileges and immunities protected are only those fundamental ones which belong to every citizen, they would soon become so far defined as to cause but a slight accumulation of business in the Federal courts. Besides, the recognized existence of the law would prevent its frequent violation. But even if the business of the national courts should be increased, Congress could easily supply the remedy by increasing their number and efficiency. The great question is, what is the true construction of the amendment? When once we find that, we shall find the means of giving it effect. The argument from inconvenience ought not to have a very controlling influence in questions of this sort. The national will and national interest are of far greater importance.

It appears from this extract, that he does not deny the stretch of Federal power which must follow the opinion of the minority. He says, "Great fears are expressed that this construction" will abolish the State governments in everything but name, &c., and without combating this opinion, he says that in his judgment "no such *practical* inconveniences would arise." He does not deny that Congress under the fourteenth amendment, as construed by him, *can* "interfere with the internal affairs of the States," *can* establish therein "civil and criminal codes of law for the government of the citizens," *can* "confer on the Federal courts power to draw to their cognizance the supervision of State tribunals on every subject of inquiry on the plea of ascertaining whether the privileges and immunities of citizens have not been abridged," and *can*, thus "abolish the State governments in everything but name;" but he meets the suggestion of these inevitable consequences by saying, "*very little* if any *legislation* on the part of *Congress* would be required to carry the amendment into effect." I agree with him that "very little legislation on the part of Congress would be required to carry the amendment into effect," as that amendment is construed by him. It would require but a *single statute*, establishing a civil and criminal code for all citizens of the United States, and giving the jurisdiction to the Federal courts. I agree with him, that "the point would be regularly raised in a suit at law and settled by *final* reference to a Federal court." I agree with him, that "if the business of the national courts should be increased, Congress could easily supply the remedy by increasing their number and efficiency." But, sir, what a spectacle would all this present. The civil and criminal codes of the States swept away; the legislative power of the States abolished; the executive of each State a mere shadow; his approval of laws, civil and criminal, transferred to the Federal Executive; his power to execute State laws given to the Federal Executive; his pardoning power placed in the hands of the President; the State courts left with their ermine, and not a case involving a fundamental right of any citizen left upon the docket, and sheriffs and constables supplanted by marshals and their deputies. But I desist, for the scene is sickening; for it presents an army of Federal judges, backed by an army of Federal attorneys and Federal marshals and deputies, marching out from Washington into all the States, and followed, if need be, by the Army of the United States, to try every cause in which a fundamental right of any citizen might be involved.

But I do not agree with Mr. Justice Bradley, that these fundamental privileges and immunities "would soon become so far defined as to cause but a slight accumulation of business in the Federal courts." I do not agree with him that "the recognized existence of the law would prevent its frequent violation." Why, sir, are not the fundamental rights of every citizen already defined? Do we not know what they are? Does it remain for a Federal judge to teach an American citizen what his rights are? This is a political, not a judicial question. Judges are not appointed to define our political rights, our civil rights. They decide whether a right already existing has been forfeited, as the right to life, liberty, or property; they decide whether A or B has the title to certain property; but God forbid that the determination of what are the fundamental civil and political rights of an American citizen shall ever depend on the opinion or decision of a Federal court.

But, again, does the recognized existence of any law prevent its frequent violation? Does the recognition of the fundamental right of A to his life, his liberty, his property, prevent B from violating that right? Does it prevent murder, arson, robbery, forgery, false imprisonment, and a hundred other crimes, each one of which is a viola-

tion of a citizen's fundamental rights? The reasons assigned by Mr. Justice Bradley to show that no such inconveniences would arise from his construction of the fourteenth amendment, may hold when the millennium shall come, when there shall be wars and rumors of wars no more; when the lion and lamb shall lie down together; when man shall no longer be man, but an angel.

The next inquiry is, how is a citizen of the United States to be protected in the enjoyment of his privileges and immunities. Is he to be protected by Congress? He may, but not primarily. The fourteenth article declares that "*no State*" shall abridge his rights as a citizen of the United States, and that Congress may enforce that article by appropriate legislation. But until a State shall attempt to abridge his rights, Congress has no power to act. But has he no protection under the fourteenth amendment except in a case where a State shall seek to abridge his rights? Clearly he has. His redress is in the courts. If a privilege which he enjoys as a citizen of the United States—that is, a right given and secured to him by the Constitution—be invaded by any one, he has his remedy, as in any other case of invasion of any of his fundamental rights as a citizen of a State. And his remedy does not stop with the State courts. For, by the Constitution, the Federal judiciary has jurisdiction over all questions arising under the Constitution and the laws passed in pursuance thereof. So that an appeal will lie from the State court to the Federal court in any case where a right is involved whose existence depends on the Federal Constitution. And this again shows that, if the minority of the Supreme Court be correct, this clause of the Federal Constitution is so broad that every case involving a fundamental right of a citizen would be subject to review in the Federal courts, and go by appeal or writ of error to the Supreme Court of the United States.

The Constitution forbids any State to impair the obligation of contracts, and before the fourteenth article Congress had the power to enforce all its delegated powers by appropriate legislation. But did any lawyer ever dream that Congress had the power to pass a law punishing a State or an individual for impairing the obligations of a contract? And yet the inhibition on the States in that instance is precisely like the one imposed by the fourteenth amendment. Neither confers any power on Congress except to prevent a State from infringing by legislation or otherwise the rights of the citizen thereby secured. The remedy under the provision forbidding the State to impair the obligation of a contract or to pass any *ex post facto* law is just the same; and that is, as has been the practice under the Government from its foundation, by appeal from a State court, where a law is sought to be enforced against a citizen which is in violation of any of these provisions of the Constitution, to the Federal courts, which have appellate jurisdiction of all questions arising under the Constitution of the United States or the laws of Congress passed in pursuance thereof.

Thus, Mr. President, I have endeavored to trace what I believe to be the principle that underlies the fourteenth amendment. I will not stop to apply it to the various provisions of this bill. I believe that it is the correct reading of the fourteenth amendment.

The question may be asked, Is it not dangerous to the States? My answer is, no; that it involves no danger to the States or to State rights. For what does it amount to under this construction? Simply this: that rights which the citizen of the United States enjoys under the Federal Constitution, and which the Federal Government cannot deprive him of, shall not be abridged by the State. In other words it is an extension of the guarantees of liberty and of the Bill of Rights that are laid down for the citizens of the United States in the first eight articles of the amendments to the Constitution, over all the citizens of the States, preventing the States themselves from depriving their citizens of those guarantees. In that view of the case, I can conceive of no evil that can arise to the States or to State rights by this construction.

If it is not the true reading of that amendment, then that portion of it which I have been considering either means nothing, or it means much more than the people of the United States ever intended; for it is a transfer of the reserved rights of the States, of their legislative, executive, and judicial powers, to the Federal Government, to be exercised at the will of Congress.

American Citizenship.

SPEECH OF HON. J. G. SCHUMAKER,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

May 5, 1874,

On the bill (H. R. No. 2199) to carry into execution the provisions of the fourteenth amendment to the Constitution concerning citizenship, and to define certain rights of citizens of the United States in foreign countries and certain duties of diplomatic and consular officers and for other purposes.

Mr. SCHUMAKER, of New York, said:

Mr. SPEAKER: It is not my intention to unjustly criticise this bill, but I think it can be said in a spirit of fairness that its provisions will greatly embarrass and harass the adopted citizen for whose benefit it is pretended this bill is offered. The adopted citizens suspect and distrust the motives of this Administration and watch with a jealous eye all laws introduced in this body for their benefit. They remember the attempt made in the Forty-first Congress to amend the naturalization laws, when the party in power desired to pass a law whereby any adopted citizen, although a voter for half of a life-time, could have his rights annulled in the courts upon the application of any worthless vagabond. They also remember the manner in which the rights of Americans in Europe and Cuba have been guarded by this Administration, and the great number of Americans who have died in British and Spanish dungeons without the least interference on the part of this country for their release. They believe the Secretary of State, Mr. Fish, to be unfriendly to them. They allege that the gentleman from Massachusetts, [Mr. HOAR,] who reported this bill, is unfriendly to them and was conspicuously so when Attorney-General. Colonel John Warren, a brave soldier in our late war, who was arrested without any just cause in Ireland, in 1869, at a mass meeting of citizens at Tammany Hall, in the city of New York, June 17, 1870, held for the purpose of demanding from this Government immediate action for the release of persons imprisoned abroad, spoke of Secretary Fish and Attorney-General HOAR as follows:

> General Grant gave me a letter of introduction to Secretary Fish, and asked him (Fish) to give me a hearing in relation to American citizens confined in British dungeons. Mr. Fish received me very courteously, but fell back upon legal questions. The result of a long interview was that Secretary Fish held that we were not American citizens when out of America. He attempted to prove that by the laws of this country we could not change our allegiance to Great Britain.
>
> I had an interview with Attorney-General HOAR. He received me with discourtesy; he first asked me by what right I departed for Ireland, and what right I had to go over there. I told him I had not called upon him to account for any right or reason that induced me to go to Ireland, but had called upon him to testify as to the number and character of the men now in British dungeons, and I expected at least to be courteously received. He (the Attorney-General) further said that the laws of naturalization could only be upheld by the voice of the people. He gave me no encouragement. I left him.

Now, Mr. Speaker, if this speech be true, (and I have no reason to doubt that it is,) taken in connection with the fact that this bill was prepared by the State Department and presented by the late Attorney-General, [Mr. HOAR,] I think it should be carefully scrutinized and understood before it becomes a law.

Mr. Speaker, Congress cannot make or unmake a citizen; we have no such power. The people of this country have very wisely ingrafted that power in the Constitution, and I hope it will never be changed. In article 14, section 1, of the Constitution of the United States, in plain words, the status of a citizen is defined, to wit:

> All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States.

Now, Mr. Speaker, this provision cannot be altered or amended by this body. But we can very much annoy or disturb any citizen who desires to reside or travel abroad by passing laws in relation to the jurisdiction of this country over its subjects, which this bill purports to do, and which is one of the mischievous objects of this bill. Is there any great public necessity for this measure? Is not our Government wise enough and powerful enough to protect its citizens everywhere under the common law of nations? Has she not been able during the hundred years of her existence always to do so if the head of the nation so willed? Why change in any degree the law as now understood? Why startle the American public by any new legislation on this subject? Why define by statute the meaning of the words "jurisdiction," "domicile," and "residence," which this bill proposes? Why not leave the definition of such words open to the widest range of argument and reason which any particular case in question may present? Such terms and their application have for ages baffled the greatest intellects, and have been, ever since the dawn of civilization, the subject of contention between the diplomats and statesmen of nations.

The word "jurisdiction" has a wide and comprehensive meaning, derived from the Latin word "*jurisdictio;*" from *jus*, right, *juris*, law, and "*dicare*," to pronounce. Its literal meaning is the power or right of exercising authority, as all legal writers have interpreted it. The leading nations of the world—most prominent among whom have been England, Germany, and the United States—have seen fit to claim jurisdiction over their citizens wherever they could reach them in any part of the globe; and been able by force to "pronounce" the right or law for them, and have demanded redress for their wrongs; and it is now generally conceded by nations that the jurisdiction of a nation over one or more of its own citizens extends to any and every place where our representatives can be sent in time of peace, or wherever we are able in time of war to send our Army or Navy.

Take the case of Minister Washburne during the late war in France. In the bloody days of the Commune in Paris, when blood like water washed its streets, the kind-hearted Washburne, our much-esteemed representative at the French court, opened the doors of the embassy to all Americans left in that ill-fated city—the foul mob of Paris howled by the door but dared not enter, for our flag was there, which proclaimed the jurisdiction of the United States over that spot. With this law upon our statute-books, he would have been compelled to have stood at the door with the regulations of Secretary Fish in his hands, asking the men, women, and children as they came flying

to him for protection, "Are you registered? Show me you are registered, or you cannot enter here."

I will instance another recent case, which has also passed into history: on the 27th of July last, when Contreras was at the head of the government of Spain, and when the united naval forces of Great Britain, Germany, and Italy in the Mediterranean threatened to bombard the city of Carthagena unless the rights of Englishmen, Germans, and Italians were respected in Spain; and of another case still more recent and fresh in our memory, when Sir Lambton Lorraine, commander of the British war frigate Niobe, trained his guns on the city of Santiago de Cuba and saved from butchery the crew of the American steamer Virginius.

Contrast this noble conduct of Minister Washburne and the foreign powers mentioned with the late intelligence received from Vienna, that Mr. Jay, the United States minister there, in a civil dispute with the Austrian government invoked in his support his rights as an American, and has been censured for this act by President Grant and his Cabinet at the instance of Austria. In consequence of which he has left Austria, and will not return to his post. If this Government will not guarantee to its ministers abroad the rights of an American citizen, what hope has a private individual domiciled abroad to expect protection from such a quarter?

The settlement, however, by statute of the meaning of the words "domicile" and "residence," and absolutely and arbitrarily defining the jurisdiction of the United States, would very much relieve Secretary Fish of a great many troublesome questions and of much annoyance, and the once important office of Secretary of State would be so simplified by statute that its duties could be performed by any clerk capable of filling out an ordinary blank, so far as related to its own citizens abroad.

The greatest objection to this bill is its registry provision, which puts restraints upon American citizens which no other country has ever attempted or suggested. Citizens of every civilized country on the globe have been always permitted to travel untrammeled. Norway and Sweden many years ago passed laws against actual emigration But treaties between these countries and the United States have caused such laws to be held in abeyance, and to-day emigration continues from Norway and Sweden to the United States unmolested. Germany has thrown obstacles in the way of emigration by increased fares on her railroads, but not by actual laws; no such law could pass the German Reichstag. The presence of American citizens abroad has always been looked upon by the officials of the crowned heads as pernicious and dangerous to the welfare of their sovereigns; and to-day all over Europe, particularly in Great Britain, Germany, and Austria, no politeness is shown an American by their officials, especially if he be an adopted citizen. In Great Britain an Irish-American citizen cannot land unless his tracks are followed by some English spy or detective, and all that he does or says is reported in full to the police authorities, and if a careless word escapes his lips that might be construed as derogatory to English rule in Ireland, he is either thrown in a British bastile or ordered to quit the country immediately. The public journals of the last few years have been full of such cases. In Austria the same espoinage exists. The police system of Austria is the most complete of any nation. It is considered by the best judges of such matters the most perfect; and as an instance I will cite that no American could cross its borders last summer, visiting their international exhibition, without having his movements known to the police; and the most trifling conversation on the part of any of the American commissioners to such exhibition was every day fully reported. And if this bill should become a law and two classes of American citizens be known to foreign powers, the registered and the unregistered, there is no telling what would be the annoyance of the unregistered. In every hotel, at every railroad station, on every steamer he would be stopped, his baggage searched, and he would oftentimes be detained, perhaps arrested; and wherever he went he would be marked as a mischievous person who could not get registered, and at every step would have to call upon an American consul to show that by law he was not required to do so unless desiring to reside in the country over two years. The old passport system would be entirely revised in a new and more troublesome manner.

A bill of this nature has for many years past been pressed upon the authorities here by the representatives of Great Britain, Germany, Austria, and Spain. But it found no favor with such distinguished men as Lewis Cass, William L. Marcy, or William H. Seward, when they occupied the chair of Secretary of State; and it was not until General Grant became President that any attention was paid to such demands at all. But President Grant did in his first message, and in every succeeding message to Congress, urge action in relation to adopted citizens who returned to their own country to reside, after having become citizens here under our laws, and this bill, prepared by the State Department, takes within its provisions all citizens, both native and adopted. In that respect it is just. But President Grant has urged no such course; he desired only that naturalized citizens should be denationalized and have their rights forfeited.

Of the two classes residing abroad, and I assert this with sorrow and regret, the natives are entitled to less sympathy and protection of this Government than the adopted. A great number of the native-born here voluntarily expatriated themselves, and are hostile to our country and its institutions and never intend to return, and every one who has traveled abroad will bear me witness that such class of persons everywhere, and to every person they meet or come in contact with, do to the utmost of their ability vilify and abuse the United States; while, on the other hand, the other class, the naturalized citizens, who generally have been successful men of business in America, having made large fortunes here, and who have the same invested here, but who have returned in their old age to the home of their childhood, speak always of our country in the highest praise. The latter class are those men who in the trying time of our country's credit abroad stood up manfully and invested their last dollar in American five-twenty bonds. England and France stood aloof; even the Rothschilds refused to buy our bonds; but the adopted citizens of Germany, scattered as they were in all the financial circles of that country, upheld our credit, and, while native-born Americans shouted repudiation, they stimulated and encouraged the German bankers to such an extent that at one time all bonds sold abroad were sent to Germany direct.

To these naturalized citizens abroad this country owes a debt of gratitude, which is very illy repaid by the head of this nation when he annually tries to proscribe them and to deprive them of their citizenship honestly attained under our Constitution. And the true intent and meaning of this act is that all persons who live abroad over two years without registering that "they intend to return" are denationalized and waifs among the nations of the earth, and that those who do "register" that they "intend to return," and stay over two years in one country, are "domiciled" beyond the jurisdiction of this country, and can receive no protection while so "domiciled," and will be informed by the Secretary of State that this law was passed only for the purpose of giving them their full rights to citizenship when they shall return. This, in a few words, is the whole object of this bill The other provisions are appendages, only confounding and confusing the long-established rules of the State Department years ago settled by a Cass, a Marcy, and a Seward, and fixed by common law and statute. As to the law of inheritance, the courts of this country have long ago established just rules.

Now, Mr. Speaker, if we are to have rules with other nations as to the conduct of our citizens while abroad, let it be done by treaty, as it has always been done heretofore. Let Great Britain, Germany, and Austria enjoin upon their citizens "domiciled" here the same restraints, rules, and regulations they ask of us to put upon ours while "domiciled" with them. That would be at least fair and just. They should not ask for what they are not willing to give. Let it be reciprocal. Let all unnaturalized Englishmen and all unnaturalized Germans be registered here who desire to return to their country. It is already stipulated in treaty with Prussia that any of her citizens who remains here over two years is supposed to intend to reside here permanently. But not so with Englishmen. Their country never gives up its claim to any of its citizens.

But can one conceive a greater nuisance in our community than many of the unnaturalized Englishmen are? They leave their country to better their condition here, to make a competency here for themselves and families, which they could not do in England, and all the time they are doing so they are abusing America and Americans. During our late war their conduct was almost unbearable—rejoicing over every defeat of the Northern Army, glorifying in the slaughter of our troops, hoping for a dissolution of the Union, and talking treason on every street corner—but yet they were protected by the British flag.

If we are to have registration, let all other nations have it. Let this registration be agreed upon by treaty; it is clearly within the meaning of the treaty-making power of the Constitution. Let all those countries who desire that our citizens should be "placarded" while abroad consent that their citizens who reside here should be also. Let "my lord," or "my lord duke," or the "earl" of this, and the "count" of that, or the "baron" of the other walk up to *their* different consulate offices here in this country and register; they are fond of doing it in all our "hotels" at our fashionable watering-places, where they dazzle the eyes of foolish old women and silly young girls. Let the Right Honorable Colonel ——, of Her Majesty's One hundredth Regiment Foot, register also; let all the pretended members of the royal navy register; and then we would have a chance to find out who was "bogus," and who the genuine among them.

We in this country have more cause to complain of foreign nations sending criminals among us than any other people. We are in our cities constantly flooded with pauper barons, bogus lords, swindling earls, confidence men, escaped convicts, ticket-of-leave men, and especially English thieves, pickpockets, and burglars, male and female. All nations have emptied such sort of people among us in great numbers, and Secretary Fish and President Grant know it; and yet the foreign powers ask us to "bell" our citizens when they go over there, and no reply is made to them to "bell" their own swindlers and vagabonds when they come over here so that our people may know where to go and find out the real character of the foreigners residing here who are not citizens. The Americans abroad, with a few exceptions, are generally gentlemen and ladies traveling for pleasure. In France and Germany a great many reside. But they reflect credit upon the country from which they come. They will compare well with any unnaturalized body of men in this country claiming allegiance to England or any other foreign government.

I think this measure is gotten up in the interest of Great Britain, Austria, Germany, and Spain, and should be defeated.

Centennial Celebration.

SPEECH OF HON. JOHN K. LUTTRELL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

May 7, 1874,

In the Committee of the Whole on the state of the Union, on the bill (H. R. No. 2986) to appropriate $3,000,000 in aid of the centennial celebration and international exhibition of 1876.

Mr. LUTTRELL. Mr. Chairman, I do not rise to-day for the purpose of making an extended speech upon the merits or demerits of the proposed appropriation, but simply to present in a brief form what we of the Pacific coast propose to exhibit as the products of our agricultural, mining, and manufacturing industries, upon the one hundredth birthday of the independence of our nation.

To do this, to present to the world the spectacle of a nation yet in its infancy, which has risen step by step in its advancement in the arts and sciences, in its wonders and inventions which have revolutionized the world, and in the great and glorious results flowing from the principles of free government, will be but a trifling cost to each individual.

And what is this cost? From an estimate which I have carefully made I find that the inhabitants of these United States will pay about five or six cents *per capita* to aid in a celebration which will show the vast resources of a nation which in a hundred years has accomplished more good for mankind than all the imperial nations of the Old World.

In my congressional district the cost will be about $5,000, or a little over six cents per head. Among those people I have lived since boyhood, and *I can say for them here that if it cost ten times as much, they would pay it cheerfully, manfully, womanly, to aid in showing to the world the grandeur, the skill, the enterprise, and the glory of the greatest nation on God's earth.*

I say to you, Mr. Chairman, that rather than see this celebration fail for want of funds, rather than see the noble old State of Pennsylvania taxed to *exhibit the entire resources of a nation, rather than see our national honor disgraced*, I will willingly subscribe my congressional salary of $5,000 (the quota of my district) to aid in its successful accomplishment.

But, sir, I know my constituency. For nearly twenty-five years I have lived among them, and I know that the electric spark need but to flash across the wires that $5,000 were needed to aid this enterprise, and in less than three hours that amount would be at my command.

The wine-growers of Sonoma would alone subscribe that sum for the privilege of displaying to the world the products of the great vineyards of Sonoma County.

Bidwell, Hill, Warfield, Snyder, Hood, Whitman, Goss, De Turk, and one hundred more would come with the hundred varieties of grape, wine, and various fruits which decorate and make a paradise of the State of California.

I shall vote for this bill because it is just and equitable; because it comes from all the people alike; because it is the first tax of the kind for one hundred years, and will be the last for one hundred years to come. I want this celebration to be an assured success. I want it to show to the world what we have done in one hundred years. I want it to show what free government can do; and to show these grand results we must invite to our shores the representatives of every nation, and on the day of our grand centennial jubilee we will astonish the world with the vastness of our resources, and the progress we have made in art, science, literature, agriculture, mechanics, and in those noble institutions of learning, the free schools, which send forth men who honor the nation in our courts, our Congress, our trades, and our professions.

I want to show to these people that we have yet thousands of miles and millions of acres of land in California, Nevada, Oregon, Arizona, Dakota, Colorado, Utah, Wyoming, Montana, Washington, and Idaho, which need but the enterprise and genius of man to develop the gold and silver and other metals which lie hidden within their hills; to bring from the soil the wheat and barley and other cereals which these States are by nature fitted to produce; where every man is free; where the young men of our country and of all countries can with enterprise and determination build themselves a home and bring around them prosperity and contentment.

We of California have had no opportunity to exhibit our vast resources.

But twenty years ago we were admitted into the sisterhood of States. But when this grand celebration takes place we will show to the people of this land that within these twenty years we have produced everything that the earth produces or that the genius of man has invented or manufactured.

In my State alone, sir, we have 120,947,840 acres of land, 10 per cent of which, or about 13,000,000 acres, is fit for agricultural purposes. One acre of this land will produce on an average 600 gallons of wine, and if the pomace and offal are saved and distilled, an additional product of 10 gallons of brandy can be made. Now, sir, supposing that one-half of this 13,000,000 acres is devoted to vine-culture purposes, and we would have an annual product of 3,900,000,000 gallons of wine and 65,000,000 gallons of brandy. If the wine is put at twenty cents per gallon and the brandy at one dollar, the annual increased wealth or income to the State of California and to the country would be $845,000,000.

For twenty years past we have had but one failure of the vineyards, (in 1873,) while in France and Germany they have generally three poor vintages out of four. Besides this, the lands in Europe have to a large extent been worn out and partially exhausted, as is shown by continued reports of diseases in European vineyards.

The total annual wine crop of Germany (excluding Alsace and Lorraine) is about 50,000,000 gallons from 300,000 acres, or an average of 166 gallons to the acre, while the annual wine crop of France in a good wine year (1869) amounted to 2,000,000,000 gallons, or about 330 gallons to the acre. The land cultivated with vines is about 6,000,000 acres, and which before the war sustained 6,500,000 vine-growers, besides some 2,000,000 people as teamsters and business men, or about one-fifth of the entire population of France.

I merely mention this in order to show but one of the many resources of California. For the last ten years we have produced enough wheat to supply the whole of Europe, independent of the home demand. Our hills and valleys are covered with the blades of wheat which have made my State famous. The product for this year is estimated at $60,000,000, and we have yet millions of acres which need but the hand of the husbandman to bring forth from the soil the staple product of the world. The State of California, sir, is rich in everything that God has created.

When this grand celebration of our nation's birth is opened, we will show, sir, golden nuggets, quartz, bars, and golden eagles, fresh from the finest mint in the Old World or the New.

We will show you, sir, our silver bricks, our lead, our tin, our copper, our cinnabar, our borax, our sulphur, our rock salt, our moss agates, and our diamonds.

We will compete with the Keystone State in our coal mines and our coal oil. We will exhibit the sparkling soda from our mountains, while Italy will not take from us the beauty of our marble, nor the Eastern States the solidity of our granite.

We will exhibit wheat and corn, rye and oats, barley and maize, buckwheat and rice, and the finest grasses and clovers in the world. From the hills of the Golden State we will send, sir, horses, mules, and cattle of every breed, sheep, swine, and goats of the purest blood—the Angora goat with its downy fleece, while from the mountain fastnesses will come the elk and the antelope, and the thousand and one four-footed inhabitants of our hills and plains.

In mechanics we will vie with every State and every people, and send you productions from a toy to a locomotive. Our ship-building interests are second to none; our type founderies are noted throughout the world; while the implements for the working of our mines—such as stamp-mills, crushers, &c.—have been improved upon until they are almost perfect. Our locomotive shops, founderies, and manufactories are seen in every city and every town.

From these vast interests and manufactures we will send specimens of our work which will compete with any other State or nation. We will show to the world, sir, that in the State of California every man can live; that no man need be idle; that our schools and colleges mark the progress of our people's intelligence.

I am proud of my State, proud of its people, proud of its interests; and on such an occasion as this the pride that glows in my heart is but the semblance of that pride which will actuate every Californian in doing his utmost to exhibit the resources which nature has lavishly bestowed upon us.

Our vast water-falls and water privileges for driving machinery are unsurpassed. Woolen factories, cotton factories, and driving power of every description are needed to develop our industries. We want men of capital to invest in our enterprises, and in order to show that we have the country in which investment is both safe and profitable, this exhibition of our products and resources will afford an opportunity which the citizens of my State will hail as a boon of inestimable value. The grangers of my State desire the opportunity to show that California alone can supply the whole world with bread, and that millions of acres of land still wait the coming of honest, industrious emigrants from all climes, and that thousands of honest hearts will bid them welcome.

We will send, sir, fabrics manufactured from the cotton, wool, flax, hemp, jute, ramie, and silk produced in our valleys. We will manufacture the silk flags to decorate the buildings, and will present them to you as a humble tribute of the pioneers and citizens of California, *of the love they bear for the place where liberty was first proclaimed to every inhabitant of the world.*

We will send wine and corn, oil and honey, fruit and sweet incense; the mellon, the pomegranate, the orange, the olive and banana, the fig and the pine-apple, the lime, lemon, apple, pear, peach, cherry, plum, and the apricot. We will send you, sir, the raisin, which, for size, beauty, and delicious flavor, cannot be excelled.

We will send you grapes (the representatives of every clime) from every vineyard in the Pacific slope. We will send you coffee and tea from Los Angeles, sugar and sirup that will challenge the finest Louisiana brands; cotton that will compete with the sunny South for strength, beauty, and the prize.

We will send you the pure white juice of the grape to the spark-

ling, laughing, dancing champagne, and the soothing sweetness of the Muscatelle.

We will tell the Frenchman and the German that in the State of California alone fourteen million acres of land now lying idle are adapted to the growing of the grape, and that in but a few years more the wine-growing interests of the Pacific will exceed those of France and Germany combined.

We will send you tobacco that will cause old Virginia to look to her laurels, and cigars that will take the palm from Havana's grasp.

Nor is this all. From Bradley & Rudolfson's art gallery we will send you the finest landscape views of vine-clad valleys and snow-capped mountains, of falls and cascades, and forrests whose trees are evergreen, and the golden sunset with the lashings of the mighty Pacific upon our rock-bound shores; of our mighty cañons and caverns which the tides of nature have washed into temples and monuments of the grandeur of the mighty God.

Nor is this all. We will send you a still greater prize, a prize that monarchs have never yet tasted; we will send you the evidence of a free people—men and women of every clime dwelling together free, happy, contented, and prosperous; each one a ruler within himself; each one a republican sovereign; each one of whom would strike for the cause of liberty; each one of whom is an example of freedom's glorious beneficence, descendants, many of them, of those who in years agone proclaimed in Independence Hall that a new nation should be born, and it should be christened "Liberty;" each one of whom is willing to contribute the small sum of six cents to exhibit our products to the whole world that it may behold American skill and enterprise, and the grand and glorious evidences of a free and enlightened people.

Centennial Celebration.

SPEECH OF HON. G. BARRERE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

May 7, 1874,

On the bill (H. R. No. 2986) to appropriate $3,000,000 in aid of the centennial celebration and international exhibition of 1876.

Mr. BARRERE. Mr. Chairman, the importance of the proper recognition and celebration of the one hundredth anniversary of the independence of this nation has been most forcibly and eloquently presented by distinguished gentlemen who have addressed this committee in behalf of the appropriation, and none I presume will take issue with them on that proposition. It will certainly be an important epoch in the history of this country, and must and will be observed with all the devotion and patriotism that a grateful people, such as we are, can lavish on it. It will be a point in time when we, as a nation, ought to pause and review the progress and advancements we have made in the arts, sciences, industries, and inventions of the age; our growth and progress in civil and religious liberty; our increase in population, wealth, intelligence, and refinement, and the material developments of the vast resources of our country.

These together with a thousand other considerations will enter into the centennial celebration, and will make it a grand and glorious event. Philadelphia is proposed as the place where the centennial shall be held, and where it shall be celebrated in such a manner as shall show our devotion to our country. And in addition to the ordinary celebration it is proposed to have a grand and universal industrial and art exhibition in which the whole world are to be invited to participate. What place more fit and appropriate for such a celebration? The place proposed being where our Declaration of Independence was signed and sent forth to the people, by which act our forefathers declared themselves a free and independent people, and it also being so prominently associated with all the important historical events of the organization of our Government in the early struggles of the noble patriots of that time for freedom and independence, hence it is that the centennial celebration ought to be held there in preference to any other place on the continent, and when held should be equal in grandeur and magnificence to the importance of the occasion and events commemorated thereby.

Should this centennial celebration at Philadelphia attain the proportions and success that its friends hope and desire for it, it will do much good, and will be a place and an occasion where every citizen should, if possible, attend. The East, with all her wealth, arts, and inventions, will be there. The North, South, and West should meet on that occasion with our eastern friends in true adoration of our country, and all should rejoice together over the greatness and grandeur of our free, happy, and reunited country. And not only this, but there we will meet with the scientific, enterprising, and representative men of all other nations. We will there have the opportunity of exhibiting to the world not only the unparalleled growth and advancement of our country in all the departments of industry, but of the wonderful productions and resources of our country. For these every patriot is anxious that the Philadelphia centennial celebration shall be a glorious and stupendous success.

But the question for us to consider now is, who shall furnish the means to make this enterprise a success? Shall Congress make an appropriation at this time of $3,000,000, and thereby assume the responsibilty of the success thereof? If we make this appropriation, the exhibition at once becomes the charge of the nation and the Government will be held responsible for the future of it; and should this appropriation prove inadequate, more will have to be appropriated, as has been well said already. And as public funds are always lavishly used, if not squandered in such enterprises, we may reasonably suppose that this is only the first installment of many millions that the Government will be called upon to donate to this celebration. Much, therefore, as we desire to see the centennial a success, we would not burden the country with taxes for the same.

All such undertakings properly belong to individual enterprise, and when managed and carried on as individual and local projects, are more likely to be successful than when assumed by the Government, conducted and carried on as governmental undertakings. This adventure, if successful, must be made so mainly by the efforts of the locality where situated. The immediate profits and all the glory of the centennial will be reaped by the citizens of Philadelphia, and hence they should assume the responsibility of the same. But what right or authority has Congress to make appropriations for a celebration or exhibition at this or any other place? If we can for this, then we can for any other; and therefore whenever any of the other cities of this country should hereafter call on the Government for like appropriations she would be bound to respond thereto, and there would be no end to these appropriations. The public funds are raised for far different purposes, and should not and cannot lawfully be diverted therefrom. Appropriations like this are not right or just, and are most palpably a misuse and misapplication of the public funds. No warrant can be found for the same in the Constitution, or under any law by which the moneys of the Government are raised.

It occurs to me that even if we have a clear legal and constitutional right to make this appropriation, that this is not the time to lavish the public money on entertainments of this kind while the people are embarrassed and are suffering so greatly from hard times, with taxes already too high, with thousands of men out of employment in all parts of the country, and suffering for the necessaries of life, and in many instances a state of starvation. Our western and southern people are burdened with high costs of their products to market to such a degree that their produce is almost worthless to them. These two sections of the country are without money, and are almost by law barred from establishing the necessary financial and moneyed institutions in their midst that will bring them money or relief. Hence we are, from the very necessity of the case, for rigid economy and retrenchment in all the expenditures of the Government, and must oppose all unnecessary appropriation of every kind. The commerce of the South and West to-day and during the last year is and has been suffering the loss of millions upon millions of dollars, because the water-courses and communications are not sufficiently improved and protected, and because proper and necessary channels for cheap transportation are not furnished to them, as it is the duty of the Government to do. Our first duty, therefore, is to make these necessary appropriations and cut off all appropriations for shows, entertainments, and ornaments. For these and other reasons I shall oppose this and all other useless and unnecessary appropriations.

Centennial Celebration.

SPEECH OF HON. JOSEPH H. SLOSS,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

May 7, 1874,

On the bill (H. R. No. 2986) to appropriate $3,000,000 in aid of the centennial celebration and international exhibition of 1876.

Mr. SLOSS. Mr. Chairman, I have listened with great interest and respect to what has been said in this House upon the question of the centennial exposition; and I desire to add my voice to those in advocacy of liberal action on the part of Congress and the country. The public throughout the Union are catching the enthusiasm of the Pennsylvanians in the matter, and the disposition is everywhere manifest to aid them in making the exposition worthy the event it commemorates. Already the fact has gone abroad, officially announced by the head of the Government and by the public press, and Congress by previous acts is committed to its success.

The general features of the proposed exposition are to be similar to the world's fair at London, the industrial exposition at Paris, and the more recent Vienna exposition; but in its scope and comprehension it will be grander than these, than all. It will be an event to mark a hundred years of progress in the history of a country, in the chronicles of the world, without a precedent. It does not become us, sir, representing the people whose pride and glory this exhibition will commemorate, to stand here squabbling over a question of expense.

The results will be a thousand-fold in compensation. I believe I know the public sentiment when I say that the nation will meet it without a single murmur of dissent. I represent in part, sir, a people far removed from the scene of the proposed exposition, but who feel a common interest and a common pride in all that pertains to the general interest and reputation of the country at large.

This exposition, as I understand it, extends a cordial invitation and a welcome hand to the whole world to meet us here in honorable competition in all that the genius of America in the progress of a hundred years has produced. Then, sir, let it be one worthy of our people. The Old World will send us their artisans, their mechanics, their scientists, in every branch of inventive skill, and the results of their civilization of a thousand years or more. It is worth while that our people should see all this, and be brought in competition with the glories of other and older nations. It will bring to our shores the people of every system of government, who in their turn may learn a lesson from the workings and the triumphs of our own model Republic.

While America will reap the immediate results the benefit will be universal, and mankind will be the debtor.

It is no idle boast that we are a great people and a great country. Let us then seize this opportunity to make it known to the world, in the success of an international exposition representing from every State the inventive skill, the mechanic arts, the native products, the genius of the land.

In London, in Paris, in Vienna the nations have met in a world's fair, where treasures were poured out to welcome, to interest, and to instruct the people. The international exposition in 1876 at Philadelphia will do more than this. It will show, besides its wonderful mechanic arts and its prolific products, running through every latitude, a kindred spirit and a common brotherhood in a people recently torn by the bloodiest strife that history records, united under the folds of one flag and glorying together in a common heritage of freedom.

Condition of the Country.

SPEECH OF HON. DAVID A. NUNN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

May 7, 1874,

On the several propositions in regard to finance, education, the centennial, and on the general condition of the country.

Mr. NUNN. Mr. Chairman, the House will bear me witness that I have not consumed very much of the public time in discussing any question before Congress at this session. I have preferred rather to attend to the interests of my constituents in a quiet way, and vote on all questions in such a way as in my judgment would promote their interests and the best interests of the country.

I am glad to have this opportunity, while the House is in Committee of the Whole on the state of the Union, to speak of the great needs of the country, and the history of political parties particularly, as the action of parties has affected the country. If we have a heavy national debt upon us, a debt which is crippling our business interests and taxing our people, that debt and that taxation were bequeathed us by the democratic party. Democrats on this floor talk loudly about the burdens of taxation, and seek to show the country that the present embarrassed state of things in the United States has resulted from mismanagement of the affairs of the country by the republican party. These gentlemen seem at times to forget that almost the entire national debt is the result of the rebellion, and that the democratic party were responsible for the war.

When good men throughout the country, in 1860 and 1861, were seeking to avert the calamities of war, when old whigs in my own district and elsewhere in the country were opposing the bitter sectional views entertained and propositions made by democratic politicians looking to secession, when men of this character who loved their country and its institutions and memories were insisting that the contest over the question of slavery ought to be fought out in the Union and under the national flag, the democratic party, in the South particularly, were almost unanimous in insisting upon a dissolution of the Union.

Every democratic United States Senator from the South, save one, left his seat in the Senate and went into the rebellion. Such representative men as William L. Yancey went through the South advocating the policy of "firing the southern heart and precipitating the cotton States into a revolution."

Henry A. Wise, Isham G. Harris, and the other democratic governors in the Southern States, while the people of these States—thousands of them—were pursuing the arts of peace and opposed to war and its dread calamities, were plotting to carry the people into rebellion and war against their own Government. The people of my own State, as late as February, 1861, and after the secession ordinance was passed by South Carolina, voted by a majority of sixty thousand against the mad attempt to secede from the Union, and by a majority of over twenty thousand votes against calling a convention even to consider the question of secession.

But the democracy of the South after they found that they could no longer control this Government in the interest of a narrow, sectional policy, were determined to rule or ruin the country. Legislatures were called by democratic governors in extraordinary session; exciting and false newspaper reports and telegrams were circulated, and by these and other means the process of "firing the southern heart" was carried out too successfully by the sectional democracy. The South, under such leadership, went into the war, a war, as they said, for independence—independence of the country, the nation that they ought to have been proud of; independence of the stirring events in its history and of the grand memories which cluster about its early and later history; independence of that bond of union which Washington had said in his Farewell Address had made us a great people.

The results of this war most of us know to our sorrow. Our people did not know what war meant until it came upon us with all its horrors and all of its dread realities. The property of the people was taken, their houses invaded, the young men of the country—the very flower of the land, and the hope of the country—were carried into the confederate army, either by undue excitement or by force; thousands of them died in hospitals, prisons, and in battle, the dearest and tenderest ties were severed, and darkness and gloom settled over our once peaceful and happy land.

The democratic party, in the influence that party exerted in bringing on the war, have sins to answer for which that party in its life could not expiate, and, now that it is dying, ought to seek forgiveness for in sincere repentance and humble contrite admission of its sins.

Its record of blood can never be effaced from the history of the country or the minds of reflecting men who have suffered by its suicidal and disastrous policy, and it ought to retire as gracefully as it can from the public notice, instead of still thrusting its dishonored front in the sight of an injured and despoiled people, claiming to be the exponent of principles which should control in the management of this great Government which that party sought to destroy but was powerless to shake.

But, Mr. Chairman, the democratic party not only brought on the war, but through its leaders and public journals, after the war had commenced for the suppression of the rebellion, used every effort to weaken the Government in its struggle against the confederacy. That party, even in the North, opposed enlistments and the draft, predicted a failure of the attempt to suppress the rebellion, secretly gloried over the failure of the Union troops, and while there was an army of a half a million of Union soldiers in the field, who had left their homes and the dear ones at home to battle for the nation and the preservation of its integrity, in 1864 that party met in convention, nominated a man they had no love for, because he had been a Union general, but whom they thought was available because he had been a Union officer, and adopted a platform which looked to nothing less than the recognition of peaceable secession as an accomplished fact, and the practical success of the southern confederacy.

The people of the United States rose in their majesty and might and pronounced a verdict against the democratic party, which ought forever to have silenced that party and consigned it to perpetual disgrace and oblivion. But it was reserved to this party to complete its infamy, by seeking in 1868, after it had failed to destroy the Union, to destroy the credit of the nation, repudiate its debt, and embarrass in every possible way the adjustment of the questions which had grown out of the war. In that celebrated political contest of 1868 the democratic party nominated Mr. Seymour, who had never during the whole war uttered a single word in favor of the Union cause, on a platform that meant repudiation and nothing else. It nominated Frank Blair, who had taken strong ground in his celebrated Brodhead letter in favor of resistance to the laws of Congress on the subject of reconstruction in the Southern States, and practically made General Blair's Brodhead letter a plank in the platform of the democratic party. The glaring inconsistency of the democratic party, which all of us know brought on the war upon the idea of preserving the institution of slavery, is seen in the fact that they nominated Frank Blair, who was an original abolitionist and who followed General Sherman in his march to the sea.

But the American people, as they did in 1864, pronounced an emphatic verdict against the democratic party in 1868.

The republican party remained in power. It had adjusted most of the vexed and difficult questions which the war entailed. It had reduced taxation, and the number of tax-gatherers and officers engaged in executing the laws; it had preserved the public credit and reduced the rate of interest on the public debt; it had carried on great public improvements, including one of the grandest public works constructed in this or any other country, in this or any other age, uniting the Atlantic coast and the Mississippi Valley with the great West and the Pacific coast, and opening and stimulating trade with the rich markets of China, India, and Japan. The republican party had, by securing amendments to the Constitution of the United States and by Legislatures of the different Southern States, secured the rights of American citizens to millions of persons who under democratic rule "had no rights which a white man was bound to respect." Public order has been maintained, and a remarkable degree of pros

perity, considering the burdensome taxation which sectional democracy had entailed upon the country, has been secured.

The democratic party has opposed every measure which looked to the development of the country, the securing of rights to our colored fellow-citizens, the maintenance of the national credit, and every measure of the republican party which was progressive and liberal. It has for years had no broad, comprehensive, national policy to present to the American people; but it has been content to oppose every measure of the republican party, and endeavored to show the people that what they called the "radical party" was, by a course of extravagance and corruption, rushing the country into irremediable ruin.

It felt that the country had lost confidence in the democratic leaders and in an organization that had brought on the rebellion; that had opposed the war for the suppression of the secession movement; that had opposed enlistments; that had sought to destroy confidence in the success of our great experiment of self-government; that had sought to bring about peaceable secession, and the reduction of this great nation to a third-class power; that had, after the war, endeavored to destroy the public credit, and opposed at every step the settlement of questions which had to be settled before there could be peace, order, or stability in our affairs, and therefore partially surrendered its organization and its name in the presidential contest of 1872. That party in that year, however, voted for Mr. Greeley, a life-long abolitionist, and B. Gratz Brown, an abolition Senator from Missouri. The party was again overwhelmingly defeated.

Its defeat in 1864, 1868, and 1872 ought to satisfy every intelligent man that the democratic party has ceased to maintain a hold upon the people as a national party; and there is in fact no reason why those who, like that noble set of men in my own State, battled valiantly for years under the banner of Henry Clay for the principles of the whig party, should not now unite with the national republican party, and secure permanently the policy which the whig party contended for in its struggles with the democracy. The whig party contended for a national bank mainly with the view of securing a uniform currency, a currency which should be good and reliable and should circulate freely and without discount throughout every portion of this widely extended country, to the exclusion of the issues of wild-cat banks, which were continually failing and entailing loss upon the people.

The republican party has given to the country such a currency.

The whig party fought valiantly for years to secure a well-protected system of internal improvements by the General Government.

The republican party, with its liberal, progressive ideas and policy, has given to the country the first great fruits of such a measure.

What have internal improvements by the national Government in the last ten years accomplished? Mr. Chairman, we cannot estimate the results in dollars and cents. The policy has opened easy and certain communication between the rich and enterprising East and the progressive West. It has accelerated the introduction of hundreds of thousands of population and millions of money now employed in adding wealth to the country and in peopling and building up the hitherto uninhabited empire in the West. Under the magic influences of this old whig policy the prophecy has been fulfilled that "the wilderness and the solitary place shall be glad for them; and the desert shall rejoice, and blossom as the rose."

The old whig policy of the distribution of the proceeds of the public lands has not been fully carried out, but the republican party has brought that great measure before Congress, and if the old whigs of the country will quit the ranks of the bogus democracy and act as they should do with the republican party, this great measure will be carried into effect, and we will have the proceeds of our magnificent and extensive public domain distributed among the States on a principle of equality, and dedicated to the great cause of the education of our children and children's children to the latest generation.

This, it seems to me, Mr. Chairman, would be particularly desirable to the people of my own State, who have been robbed by the old democratic party of the school fund invested as capital in the Bank of Tennessee.

That fund amounted to a large sum. It had been set apart by the Legislature of my State as a sacred fund to be devoted exclusively to the education of the children in the State. It was derived from the proceeds of the sale of lands belonging to the State, the amount apportioned to the State of Tennessee by the United States in the distribution of the surplus proceeds of the funds in the Treasury of the United States, in 1836, from profits made by the Bank of Tennessee and from other sources.

About the time of the victory of General Grant at Fort Donelson, the democratic Legislature and the democratic governor of Tennessee, and the officers of the Bank of Tennessee, all of whom were democrats, removed the coin and other assets of the Bank of Tennessee to Chattanooga, and afterward to the State of Georgia; squandered these assets in paying democratic officers, in loans to leading democrats engaged in the confederate service, and in aiding the southern confederacy, so that when the Bank of Tennessee was captured by the United States forces and brought back to Tennessee, the school fund and all the assets of the bank, taken by these democratic managers of the institution who had run away with the bank, was all gone except a few hundred thousand dollars. Our school fund is gone, and we must look to the republican party to provide for the great cause of popular education in Tennessee and other States by a distribution of the proceeds of the public lands.

Mr. Chairman, the people of the State of Tennessee and the other Southern States have passed through a terrible ordeal during the last few years. The loss of property has amounted to millions of dollars. The loss of our school fund was a serious blow to us in Tennessee. The squandering of this fund by the democracy can never be atoned for. Our labor system has been deranged. The political situation, the unsettled condition of things, for a long time produced a feeling of uncertainty—an instability, and even disorder, which materially retarded our progress and prosperity. The heavy national debt which democratic and secession leaders entailed upon us has imposed heavy taxes on an impoverished people. In addition to this, the democratic leaders and secession officials carried off into the southern confederacy millions of dollars' worth of machinery and rolling-stock belonging to the railroads in Tennessee which the people had built.

At the close of the war the Union party, finding the roads torn up, their bridges burned, and the engines and cars run off to Dixie, were forced either to issue State bonds and increase the State debt and reconstruct these roads, or else let the people and the vast commercial interests in Tennessee be deprived of the benefits of these roads which had cost the people so many millions of dollars besides losing the heavy amount thus invested by the people.

The Union party did not long hesitate as to this matter. That party, although violently opposed by the few democrats who had slipped back into Tennessee at that time, went forward promptly and reconstructed these roads, and in order to put them into successful operation had to largely increase the State bonded debt. The people are taxed heavily to pay the interest on the State debt.

All these heavy burdens on the people have weighed them down. The present democratic administration of the State government in Tennessee has not contributed to relieve them. Taxes are heavy. No measures of economy have been introduced and carried out by that party. The public debt has been increased by the funding measure. There is no reduction of the army of State officers or of their salaries. A slip-shod and senseless system of assessments is kept up which does not bring out all the property of the people of the State for taxation with anything like equality, and besides is annoying and inquisitorial in the highest degree.

But, Mr. Chairman, notwithstanding all these evils, notwithstanding these losses, notwithstanding heavy taxation and the scarcity of money, our people with their industry, their thrift, and immense recuperative energies will yet succeed, aided by something like a generous fostering care by the national Government, and, in a short time, in attaining to a prosperous condition. Let Congress pass the bill, introduced by the distinguished gentleman from Massachusetts, [Mr. G. F. HOAR,] providing for the distribution of the proceeds of the public lands among the States for educational purposes; let a liberal and equal system of free banking, based on a deposit of Government bonds, be provided for, so that the national banks shall be no longer favored with privileges they now enjoy at the expense of the people, and so that the amount of currency in the country will be increased; let the Government do us full justice in appropriations to public buildings, to the improvement of our rivers, and the opening of lines of water communication, so that the products of the country will not be so heavily taxed on their way to market by railroad rings and railroad kings and by combinations of monopolists; let the laws be faithfully executed, so that every citizen is protected in his life, liberty, and property—protected in the enjoyment of his home, whether it be a palace or a log-cabin, and our people, under the inspiriting influence of our free institutions and of the principles and policy of the national republican party, whose watch-word is "Liberty, order, and progress," will, by the grace of God and the American Constitution, achieve a prosperity which will astonish even themselves.

And now, Mr. Chairman, one word more and I have done. It would afford me great pleasure to vote for the three millions asked for for centennial purposes could I do so and act justly toward my section of the country. There is no one on the floor of this House who feels prouder of his own America than I do; none who has watched from boyhood up with greater interest and delight the developments of our highly favored land. With every kind of climate and soil, rich also in minerals, we are indeed a world within ourselves, and have no occasion to be dependent on any nation or clime to supply our wants. Yet, Mr. Chairman, at the present moment, with the wails of thousands of drowning and starving people of my section of the country ringing in my ears, I should be recreant to my sacred duty to vote for the appropriation of so vast a sum as three millions—to help what? A big show. Charity begins at home, and so ought justice. Let us, then, go to work and appropriate what is wanted for the immediate relief of the southern people. Let us at once take action on and pass the appropriation asked for by the southern claims commissioners. Let us take up and act at once on those private bills that have been approved in the committees and are now on the Calendar; and let us not forget the claims before us for pensions and bounties promised, but not yet paid. Let not there come up a voice of accusation from the graves of our buried heroes complaining that we neglect the widow and the orphan by the non-action of Congress in affording the necessary relief. I want to see the Fourth of July, 1876, a great and glorious day in the history of my country, but it will add greater luster to our country's shield if we first deal justly.

Centennial Celebration.

SPEECH OF HON. JOSIAH T. WALLS,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

May 7, 1874,

On the bill (H. R. No. 2986) to appropriate $3,000,000 in aid of the centennial celebration and international exhibition of 1876.

Mr. WALLS. Mr. Speaker, from what I have seen of the wide discussion of the proposed centennial exposition in the public press, and from the course of the debates upon the subject in these Halls, it seems to me that a misapprehension of the origin and character of the enterprise has from the beginning taken largely from the dignity of the discussion, and has largely and without necessity added acrimony and bitterness to the evident feeling attending it.

The exposition has in the press, even of this capital, been sneeringly alluded to as "The Philadelphia job," as though it were an evident attempt on the part of the people of Pennsylvania, and especially of the city of Philadelphia, in an improper and unwarrantable manner, from motives of selfish greed, to foist upon an indifferent and an unwilling people a scheme foreign to their interests and in opposition to their wishes, and all for the petty gains and notoriety that by the adoption of the proposed plan would inure to the local benefit of a particular section.

It is only upon the supposition of the existence of some such opinion that I can account for an acerbity of feeling and a harshness of language in the newspaper discussion of the centennial which to me seemed utterly uncalled for and unworthy of the theme.

From my recollection of the congressional action heretofore had, and in which I participated, the place of holding a proper national celebration of the one hundredth birthday of this Government and of this people, as a separate and independent nationality, was, previous to the fixing of a definite location for its celebration, in no sense of the word considered as *a job* attempted to be put up by anybody. From and indeed previous to any action whatever being had on the part of Congress, the whole subject had been widely agitated in all parts of the country; and congressional action was proposed and was had, not in advance of the popular wish and sentiment, but in response to a general popular demand, and in conformity with the popular wish of the whole people, as evinced in the numerous petitions presented to us.

Indeed, I can but feel that the mere selection and designation of the city of Philadelphia as the place in which the exposition should be held did more than aught else, or indeed all other considerations, to excite jealousy and create animosity before unexpressed and unfelt, but which would, in like manner and for the same causes in due time, have existed against any other locality which might have been named.

But aside from all these minor and incidental considerations, the aid of Congress having already been granted to some extent to the centennial by such legislation as was asked; and more, its former assistance having been solicited in a proper manner by a very numerous and respectable portion of the people at large as well as by the centennial representatives selected and commissioned by the Government from every State and Territory of the Union, and certainly very plausible reasons having been offered for the grant of further national assistance, we have a plain duty before us.

And accordingly it seems to me that, under all the circumstances of the case and in view of the large share of public attention already excited toward the centennial, and partly in consequence of the very decided encouragement drawn to it from the congressional action already had, the very least that we can with propriety do is to give the whole matter full consideration, in justice to ourselves as well as to a matter appealing so directly to the patriotic sentiments of our whole people, and by a full and fair discussion endeavor to ascertain the actual merits of the place proposed, the probable success of the undertaking, the benefits that may be expected to result from it both to ourselves and to the world, the propriety upon general principles of a grant of national aid, and whether or not the extension of such national aid is by our previous action already pledged.

First, then, what are the real merits of the proposed international exposition?

In reference to this point, the mere recital of the preface to the act of Congress to which the centennial owes its corporate existence would seem to summarize the whole matter in its authoritative announcement of "Whereas it behooves the people of the United States to celebrate by appropriate ceremonies the centennial anniversary of this memorable and decisive event, which constituted the 4th day of July, A. D. 1775, the birthday of the nation," &c.

From the very first, then, a dominant and not discreditable feature of the centennial seems to have been that it contemplated a public, emphatic, and comprehensive expression by a whole people, who for a hundred years had enjoyed a more than usual share of the ordinary blessings of human life under the genial but powerful influences of an essentially popular government based upon the organic and paramount doctrines of the Declaration ascribing to every man born of woman an entire and absolute equality of political rights, of their gratitude for the blessings attending their lot, and their profound appreciation of the adequacy of a free government to the protection of the social, political, and personal rights of all within its scope.

Such recognition of advantages received from the practical operation of existing systems of government have characterized the people of all the various known governments that have existed from time immemorial, so much so as to have become a custom well-nigh universal.

Recognized thus as proper and becoming under monarchical and even despotic governments, will any say that it is any less proper and becoming to the happy people who exult in the possession of the only literally free government upon the face of the broad earth?

Indeed, there would seem to be a peculiar propriety in such a national exhibition to the nations of the world of our own satisfaction with the capacities and excellencies of our own system of government, thus approved, tested, and favored, to be both sufficient and satisfactory, by the dangers and reverses as well as the sometimes more dangerous successes of a century of practical trial.

It may all be very true that no absolutely new truth and no thereto unheard-of discovery in political science was announced in the Declaration as a novel and startling base upon which to found a governmental structure that should challenge the admiration of the nation. Such admitted fact in no whit derogates from the value or force of that noble document. Right there, in the very fact that in the Declaration was nothing intrinsically *new*, but that it simply gathered up and arranged in systematic order and for a practical purpose in the promotion of human happiness and progress those simple, forcible, and undoubted political truths which had long been acknowledged as true in the abstract, but never practically embodied in any actual and existing form of government, consists the real power of the Declaration.

It was this very novelty of making practical application of what had previously been considered only abstract propositions for the discussion of philosophers, and to serve as themes for sentimental preachers and visionary theorists, to the protection of every-day rights and privileges, and their incorporation into an actual system of government for living men, which aroused the sceptical curiosity, and awakened the incredulous but zealous attention of the political world.

Thus proclaiming nothing actually new to philosophers and theorists the announced determination to base upon the truths of the Declaration an actual government of living men, and to place it in competition with existing governments of a variously but totally different character, startled and at first alarmed, the nations.

Organically strange, and, in its application, of necessity essentially aggressive and practically threatening, the newly-organized Government met with but chary courtesy from other nations, and early excited an alarm and a proclivity to opposition which to this day has not entirely disappeared.

While other nations thus so gladly welcome and celebrate those memorial days which remind them of the glorious deeds of their own noble and beloved ancestry, and delight to sound their praise, shall we, a happy and prosperous nation of forty millions, exulting in the possession of a Government by the people, for the people, of the people, entirely adequate to all our wants, and, however otherwise differing, united in common satisfaction without political heritage, decline upon an appropriate occasion to manifest our gratitude to our fathers and our pride in the perfectness of their work?

What measure of success may be expected to attend an enterprise begun in the spirit and with the purposes alluded to, is a question with which in fact we have little to do, for the purposes of this discussion, as to the propriety of lending our aid; and yet it is a question the discussion of which will be to help to influence the action of many in reference to it.

No little weight, however, should attach to the evident truth, that our action upon the matter, whether favorable or the reverse, will be apt to exert a very strong, if not a conclusive influence upon the success or failure of the proposed undertaking.

The commission, as an organized body, owes its existence as such to the action of Congress which gave the first effective impetus to its life, and in its every stage, so far, has been led on and encouraged by governmental co-operation and congressional legislation.

The entire nationality of its character as indispensable to its probable success, even as a merely national exposition, was fully recognized by the commission at their first convention, while they were soon convinced that to attempt an international exhibition without the open and emphatic countenance and assistance of the national Government was, from the impossibility otherwise of any formal communication with foreign governments, wholly absurd.

Such countenance, which indeed was foreshadowed in the direction of the organic law that the exposition should be held "under the auspices" of the United States Government, was sought in the petition for the incorporation of "the centennial board of finance," and was granted in the enactment of its charter.

Thus led on, step by step in its gradual progress, and encouraged by the successive acts of participation by different branches of the national Government, it is scarcely too much to say that the ultimate success of the exposition, as of a full and complete national character, depends upon the determination which we shall reach as to the extension of further national aid.

And, as it seems to me, that consideration alone, that the success

of an enterprise which originated as an organized undertaking in congressional action, and has been in the same manner steadily encouraged hitherto, will depend very largely upon our future action, and will be marred by our refusal of any further aid, should carry with us great weight.

With such aid as we are now solicited to grant, and which, in view of the many beneficial effects that may reasonably be expected to result from a successful exposition, is really of little account and nearly insignificant, the favorable progress and successful termination of the exposition may safely be predicted.

The general interests of the nation as a whole, as well as the particular interests of each State and section, will be so surely and so largely promoted by the intimate intermingling of citizens from every corner and section of the vast extent of our own country, with an opportunity for a prolonged association with the citizens of far-away regions whose very existence has with thousands of our own people secured, from remoteness alone almost mythical, will create an exciting interest in the exposition which from the time of general assurance of its vigorous prosecution will increase day by day up to the close of the exposition.

Located, as it is, in the midst of one of the most prosperous and densely populated regions of our country; in a city itself containing nearly one million people, and in the near vicinity of a half dozen others with an aggregate population of two millions more, the probable attendance upon the exposition from a circle about its location of a radius of two hundred and fifty miles, or within a single day's travel by rail, may safely be estimated at from two to three millions of our own people.

The immensity of the mineral resources of this favored country, of which the simple and truthful report has amazed the world—our incalculable wealth of coal, iron, copper, silver, and gold, of which a thorough and exhaustive exposition will be given, will alone attract the attendance of many thousands from abroad.

The admitted perfection in the cultivation of various of the mechanic arts, the demonstrated excellence of mechanical skill, attained by our American workmen, as exhibited in the European expositions, with the immense extent and wide distribution of our manufacturing establishments, will be of special interest to many other thousands.

The wide-spread and familiar use of steam and other machinery in the prosecution of all varieties of agricultural as well as merely mechanical work will constitute a feature of the exposition that will add largely to its attractiveness in the eyes of thoughtful men from all sections.

A full exhibition of the immense variety of the natural productions of the United States, stretching as it does from the tepid waters of the Gulf to the northern home of the glaciers, and reaching from the orange and grape of California, the banana, the cocoa-nut, and the pine-apple of Florida, to the dwarfed and stunted vegetation of the Polar circle, will present at one glance so striking and palpable a view of the immense extent of our country with vast range of vegetable production, stretching not in distant colonies, but in what will ultimately and organically, and at no distant period, form a solid continuation of coterminous States, as to sustain universal and irresistible attention.

Indeed, viewed in any probable light, a large attendance and participation from abroad may reasonably be expected to gather at the centennial, if only that aid which is subsequently necessary now in the time of its utmost need be extended, and that its inauguration and an auspicious beginning secured, for after that it can take care of itself.

From some, among the many nations of the eastern world, our country has never met with any but the most cordial and kindly support, and their good offices in our behalf have more than once been tendered; for however different in character and tendency may be their own governments, they have been wise enough to recognize the strength that may naturally be made to grow out of organic differences. From all those nations warm sympathy and a large attendance may be counted on with certainty.

And, in the case of nations to whom our own steady and progressive expansion and prosperity have been a matter of disappointment and regret, the very jealousies and even animosities that peradventure may exist, will all work together to enhance the curiosity that will induce many to see with their own eyes the actual sources of weakness of the "Republic of the North," upon which in contemplation they have fed, perhaps, their grudges.

On all these accounts, then, and in view of all these inducements and moving causes, I count with confidence upon an attendance upon the exposition that of itself will command its final success.

I come next to the inquiry as to what, if any, results of any substantial value may be anticipated from the centennial exposition, if a fair degree of success attend it.

That benefits of the kind commonly considered as alone being substantial, that is to say, of the kind that bear immediate and tangible fruit that within some short time makes itself perceptible to the senses, will of necessity be received from such an exposition as is contemplated, I can have no doubt.

No more direct, nor any more effective agency in the promotion of national strength and growth, so far as is shown in the experience of this country as plainly written in its history, can be mentioned than that of immigration

The incredible extent of the current of humanity that, for the last half century, has been constantly drifting toward and flooding this continent is even now, after all the attention that has been given to it, very little appreciated even by many of our most intelligent men.

I care not now to go into many of the ascertained facts in regard to that matter in detail, but in this connection will call attention to only one or two.

Mr. Young, Chief of the Statistical Bureau, in his report for 1870, says, that on averaging the increase to the population of the United States, caused by immigration, it is found that "during the entire period from 1820 to 1870 the increase of each year over the one immediately preceding, if uniform, would average alone 13 per cent.;" and in 1870 he estimates that "the total number of aliens who have been permanently added to our population by direct immigration since the formation of the Government will reach 7,803,863."

What may be the actual and reasonable valuation of such an increase of population is a nice question, and one which I have no desire to pretend to determine, but in regard to it I prefer once more to quote from Mr. Young, who on page 10 of his preliminary chapter of his report gives, after a fair calculation and comparison of the varying estimates of experts upon that peculiar branch of statistical knowledge, the following calm and cool but startling estimate of the money value of the annual and aggregate accretion by immigration to the population of this country within the preceding year and the preceding half-century:

> From the foregoing considerations, therefore, the sum of $800 seems to be the full average capital value of each immigrant. At this rate those who landed upon our shores during the year just closed added upward of $285,000,000 to our national wealth, while during the last half-century the increment from that source exceeds $6,243,880,800.

And after this reasonable but astonishing conclusion he proceeds:

> It is impossible to make an intelligent estimate of the value to the country of those foreign-born citizens who brought their educated minds, their cultivated tastes, their skill in the arts, and their inventive genius.
>
> In almost every walk of life their influence has been felt. Alike in the fearful ordeal of war and in the pursuits of peace, in our legislative halls and in the various learned professions, the adopted sons of America have attained eminence.
>
> Among the many who rendered timely aid to our country during the late war, it may seem invidious to mention a single name except for the purpose of illustration. In the year 1839 there arrived at the port of New York in the steamship British Queen, which sailed from the port of London, a Swedish emigrant, better known as Captain John Ericsson. What was his value to the country as estimated on the 9th day of March, 1862? Was it $800, $800,000 or $8,000,000?

And to the above admirable and forcible illustration by Mr. Young of the incalculable value to this country of immigration I desire to close this part of the discussion, by asking some bold man among my colleagues upon this floor to give here and now a cash valuation of the value of the life and services in one direction of such a man as CARL SCHURZ; and in another of such a one as Louis Agassiz; and in still another of such a man as Smithson, Girard, or Stewart.

Tending, then, as it inevitably will, by showing the manifold chances for social, political, and material advancement that in this happy country were offered as free gifts to every son of man who chooses to apply in person for them and to demonstrate his sincerity by assuming the obligations of American citizenship, to add a powerful and continuing stimulus to a never-ending tide of valuable immigration—for those reasons alone, were there absolutely none others offered, I am in favor of substantial and direct aid to an enterprise so palpably capable of such valuable results.

I will leave to others such comments as the certain improvement in mechanical and artistic skill, which may reasonably be expected to grow out of such a favorable opportunity for the examination and comparison of the master achievements of the trained and skilled workmanship of the world; for I know that this will be with many a favorite and fruitful subject of full discussion.

But I will take the occasion to call attention to a less direct, but to my mind a no less important, effect that may be expected to result from a well-understood national and international exposition. I allude to the tendency of such a gathering as will then occur to revive, invigorate, and stir to vigorous life that feeling of national patriotism in our land which recent occurrences have somewhat weakened.

I am well aware of the common inclination to consider patriotism as a sort of myth and a popular delusion, and to look upon any allusion to it as at least bordering upon the ridiculous.

Long ago patriotism was said by an eminent English novelist to be "The love of office," and politics "The art of getting it;" and I am not ignorant of the common supposition that, in southern politics particularly, the actual truth of old Fielding's allegation is being continually illustrated; but coming from the South, as I do, I desire to say that the patriotic tendency of the centennial is not the least attractive or least important feature of it in the estimation of southern men, "without respect to previous condition."

In the face of the common drift of the modern general mind toward ridicule of anything in the way of sentiment in the discussion of important questions, I am fully conscious that I am by no means alone in ascribing to a patriotic attachment to one's own country, its people, and its government, a powerful influence in adding to its strength and in increasing the stability of its institutions.

This is proved to be true of all the nations of which history has preserved the records, and equally true of all, no matter what may have been the nature of their governments.

This is true even of governments of a monarchical character, as is

proved in the history of yesterday as well as of a thousand years ago; as is witnessed to-day in the devotion of his adherents to Don Carlos, in the warm affection of Frenchmen of prominence to the prince imperial, and in the undying devotion of the enthusiastic Irishman to the green banner of the Ireland of old.

Instances innumerable in point could easily be adduced, extending through the whole reach of recorded and traditional history, from the noble Roman who knowingly gives himself to torture and death for his country's sake to the equally noble American who in the very last extremity "only regretted that he had but one life to lose in the cause of liberty," and within our own personal knowledge has been convincingly exemplified in the unnoted deaths of thousands in our last great struggle, who died and gave no sign of the paramount strength of patriotic and unselfish sentiments and opinions, and sealed the evidence of their power and their sincerity as well in the oozing ebb of their life's blood.

The power of a mere sentiment, whether shown in the unchanging faith of the martyr or the constant and undying attachment of the patriot, has, in the shaping of the destinies of this world and the dignity lent to its history, worked greater miracles than any other than divine power.

And I insist upon it that now, as it ever has been, whatever agency adds to the force or enhances the vitality of the considerate patriotism of a thoughtful and intelligent citizenship ministers directly to the permanent sources of the health and strength of the nation to which it belongs.

Does any man suppose that the fathers of '76, with the halter dangling before their eyes, affixed their signatures to the Declaration from deliberate conviction that pecuniary gain to them would therefrom result? Was greed the animus of that ever-memorable political announcement of "Millions for defense, but not one cent for tribute?"

In tracing their course over the frozen ground of Valley Forge, did those who followed Washington, or lurking in the gloomy swamps of the Carolinas, did those who were "out" with Marion believe that patriotism was "the love of office?"

So I believe that when from every corner of this broad land, from every State and Territory, thousands and millions of the free citizens of a free government shall assemble in the very cradle and place of the birth of all that politically they hold dear, and exchange with each other the mutual grasp and the meaning glances of a common citizenship, there will be aroused in the bosoms of all a higher and purer sense of the honest and sincere attachment cherished by all in common for those free institutions whose origin and beneficent sway they are now to celebrate than they have ever before been permitted to feel, and which will strengthen all the bonds which can unite freemen to their native land, and kindle a blaze of patriotic feeling in whose dazzling light all questions of minor differences and all hurtful recollections of past disagreements will be blotted out.

Recognizing fully the obligations of a large majority of those to whose suffrages I owe my official presence in this Hall to the tardy but in the end the full and complete vindication of the sublime and sublimely simple announcements of the Declaration, I am willing that others should find amusement in contemplating the centennial as "an overgrown and spread-eagle Fourth of July;" while for myself and at least four millions of the new freemen of this land of liberty, I will hope that, in the mercy of God, my own life may be spared till, among the crowding thousands of exulting freemen, I may on the 4th of July, 1876, stand in the very shadow of Independence Hall, and with glowing heart read the undying words of Webster: "When my eyes shall be turned to behold, for the last time, the sun in heaven, may I not see him shining on the broken and dishonored fragments of a once glorious Union; on States dissevered, discordant, belligerent; our land rent with civil feuds, or drenched, it may be, in fraternal blood! Let their last feeble and lingering glance rather behold the gorgeous ensign of the Republic now known and honored throughout the earth, still full high advanced, its arms and trophies streaming in their original luster, not a stripe erased or polluted, not a single star obscured, bearing for its motto no such miserable interrogatory as 'What is all this worth?' nor those other words of delusion and folly, 'Liberty first and Union afterwards,' but everywhere spread all over it in characters of living light, blazing on all its ample folds, as they float over the sea and over the land, and in every wind under the whole heavens, that other sentiment, dear to every true American heart—Liberty and Union, now and forever, one and inseparable!"

Entertaining such sentiments and cherishing the hope that the day of the termination of one hundred years from the birth of our Government may by common consent and by universal adoption be fixed upon as the day of the definite and emphatic termination of all feelings of harshness and bitterness arising from our recent contentions, I shall not apologize for them, however unfashionable they may be held to be, but still continue to hold them, hoping for them a wider adoption and a more commanding prevalence.

In the presence of so many who are infinitely better versed in all matters of the legal and constitutional authority of Congress to make a grant of pecuniary aid, I do not propose to occupy much time with that part of the discussion.

If the centennial is right and proper in itself, as I think it is; if it will promote the general harmony, increase the fervor of the common patriotism, and so strengthen the sources of national strength; if it will unite more closely together the now somewhat discordant and jarring interests of the North and the South; if it will tend to discourage and extinguish all feelings of sectionalism; if it will stimulate that immigration, to which more than to all others except organic agencies we owe our wonderful national growth; if it will promote and advance our progress in the industrial arts, then I have faith to believe that no specifically permissive power is constitutionally necessary.

In a common-sense way I look about for analogies, and I find them spread around me on every hand. I find national banks established, a circulating medium of paper money created, Pacific railroads built, the improvement of internal harbors and rivers effected, vast sections of foreign territory purchased and incorporated with our own, a board of immigration established, provision at large expense for a periodical census, a national observatory established and supported, and all, so far as I can discover, without any specific permission given in the Constitution, and I am satisfied that the good results expected and attained thereby give, in my opinion, sufficient warrant; and I am content to consent to an appropriation for the centennial on the same ground on which the picture of the Father of his Country was placed upon the walls of the Capitol in the city that took his name. And however others may feel at liberty to regard the previous action of Congress, and of the Executive in obedience to such action, as having been taken under a sort of duress of inconsideration, and as to be construed in a sort of Pickwickian sense, I cannot so regard it.

The commission was inaugurated by and took its organic life from the action of Congress in accordance with the wishes, expressed by direct petition and through the press, of a large portion of the citizens. The commissioners were under and by virtue of congressional action selected by the executive of every State and Territory and were commissioned by the Executive of the nation. The centennial is to be held "under the auspices of the national Government." Its officers are to report regularly to the national Government, and finally, when "all is made ready" for the festival, the Executive of the nation is to proclaim the fact to the nations, and to communicate the regulations that may be adopted for its control to the representatives of such nations.

The construction which to me seems the only proper one of all these doings and sayings is, that in the ordinary significance of the words used they mean that the various nations of the earth are formally and officially informed of all these things. They were invited by our representatives to be present and participate in this national and international festival, and in an exhibition of natural resources, the products of the shop and the mine, and the evidences of the advancement made in social, educational, scientific, and mechanical progress within the Republic of the western continent. And finally, I am constrained to a hearty support of the centennial from a conviction that, whether the effect of the exhibition be great or small, and whether it be entirely beneficial or not upon the Northern and Eastern States, its results upon the Western, and particularly the Southern States, will be prolific in great and unmingled good.

With a climate of unexampled mildness, and yet, with the exception of extreme cold, existing in its various sections almost every conceivable grade of temperature between the mild temperate and the tropical; with every known description of soil, the various kinds being intermingled in all desirable ways, and, in large proportion, of a character for fertility equaling the best; with a range of vegetable production, extending from the lime, the cocoa, and the coffee of the fervent climate of the tropic, to the green, the forage, and the fruit of the temperate zone, the South, as a distinct division of our common country, is worthy of vastly more attention relatively than she has yet received.

In no part of the world that has for an equal length of time been occupied by civilized men can be found so great a wealth of mineral resources that is so little known and has received so slight a comparative development.

For more than a half century the South as a whole has been given so exclusively to agricultural pursuits, and those of the ruder kinds alone, which were involved in the raising by unskilled labor the usual crops of corn, cane, and cotton, as now in the time of an entire revolution of her whole system of labor to find herself utterly destitute of those higher agricultural and mechanical employments which have proved so lucrative in the North and West.

Again, by the abolition of slavery, in which mainly by her own fault, but also partially through the consenting toleration of the North and West, the South was instantaneously deprived of an incalculable amount of capital actually invested, which has operated as a similar destruction of what stood for property and represented capital would have operated elsewhere in the world, and has reduced the whole section to comparative, and it may be said actual, poverty.

With all her great variety of valuable productions and all her great wealth of mineral resources; with her abundance of cheap fuel for the operation of steam machinery and plenary water-power abundant through her whole extent, the South may be said to furnish a vast, rich field for profitable development of manufacturing industry, but as yet almost entirely unoccupied.

These patent sources of untold wealth remain dormant, because first their existence is only known to a small proportion of the world, who never dream of the advantages there offered; and second, because of a widely prevalent notion that the introduction of capital would not be safe and immigration would not there be welcome.

Knowing personally that in my own sunny State as fair and promising fields for agricultural labor, mechanical skill, and manufacturing capital are offered with as much of safety, as hearty a welcome, and as good a prospect of success as can be found anywhere in the North or West, or indeed in the world, and having reason to believe that in these respects, what is true of Florida is true of the South as a whole, I am anxious that she should be better known to our own people and to the nations of the world.

Seeing, then, in the proposed centennial exposition an opportunity, not likely soon to recur, to exhibit to the widest observation the manifold capacities and resources of the Southern States, and to make fully known to the sensible appreciation of the largest number of discriminating observers the thousand rare and valuable inducements to immigration, I have in addition to that general interest, so proper for all, an interest which is, as I trust, of a pardonably sectional character, that my own State and her sisters of the South may have a chance to be more fully and more particularly known; for then I know they will be more highly considered.

And now, almost reluctantly, I leave the subject with a closing remark. I desire to say, as of my own personal knowledge, that in my own State very much of the not inexplicable bitterness and hostility of feeling between the different classes of citizens which followed after the war, and not, as it strikes me, unnaturally so, has now for several years been gradually and rapidly disappearing, until now it would not be easy for a northern or western man to discover the fact of his being in a former slave State from any peculiarity of the treatment that he, as a stranger, would there receive—as rapid and as extensive progress toward a homogenity of feeling and a unity of interest as could possibly have been anticipated by the most sanguine anti-slavery man of ten years ago.

From this, as a natural result, it has followed that very much more of a feeling of acceptation of the startling results of the late war is actually felt than is by any one publicly acknowledged.

The sanctity of the Union is tacitly conceded; the majesty of the inherent power of a free government is felt and known, so much so that if in the future any strong tendency to increasing the power of the Government by concentration should ever be manifested it will, in my opinion, first develop itself in the Southern States.

While something of remaining bitterness still rankles in the breasts of a small portion of the "irreconcilable," it does not indicate the general feeling. With the many, and the best of the whole, the old Government and Constitution of the fathers has received an increased sanction from its baptism of blood. The streaming folds of the "flag of the free" has received an increase of force and an added significance. Many, very many of those who once fought against that flag under the delusions of sectionalism are now more fully aware of the extent and folly of their wide political departure than any care in words to admit. But let once more the starry flag be unfurled in a national cause, whatever it be, to convince the world that the whole American continent is to be reserved for the gradual occupation of popular governments, attaining to the stature of strength and national manhood by steady and normal growth and development; or whether it be displayed above a national centennial exposition, as unfurled to celebrate a common and patriotic exultation at the triumphant demonstration by a hundred years of trial and practical use of the wisdom and forecast of our fathers as to the adequacy of popular government for the political necessities of the races, and the spontaneous joy of a free people at their unbroken Union and the restored unity of that nationality, and none will hail the glorious old banner with more joy than the men of the South.

The Centennial Celebration and International Exhibition of 1876—Their Advantages, Duties, and Honors.

SPEECH OF HON. J. R. HAWLEY,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

May 7, 1874.

The House being in Committee of the Whole, and having under consideration the bill (H. R. No. 2386) to appropriate $3,000,000 in aid of the centennial celebration and international exhibition of 1876—

Mr. HAWLEY, of Connecticut, in closing the debate, said:

Mr. SPEAKER: I have no speech to make, as the expression is popularly understood. But I think I never in my life was so anxious and ready to talk as I am now. I never was so desirous to be heard; and that not for my sake at all, for no man could possibly so feel his insignificance, in the presence of what he considers a great national question, as I do at this moment. Circumstances above and beyond my control, and not of my making, have put me where I am. It is a habit of my life to follow my flag and do my duty; I wish I could do it better. But when I have done as well as I can, I shall in my conscience be acquitted, whatever becomes of the cause that may unfortunately have been committed to me.

THE CREATION OF THE COMMISSION.

I find myself a member of a national commission, created by an act of Congress, an act duly approved by the President and published in your laws. The governor of my Commonwealth sent for me and asked me if I would accept a place upon this commission. I had not even read the act. I did not know of its passage. I considered the matter for a short time and consented to serve. I received my commission from the President of the United States and began to study my duties. There are ninety-three citizens of the United States in precisely my condition. And here is the act we are told to execute. I do not know what was said in the debate that preceded its passage. I have never read one word of that debate. I never took the trouble to take the Globe containing it from my shelf or to go to the Library to read it. So far as my duty is concerned, I do not care about it. Here are my orders, your orders, the orders of my country:

An act to provide for celebrating the one hundredth anniversary of American independence, by holding an international exhibition of arts, manufactures, and products of the soil and mine, in the city of Philadelphia, and State of Pennsylvania, in the year 1876.

The preamble recites:

Whereas the Declaration of Independence of the United States of America was prepared, signed, and promulgated in the year 1776, in the city of Philadelphia; and whereas it behooves the people of the United States to celebrate, by appropriate ceremonies, the centennial anniversary of this memorable and decisive event, which constituted the 4th day of July, A. D. 1776, the birthday of the nation; and whereas it is deemed fitting that the completion of the first century of our national existence shall be commemorated by an exhibition of the natural resources of the country and their development, and of its progress in those arts which benefit mankind, in comparison with those of older nations; and whereas no place is so appropriate for such an exhibition as the city in which occurred the event it is designed to commemorate; and whereas as the exhibition should be a national celebration—

Not a Pennsylvania and Philadelphia celebration, but "a national celebration," as well as an international exhibition—

in which the people of the whole country should participate, it should have the sanction of the Congress of the United States: Therefore,

SECTION 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That an exhibition—

Of what? That a "celebration" merely shall be held on the 3d, 4th, and 5th of July of that week? Not that alone, but that—

an exhibition of American *and foreign* arts, products, and manufactures shall be held—

Not by us ninety-four private citizens, not by Daniel J. Morrell, or any other citizen of Pennsylvania alone; not by the corporation of the city of Philadelphia, but—

under the auspices of the Government of the United States, in the city of Philadelphia, in the year 1876.

SEC. 2. That a commission, to consist of not more than one delegate from each State and from each Territory of the United States, whose functions shall continue until the close of the exhibition, shall be constituted, whose duty it shall be to prepare and superintend the execution of a plan for holding the exhibition—

The "international" exhibition described in the preamble—

and, after conference with the authorities of the city of Philadelphia, to fix upon a suitable site within the corporate limits of the said city, where the exhibition shall be held.

These commissioners, with an alternate from each State, are to be nominated by the governors of the States and Territories, and appointed and commissioned by the President. We were told that the commission must—

Report to Congress, at the first session after appointment, a suitable date for opening and for closing the exhibition; a schedule of appropriate ceremonies for opening or dedicating the same; a plan or plans of the building; a complete plan for the reception and classification of articles intended for exhibition; the requisite custom-house regulations for the introduction into this country of articles from foreign countries intended for exhibition; and such other matters as in their judgment may be important.

And by subsequent legislation we were commanded to report from time to time, and to make our regular reports to the President, and "in a final report present a full exhibit of the result of the centennial celebration and exhibition of 1876." You authorized us, you created us, you ordered us to be commissioned by the President. You commanded us to report. You commanded us to devise plans for holding not a national celebration alone, but an international exhibition. We have obeyed you. We have made our plans. We have our plans for the reception and classification of articles. We have our plans for the admission of goods. We have our plans for building. We have our ground selected. We have everything ready but one thing. And we have reported to you from time to time. And now we come again to report, as you have commanded us to report.

I do not come here, sir, to pretend that we have ever obtained any snap judgment upon the Government or upon the nation. I do not come here to pretend that you are bound by any law from which you cannot escape. I have come to tell you where we, your officers, commissioned by your order, find ourselves to-day; and I come, gentlemen, my friends, to ask you to tell us what we must do.

As I see it, as we see it, the national honor is involved. As we see it, the national profit and advantage are involved in it; not alone "sentiment," in which I believe from the bottom of my soul—for every "sentiment" I hold I am ready to offer my life at any time and place—not sentiment alone, but honor and profit, all that it becomes a nation or that it becomes you to consider.

I come here in behalf of that commission to lay before my fellow-citizens and fellow-Representatives our situation, and to ask you whether this nation can possibly escape from the position in which

you have placed it. And my great anxiety is that we shall be acquitted of any censure in carrying out your orders.

Well, we did organize this commission. Finding afterward that an auxiliary association would be valuable for the collection, holding, and disbursement of the funds, and that the work was too cumbersome for us alone, and might properly be divided with another corporation, an act was submitted and passed here chartering the centennial board of finance.

I do not know who drafted it, but upon the whole it was wisely drafted, and I believe was approved by our commission. It follows, in its general tenor and purpose, all that was provided in the previous acts. We were perfectly well aware that in the original act was this clause:

The United States shall not be liable for any expenses attending such exhibition, or by reason of the same.

We were perfectly well aware that we could incur no debt or obligation for which the Treasury of the United States could be made liable, and we never have tried to do it. But we have come here now to report to you the situation in which we find ourselves. The second act, upon which one gentleman dwelt, does not, as he claimed, provide that "under no circumstances shall Congress ever be called upon to appropriate to the enterprise." Not at all. He said that precisely as if he were reading from the act. There was nothing in the original act but a declaration that the United States should not be liable for any of the expenses attending the exhibition, and the subsequent act was substantially in the same words. That was a perfectly proper provision, and we have honestly lived up to it. We have had no disguise of any sort or kind.

PROCLAMATION AND CIRCULARS OF THE NATIONAL GOVERNMENT.

Now, what more has been done? In one way and another the sum of $4,500,000 has been raised, of which I will speak in due time. The President has issued a proclamation upon this subject, with which I suppose you are familiar. That proclamation was dated July 3, 1873, and in it, after citing the authority for so doing, he proceeds to say:

Now, therefore, be it known that I, Ulysses S. Grant, President of the United States, in conformity with the provisions of the act of Congress aforesaid, do hereby declare and proclaim, that there will be held in the city of Philadelphia, in the State of Pennsylvania, an international exhibition of arts, manufactures, and products of the soil and mine, to be opened on the 19th day of April, 1876, and to be closed on the 19th of October, in the same year; and in the interest of peace, civilization, and domestic and international friendship and intercourse, I commend the celebration and exhibition to the people of the United States; and in behalf of this Government and people I cordially commend them to all nations who may be pleased to take part therein.

And then, in simple execution of his duty under the act, the President proceeded to communicate to the diplomatic representatives of all nations copies of this proclamation, together with the regulations adopted by the commissioners, for publication in their respective countries. The Secretary of State prepared a circular note to be given to every foreign representative at or near this seat of government. In it he said:

I have the honor to inclose, for the information of the government of ——, a copy of the President's proclamation, announcing the time and place of holding an international exhibition of arts, manufactures, and products of the soil and mine, proposed to be held in the year 1876.

The exhibition is designed to commemorate the declaration of the independence of the United States, on the one hundredth anniversary of that interesting and historic national event, and at the same time to present a fitting opportunity for such display of the results of art and industry of all nations as will serve to illustrate the great advances attained and the successes achieved in the interest of progress and civilization during the century which will have then closed.

How could you use language more decisive than those words of our President and Secretary of State? Listen to this also, from Mr. Fish's circular, I beg you:

The President indulges the hope that the government of —— *will be pleased to notice the subject, and may deem it proper to bring the exhibition and its objects to the attention of the people of that country, and thus encourage their co-operation in the proposed celebration. And he further hopes that the opportunity afforded by the exhibition for the interchange of national sentiment and friendly intercourse between the people of both nations may result in new and still greater advantages to science and industry*, and at the same time serve to strengthen the bonds of peace and friendship which already happily subsist between the government and people of —— and those of the United States.

Will you tell me in what words you could clothe any warmer or more cordial commendation and invitation to foreign governments to take part in this exhibition? But that is not all. The Secretary of State wrote another letter, which I had not seen until within a day or two. In a circular, dated July 7, 1873, sent to all our representatives abroad, is this paragraph:

It is desired that you will avail yourself of such opportunities as your official relations with the government of —— will afford, to make known to the proper authorities, and through them to the people of that country, the scope and object of the exhibition, and thereby aid in securing their interest and co-operation in it. You will also ascertain, as early as may be practicable, whether or not it is the purpose of the government to create a commission to represent it at the exhibition, to have in special charge the interests of the citizens of that country which may take part in the proposed celebration.

Ascertain whether they will appoint the usual commission or committee to take charge of the interests of their people. These are the instructions to our foreign ministers, to have all this information made known to foreign governments and as far as possible to the people also.

And when the Secretary of State transmitted to all the representatives of other nations here the proclamation of the President and the other documents in this case, he added also a copy of our general regulations, drawn up by the centennial commission, giving a general idea of the management and scope of the exhibition; a general preliminary statement of ten regulations. This was *asked* for from us, and submitted by us to the Secretary of State. We did not send it to foreign governments. We had no right to communicate with a single government—no right under the law. We have obeyed your orders. It has been done through your President and through the Secretary of State and your ministers abroad. The third, fourth, and fifth regulations are as follows:

Third. A cordial invitation is hereby extended to every nation of the earth to be represented by its arts, industries, progress, and development.

Fourth. A formal acceptance of this invitation is requested previous to March 4, 1874.

Fifth. Each nation accepting this invitation is requested to appoint a commission, through which all matters pertaining to its own interest shall be conducted. For the purpose of convenient intercourse and satisfactory supervision, it is especially desired that one member of each such commission be designated to reside at Philadelphia until the close of the exposition.

Sixth. The privileges of exhibitors can be granted *only to citizens of countries whose governments have previously formally accepted* the invitation to be represented, and have appointed the aforementioned commission, and all communications must be made through the governmental commissions.

The whole of the ten regulations provide the general regulations under which foreign exhibitors can come here. That was transmitted to every foreign government, not by us, but by your President and by your Secretary. You cannot tell us that we have departed from your original act, or "injected" anything, as the gentleman from Ohio [Mr. GARFIELD] says. I was sorry to hear him use that expression, for I receive it as a reflection upon the ninety-three or ninety-four men of this commission. We have put nothing in the bill. I know that gentleman's heart, and I know it is not with his words. I know he borrowed his idea, and I was sorry to hear him repeat it. We have not changed a letter of that law; we have put nothing into the spirit of it that is not in the letter of it.

INVITATIONS ACCEPTED.

Your President and your Secretary of State have gone so far. How was their invitation received by other nations? You have heard, and I will not dwell upon it. I take it that Bismarck and the German Empire understood what an invitation meant. They had these documents before them.

Germany sends us the following acceptance:

I request you respectfully to communicate to the Secretary of State, Mr. Fish, that the German Empire accepts with sincerest thanks the invitation of the Government of the United States of America to take part in the above-mentioned exhibition. The appointment of a special commission for the exhibition, as also a plenipotentiary residing in Philadelphia will therefore be made in time.

The Netherlands minister sends the following acceptance:

I have the honor to inform your excellency that the government of the Netherlands has received this international invitation with lively satisfaction, and intends to take part in the said exposition by contributing productions of the arts and industry of the Netherlands.

To this effect a commission will be appointed in the Netherlands, and also a committee to direct and furnish information to exhibitors.

As soon as it shall be in my power, I shall hasten to communicate to your excellency the names and quality of the persons who are to constitute this committee.

From Spain we have the following:

LEGATION OF SPAIN AT WASHINGTON,
Washington, April 24, 1874.

The undersigned, minister plenipotentiary of Spain, has the honor to address the honorable Secretary of State of the United States, inclosing to him a copy of a dispatch, which he has received from the secretary-general of the ministry of state at Madrid, signifying Spain's acceptance of the invitation to take part in the international exhibition which is to be held at Philadelphia in the year 1876, by way of celebrating the hundredth anniversary of the independence of the United States. The undersigned is very happy to inclose this dispatch to the honorable Secretary of State, since it confirms the telegrams announcing the acceptance of Spain which was received some time since by the undersigned, and which he only communicated verbally to the honorable Secretary of State, having waited until the arrival of the dispatch which he now has the honor to inclose before doing so in writing.

The undersigned will thank the honorable Secretary of State for all the information which it may be possible to give in relation to the aforesaid exhibition that he may transmit to his government, and he gladly avails himself of this occasion to reiterate to the honorable Secretary of State the assurances of his most distinguished consideration.

JOSÉ POLO DE BERNABE.

The honorable SECRETARY OF STATE *of the United States, &c.*

From the Argentine Republic comes the following:

I have the honor to inform your excellency that the Argentine government accepts the invitation which that of the United States has been pleased to extend to it through your excellency, to take part in the exhibition which is to be held at Philadelphia, and that a commission has been appointed for this purpose, composed of the gentlemen whose names are mentioned in the decree of which a copy is inclosed.

The Argentine government returns its sincere thanks to the Republic of the North for this attention.

Mr. Andrews, our minister to Sweden, writes under date of "Stockholm, March 21, 1874:"

The official journal of last evening announced the appointment, by the King, of the following committee with power to organize and supervise all that concerns Sweden's taking part in the Philadelphia exhibition, namely:

The chief of the civil department, (Mr. P. A. Bergstiern,) as chairman;

Carl O. Troilius, director-general of the public railways;

F. L. von Dardel, president of the Academy of Fine Arts; also president of the Mechanic Arts Association;

Colonel C. G. Beyer;

Dr. Charles Dickson, M. D., of Gothenburg;
Baron A. H. E. Fock;
F. W. Scholander;
C. F. Lindstiöm, manufacturer;
N. A. Elfwing, United States consul;
Professor S. Stenberg;
A. R. Akerman, instructor in Technological Institute;
J. Bolinder, manufacturer;
J. Lenning, manufacturer;
D. C. Lundstrom, manufacturer; and
C. Juhlin Dannfelt, superintendent of the public experimental farm; also late commissioner for Sweden at the Vienna exposition, as secretary.

Five of the committee, namely Messrs. Bergstiern, Troilius, Dickson, Fock, and Lenning, are members of the Diet.

The committee are instructed to select for the exhibition those branches of industry that are natural to and characteristic of Sweden, and that are specially adapted to promote her commercial interests; also to accept only such objects of each class as are of distinguished merit. It is announced at the same time that so much of the fifty thousand Swedish dollars voted by the Diet will be applied to enable the committee to carry on their work as is requisite, and that free transportation on all of the public railways will be granted for the committee and for the articles to be exhibited.

It may be assumed that in the department of statistics Sweden will make a fine showing. I have reason to believe that this country is going to work to gain as much honor as possible at the exhibition. Undoubtedly able men from every state in Europe will visit our country during the exhibition and make searching investigations of social affairs, especially in the South, and report the results. In the proposed centennial exhibition the United States have made a sort of challenge to the civilization of the world, and it seems to me the people of each of the States have no time to lose in preparing for the trial.

I do not care to read all of these. Fourteen or fifteen different governments have accepted in perfect innocence and sincerity the invitation which has been given them, and have sent word, not to us as a commission, mind you—keep clear of that idea—have sent word to your Secretary of State that they accept, not our invitation but your invitation, and that they intend to be here. Here is a list of those who have accepted: the German Empire, the Netherlands, Belgium, Sweden, Switzerland, Spain, Mexico, Ecuador, the Argentine Republic, Brazil,* Chili, Liberia, Hayti, and the Sandwich Islands.

The governments the citizens or subjects of which have manifested a special interest and desire to participate are Austria,† France, England, Scotland, Wales, Italy, Persia, Turkey, Russia, Egypt, Japan, New Zealand, Tunis, Canada, Australia, China,‡ and Siam.

Now have done with this talk of "entrapping," with this charge upon us that we have perverted this act of incorporation. As a man of honor I will not submit in silence to it. Your Secretary of State, your President, your acts of Congress have done this. Foreign governments do not know me; they do not know my friend, Governor McCormick; they do not know Governor Straw; they do not know Mr. Corliss, nor any one of the ninety-four commissioners. They know Ulysses S. Grant, President, and Hamilton Fish, Secretary of State, and the Congress of the United States. They read their proclamation and their circulars and this law; they send word here to you that they accept your invitation. And your Secretary of State hands over these acceptances to us, with your command to go on with the exhibition. That is where we are. Now, again I say, have done with all this talk of "entrapping;" let no man charge that we have done anything beyond your orders.

SECRETARY FISH'S CAUTIONARY LETTER.

A MEMBER. How about the second letter of the Secretary of State?

Mr. HAWLEY, of Connecticut. Ah! the second letter of the Secretary of State. To that is due one-half, nay nine-tenths of the whole trouble. It is a letter which I hold he had no right to issue without full instructions and upon fuller consultation than I believe he ever had. I know too well what embarrassments that letter caused. While we were receiving communications from abroad, generous offers of hearty sympathy from all over the world, the Secretary of State privately, that is unknown to us of the commission, sends out this circular. We did not know of it till months afterward, when we obtained it upon a special and formal request to be informed how he construed the law. For answer to that inquiry he sent to us this circular, months after it had been sent out. I do not wish to complain. I do not wish to censure a man who I believe has done his country the greatest possible service. But I hold that he was unnecessarily conservative in his construction, and that he should have dealt a little more frankly with us. And even in a greater portion of this letter he commends the exhibition to the co-operation of all the world, and says that the President desired him to do so in the heartiest way. I shall refer in a moment to the language of this circular of Mr. Fish. I did not quite hear what the gentleman from Massachusetts [Mr. DAWES] said; but as I partially heard him, I understood him to say that there was some document from the Secretary of State which did not appear in our annual report, as if we had concealed something. I may do the gentleman from Massachusetts injustice; but that is the way I understood him. Sir, this document is a mattter belonging to the archives of the Secretary of State, a document which we obtained from him upon our special entreaty. It is not any part of our doings that we were called upon to report. Here is the language of Mr. Fish; and it is to be noticed that this is not a letter to foreign powers; it is a private circular to our ministers:

It will be observed that the President in his proclamation has extended no invitation to foreign powers to participate in the exhibition. He was not authorized so to do, and while he desires to attract as much attention and interest as possible thereto, he carefully confines himself to "commending" the celebration of the centennial anniversary of American independence, and the exhibition which is to be held in connection therewith, to all nations who may be pleased to take part therein. It is presumed that you will not have failed to observe the guarded language of the President's proclamation, and the difference between it and that which would be used in extending an invitation to other powers.

Has the Secretary of State sent this circular to Bismarck? Has he sent it to the Netherlands? Has he sent it to Spain? Has he sent it to the Argentine Confederation? Has he sent it to Sweden? To whom has he communicated it? Has he said to Bismarck after the latter has signified his acceptance, "Ah! Herr Bismarck, you have not correctly read the document; the Yankee did not invite you." "Ah! did he not? Why, your President said he commended the enterprise cordially to all nations, hoped they and their people would take part therein; and the Secretary of State said the same thing in his circular; and they sent to us the general regulations, cordially inviting us, providing for the appointment of foreign commissioners according to law; they sent us a copy of the law and said they hoped foreign governments, foreign commissioners, foreign manufacturers and artisans would be represented there, and they begged to have the enterprise commended to everybody. And then your distinguished citizen, Mr. Bancroft, called on me and said that he wanted me to come; and I said, yes."

But we are to retain an attorney from Maine who has discovered that the word "invitation" is not in the statute. Perhaps it is not; but the law says that—

The President shall through the Department of State make proclamation of the same, setting forth the time at which the exhibition will open, and the place at which it will be held, and he shall communicate to the diplomatic representatives of all nations copies of the same, together with such regulations as may be adopted by the commissioners for publication in their respective countries.

And in that proclamation was the most cordial "commendation," and in the regulations was the most cordial "invitation."

And it is to be an "*international* exhibition." But there is no invitation; no, no! And Bismarck is to be solemnly informed that the word "invitation" is not distinctly there though he reads that the President has cordially commended the enterprise to all nations, and that the Secretary of State has said that it will be a fine opportunity to display the industry of all nations, and the President indulges the hope that every Government will notice the subject and bring it to the attention of the people and encourage their co-operation, and that the result will be an increase of friendly intercourse.

Mr. TREMAIN. Does not the original statute also say that the President shall send to foreign governments a copy of the regulations?

Mr. HAWLEY, of Connecticut. O, yes.

Mr. TREMAIN. And does not the Secretary of State in his communication say that he therewith sends the regulations according to the statute?

Mr. HAWLEY, of Connecticut. Yes, sir; the law provides that he must send the presidential proclamation and that he must send also the regulations. We in all innocence drew these regulations and submitted them to the Secretary of State. We did not send them ourselves. What is the form of those regulations?

GENERAL REGULATIONS.

First. The international exhibition of 1876 will be held in Fairmount Park, in the city of Philadelphia, in the year 1876.

Second. The date of opening of the exhibition will be April 19, 1876, and of closing will be October 19, 1876.

Third. A cordial invitation is hereby extended to every nation of the earth to be represented by its arts, industries, progress, and development.

Fourth. A formal acceptance of this invitation is requested previous to March 4, 1874.

Fifth. Each nation accepting this invitation is requested to appoint a commission, through which all matters pertaining to its own interests shall be conducted. For the purpose of convenient intercourse and satisfactory supervision, it is especially desired that one member of each such commission be designated to reside at Philadelphia until the close of the exposition, &c.

Now, sir, look at the attitude of your Government. Is it becoming, under the circumstances, that your attorney should plead in abatement that the word "invitation" is not in your laws? What would any honorable gentleman the world over think should he come to your door on a supposed invitation to dinner and be there told, "Look at your card; the word 'invitation' is not there; you were 'commended' to a good dinner to be held on a certain evening, but the word 'invitation' is not there." I congratulate the Secretary of State who will have this correspondence to close if you forbid this exhibition to go on. I would take a sardonic pleasure in looking over his shoulder to see how he will excuse the Yankee Congress for ignominiously backing out.

I want the chairman of the Committee on Ways and Means to go to him and tell him how to do it—the man who says we are twenty-nine millions behind in our obligations, and that too while a Massachusetts man has been chairman of the Committee on Ways and Means for years, and while a Massachusetts man has been Secretary of the Treasury for years—that we are twenty-nine millions behind-

*The Emperor of Brazil has appointed his own son-in-law one of the commissioners, and has made remarks from which we may infer that he thinks of visiting the exhibition himself.

†It is not improper to note here the fact that Baron Schwarz-Senborn, who presided so ably over the Vienna Exhibition has been appointed by his sovereign the Emperor, minister to the United States. We know by his many cordial declarations and his valuable suggestions how warm an interest he takes in the exhibition of 1876.

‡The Chinese prince in charge of foreign affairs has made arrangements for a commission to represent China, and has caused full notices of the exhibition to be spread through the empire.

hand; and yet he has not dared to come here to a powerful and generous people, who will not be dishonest—he has not dared to come to them and bring in a tax bill to redeem what he says is the solemn obligation of the Government.

THE BUGBEAR OF TAXATION.

Mr. Chairman, I am weary—I am sick of this talk about a bankrupt nation, a bankrupt Government. Will somebody bring in a tax bill here and let us vote for it? If we owe $29,000,000 which we promised to pay, I dare vote for any bill which is needed to redeem the honor of my Government. Put it on what you may deem best, but do not stand here pointing—as he who represents the financial resources of this Government does—to what he says is a dishonorable deficit; and yet—December, January, February, March, April, May—in the sixth month of the session, and he has not yet dared to offer a tax bill! I say, sir, he is false to his duties. Is the nation dishonored; has it become bankrupt? No, sir; whenever you owe, whenever you have an obligation, whenever you have an honorable debt to discharge, present your bill, go and face your constituents, and tell them that the honor and majesty of this Government demand of you additional taxation; and, unless you have had worse experience than I ever discovered in traveling over this country, they will commend you for it. The question will not be so much what your taxes are, as whether you have expended your money for honorable and necessary purposes. That will be the question they will ask you. What is the sum here; what is the bugbear of which they talk? Three millions, to be paid before the last day of June, as the chancellor of the exchequer would have you believe. To be paid in these seven weeks? No, sir; but one-half next year and one-half the year after. You have two years in which to pay it, less than one-half of 1 per cent. a year of your gross revenues; a million and a half next year out of over three hundred millions of revenue, and a million and a half the year after.

He talks about the apparent deficit during this current year. Two months of the fiscal year remain, and they will show a balance for the year in favor of the Government—not what it ought to be, it is true, but every man here knows, every man in the country knows, that exceptional circumstances have for the time checked our revenues. Does not every man know that the revenues are reviving? Whatever he may claim to be the distress of the country now, does not our chancellor of the exchequer and every member of the Committee on Ways and Means know that the existing taxation in any ordinary condition of prosperity will enable us to more than meet our obligations for the next year, if we reduce expenditures, as we ought to do, and have been doing—cutting down all unnecessary expenditures and rooting out dishonest ones? I say I believe that existing taxation will provide for every possible obligation of the Government next year. But if there be any doubt on the subject whatever I call upon that son of old Massachusetts, a State which has always professed to be and always has been brave enough to do its duty, to tax the people.

ESTIMATES FOR THE EXHIBITION.

Here are our estimates. We have gone on according to the best of our ability; we have been industrious; we have been honest. We have invited the best architects to prepare plans of buildings and grounds. We have invited the most capable builders to give us their proposals for buildings. We have got all this. We are ready, if the funds can be guaranteed, or given, to begin, in thirty days or perhaps ten days, to put up these buildings. They ought to be commenced soon. How much money have we got? Four and a half million dollars in round numbers; but I have an accurate statement by the officers of the commission and the board of finance, which I will publish in detail.

The following is the duly authorized financial summary of the officers, architects, and engineer of the international exhibition, presented to the Senate committee, and published with its consent:

Capital actually secured.

Subscription up to date of former statement, March 16, 1874	$1,574,440
Subscribed by citizens of Philadelphia since that date and up to April 3	50,000
Additional subscription since guaranteed by responsible citizens of Philadelphia	250,000
State of Pennsylvania and city of Philadelphia for the art building	500,000
Appropriation by ordinance of Philadelphia, April 2, 1874	1,000,000
State of New Jersey	100,000
	3,574,440
Proposed contribution by Congress	3,000,000
	6,574,440

Estimated resources.

Additional subscriptions on a programme for Pennsylvania, exclusive of Philadelphia, $40,000 of which was subscribed before the beginning of the panic and not included in the above statement	150,000
Additional subscriptions in city of Philadelphia	150,000
Subscriptions from New York, New England, the West, and other sections	500,000
Estimated receipts from the exhibition	2,500,000
Sale of materials	500,000
Total receipts	10,334,440
Total expenditures	8,750,000
	1,574,440

The above balance may be treated as guaranteeing creditable success.

Summary of expenditures.

Main pavilion	3,363,000
Machinery hall	895,000
Agricultural hall	512,000
Horticultural department	200,000
Building for the fine arts, painting, statuary, &c	500,000
Water, gas, grading, fencing, and railroad facilities	1,030,000
General administration	500,000
Add 25 per cent. for errors in estimates and general contingencies	1,750,000
Total	8,750,000

The building for the fine arts, above named, is to be erected by the State of Pennsylvania and the city of Philadelphia, and for that purpose $1,500,000 has been appropriated. It is to be under the exclusive control of the United States commission, and is to remain as a museum for the State. It is placed in the estimate at the cost of $500,000, because it will save the commission that amount of expenditure. The remaining million will add to the imposing character of the exhibition buildings.

A. T. GOSHORN,
Director General Centennial Commission.
JOHN WELSH,
President of the Centennial Board of Finance.
VAUX & RADFORD,
Architects.
HENRY PETTIT,
Consulting Engineer United States Centennial Commission.

WASHINGTON, *April* 4, 1874.

The estimated subscriptions from New York, New England, and the West, and other sections, if this prospers, as it will when Congress says go on, will beyond all question reach $500,000. Estimated receipts from the exhibition, $2,500,000. That is the lowest figure anybody has given who has studied all the exhibitions. But put it lower if you wish. Sale of materials $500,000. We know what the remains will be worth very nearly, because the contractors are able to, and some of them do, make two bids, one conditioned on their having the remains of the materials; the other conditioned on their being left to be sold by the commission. So we can easily estimate what the remains will be worth when the exhibition closes. This makes a total of $10,324,000. The total expenditures are estimated at $8,750,000; so that there is an estimated surplus of $1,574,000.

But mind you, while they have made this estimate—these able and experienced business men, and many of them leaders in some of the greatest enterprises in the country—while they have deliberately made and certified to this estimate, based as far as possible on the plans and proposals of architects and builders, they have put these expenditures very high. The main pavilion, $3,363,000. Now, we have wasted no money upon grand domes, merely ornamental structures or superadded decoration. We have followed the advice of our best friends abroad, and we propose to build plain, useful, and capacious buildings.

General administration—what may be called working capital, which the managers of great enterprises will perfectly well understand—what is necessary to pay the expenses up to the close of the exhibition, for we must estimate them up to that period, $500,000. Add 25 per cent. for errors in estimates and general contingencies, $1,750,000; which makes up our total expenditures $8,750,000. I hardly think it will be necessary to go up to that. But the estimate is made abundantly safe, through caution, as wise men know that some mistakes will surely be made in such a matter.

Some gentlemen say that we will be here again asking for more money. I ask you to judge whether our experience here has been so pleasant that we should like the practice of coming here. But consider this: This bill provides for an appropriation of $3,000,000 by this Government, of which forty dollars are to be paid out as we shall have expended one hundred, and upon the certificate of a capable engineer officer named by the President, who shall watch our progress from day to day, and certify at the end of each month what we have expended, and then repay us four-tenths of that amount. We cannot get the $3,000,000, under this bill, until we shall have expended $4,500,000. This will make an aggregate expenditure of $7,500,000.

Now, in justice to Philadelphia and Pennsylvania, I ought to make one explanation. The State gives $1,000,000 for a certain building, and the city $500,000; making together a million and a half. That building is to remain there, a permanent historic gallery and museum, a memorial of the occasion. But we put that down in our estimates as only half a million; because that million and a half put into a permanent building furnishes only the room we could get for $500,000, spent in our own way, in temporary buildings. Therefore the actual value to us is only half a million, and we so put it down.

UNJUST CENSURE OF PENNSYLVANIA.

Now, why are we here to-day and why do we not raise money by popular subscription? It has been said that some gentlemen when this bill was before Congress expressed their entire confidence that Pennsylvania and Philadelphia would raise the money, that they would see the enterprise through, as it was supposed they were to have local benefit from it, and as they seemed to be the first to present it here. Now are you to drive a hard bargain with a people of a State who thought they could raise all that was needed, but have now found that they have not been able to do it? Are you going to an exhibition, or are you to ask the world to go to an international exhibition, paid for wholly by Pennsylvania and Philadelphia? Would you not be ashamed to go there from Faneuil Hall and Concord and bring your wares; to show the revolutionary swords and muskets and

paintings and all the relics of that era, to put them in that exhibition at Fairmount Park, when you had made Pennsylvania and Philadelphia pay for it all, because Daniel J. Morrell and a few other enthusiastic men thought Pennsylvania *could* do it alone? Has Pennsylvania done anything to deserve this treatment? I say there has never been in my knowledge of human nature a finer exhibition of unselfish patriotism than there has been on the part of these men. They have said, "Let us stand back and out of sight—you carry on the work, putting us where you please, in the front or in the rear; tell us merely what to give and what to do." They have not sought to control it in any way. Not one Pennsylvanian is among the officers of the commission. The president of the commission is from Connecticut. The vice-presidents are from Ohio, New Jersey, Alabama, California, and Iowa. The secretary is from Indiana. And the whole control in the vacations of the commission, that is during most of the year, is in the hands of an executive committee of thirteen, only one of whom is a Pennsylvanian.

The directors of the board of finance, which corporation may be called the treasurer, the auditing body, under whose charge the building will be constructed, subject to the approval of the commission, has among its twenty-five directors a majority of Pennsylvanians, because four-fifths of the money was from Pennsylvania. We constituted this board of finance that they might hold the funds in trust and supervise the work. They are as honest and able men as Philadelphia can furnish, and as honorable and pure-minded men as this country can furnish, and every dollar we have spent is there to be seen accounted for. Philadelphia gave $75,000 for preliminary expenses, as there was no fund out of which to pay them, Congress having launched us in a national work with the President's commissions in our pockets and not a cent to pay even for railroad tickets. Philadelphia paid all these preliminary expenses, and her citizens and those of the State have subscribed four-fifths of the money thus far subscribed. What mistake did Pennsylvania make? Did she underestimate her own patriotism? No, sir; but she overestimated yours and mine. There is her mistake. How much more she would do if driven to it by pride, I do not know. You may drive this bargain with Pennsylvania, and say that she shall pay the expense of this celebration herself, because of the unauthorized and unofficial but patriotic and enthusiastic declarations of one or two of her representatives. Drive your bargain with Pennsylvania. Exact the pound of flesh and brag of it. She said she would pay all the expenses; let her do it, or let the whole thing go to the dogs and break down entirely. Recall your international invitations because Pennsylvania has failed to do that which you would be ashamed to let her do.

Sir, to argue here that Pennsylvania promised to pay the whole, and if she does not you will disgrace your country, is to make a plea in abatement worthy of some country cross-roads horse case. It is dodging the merits of the question.

WHY POPULAR SUBSCRIPTION FAILED.

A word or two more as to why we did not succeed in raising all the money. We had made every arrangement, and had the machinery ready for operation last summer for a general and systematic appeal to the whole country in the autumn. I had in my own State made arrangements for meetings in all the principal cities. I had talked with many of our manufacturers. Three or four of us were to go round calling meetings of manufacturers, of public-spirited gentlemen who had taken part in exhibitions abroad and knew all about them, to organize in their respective localities and to form a State organization, and procure subscriptions. We had made similar arrangements for other States. The system was just starting into full operation when the financial disaster came down upon us like a cloud, and shortly after that it was discovered or alleged that there was some mysterious secret circular somewhere from the State Department which had spread distrust in certain foreign countries, and that they had delayed accepting the invitation to take part. And then the debate in Congress arose indicating doubts as to what might be done, and in view of all these circumstances subscriptions inevitably stopped. But for these checks we believe that we should have raised a million or two or three more than we have secured. We believed for a time, and we always hoped, that we should be able to avoid the necessity of an appeal to Congress, and that the enterprise would have been carried out by the generous subscriptions of the people; and if you will now give us God-speed and grant us what is a small amount in comparison with the great benefits that must result to the country, the people of the nation will again accept this enterprise, as they did a year ago, with all their hearts and souls, and will make generous contributions to carry it out. It never met with an objection worth speaking of until the debate began here in Congress.

ABILITY TO MANAGE AN EXHIBITION.

We are told by some gentlemen that we have no ability in this country to manage such an enterprise; that we cannot do it. I say that no nation in the world is so capable of conducting a great exhibition as this is. It is my doctrine that whatever is to be done by a whole people can better be done by a free people than by any other. I said *my* doctrine. Sir, it is the doctrine of the nation, it is the doctrine of our form of government, that whatever is to be done by the whole nation can better be done by a free people than by any other. Now, I want to see us display our ability to conduct an exhibition. You say we cannot do it. Look at our seventy thousand miles of railways. We have forty railroad companies in this country that have within their own organizations the men and the discipline that could carry out a great exhibition as easily as they can run an extra machine-shop. Look at Governor Straw, of New Hampshire, with forty acres of flooring in the Amoskeag Mills, more than perhaps we will need in this exhibition, and with four thousand operatives. Governor Straw, one of our commissioners, a civil engineer by profession, sits there and drives that great establishment with its four thousand operatives, working up twenty-five thousand bales of cotton a year as easily as the Speaker presides over this House. We have not the capacity, eh? Look at the Sprague establishment, now under temporary clouds to be sure, with their six great cotton mills, (at one of them a room one thousand feet long,) working six thousand operatives, using forty thousand bales of cotton a year, and whirling out cotton that would run from the mill, if the sheets were in one, with the speed of a railroad train.

We cannot manage this exhibition! Look at the Pacific Railroad, where from either ocean the track was run as the unrolling a ribbon, the two companies competing to see which would go farthest before they united. Look at the operations of our late gigantic war; two and a quarter millions of men on one side and a million and more on the other side. Consider that twenty thousand, thirty thousand, fifty thousand men were taken up as it were in the arms of the quartermaster and whirled a thousand miles in ten days and dashed against the enemy's flanks. Look at General Meigs himself, sitting here at the head of the Quartermaster's establishment and sending arms, clothes, food, ordnance stores, horses, cannon, tents, and all ponderous equipage for armies that sometimes numbered more than a million. We felt strong enough to have carried half a dozen of some little nations of Europe in our coat-tail pockets, not remembering their presence. And yet you tell us we do not know how to conduct a big business operation like this!

We have a thousand factories, a hundred railroad schemes, magnificent operations and achievements, showing that genius never was developed in any nation for conducting great enterprises as it has been in this. Foreign people tell us—they told us at Vienna, where we had our commissioners—that we Americans seemed to have a way of conducting great enterprises that other people had not; that we always got out of a scrape better than anybody else; that they had abundant faith in our ability for conducting a "show," as these gentlemen called it. I challenge the engineers and architects of the world to say whether our plan for the exhibition at Philadelphia is not superior to the one held at London or the one at Paris or the one at Vienna, in convenience of location and arrangement, though not in mere splendor of architecture.

EXCELLENCE OF OUR PLANS.

We have a better arranged building, preserving the dual system of arrangement, geographical and scientific, a better system of railroad tracks. At Vienna they dumped out their piles of merchandise sometimes far from the building, and the piles so augmented that a thousand carts could not move them in time. What have we planned? In that lordly Fairmount Park, right on the verge of the Pennsylvania Central Railroad, in connection with every foot of railroad in the country, we run a side track across our grounds, with parallel tracks, down through each of our long naves. We trundle our goods into the building, tumble them out on each side of the track, the cars are drawn out, and you can lay a plank six inches wide over the rails and nobody would know there was a railroad track in the building. You could load and unload the entire contents of the exhibition in three days.

And will you tell me that a Yankee—and when I say a Yankee I mean an American—could not manage an enterprise of this kind? Why, sir, we will take a contract to pick up one of those little European nations, and pack it in plant-pots, and bring it here and set it up for a show if you want it.

THE CONSTITUTIONAL QUESTION.

You tell me you have no constitutional power to grant this money; and the small constitutional lawyers run riot when they get hold of anything of this sort. They say you have no constitutional power to make this appropriation. Sir, where is your power to spend $10,000,000 on public buildings? Tell me where you have the power to build one single post-office or one court-house. Point to the clause. I am not going to help you do it, but I know that you wheedle it out of the Constitution. You say in one case that you find power to build court-houses under the power to provide inferior courts; and if you have power to create a court you have power to build a shed to put it in. That is where your constitutional lawyers find it.

Jefferson, a strict constructionist, could find no power in the Constitution for the purchase of Louisiana. But he took it, and let others hunt for the "power." They have not found it yet. Where was your power to pay the expedition to the South Sea Islands in 1836, a costly affair for those days? Where was your power to appropriate money for the sufferers by the earthquake in Venezuela? Where was your power to appropriate money for the north pole expeditions? Where was your power to appropriate a half million dollars and more for the several expositions that have been held in Europe? Where was your power to send a vessel to Ireland with food for her starving people? Where was your power to refit the bark Resolute which Sir John Franklin lost in the Arctic Seas, and which a Yankee from

Connecticut found and brought home? Where was your power to refit it and send it over to England as a present—a generous act of international courtesy, for which a Virginia strict constructionist offered a resolution to give $40,000? Where is your power to spend tens of thousands of dollars on costly gold and silver medals commemorative of various enterprises and complimentary to various individuals? Where is your power to provide the statues that are scattered through your public grounds and of which you will have more as you grow to a nobler culture? Where is your constitutional power to order your military authorities to issue rations to the suffering people of the overflowed Mississippi Valley? Go to the Constitution, and tell me if you can where you found your power to give three weeks ago ten cannon (worth $3,300 to-day at the arsenal) to the town of Concord for the centennial there next year—the centennial celebration of the first firing upon a British soldier! You have within the last three weeks settled this whole question. You have voted to give bronze cannon sufficient to build a statue right where the first blood of the revolutionary conflict was shed. You have provided for giving $3,300—$1.30 a piece for every inhabitant of Concord—to celebrate their centennial. And yet the constitutional power over this exhibition is doubted, and the gentleman representing Concord itself cries out, "Where is the money to come from?"

Where is your power to build the monument you voted the other day to Admiral De Ternay, the gallant Frenchman who came to fight for us and died with us in the Revolution?

Where is your power to pay for observing the eclipse of the sun in 1869, or the coming transit of Venus?

But I have not had time to search the whole statute-book. You will find that there is some elasticity and liberality in your Constitution, by construction and practice at least, though some men may have tried to find in it an iron frame. And these things have been done not in the green tree, but in the dry; not by republicans or whigs alone, but by Calhoun strict constructionists, men of the North and the South, the East and the West, who said that we had a nation, and that Uncle Sam must be a man and a gentleman among the nations.

THE FLAG AND THE EAGLE.

Some gentlemen tell us that we may have a national celebration, but not in connection with an international exhibition; that there is some incongruity between the two; and as the *celebration* is national, the exhibition must be only and strictly national. I would like to be heard a few moments on that point. I believe in the Fourth of July in the popular acceptation of that term. I believe in the Fourth of July all over, from the crown of my head to the sole of my feet. As a boy and young man I fired my guns and had my good time. I like to see the boys do the same now. You may belong to a city council, and may pass volumes of ordinances against guns and fire-crackers; you may send platoons of policemen to arrest the boys who violate your ordinances, but you still have within you a secret sympathy with the young rascals, and you like to be awakened on the morning of the Fourth by great bells and guns, even if you do swear a little about it. I believe in the Fourth of July; I believe in "sentiment;" I believe in the Flag; and I honor the memory of Daniel Webster when I remember how he pointed up through yonder rotunda at the "gorgeous ensign of the Republic," and trampled with magnificent scorn upon the poor, puny, contemptible spirit that dared to ask "How much is all this worth?" God bless Daniel Webster for that one paragraph.

I was grieved, not angry—grieved in my very soul—when I heard men on this floor, of wealth and culture and honor and ability, sneering at what they called "sentiment," and laughing at "tears," and when I heard a Massachusetts man from the very hills of Berkshire ridiculing the "eagle" and all that "cheap clap-trap." God grant that the day may be far distant when what you call "Fourth of July talk" shall be out of fashion. Let it always be in fashion. Our millions of "Boys in Blue" talked it from the cradle; and while perhaps infidels to free government sneered at them, and ridiculed the "cross-roads talk about the Fourth of July" and "the eagle," those boys believed in it; five hundred thousand graves bear witness to their belief. God help the poor, narrow soul whose eyes never moisten at the sight of the Flag.

THE EXHIBITION MUST BE INTERNATIONAL.

Shall this exhibition be national alone, and not international also? First, we are thoroughly committed to the international idea by the act itself, by the proclamation of the President, by the circular of the Secretary of State communicating it to the diplomatic representatives, by his circular to our ministers abroad, and by the acceptances of many nations. Secondly, it is interwoven with the whole scheme—the classification, the policy, and the pledges. We are committed to it by personal presentation to foreign exhibitors, commissioners, jurors on the international jury, and others at the Vienna exposition; by the publication of this proclamation and of this scheme in three foreign languages in the pages of the Vienna catalogue. The Vienna people asked us to do it. They offered us pages for advertising our international exhibition. We observed the words of your act, and thus advertised all over Europe. We are committed to the international idea by the acceptance of donations from foreign commissions. Goods that were offered to us at Vienna by commissioners from foreign states are already on the way or in store. We told them we would take the articles gladly. From various foreign citizens we have accepted such contributions. Why, sir, the Marquis of Bute, the descendant of the Bute who was in the famous Lord North ministry that urged on George III to the long seven years' war, proposes to furnish largely a room in that exhibition displaying the wonderful resources of his estate in Wales. Being instructed to conduct an international exhibition, we have felt at liberty to accept these offers.

International comity requires that our exhibition should have this character. We have as a nation taken part in three great exhibitions, while our citizens have participated in others. We had seven hundred exhibitors at London, and nine hundred at Paris. We spent at least $240,000 on the Paris exposition, and full $200,000 at Vienna. We accepted these invitations, which were just like the invitations we want to extend. It is not the purpose of international exhibitions to invite foreign princes to come and junket at public expense. The invitation to each government is to appoint a commission. The people of a country will not come here without a commission appointed by their government. Note this point. This is the essence of the international feature. The people from another country will not come without a commission appointed by their government. That government will not appoint a commission unless it receives a courteous invitation to do so, and that commission will take care of the exhibitors here, and will put us to no expense on their account beyond providing room and protection for them. Whatever they choose to expend here we will be glad to see them spend. They will do it largely. For the exposition at Vienna the German Empire spent $750,000; France, $300,000; England, $100,000; Italy, $200,000; Turkey, $500,000; Egypt, $500,000; the United States, $200,000, (something was saved of that;) Belgium, $100,000, &c. About $3,000,000 were spent at Vienna by other governments. If they send commissioners here they will spend two, three, or four million dollars in taking care of their exhibitors and their people, as their commissioners are bound to do, and just as we did at Paris and Vienna.

But there is another table here, which I do not turn to at this moment, showing a larger expenditure at the Paris exposition. I know that England spent £120,000—$600,000, at that foreign exposition. We do not invite them here at our expense except as we provide room in which to keep their goods secure from the rain. They will do the rest and take care of themselves. They will spend more money three times over, these foreign governments and commissioners and exhibitors and travelers and purchasers, than you are asked to appropriate here; and yet we are told you cannot afford this!

It will help immigration. Three thousand immigrants, worth $1,000 apiece as all statisticians and economists say, and they would make $3,000,000 alone. Do you not believe it will add three thousand to your immigration?

International exhibitions advance the common sciences, the common arts, the common progress of modern civilization. Common courtesy and good feeling require reciprocation. Reciprocation of effort for the advancement of civilization and human welfare is the graceful adjunct of the national festival, especially as we have drawn benefit from other exhibitions and are, as a people, made up of all peoples. Their usefulness is in geometrical proportion to their universality. A well-balanced exhibition of the industries of the world commands the attention of the world. It makes exhibitors willing to come and spend money to extend the field of their enterprises. It draws more exhibitors and more visitors. Many important industries—mark this, if you please—many important industries cannot be shown independently of foreign products, the basis of their manufacture. You cannot have *a purely national* exhibition of really great value. The men who have studied this subject of exhibitions will tell you so. To exhibit industries without bringing in materials produced abroad is impossible. For example, tin-ware, dye-woods, precious stones, coffee, tea, foreign woods, foreign hides, furs, irons, steels, and partly manufactured articles of many kinds.

Are you going to make a "know-nothing" exhibition of it, that you refuse to extend invitations to other peoples—we all the time professing above all other peoples to a generous and cosmopolitan spirit, willing to accept and embrace all peoples? Do you wish to make a little "know-nothing" exhibition of the affair?

An abandonment of the international feature would operate to exclude very large classes of our own people—all who import and deal in articles of foreign production; would exclude all pictures, statues, and works of art, whenever or however they may have come into possession of Americans—all beautiful and useful machinery, furniture, woven goods, &c.; a multitude of articles just such as we wish to learn to produce.

You say that it is a Fourth of July celebration. While I tell you I believe in cannon and trumpets, thunder and glory, orations, bonfires, and bell-ringing, still I wish something more, further and higher—an exhibition which will mark our progress for one hundred years and exhibit the modern spirit of advancement and civilization characterizing the nineteenth century. Are not gentlemen aware that this exhibition is a bazaar at which for six months all the nations will assemble to shake hands as brethren and as friends? You say they will not feel at home here. I tell you, men of Massachusetts, and Ohio, and Maine, who tell us to-day the people of other nations would not be welcomed here, that strangers would not feel at home here during this exhibition, you may learn a lesson from that "old tyrant," as boys were taught to style him, George III. He had the manhood and

the kingly courtesy, despot as he was, to rise before his Parliament and acknowledge our independence and say what I will read:

"I lost no time in giving the necessary orders to prohibit the further prosecution of offensive war upon the continent of North America. Adopting, as my inclination will always lead me to do, with decision and effect whatever I collect to be the sense of my Parliament and my people, I have pointed all my views and measures in Europe, as in North America, to an entire and cordial reconciliation with the Colonies. Finding it indispensable to the attainment of the object, I did not hesitate to go to the full length of the powers vested in me, and offer to declare them"—here he paused, and was in evident agitation; either embarrassed in reading his speech by the darkness of the room or affected by a very *natural emotion*. In a moment he resumed—"and offer to declare them *free and independent* States. In thus admitting their separation from the crown of these kingdoms, I have sacrificed every consideration of my own to the wishes and opinions of my people. I make it my humble and ardent prayer to Almighty God that Great Britain may not feel the evils which might result from so great a dismemberment of the empire, and that America may be free from the calamities which have formerly proved in the mother country how essential monarchy is to the enjoyment of constitutional liberty. Religion, language, interests, and affections may, and I hope will, yet prove a bond of permanent union between the two countries."

And wherever the English flag and American flag meet in foreign waters, there the Englishman salutes the Stars and Stripes on the Fourth of July. And when the Queen's birthday comes around, the American salutes the Cross of Saint George. They exchange the salutes of guns and dipping of colors, as becomes gentlemen among the nations of the earth. And while I would fight John Bull to-morrow, and so would you, John Bull and we are friends to-day; we are blood relations, welcome here and welcome there. And in the great struggle which makes the glory of the nineteenth century, for pre-eminence in the application of science, to lift up the weak and lowly and lighten the sorrows of labor, we are generous rivals, standing on a common platform. We welcome here the Englishman, the German, the Frenchman—all of them! While the kings of those European monarchies may not love the Declaration of Independence their people love it, and we want to invite their people here. We want their people to know the character and boundless magnitude of our resources, that they may come here in still greater numbers. Human ingenuity cannot devise a fairer way—to use the commercial expression—to advertise the American continent than by this exhibition.

Comparison is vital to the success of any exposition. "Comparison" is expressly referred to in the act—an exhibition of our resources, development, and "progress in the arts which benefit mankind in comparison with those of older nations." You can never discover your success or your failure without comparison. You cannot gauge your status without comparison with other nations. Comparison is essential to show the effects on the industries and the arts of climate, of race, of geographical position, of raw materials, of social and political institutions. By having an international exhibition, the people of other countries bring us over what they produce, and show us how they produce it. In this way they will stimulate the establishment of many manufactures which we wish to see growing up here. They will bring over what we do not make; and we can see what it is, how it is made, and how we could make it. We will thus make advances where we are most deficient and have most need to learn. Such an opportunity we could not have in a purely national exhibition.

I wish I had time to read passages to show what Englishmen learned through their exhibition of 1851. They learned some sore lessons there, and they acknowledged it like men. They say it is a part of the British character to manfully confess defeat. They saw that in some respects they were beaten, and the result was that they were stirred up to greater efforts, so that they should not be left behind in the race by some of the continental nations. The exhibition of 1851 changed the face of industry, in Great Britain. The exposition of Paris changed the industry of the French nation. Not one of those exhibitions worth mentioning has been held that has not been productive of important effects on everything relating to the economic and social condition and progress, the foreign and domestic trade, of the people among whom it was held.

No country is so well situated for an international exhibition as ours is. We afford the best market for many countries, and are their best customers. Many nations sell more to us than to any other people. With importations of over $600,000,000 to our shores, every nation in Christendom is under the bonds, each of its own peculiar interest, to be here. And as there is no necessary land transportation in the way of reaching Philadelphia, it will cost less to send thither than to send to Vienna. The people of Great Britain, France, Spain, Portugal, Denmark, Sweden, Norway, the West Indies, South America, Asia, and the larger part of Africa can more easily send to Philadelphia than to Vienna. Unless you have a know-nothing exhibition it must be a success.

As I have explained, the expense and the responsibility of foreign departments rest on the foreign governments themselves. We furnish the space and the protection, and the foreign governments will spend largely to take care of and exhibit what they send. And I may state here that a very friendly feeling in reference to our proposed international exhibition exists abroad. At the meeting of the jurors at the close of the Vienna exposition enthusiastic pledges were given to meet next at Philadelphia. We had experienced men, skilled engineers, and others, all saying to us, "You ought to have a grand exhibition; you have a noble opportunity, which you ought to seize for the credit and glory of your nation." The impression prevailed there that we could better manage an exhibition than any other people.

One great point is that we shall make a fair representation of the progress we have made during one hundred years of existence, and that we shall show especially the comparative progress we have made.

OUR SUCCESS ABROAD.

How did we succeed at London in 1851? Why, sir, we had only six or seven hundred exhibitors there, and yet the London Times said that the American department was second in interest in the Crystal Palace. Where did we triumph? You may not think Colt's revolver much of an affair; Europeans did. Some might say that McCormick's reaper was not of very great importance, but it is one of the types of a large class of inventions which are blessing mankind and revolutionizing the labor of production. Inventive ingenuity applied to labor saving is a peculiar boast of the American.

For twenty years there was an offer in the streets of London of two hundred guineas to any mechanic who would open one of Bramah's locks. Hobbs, an American, opened it in two days and then opened and shut it at pleasure. There was a similar challenge in the streets of London to any mechanic to open Chubb's lock; Hobbs opened it in twenty-five minutes.

Then, sir, Steers's little schooner went over from this country. John Bull thought that if Britannia was queen anywhere it was upon the sea. But when the yachts came home in the race John Bull telegraphed to London that the yacht America was ahead and the rest nowhere. Again, too, at the London exposition the English artists and critics dwelt with rapture on the work of an Ohio man, the beautiful statue of the Greek slave, the most notable and best-remembered sculpture in that exhibition. Sir, we gained ten times our meed of honor in proportion to the number of exhibitors we had there.

WHAT WE CAN SHOW.

We can show something of sculpture, and we are not behind in the arts. As sculptors we have Powers, and Brown, and Ward, and Hosmer, and Crawford; and in painting, we have Allston and Trumbull, Church and Kensett, and Bierstadt and Huntington—scores whom I cannot wait to name. We have in the field of mechanics produced the cotton-gin which revolutionized continents, for cotton employs forty million people in Europe, and it would not have employed two millions but for this cotton-gin. In mechanics we have the reaper, to which I have referred, and Blanchard's turner of irregular surfaces, the interchangeability of parts, the electric telegraph, the steamboat, the sewing-machine—a catalogue honorable and innumerable. These things are America's glory, and the workers of no other nation have done more to uplift labor and glorify this century than our mechanics and inventors. And yet gentlemen put down "sentiment" with a laugh, and our claims to eminence in material development with a sneer, and say we have nothing to exhibit.

Sir, I never go into a great machine-shop without an impulse to take off my hat to my master. These exhibitions are democratic. Monarchs may march triumphantly to their doors, but within, the artists, mechanics, and manufacturers are kings. No nimble-tongued orator has a right to assume airs of superiority when he walks into a shop a thousand feet long, with a thousand operatives working machinery of infinite accuracy, throwing out products of beauty for the farthest corners of the earth. My own door is within the hearing of mechanics, my neighbors, making for the Prussian government $1,100,000 worth of arms machinery, because it can be better done there than even in German arsenals.

I have a right to be proud of American industry, of American art and science. In nine-tenths of the fields embraced in these exhibitions we may boldly challenge the competition of the world. I say that deliberately, and thereon put my all at stake. You will have no reason to be ashamed of this exhibition. True, we cannot produce a Titian, or a Raphael, or a Rubens, or a Praxiteles; but it took thousands of years to produce them, and we have done very well in one hundred.

But that is not all. We have had a people to make in a hundred years; and, the Lord be praised, we have made a people. Bitterly as we fought among ourselves, I think we have got to be one nation now and shall remain so. We have done a great work in one hundred years. Why should we not let the world see what it is? Why should not we stop to examine it ourselves? You do not know your country. You do not know what an exhibition we can make. Let us put in one hall the progress of education and its present condition; in another the progress of religious denominations—and several of them are already making their arrangements. In another, the varied and innumerable soils and their capacity; elsewhere the treasures of the mine. Why, the gentleman from Alabama [Mr. WHITE] told you last night that you could ride in his State, which we think of as a "cotton State," one hundred miles over the very best iron ore, the bed fifteen feet deep and forty feet wide, and with the mountains full of it besides; and engineers say that there is coal enough in that State to supply the world for two thousand years. How many of you knew the resources of Alabama? We can beat Great Britain in coal and iron in that one State. We can produce iron there at fourteen dollars per ton, the gentleman says; and others have told me the same. And my friend before me from Chattanooga [Mr. CRUTCHFIELD] can give a similar account of the region around him.

Look at your wheat-fields. We can furnish bread to the whole world and not miss it. Look at the wheat-growth on the Pacific coast. Ten years ago we did not know that wheat could be pro-

duced there, and now California is feeding nations. There are fields ready for wheat over which you cannot ride in a week; where not only no plow has ever passed, but where the white man's foot has hardly yet trod, in the boundless Saskatchewan Valley, yet to be brought under cultivation.

You have not tickled the surface of the great Mississippi Valley. You have gold and silver enough to keep your miners at work for centuries; your coal, your iron; your soil, black and rich, fifteen feet deep, the deposit of centuries. Spread this information on maps, charts, and tabulated statements, on the walls of your exposition building. You wish the world to know it.

There are men now making ready specimens of the the root, the bark, the wood, the leaf, flower, and fruit of every tree from Maine to California—a collection such as no other country in the world can make. There will be an exhibition of the fishes to be gathered from Maine to Galveston, on the Pacific coast, and in our inland seas, such as will be of interest to all the naturalists of the world. Then there are our fire-arms, in which we beat the world; our clocks which we export everywhere; our edge-tools, in which we now beat Sheffield in her own markets, because the Yankee brain works through the machine that makes the tool, and we are quicker in that than John Bull. We have been building locomotives and passenger-cars for Europe. John Bull did not know how to go comfortably from London to Edinburgh till we sent him the other day some trains of Pullman cars. Then there are the cold fields of Maine, where they raise two hundred bushels of potatoes to the acre; and all the various soils and climates between that State and the sunny fields of San Diego, in California, rich in oranges, limes, lemons, almonds, all fruits of all climates, the sugar-cane of Louisiana, the matchless cotton of the sea islands, the grape culture, destined to an infinite development—everywhere productive capability immeasurable.

Let us devote a few weeks to arranging all these things in rooms and cases, and then ask the world to come and see them. In both aspects, that of fraternity and that of profit also, I believe this enterprise is legitimate and lawful. We will have scientific men and commissioners, who will come here and make their reports, published at home, and read and talked over by their people. The press of the world will sketch in words and pictures the wonders and uses we shall have, and the year after your immigration will be increased by thousands upon thousands. Your trade will be increased. New ships and flags will come to sell and buy.

THE MORAL USES.

How grand the opportunity to promote fraternity among the nations, whose representatives will there meet in the friendly competitions of a Christian civilization!

One consideration more that lies near my heart. In that summer of 1876 we of these States will meet under one flag and one name, avowing one purpose and one destiny, looking back far beyond the fierce and bloody quarrels that have tortured our hearts and reddened our fields. Pass our amnesty bills, secure the civil rights of all, clear the ground, and shake hands. I look around and see men who would have shot each other at sight a few years ago. I have learned something in this Hall, gained somewhat, I hope, of a kindlier feeling, just through these daily friendly greetings. We need such opportunity for all, as you, Mississippi, [looking at Mr. LAMAR,] have said, that we may "know one another better, and love one another better." We want the people called together in what I might call a good old-fashioned Methodist camp-meeting for six months. We cannot afford to throw away the opportunity. None such will come again in a hundred years. The moments hasten by; local jealousies, personal rivalries, false economy, no matter what folly, may let the time pass, and then historians for a hundred years will make your neglect the text for a shameful chapter. I pray for once clear away this smothering atmosphere. Let us not place self-interest above all things else. Indeed self-interest and honor move together, as in the true sense they always do. Let the American people pay a tax of ½ of 1 per cent., half a million out of each one hundred millions of revenue, for two years. I am not afraid of them on that point; but I am afraid of undertaking the rôle of pettifogger in answer to the foreign governments that have accepted our invitations.

CONCLUSION.

As one of the commissioners, and just now their president, I cannot do this. You must relieve us from all that. You ordered the invitation. In obedience to your laws the President and Secretary have notified the world. Get the gentleman from Maine, [Mr. HALE,] the chairman of Appropriations, [Mr. GARFIELD,] and the gentleman from New Jersey, [Mr. PHELPS,] to prepare your statement thus, perhaps: "Whereas we sanctioned and ordered a celebration and an international exhibition for the honor and profit of the whole nation and to the glory of republican institutions only on condition that Pennsylvania would see the money raised; and whereas though Pennsylvania has secured half what was needed, the financial crisis checked the work of the commission; and whereas we somewhat doubt our having anything worth looking at or anybody capable of arranging it; therefore resolved that we back out and tell all our friends among the nations that they need not come."

No; you will not let them write or offer that. You will provide for a festival of patriotism and an exhibition of resources and developments worthy of a nation that claims a leadership in civilization and asserts the supreme beneficence of free institutions.

[Here the hammer fell.]

APPENDIX: CONTAINING VARIOUS OFFICIAL DOCUMENTS REFERRED TO IN SAID SPEECH.

ACTS OF CONGRESS RELATING TO CENTENNIAL CELEBRATION.

Copy of act of Congress creating the commission, approved March 3, 1871.

An act to provide for celebrating the one hundredth anniversary of American independence, by holding an international exhibition or arts, manufactures, and products of the soil and mine, in the city of Philadelphia, and State of Pennsylvania, in the year 1876.

Whereas the Declaration of Independence of the United States of America was prepared, signed, and promulgated in the year 1776, in the city of Philadelphia; and whereas it behooves the people of the United States to celebrate, by appropriate ceremonies, the centennial anniversary of this memorable and decisive event, which constituted the 4th day of July, A. D. 1776, the birthday of the nation; and whereas it is deemed fitting that the completion of the first century of our national existence shall be commemorated by an exhibition of the natural resources of the country and their development, and of its progress in those arts which benefit mankind, in comparison with those of older nations; and whereas no place is so appropriate for such an exhibition as the city in which occurred the event it is designed to commemorate; and whereas, as the exhibition should be a national celebration, in which the people of the whole country should participate, it should have the sanction of the Congress of the United States: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That an exhibition of American and foreign arts, products, and manufactures shall be held under the auspices of the Government of the United States, in the city of Philadelphia, in the year 1876.

SEC. 2. That a commission, to consist of not more than one delegate from each State and from each Territory of the United States, whose functions shall continue until the close of the exhibition, shall be constituted, whose duty it shall be to prepare and superintend the execution of a plan for holding the exhibition; and, after the conference with the authorities of the city of Philadelphia, to fix upon a suitable site within the corporate limits of the said city, where the exhibition shall be held.

SEC. 3. The said commissioners shall be appointed within one year from the passage of this act, by the President of the United States, on the nomination of the governors of the States and Territories, respectively.

SEC. 4. That in the same manner there shall be appointed one commissioner from each State and Territory of the United States, who shall assume the place and perform the duties of such commissioner and commissioners as may be unable to attend the meetings of the commission.

SEC. 5. That the commission shall hold its meetings in the city of Philadelphia, and that a majority of its members shall have full power to make all needful rules for its government.

SEC. 6. That the commission shall report to Congress, at the first session after its appointment, a suitable date for opening and for closing the exhibition; a schedule of appropriate ceremonies for opening or dedicating the same; a plan or plans of the building; a complete plan for the reception and classification of articles intended for exhibition; the requisite custom-house regulations for the introduction into this country of the articles from foreign countries intended for exhibition; and such other matters as in their judgment may be important.

SEC. 7. That no compensation for services shall be paid to the commissioners or other officers provided by this act from the Treasury of the United States; and the United States shall not be liable for any expenses attending such exhibition, or by reason of the same.

SEC. 8. That whenever the President shall be informed by the governor of the State of Pennsylvania that provision has been made for the erection of suitable buildings for the purpose, and for the exclusive control by the commission herein provided for of the proposed exhibition, the President shall, through the Department of State, make proclamation of the same, setting forth the time at which the exhibition will open, and the place at which it will be held; and he shall communicate to the diplomatic representatives of all nations copies of the same, together with such regulations as may be adopted by the commissioners, for publication in their respective countries.

OFFICERS OF THE UNITED STATES CENTENNIAL COMMISSION.

President.—Hon. Joseph R. Hawley.

Vice-presidents—Hons. Alfred T. Goshorn, Orestes Cleveland, W. M. Byrd, John D. Creigh, David Atwood, Thomas H. Coldwell.

Director-general.—Hon. Alfred T. Goshorn.

Secretary.—Hon. John L. Campbell.

Counselor and solicitor.—John L. Shoemaker, esq., 611 Vine street, Philadelphia.

The supreme control of the business of the United States centen-

nial commission, except during its session, is vested in the executive committee composed of thirteen members, namely:

Executive committee.—Daniel J. Morrell, Pennsylvania; Alfred T. Goshorn, Ohio; Walter W. Wood, Virginia; George B. Loring, Massachusetts; Charles H. Marshall, New York; James T. Earle, Maryland; George H. Corliss, Rhode Island; John G. Stevens, New Jersey; Alexander R. Boteler, West Virginia; Richard C. McCormick, Arizona; William Henry Parsons, Texas; Lewis Waln Smith, Georgia; John Lynch, Louisiana.

MEMBERS.

Alabama.—William M. Byrd, commissioner, Selma; James L. Cooper, alternate, Huntsville.

Arizona.—Richard C. McCormick, commissioner, Washington, D. C.; John Wasson, alternate, Tucson.

Arkansas.—E. W. Gantt, commissioner, Little Rock; Alexander McDonald, alternate, Little Rock.

California.—John Dunbar Creigh, commissioner, No. 714 Shotwell street, San Francisco; ——— ———, alternate, deceased.

Colorado.—J. Marshall Paul, commissioner, Fair Play; N. C. Meeker, alternate, Greeley.

Connecticut.—Joseph R. Hawley, commissioner, Hartford; William Phipps Blake, alternate, New Haven.

Dakota.—George A. Batchelder, commissioner, Yankton; Solomon L. Spink, alternate, Yankton.

Delaware.—Henry F. Askew, commissioner, Wilmington; John H. Rodney, alternate, New Castle.

District of Columbia.—James E. Dexter, commissioner, 322 Four-and-a-half street, northwest, Washington; Lawrence A. Gobright, alternate, Washington.

Florida.—John S. Adams, commissioner, Jacksonville; J. T. Bernard, alternate, Tallahassee.

Georgia.— ——— ———, commissioner; Lewis Waln Smith, alternate, Philadelphia, Pennsylvania.

Idaho.—Thomas Donaldson, commissioner, Boise City; James S. Reynolds, alternate, Boise City.

Illinois.—Frederick L. Mathews, commissioner, Carlinville; Lawrence Weldon, alternate, Bloomington.

Indiana.—John L. Campbell, commissioner, Crawfordsville; F. C. Johnson, alternate, New Albany.

Iowa.—Robert Lowry, commissioner, Davenport; Coker F. Clarkson, alternate, Eldora, Hardin County.

Kansas.—John A. Martin, commissioner, Atchison; George A. Crawford, alternate, Fort Scott.

Kentucky.—Robert Mallory, commissioner, La Grange; Smith M. Hobbs, alternate, Mount Washington.

Louisiana.—John Lynch, commissioner, lock box 980 New Orleans; Edward Penington, alternate, Philadelphia, Pennsylvania.

Maine.—Joshua Nye, commissioner, Augusta; Charles P. Kimball, alternate, Portland.

Maryland.—James T. Earle, commissioner, Centreville, Queen Anne County; John W. Davis, alternate, 25 North Calvert street, Baltimore.

Massachusetts.—George B. Loring, commissioner, Salem; William B. Spooner, alternate, Boston.

Michigan.—James Birney, commissioner, Bay City; Claudius B. Grant, alternate, Ann Arbor.

Minnesota.—J. Fletcher Williams, commissioner, Saint Paul; W. W. Folwell, alternate, Saint Anthony.

Mississippi.—O. C. French, commissioner, Jackson; ——— ———, alternate, ———.

Missouri.—John McNeil, commissioner, Compton Hill, Saint Louis; Samuel Hays, alternate, Saint Joseph.

Montana.—William H. Clagett, commissioner, Deer Lodge City; Patrick A. Largey, alternate, Virginia City.

Nebraska.—Henry S. Moody, commissioner, Omaha; R. W. Furnas, alternate, Brownville.

Nevada.—William Wirt McCoy, commissioner, Eureka, Lander County; James W. Haines, alternate, Genoa.

New Hampshire.—Ezekiel A. Straw, commissioner, Manchester; Asa P. Cate, alternate, Northfield.

New Jersey.—Orestes Cleveland, commissioner, Jersey City; John G. Stevens, alternate, Trenton.

New Mexico.—Eldridge W. Little, commissioner, Santa Fé.

New York.—N. M. Beckwith, commissioner, New York City; Charles H. Marshall, alternate, New York City.

North Carolina.— ——— ———, commissioner, ———; Jonathan W. Albertson, alternate, Hertford, Perquimans County.

Ohio.—Alfred T. Goshorn, commissioner, Cincinnati; Wilson W. Griffith, alternate, Toledo.

Oregon.—James W. Virtue, commissioner, Baker City; Andrew J. Dufur, alternate, Portland.

Pennsylvania.—Daniel J. Morrell, commissioner, Johnstown; Asa Packer, alternate, Mauch Chunk.

Rhode Island.—George H. Corliss, commissioner, Providence; Samuel Powel, alternate, Newport.

South Carolina.—William Gurney, commissioner, Charleston, Archibald Cameron, alternate, Charleston.

Tennessee.—Thomas H. Coldwell, commissioner, Shelbyville, Bedford County; William F. Prosser, alternate, Nashville.

Texas.—William Henry Parsons, commissioner, New York City; John C. Chew, alternate, New York City.

Utah.—John H. Wickizer, commissioner, Salt Lake City; Oscar G. Sawyer, alternate, New York City.

Vermont.—Middleton Goldsmith, commissioner, Rutland; Henry Chase, alternate, Lyndon.

Virginia.—Walter W. Wood, commissioner, Halifax Court-House; Edward R. Bagwell, alternate, Onancock, Accomack County.

Washington Territory.—Elwood Evans, commissioner, Olympia; Alexander S. Abernethy, alternate, Cowlitz County.

West Virginia.—Alexander R. Boteler, commissioner, Shepherdstown; Andrew J. Sweeney, alternate, Wheeling.

Wisconsin.—David Atwood, commissioner, Madison; Edward D. Holton, alternate, Milwaukee.

Wyoming.—Joseph M. Carey, commissioner, Cheyenne; Robert H. Lamborn, alternate, Philadelphia, Pennsylvania.

THE CETENNIAL BOARD OF FINANCE.

This board was created and chartered by the act of Congress in the premises, approved June 1, 1872, as an auxiliary to the commission. The corporators named in the act represented every congressional district in the country. Provision was made for the annual election of twenty-five directors at which every stockholder is entitled to cast a vote for each share of stock owned by him. These directors are charged with the financial administration of the exhibition. The measures necessary for promoting the procurement of the capital, by subscriptions to stock to the extent of one million shares at ten dollars per share, were intrusted to those directors. Their duties include also the auditing and settlement of all accounts for the expenses attending the erection of buildings, the expenses and the organization, completion, and closing up of the exhibition. They are to have charge of moneys received from all sources of income to the exhibition, and to distribute at the close of it *pro rata* among the stockholders the surplus remaining in their hands of such amount as may have been received from admissions, rents, licences, and all other sources of income, including the proceeds of the sale of buildings and other property, after payment of all expenses properly pertaining to the exhibition.

The following is a list of the board of directors and of their officers:

OFFICERS OF THE CENTENNIAL BOARD OF FINANCE.

President.—John Welsh, Philadelphia.

Vice-presidents.—William Sellers, Philadelphia; John S. Barbour, Virginia.

Directors.—Daniel M. Fox, Philadelphia; Samuel M. Felton, Philadelphia; Thomas Cochran, Philadelphia; Clement M. Biddle, Philadelphia; N. Parker Shortridge, Philadelphia; Edward T. Steel, Philadelphia; James M. Robb, Philadelphia; John Wanamaker, Philadelphia; John Price Wetherill, Philadelphia; Henry Winsor, Philadelphia; Thomas H. Dudley, New Jersey; Abram S. Hewitt, New York; Charles W. Cooper, Pennsylvania; John Cummings, Boston, Massachusetts; William Bigler, Pennsylvania; Robert Patton, Alabama; John B. Drake, Illinois; George Bain, Missouri; Henry Lewis, Philadelphia; Amos R. Little, Philadelphia; (one vacancy.)

Secretary and treasurer.—Frederick Fraley, Philadelphia.

By the President of the United States of America:

A PROCLAMATION.

Whereas by the act of Congress approved March 3, 1871, providing for a national celebration of the one hundredth anniversary of the independence of the United States, by the holding of an international exhibition of arts, manufactures, and products of the soil and mine, in the city of Philadelphia, in the year 1876, it is provided as follows:

That whenever the President shall be informed by the governor of the State of Pennsylvania that provision has been made for the erection of suitable buildings for the purpose, and for the exclusive control by the commission herein provided for of the proposed exhibition, the President shall, through the Department of State, make proclamation of the same, setting forth the time at which the exhibition will open and the place at which it will be held; and he shall communicate to the diplomatic representatives of all nations copies of the same, together with such regulations as may be adopted by the commissioners, for publication in their respective countries.

And whereas his excellency the governor of the State of Pennsylvania did, on the 24th day of June, 1873, inform me that provision has been made for the erection of said buildings and for the exclusive control by the commission provided for in the said act of the proposed exhibition; and whereas the president of the United States centennial commission has officially informed me of the dates fixed for the opening and closing of the said exhibition, and the place at which it is to be held:

Now, therefore, be it known, that I, Ulysses S. Grant, President of the United States, in conformity with the provisions of the act of Congress aforesaid, do hereby declare and proclaim that there will be held, at the city of Philadelphia, in the State of Pennsylvania, an international exhibition of arts, manufactures, and products of the soil and mine, to be opened on the 19th day of April, A. D. 1876, and to be closed on the 19th day of October, in the same year.

And in the interest of peace, civilization, and domestic and international friendship and intercourse, I commend the celebration and

exhibition to the people of the United States; and, in behalf of this Government and people, I cordially commend them to all nations who may be pleased to take part therein.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this 3d day of July, 1873, and of the Independence of the United States the ninety-seventh

[L. S.] U. S. GRANT.

By the President:

HAMILTON FISH,
Secretary of State.

The foregoing proclamation was sent to foreign governments with the following form of note:

DEPARTMENT OF STATE,
Washington, July 5, 1873.

SIR: I have the honor to inclose, for the information of the government of ———, a copy of the President's proclamation announcing the time and place of holding an international exhibition of arts, manufactures, and products of the soil and mine, proposed to be held in the year 1876.

The exhibition is designed to commemorate the Declaration of the Independence of the United States, on the one hundredth anniversary of that interesting and historic national event, and at the same time to present a fitting opportunity for such display of the results of art and industry of all nations as will serve to illustrate the great advances attained and the successes achieved in the interest of progress and civilization during the century which will have then closed.

In the law providing for the holding of the exhibition, Congress directed that copies of the proclamation of the President, setting forth the time of its opening and the place at which it was to be held, together with such regulations as might be adopted by the commissioners of the exhibition, should be communicated to the diplomatic representatives of all nations. Copies of those regulations are herewith transmitted.

The President indulges the hope that the government of ——— will be pleased to notice the subject, and may deem it proper to bring the exhibition and its objects to the attention of the people of that country, and thus encourage their co-operation in the proposed celebration. And he further hopes that the opportunity afforded by the exhibition for the interchange of national sentiment and friendly intercourse between the people of both nations may result in new and still greater advantages to science and industry, and at the same time serve to strengthen the bonds of peace and friendship which already happily subsist between the government and people of ——— and those of the United States.

I have the honor to be, sir, with the highest consideration, your obedient servant,

———.

GENERAL REGULATIONS.

First. The international exhibition of 1876 will be held in Fairmount Park, in the city of Philadelphia, in the year 1876.

Second. The date of opening of the exhibition will be April 19, 1876, and of closing will be October 19, 1876.

Third. A cordial invitation is hereby extended to every nation of the earth to be represented by its arts, industries, progress, and development.

Fourth. A formal acceptance of this invitation is requested previous to March 4, 1874.

Fifth. Each nation accepting this invitation is requested to appoint a commission, through which all matters pertaining to its own interests shall be conducted. For the purpose of convenient intercourse and satisfactory supervision, it is especially desired that one member of each such commission be designated to reside at Philadelphia until the close of the exposition.

Sixth. The privileges of exhibitors can be granted only to citizens of countries whose governments have formally accepted the invitation to be represented, and have appointed the aforementioned commission, and all communications must be made through the governmental commissions.

Seventh. Applications for space within the exposition buildings, or in the adjacent buildings and grounds under the control of the centennial commission, must be made previous to March 4, 1875.

Eighth. Full diagrams of the buildings and grounds will be furnished to the commissioners of the different nations which shall accept the invitation to participate.

Ninth. All articles intended for exhibition, in order to secure proper position and classification, must be in Philadelphia on or before January 1, 1876.

Tenth. Acts of Congress pertaining to custom-house regulations, duties, &c., together with all special regulations adopted by the centennial commission in reference to transportation, allotment of space, classification, motive-power, insurance, police rules, and other matters necessary to the proper display and preservation of materials, will be promptly communicated to the accredited representatives of the several governments co-operating in the exposition.

PHILADELPHIA, *November*, 1873.

The above regulations were adopted by the United States centennial commission by virtue of authority conferred by the acts of Congress approved March 3, 1871, and June 1, 1872, and were sent officially to foreign governments with the same note which communicated the President's proclamation.

INSTRUCTIONS TO AMERICAN MINISTERS.

In a circular note dated July 7, 1873, addressed to all American ministers abroad by the State Department, Secretary Fish said:

DEPARTMENT OF STATE,
Washington, July 7, 1873.

SIR: I transmit, herewith, a copy of the proclamation of the President announcing, &c. * * * * * * *

It is desired that you will avail yourself of such opportunities as your official relations with the government of ——— will afford, to make known to the proper authorities, and through them to the people of that country, the object and scope of the exhibition, and thereby aid in securing their interest and co-operation in it. You will also ascertain, as early as may be practicable, *whether or not it is the purpose of the ——— government to create a commission* to represent ——— at the exhibition, and have in special charge the interests of citizens of that country who may take part in the proposed celebration. It is also desired that you will keep the Department advised of such information as you may become possessed of in relation to the subject, and that you will, by imparting information to those who may inquire in relation to the objects and purposes of the exhibition, and by such other means as your judgment and experience may suggest, do all in your power to promote the interest and success of this interesting national celebration.

* * * * * * * *

By the President of the United States.

EXECUTIVE ORDER.

Whereas it has been brought to the notice of the President of the United States that, in the international exhibition of arts, manufactures, and products of the soil and mine, to be held in the city of Philadelphia, in the year 1876, for the purpose of celebrating the one hundredth anniversary of the independence of the United States, it is desirable that, from the Executive Departments of the Government of the United States, in which there may be articles suitable for the purpose intended, there should appear such articles and materials as will, when presented in a collective exhibition, illustrate the functions and administrative faculties of the Government in time of peace, and its resources as a war power, and thereby serve to demonstrate the nature of our institutions and their adaptations to the wants of the people:

Now, for the purpose of securing a complete and harmonious arrangement of the articles and materials designed to be exhibited from the Executive Departments of the Government, it is ordered that a board, to be composed of one person, to be named by the head of each of the Executive Departments which may have articles and materials to be exhibited, and also of one person to be named in behalf of the Smithsonian Institution, and one to be named in behalf of the Department of Agriculture, be charged with the preparation, arrangement, and safe-keeping of such articles and materials as the heads of the several Departments and the Commissioner of Agriculture and the Director of the Smithsonian Institution may respectively decide shall be embraced in the collection; that one of the persons thus named, to be designated by the President, shall be chairman of such board; and that the board appoint from their own number such other officers as they may think necessary; and that the said board, when organized, be authorized, under the direction of the President, to confer with the executive officers of the centennial exhibition in relation to such matters connected with the subject as may pertain to the respective Departments having articles and materials on exhibition; and that the names of the persons thus selected by the heads of the several Departments, the Commissioner of Agriculture, and the Director of the Smithsonian Institution, shall be submitted to the President for designation.

By order of the President:

HAMILTON FISH,
Secretary of State.

WASHINGTON, *January* 23, 1874.

DEPARTMENT OF STATE,
Washington, March 25, 1874.

SIR: I have the honor to inform you that, in accordance with the order of the President of the 23d of January last, the following persons have been named by the heads of the several Departments, &c., mentioned in the order, having articles or materials to be exhibited at the centennial exhibition to be held in 1876, to compose the board directed to be created by the said order, namely:

By the Secretary of the Treasury—Hon. F. A. Sawyer.
By the Secretary of War—Colonel S. C. Lyford, United States Army.
By the Secretary of the Navy—Admiral T. A. Jenkins, United States Navy.
By the Secretary of the Interior—John Eaton, esq.
By the Postmaster-General—Dr. Charles F. McDonald.
By the Department of Agriculture—William Saunders, esq.
By the Smithsonian Institution—Professor S. F. Baird.

I have the honor further to inform you that the President has

designated Colonel S. C. Lyford, United States Army, to be the chairman of such board.

I have the honor to be, sir, your obedient servant,

HAMILTON FISH.

Hon. WILLIAM W. BELKNAP,
Secretary of War.

The above and the executive order preceding it were embodied in General Orders of the War Department No. 28, published to the Army.

SOME OF THE ACCEPTANCES RECEIVED FROM FOREIGN GOVERNMENTS.

Acceptance of the German Empire.

[Extract from Prince Bismarck's instructions to the German envoy at Washington.]

BERLIN, *January* 2, 1874.

* * * * * * *

I request you respectfully to communicate to the Secretary of State, Mr. Fish, that the German Empire accepts with sincerest thanks the invitation of the Government of the United States of America to take part in the above-mentioned exhibition. The appointment of a special commission for the exhibition, as also a plenipotentiary residing in Philadelphia, will therefore be made in time. * * * *

The chancellor of the Empire,

BISMARCK.

Acceptance by the Netherlands.

[Mr. de Westenberg, the minister of the Netherlands, to Mr. Fish.]

I have the honor to inform your excellency that the government of the Netherlands has received this international invitation with lively satisfaction, and intends to take part in the said exposition by contributing productions of the arts and industry of the Netherlands.

To this effect a commission will be appointed in the Netherlands, and also a committee to direct and furnish information to exhibitors.

As soon as it shall be in my power, I shall hasten to communicate to your excellency the names and quality of the persons who are to constitute this committee. * * * * *

WESTENBERG.

LEGATION OF THE NETHERLANDS.

Acceptance by Switzerland.

Our minister at Berne, under date of January 28, 1874, incloses to the Department of State a communication from the federal council, in which it is said:

"In thanking Mr. Rublee for these overtures, and in requesting him to be pleased to convey to his government its grateful sentiments for the courteous invitation, which it accepts, the federal council assures him that it will use its best efforts to promote the enterprise, as it has done in the case of similar expositions in Europe, provided that the necessary credits are granted by the Federal Assembly."

Acceptance by Sweden.

Our minister to Sweden in a communication to the Department of State, dated March 21, 1874, says:

"The official journal of last evening announced the appointment, by the King, of the committee with power to organize and supervise all that concerns Sweden's taking part in the Philadelphia exhibition. * * * It is announced at the same time that so much of the fifty thousand Swedish dollars voted by the Diet will be applied to enable the committee to carry on their work as is requisite, and that free transportation on all of the public railways will be granted for the committee and for the articles to be exhibited.

"It may be assumed that in the department of statistics Sweden will make a fine showing. I have reason to believe that this country is going to work to gain as much honor as possible at the exhibition.

"Undoubtedly able men from every State in Europe will visit our country during the exhibition and make searching investigation of social affairs, especially in the South, and report the results."

Acceptance by Spain.

The Spanish minister at Washington, writing to the Department of State, under date of April 24, 1874, incloses a communication from the secretary-general of the ministry of state, in which he says:

"The government of the republic has been gratified to receive the invitation which has been extended to Spain through your excellency by the Secretary of State of the North American Republic, to take part in the international exhibition. * * * The Spanish government will adopt all necessary measures to the end that Spain may be represented in the best manner possible."

Acceptance by the Argentine Republic.

The minister of foreign affairs, in a note to our minister to the Republic, dated January 22, 1874, says:

* * * "The Argentine government accepts the invitation which that of the United States has been pleased to extend to it through your excellency, to take part in the exhibition which is to be held at Philadelphia, and a commission has been appointed for this purpose.

* * * * * * *

"The Argentine government returns its sincere thanks to the Republic of the North for this attention. * * *

"C. TEJEDOR."

The President of the Argentine Republic issued a decree on the 24th November, 1873, a copy of which was inclosed with the above note, in which arrangements were ordered and appropriations designated for organizing commissions and forwarding articles from every province of the republic.

TEXT OF HOUSE BILL NOW BEFORE THE SENATE.

"Whereas at various international exhibitions which have been held in foreign countries the United States have been represented, in pursuance of invitations given by the governments of those countries and accepted by our own Government: Therefore,

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the President be requested to extend, in the name of the United States, a respectful and cordial invitation to the governments of other nations, to be represented and take part in the international exhibition to be held at Philadelphia, under the auspices of the Government of the United States, in the year 1876."

This passed the House by a vote of 206 yeas to 41 nays. In the Senate, after much debate, it was referred to the Committee on Appropriations.

Compensation for Destruction of Property.

SPEECH OF HON. FRANK HEREFORD,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

May 8, 1874,

On the subject of the duty of the Government to make compensation for colleges and churches and other private property destroyed by the United States Army during the late war.

Mr. HEREFORD. Mr. Speaker, the principle upon which compensation may be justly claimed and awarded for private property when taken for public necessity in time of warfare is well stated by the late William Whiting in his treatise upon War Powers under the Constitution of the United States. Says Mr. Whiting:

When individuals are called upon to give up what is their own for the advantage of the community, justice requires that they shall be fairly compensated, otherwise public burdens would be shared unequally. * * * Public use does not require that the property taken shall be actually used; it may be disused, removed, or destroyed. And destruction of private property may be the best public use it can be put to. * * * If the private property of loyal citizens, inhabitants of loyal States, is appropriated by our military forces for supplying our armies and to aid in prosecuting hostilities against a public enemy, the Government is bound to give a reasonable compensation therefor to the owners.—*Whiting on War Powers*, pages 16 and 17.

To the same effect concur the leading writers on military law and the law of nations. The distinguished publicist, Grotius, in his treatise on The Rights of War and Peace, uses the following language:

The state has an eminent right of property over the goods of the subjects, so that the state or those that represent it may make use of them and even destroy them, not only in extreme necessity, but for the public benefit; to which we must add that the state is obliged to repair the damages suffered by any subject on that account out of the public stock.

In volume 3, page 348, of Vattel's celebrated treatise on The Law of Nations the following principle is laid down:

Damages sustained in war are of two kinds: those done by the state itself or the sovereign, and those done by the enemy. Of the first kind some are done deliberately and by way of precaution, as when a field, a house, a garden, belonging to a private person, is taken for the purpose of erecting on the spot a rampart or any other fortification, or when his standing corn or his store-houses are destroyed to prevent their being *of use* to the enemy. Such damages are to be made good to the individual, who should bear only his quota of the loss.

These principles, thus announced by eminent publicists, have been confirmed by the practice of all civilized nations in the case of damages by their own military operations to the property of loyal subjects or citizens. In fact, most of these nations have gone further, and have recognized the right of their citizens to compensation for damages sustained in war not only through the troops of their own country, but also by those of the enemy. A conspicuous instance of this is to be found in the treatment of the claims of the British loyalists in the war of the American Revolution by the government of Great Britain. These adherents to the cause of the mother-country (or tories as they were called among us) petitioned Parliament for payment for the losses sustained, not at the hands of the British army in America, but at the hands of the American forces or "rebels."

These claims long formed the subject of consideration in Parliament, where it was admitted that the loyalists were as perfectly subjects of the British state as any man in London or Middlesex. Eminent parliamentary leaders declared that the nation was bound as well by the fundamental laws of society as by the eternal principles of natural justice to make them a compensation. The King, in his speech from the throne, alluded to these American sufferers, and trusted that generous attention would be shown to them. Both political parties in Parliament assented to this suggestion. Commissioners were appointed to inquire into the circumstances of the loyalists "reduced to distress by the late unhappy dissensions in America." This measure was passed without opposition. The commissioners were to inquire into the loyalty and conduct of the claimants, who were required to state in proper form every species of loss which they had

suffered. The total number of claimants was five thousand and seventy-two, and the commissioners were engaged in examining their claims from March, 1784, to April, 1788. The whole amount of losses claimed was £8,026,045, of which the sum of £3,292,452 was allowed and paid by act of Parliament. The claims thus allowed included not only those who had lost property, but those who had lost life estate in property by confiscation, and those who had lost income.

A few received their whole demands without any deduction, while others received much less than the claims they had preferred; but the handsome sum of $16,000,000, divided among the loyalists by the Government of Great Britain, proves that these adherents to the royal cause were well cared for by a greateful country. (Sabine's Loyalists of the American Revolution, volume 1, pages 104–112.)

The precedents in our own military history for awarding compensation to the sufferers by damage or destruction of property during war by our military authorities are numerous and conclusive. Thus we find Congress passing an act as early as 1792 providing indemnification to the trustees of a public grammar school and academy at Wilmington, Delaware, for the use and occupation of the said school and for damages done to the same by the troops of the United States during the revolutionary war. (6 United States Statutes, page 8.)

Again, on the 16th of April, 1800, Congress directed the accounting officers of the Treasury to liquidate and settle the claim of Rhode Island College, for compensation for the use and occupation of its edifice and for injury done to the same in the years 1776 to 1780, by the troops of the United States. (6 United States Statutes, page 40.)

A case of the destruction of property during the revolutionary war closely analogous to the one now presented to Congress will be found in the American State Papers, (class 9—claims,) on page 522. The report of the committee in this case sets forth that it was the object of the petitioner, Sarah Dewees, to obtain indemnity for buildings, the property of her late husband, destroyed by the public enemy while occupied under the authority of the Quartermaster-General of the United States as a place of regular military deposit at Valley Forge, in the year 1777. The committee quote the report of a former select committee made to the House in 1794, which sets forth—

That the facts alleged in the said petition are satisfactorily established; that it appears the property was taken for public use, contrary to the wishes and remonstrances of the petitioner; that the chief part of his buildings were occupied as a deposit for military stores, where a part continued until the approach of the enemy; that, on the arrival of the enemy, he consumed the stores with the buildings; that the destruction of the said property *is to be ascribed wholly* to the circumstance of the military stores being there deposited, as none of the buildings in the vicinity suffered in like manner; and that the claim of the petitioner is not barred by any act of limitation.

The Committee on Claims of the House, in their report recommending the payment of this claim of Sarah Dewees, February 5, 1817, use the following language:

The petitioner represents her case as coming entirely within the scope of an act passed at the last session of Congress, authorizing the payment for buildings destroyed by the enemy while occupied as a military deposit. The force of this suggestion the committee are compelled to admit in all its extent.

The committee believe the destruction of Colonel Dewees's buildings was clearly sanctioned by the usages of civilized warfare, and that the obligation on the Government to make compensation for the loss of property thus taken for public use is unequivocal. In the lapse of time for which indemnity has been withheld, the committee see nothing to weaken this obligation. The facts were established to the satisfaction of the House of Representatives as early as 1794. From a diligent examination of the records of the House of Representatives, the committee are induced confidently to believe no claim similar in character has ever been made on the justice of Congress since the establishment of the present Government.

They therefore respectfully recommend the payment of the claim of Sarah Dewees, and report a bill making the necessary appropriation.

The act referred to in the above-cited report was approved April 9, 1816. It was entitled "An act to authorize the payment for property lost, captured, or destroyed by the enemy while in the military service of the United States." The fifth section of this act provided as follows:

And be it further enacted, That where any property has been impressed or taken by public authority for the use or subsistence of the Army during the late war, and the same shall have been destroyed, lost, or consumed, the owner of such property shall be paid the value thereof, deducting therefrom the amount which has been paid, or may be claimed, for the use and risk for the same, while in the service aforesaid.

The ninth section of the act also contained the following provision:

And be it further enacted, That any person who in the time aforesaid has sustained damage by the destruction of his or her house or building by the enemy, while the same was occupied as a military deposit under the authority of an officer or agent of the United States, shall be allowed and paid the amount of such damage: *Provided*, It shall appear that such occupation was the cause of its destruction. (3 United States Statutes, 263.)

Further sections of the act provide that the value of such destroyed property should be ascertained by the best evidence which the nature of the case would admit of; and that a commissioner should be appointed by the President and Senate whose duty it should be to decide cases arising under the act, and, when the judgment of said commissioner should be in favor of the claim, it should entitle the claimant to payment of the amount thereof at the Treasury of the United States. Congress recognized the justice of this claim of the widow, Sarah Dewees, by passing an act, approved April 11, 1818, awarding her and the heirs of her late husband the sum of $8,000 for the loss of property owing to its being taken for public use. (6 United States Statutes, 207.)

In like manner, we find numerous cases of compensation paid to American citizens whose houses and property were destroyed or injured through the exigencies of warfare in the last war with Great Britain, of 1812–'15. By the act of March 3, 1815, Congress directed the Secretary of War to audit and settle the claims of James Savage and twenty-one others for damages on account of the destruction of their houses and property by order of Major-General Macomb, by ascertaining the value of the said property at the time of its destruction, and paying for it, "upon such terms as may appear reasonable and just," out of the Treasury of the United States.

Again, on the 26th of April, 1816, Congress directed the auditing and settlement of the claim of the supervisors of the county of Clinton, in the State of New York, for the destruction of the courthouse of the said county by order of General Alexander Macomb, commander of troops of the United States, by ascertaining the value thereof and paying it over to said supervisors for the benefit of the county of Clinton, out of any money in the Treasury not otherwise appropriated. This, be it observed, was a case of the destruction of a public building to prevent it from falling into the hands of the enemy.

The Committee on Claims of the House of Representatives, in November, 1814, reported in favor of the payment to John Chalmers, jr., of a claim for the destruction of the petitioner's rope-walks at Baltimore by a military order of General Forman, commanding the Maryland militia at that place. The facts were these: Claimant was manufacturing cordage for the Navy Department, and had a large quantity ready to deliver, when on the approach of the enemy toward Baltimore the rope-walks were set on fire and destroyed to prevent their falling into the hands of the British army. In accordance with the report of the committee the accounting officers of the Navy were directed by act of Congress to allow John Chalmers the whole sum due for actual disbursements made by him on the rope-walks thus destroyed. A similar act was passed to indemnify the owners of other rope-walks near Baltimore destroyed at the same time in front of the lines of the American Army.

But we find another case precisely similar in the main circumstances to that of the claim now before this body for indemnity. This was the claim of William Henry Washington, for a house destroyed by military order during the year 1814. The Committee on Claims of the House of Representatives thus reported upon this case December 9, 1814:

That the petitioner owned a small house, situated in Alexandria County, near the western end of the Potomac bridge; that on the 24th of August last a quantity of public stores was removed from Greenleaf's Point by order of Colonel Wadsworth, and deposited in the house for safe-keeping. A corporal and five men were stationed at the house to protect the public stores and to prevent them from falling into the possession of the enemy. The command of the stores was given to Lieutenant Baden, who directed the corporal, in case of attack by the enemy, to blow up the stores and retire from the place.

It appears from the affidavit of the corporal, hereto attached, that he apprehended an attack by the enemy, and, under that impression, blew up the stores and destroyed the house. The petitioner claims the value of his house.

Whether the destruction of the house was necessary to prevent the public stores from falling into the hands of the enemy is a matter of opinion, to be formed by the facts submitted to the House. The committee are of opinion that, inasmuch as the officer to whose care the public stores were committed thought it prudent and proper to destroy the house and stores to prevent the latter coming to the possession of the enemy, the petitioner should be paid the value of his house. They therefore report by bill.—*American State Papers, Claims*, page 446.

The recommendation of the Committee on Claims in this case (in which, be it observed, the committee did not declare that the destruction of the house was found necessary to prevent the public stores falling into the hands of the enemy) was nevertheless carried into effect by Congress.

By an act approved March 1, 1815, (6 United States Statutes, 151,) the accounting officers of the War Department were directed to ascertain the value of the house belonging to William H. Washington, situated near the west end of the Potomac bridge, and which was destroyed by order of an officer of the United States; "which valuation," says the act, "shall be made in such manner and upon such terms as may embrace the justice of his case." The second section of the act appropriated the money to pay the claim of the said Washington upon his releasing to the United States all claim on account of the destruction of the aforesaid house.

By an act of March 3, 1817, Peter Caslard was awarded damages to the full value of such injury as he might satisfactorily show he had sustained by the destruction of his saw-mill and property by order of General David B. Morgan, of the Army of the United States. (6 United States Statutes, 188.)

Again, by the act approved March 15, 1815, the Eastern Branch Bridge Company were indemnified on account of injury done their bridge by an order from the Navy Department during the prosecution of hostilities in the vicinity of Washington. The bridge, as we learn from contemporary history, was partly burned and partly blown up, in a panic, during the advance of the British army upon Washington. (6 United States Statutes, 152.)

Again, on the 3d of March, 1817, Congress passed an act for the relief of Joseph I. Green, for the damage done to his house in Plattsburgh, New York, under the orders of General Macomb, in September, 1814, during the prosecution of hostilities.

Caleb Nichols was awarded damages for injury done to his house and store in Plattsburgh, New York, under the orders of General Macomb, in September, 1814.

On the same day Congress passed an act reimbursing James H.

Boisgervais for the destruction of his saw-mill and property, by order of General David B. Morgan; and also to settle his claim for the use of his wood and fencing by the American troops for fuel, while stationed below New Orleans.

William Oliver was also paid the full value of his houses, destroyed at Fort Wayne, Indiana, by order of the officer who commanded there in the year 1812.

The number of claims which have been recognized and paid by Congress on account of damages done to property in the last war with Great Britain has been very large. Many of them were for property seized or destroyed under orders of Major-General Andrew Jackson. Of this class was the claim of Madam Montreuil, of Louisiana, who, as appears from a report in the case, owned a plantation below New Orleans which was occupied by the American Army, and upon which public works for the defense of the country were erected. The committee reported a bill for her relief, her plantation having received considerable injury by these public works, and Congress passed an act accordingly. (American State Papers, Claims, page 521.)

Another case of perhaps greater hardship, and more closely analogous to the one now presented to Congress for relief, was that of Antoine Bienvenu, of Louisiana. The report of the Committee on Claims in this case set forth that the claimant was owner of an elegant house situated below New Orleans, and between the positions occupied by the American and British armies in January, 1815. In consequence of this situation of the house and the two armies, it afforded a shelter to the British army; and was by General Jackson ordered to be fired on with hot shot for its destruction. In consequence of the destruction of the house and furniture the petitioner sustained considerable injury, and the committee, being of opinion that he was entitled to relief, reported a bill for that purpose. (American State Papers, Claims, page 521.)

A similar claim for indemnity for the erection of a battery in front of the house of John De Castanado by order of the commanding officer of the United States Army, in consequence of which the house received much injury from the British artillery, was favorably reported at the same session by the House Committee on Claims.

Another case closely analogous to the one now presented was the claim of the firm of Miller & Baker, of New York, which was paid by Congress in 1818. They had rented to the Quartermaster-General of the United States Army a house in Greenwich, Long Island, for the use and occupation of the troops of the United States, "which said house," (as is stated in the act of indemnity,) "used and occupied at the risk of the United States, was substantially burned down on the 4th of March, 1813, while used and occupied as aforesaid." The act appropriated the sum of $3,500 in full payment of the loss. (6 United States Statutes, 209.)

Congress directed to be paid the sum of $3,867.66 to settle the claim of Samuel F. Hooker, of Sackett's Harbor, for property taken and occupied for public use during the late war, and for a house and barn rented for barracks which were destroyed by the enemy. (6 United States Statutes, 211.)

Congress further paid by successive appropriations the following among other claims for the occupation of buildings and destruction of property by the troops of the United States during the invasion of New Orleans by the British:

John Rodriguez	$1,857 00
Francis B. Languille	2,250 00
Alexander Milne	2,500 00
Lewis H. Guerlain	420 00
Joseph M. Neil	700 00
Bartholomew Duverge	2,100 00
P. D. De La Ronde	5,770 50
John Pellett	3,864 00
Heirs of Edward McCarty	2,940 00
Solomon Prevost	1,960 00
Thomas Shields	1,693 10
Thomas Mayhew	715 00
Edward Evat	1,328 81
John Rodriguez	883 00
Heirs of Widow Dupré	8,995 00

Besides many other cases, too numerous to be here quoted.

Another instance of a building used for public purposes paid for by act of Congress will be found on page 711 of the sixth volume of the United States Statutes at Large. The sum of $3,000 was thereby appropriated in full satisfaction for the destruction of the court-house of Calvert County, in the State of Maryland, during the late war with Great Britain, while the same was in the military occupancy of the United States, and in consequence thereof destroyed by fire.

Nor are the cases of indemnity for property destroyed by the necessities of warfare by any means confined to the war of the Revolution or to that with Great Britain in 1812–'15. By the act of March 1, 1843, William G. Saunders was paid for his store-house and dwelling-house, destroyed January 21, 1836, by order of Captain Pelton, United States Army, commander at Fort Brooke, Florida, to destroy the cover of the enemy in approaching the fort, so as to prevent the buildings being occupied and burned by the hostile Indians. This was during the Seminole war.

The principle upon which nearly all the cases of indemnity for military losses have been paid by Congress is thus admirably set forth. In a report of the Committee on Military Affairs to the Senate, February 14, 1816, that principle is thus expressed:

Whether it becomes the magnanimity of a government whose only object should be the protection and prosperity of all its citizens to dispense relief in cases like these, and thereby to cause the war to fall equally on all, is a question which the committee believe is placed beyond their cognizance in consequence of the course heretofore pursued by Congress in regard to losses sustained during the war, *a course which seems to inculcate that indemnity is due to all those whose losses have arisen from the acts of our own Government, or those acting under its authority*; while losses produced by the conduct of the enemy are to be classed among the unavoidable calamities of war, and do not entitle the sufferer to indemnification by the Government. (See Report, as cited in American State Papers, Claims, page 462.)

Congress has likewise recognized in the fullest manner the obligation of the Government to pay for stores taken and property destroyed in the possession of loyal citizens during the war of the rebellion. By an act approved January 31, 1867, the Secretary of the Treasury was required to pay to Josiah O. Armes the sum of $9,500 for damages sustained by him in consequence of the burning of his buildings and the destruction of his property at Anandale, Fairfax County, Virginia, by the United States troops. (14 United States Statutes, 617.)

And in the case of the Kentucky University, an institution of learning whose claim rests certainly upon no higher ground than that of a religious organization, for similar destruction of property by United States authority, Congress awarded the sum of $25,000 in full compensation for the occupation of its buildings at Lexington, Kentucky, as a general hospital for United States soldiers during the war. This payment to the Kentucky University for the use of its buildings for purely military purposes was made in pursuance of an act approved as late as January 17, 1871, and recorded in the United States Statutes at Large, volume 16, page 678.

In the creation also of the board known as the southern claims commissioners Congress has solemnly admitted the obligation of the Government to pay for all stores, supplies, fences, and other similar property taken for the use of the United States Army from loyal citizens during the entire war. Does the obligation to pay for such property, taken and used directly by the Army, rest upon any higher ground than that of payment for property destroyed by order of the commanding officer of the Union Army to prevent its falling into the hands of the enemy?

It may be added, that in the still later instances of the Franco-Prussian war of 1870–'71, the French Republic, although staggering under the weight of an immediate war debt much greater than our own, provided by statute for the payment to its loyal citizens of damages sustained by the French army as well as for the repayment of exactions levied by the German authorities. The sum of 100,000,000 francs was appropriated to be at once supplied to these sufferers, besides an additional sum of 6,000,000 francs to be distributed among those who suffered most in the operations attending the attack made by the French army to gain entrance into Paris.

I have introduced this session two bills; one to pay the Methodist Episcopal Church South, at Charleston, West Virginia, for the destruction of their church building, and the other for the destruction of the building of the Baptist church in Greenbrier County, West Virginia. The evidence shows clearly that each of these cases falls within the law and precedents heretofore cited, and I confidently rely upon this Congress to reimburse the parties injured in each case.

The Internal-Revenue System—Its Evils, Oppressions, and Abuses.

SPEECH OF HON. W. M. ROBBINS,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

May 8, 1874.

The House, as in Committee of the Whole, having under consideration the President's annual message—

Mr. ROBBINS said:

Mr. SPEAKER: When Louis Napoleon, twenty-two years ago, struck down the liberties of France by his celebrated *coup d'état* and erected his throne on the ruins, he scarcely possessed more effective agencies for the accomplishment of his purposes than are now in the hands of the President of the United States. He had perhaps a more subservient army, though unfortunately ours has often recently proved itself a convenient instrument for the perpetration of very gross outrages and invasions of popular rights. But if we look at other means and other tools for seizing and maintaining supreme autocratic power, we find our soldier President as well provided with them as was the prince President of 1851. Napoleon contrived to draw into alliance with him the money power, the monopolies, the soulless corporations of France—all, in short, who loved wealth more than liberty, and who wished for an energetic government to protect them in their unjust exactions, and against the complaints of the down-trodden masses. In like manner we have seen our President all through his administration court the support and the favor of the money lords to the neglect of the interests of the toiling millions; and by his latest act, his veto of the bill for the expansion of the currency, he has thrown himself into the arms of the bankers, the monopolists, and the money-changers—the entire creditor class—and they are now singing pæans

in his praise, while he turns his back upon the struggling debtors and toiling agriculturists of the West and South and leaves them to perish, crushed by a mountain of accumulated burdens. Even Napoleon sought how he might favor the agriculturists. Grant utterly deserts them.

To run out the parallel, however: Napoleon had his multitudes of deputies and prefects in all the provinces and departments, his creatures and tools, who owed their official being to his individual will, and were ready at a word from their master to shape public opinion, and by cajolery, intimidation, or fraud to carry elections as might be dictated by the central power, the silent sphinx, at Paris. The people were ingeniously deceived by the establishment of "universal suffrage," and led into the belief that they were the all-powerful arbiters of their own destiny, while this machine of "universal suffrage," being manipulated by the interested agents of despotism, recorded not the will of the majority but the will of one man. And here we have the same "universal suffrage" and prostituted ballot, and a like multitude of officials and placemen dependent on one man for their positions and equally active in doing the bidding of their master at Washington, intimidating and corrupting the voters, controlling conventions, oppressing freemen, cheating the ignorant, manipulating ballot-boxes, engineering elections, perpetrating frauds, and finally, when all else fails, committing the foulest usurpations in the confident and often well-founded hope that the master and the party they serve will uphold them in their daring outrages upon liberty, law, even decency.

Such seems to me the parallel between the circumstances of the prince President and the soldier President—the situation of France in 1851-'52 and America in 1874. In the one case we know the result: usurpation, despotism, the empire, universal corruption like a worm eating out the heart of national virtue, and at length a collapse which astounded the world. In the other case what will be the event we must wait to see.

I am frank to say, nevertheless, that I have small fear that Grant will try to play the role of Napoleon. I do not believe he is unpatriotic enough to do that. Far be it from me to do him injustice by charging him with studied designs against the liberties of his country. But is it not a humiliating situation for us that we should owe our liberties to the forbearance of one man? Moreover, among those who are to come after him, are we sure that there may not soon arise some one whose domineering and arbitrary spirit, brilliant faculties, and consuming ambition may prompt him to put in exercise the mighty enginery which Grant forbears to use in its full force, and make us all his subjects?

Among the many reasons, some of which I shall endeavor to specify, why the present internal-revenue system ought at once to be totally abolished, is its tendency to centralization and the absorption of all power in the Federal Government and ultimately in the hands of one man. It works toward this result in many ways, as by introducing the constant surveillance of Federal officials into the daily employments and most intimate affairs of the people, by augmenting the jurisdiction of the Federal courts, and especially by adding so extensively to the patronage of the Executive.

Before the introduction of this system the people truly felt that they governed themselves, and lightly did their own self-imposed yoke rest upon them; but now they painfully realize that they are governed—governed by strangers or by the sycophants of power, and grinding is the burden. On a man's own land grow his own fruit trees planted by his own hand and laden with luscious fruits ripened by the bountiful sunlight of heaven. He feels that he ought to have the right to do what he pleases with that which is so truly his own. What he ought to do with it neither you nor I have a right to say; perhaps we might not think as he does about that. In the exercise of his indisputable privilege he chooses to convert his fruits into brandy, for the purpose of putting them into a form less perishable and more available for market, or for uses of various sorts in his own family or business. But in setting about this simple matter of utilizing the products of his own little orchard he finds himself at once under the prying supervision of some revenue underling, whose complex instructions and vexatious requirements must be duly complied with before it is lawful to start the fire under the still. And when at last the juice of the apple begins to trickle out in the form of brandy, your store-keeper or your mousing detective must be around to note and watch the operation and guard the spirits till the gauger comes to measure and stamp them. Nowhere in all these proceedings are the honor and honesty of the citizen relied upon or appealed to. At every stage you watch him and treat him as a suspected rogue. No wonder that under such a system he thinks it but fair to cheat you whenever he can. And if in an honest endeavor to comply with the laws he should commit an innocent mistake and thus involve himself in a technical difficulty, the Federal officials too often take advantage of such an occasion to *black-mail* him heavily before they release him from the net in which sometimes they have designedly entangled him by confused instructions. Candid men may judge how great a tendency this daily interference of Federal agents in the most ordinary affairs of the people has to impress upon the popular mind the idea that power now resides only in the General Government; and such an impression insensibly induces acquiescence in all assumptions of power by the Federal head.

By the same system the jurisdiction and importance of the Federal courts is vastly increased, insomuch that they are rapidly overshadowing the State courts. A few years ago the United States courts were practically unknown in North Carolina, their proceedings being confined almost entirely to the adjudication of an occasional admiralty case, of which scarcely one man in a thousand ever heard mention made. Now a session of the Federal court is a great event, and brings together throngs of citizens as jurors, parties litigant, or witnesses, from the most remote parts of the State, entailing great expenses, loss of time, and many inconveniences to the people. No single feature of the great revolution which has recently occurred in this country is more notable than the sudden growth which has taken place in the assumed powers and prerogatives of the Federal judiciary. I cannot now digress from the subject in hand to enter upon a full discussion of this matter; I may recur to it at some other time, and enlarge upon the manner in which the local administration of justice is being superseded by your Federal courts. When the laws of North Carolina are violated it would seem but proper that the trial and punishment of the offender should be left to North Carolina tribunals. But under your legislation it is not so. The murderer, the robber, the ravisher indicted in the State courts has only to swear that he believes he cannot have justice done him in those courts, and it is contended under your recent laws that he is entitled to have his case removed to the United States courts for trial. In the jail at Raleigh there is to-day confined a man who committed a cold-blooded murder in Charlotte four years ago; but the State whose law he thus violated is inhibited from trying and punishing him unless your Supreme Court, to which the case has gone, shall decide that she has the right to do so. If he had been a white man and not a negro, doubtless death and the devil would have claimed him for their own long since. But I cannot now stop to give full and fitting notice, as I hope to do hereafter, to the ominous encroachments of the Federal tribunals upon the proper jurisdiction of the State courts. The subject is one of vast importance. There may be those who, in their overweening desire to see the power and prestige of the Federal Government augmented, may not deem it an evil to have the prerogatives of the Federal judiciary thus extended. But thoughtful patriots, in view of recent events, among which we have seen a State government overturned by the decree of a Federal district judge, will perceive in the new assumptions of power on the part of the Federal judiciary the most imminent danger to that fundamental principle of liberty, local self-government.

One of the greatest evils of the internal-revenue system and one which most tends to the centralization of power is the increased patronage which it gives to the President. I do not know, nobody does know, precisely the number of officials, high and low, which the Executive has by law the right to appoint, or nominate, which is usually the same as appointing them. Cabinet officers, judges, postmasters, customs officers, Indian agents, internal-revenue officials of every grade—all these are the actual or virtual appointees of the President, and a large portion of them belong to the internal-revenue service. Being the appointees of the President, most of them belong to his party and are personally and politically his supple tools and blind apologists and supporters. Just think of it! In a country possessing a republican form of government, wherein the people are said to have the right to elect their own rulers and officers, in a country where the idea of universal suffrage prevails, more than half of all the officers are elected by one man! What sort of republican government is this? Away with such republicanism!

In North Carolina, from the governor down to the clerk and constable of a township, our officials are chosen by the people. Why should it not be so in the case of the collectors and other principal officers of the internal-revenue service? These officers, in the discharge of their duties, come into daily contact with the people, and the manner in which they perform their functions is of vital importance to the happiness and prosperity of the people. Why not then allow them to be elected by the people whose most intimate concerns they are to oversee and pry into? If we were allowed to elect our own officers in this department we could no doubt find some North Carolinian to fill every place in our State. As it now is we have a man from the State of Maine filling the office of supervisor of internal revenue for the States of North and South Carolina, from which I suppose we are to infer that the President thought he could not find in those two States, in either party, any man who, in his opinion, was suitable for the position. In the name of the people of North and South Carolina I protest against such injustice. In either State and in either party can be found many men far more suitable and more worthy to be our supervisor of internal revenue than the man from Maine whom the Executive has placed over us.

Give the people the privilege of choosing their own officers. If the internal-revenue system is not to be abolished forthwith, as it should be, at least grant the people the right to elect the collectors and all the other principal officials of that service in the respective districts. I demand this in the interest of the constituency I have the honor to represent. It is full time such a policy were adopted in vindication of popular liberty against the encroachments of the one-man power. There is no more propriety in depriving the people of the right to choose their collectors of internal revenue, for instance, than there would be in refusing them the privilege of electing their sheriffs, solicitors, clerks, or Congressmen.

As it is now, one man appoints all the myriads of revenue officers of every rank, whose duties ramify into every neighborhood and

bring them into daily contact with nearly every citizen throughout this broad land. Was there ever contrived in any country so vast and mighty an engine for the promotion of the views and schemes of the Chief Executive should he choose to put it to work? If he desired a re-election for a third or a fourth term, or even for life, how many thousands of these, his creatures and underlings all over the country, would throw up their hats for him and go to plotting in his interest; for an extension of his official term means an extension of their own. Even now these multitudes of subordinate officials are not so much the servants of the public as they are the political agents of the President, through whom he seeks to shape the politics and control the elections in States and districts. We heard the angry protest of Massachusetts on this subject last year. If you have heard nothing of this sort from North Carolina, where such abuses are rampant, it is because the people there are so used to the insolent interference of Federal officials in their affairs that they have come to look upon it as one of the inevitables. Why, sir, in a delegation of six men, whom I chanced to see on their way to the convention which nominated my opponent for Congress, five were officers of the United States Government. And in the canvass which followed for the seat I now hold here, great as was the ability and energy of my worthy competitor, his opposition was as a drop in the bucket to that which I had to encounter in the phalanx of revenue officials and placemen, many of whom were appointed to positions with no duty to perform except to draw their pay of $130 a month and ride day and night among the people electioneering for their candidates. It is inconceivable what activity they displayed and what expedients they resorted to, intimidating some of the voters by threats of prosecution, corrupting others by promises to wink at their evasions of the law, cajoling, bullying, browbeating; even going so far on one occasion as to present fire-arms at myself while on the platform making a speech, because I dared to denounce, in as fitting terms as I could, the infinitude of their villainy.

If such things are to go on till they become chronic and inveterate, how long will it be before the freedom of elections will entirely vanish and the ballot-box be nothing more than a machine for registering the decrees of the man at the White House?

Another reason for abolishing the internal-revenue system is the demoralizing influence it exerts both upon its own officials and upon the people. It affords extraordinary facilities for peculation. I do not wish by any means to make reckless and indiscriminate charges against those who are engaged in this service, many of whom are no doubt honest and upright men. But it is undeniable that fortunes have been made by some of them very disproportionate to their lawful salaries; and it is well known that in many instances these officials use their positions to *black-mail* citizens by entrapping them into violations of the law and receiving money to quash proceedings or to wink at irregularities. But the system is still more demoralizing in its influence upon many of the people.

I have mentioned the manner in which the people are watched by spies and informers in their daily employments, as if they were destitute of honor and not to be trusted in their dealings with the Government. Nothing can be more humiliating and degrading to the spirit of American freemen than this espionage. If possible it will make cheats and swindlers out of honest men. By the way you watch them you clearly intimate that they are expected to cheat you and run the blockade when they can; and they take care not to disappoint your expectations. If you would only trust the integrity of the people they would not fail you. But you pursue them with spies, and they dodge them. You seek to bind them with oaths and pledges, until oaths become a by-word and lose all sanctity. In the South since the war you have required us to *swear* so often that we have got to *swearing* when not required. Instead of this degrading process, if you must continue your internal taxation, why not adopt a simple and straightforward plan for ascertaining the amount of the taxables, like the State of North Carolina does? The State simply requires each citizen to give in the list of his taxable property himself, and takes his word for it except in unusual cases. In like manner, why cannot the United States allow every man to give in the amount of spirits he makes or tobacco he raises or manufactures? In my opinion you would thus come nearer getting a correct account of these things than by your present plan; and by simplifying and cheapening your method of collecting the tax a much larger amount of it would reach the Treasury.

But the revenue system is further demoralizing by the great multitude and variety of offices it creates, which, it is no secret, are considered in North Carolina, and perhaps elsewhere, principally as baits with which to catch hungry democratic gudgeons and land them safe in the radical party. The rank and file of that party in the South consists mainly of the negroes, with whom are united a small number of plain, honest men who entertained Union sentiments during the war; and were induced to become republicans through their prejudices. The leaders of the party are almost all men once bitter democrats who have gone over to the radicals in the hope of securing office or making money; and I know of no instance where a previously respectable man goes over to them except in anticipation of receiving some appointment as the price of his tergiversation.

This occasional metamorphosis of an impecunious democrat into an office-holding radical is a process extremely curious to watch. Most likely the individual has been blatant and extreme in his professions of democracy; perhaps a bloody secessionist. But the first thing you know the active partisan grows strangely silent and reserved; he mopes around like a chicken with the gapes, with feathers frowzled; he avoids as far as he can the company of former comrades, is sheepish and downcast, cannot look a man in the face, but looks ashamed, like he felt mean and was about to do a mean thing. When you see these signs the poor fellow is near his end—the end, I mean, of his honorable and self-respecting existence. Very soon he is in some Federal office, and professes to have found out the mistakes in his former opinions and accordingly changed them! So much for the corrupting and demoralizing tendencies of the internal-revenue system.

The system ought also to be abolished on account of the inequality of the burdens it imposes upon different sections of the Union, and particularly because it oppresses the agricultural interest. The larger portion of this revenue is raised on spirits and tobacco, both of which are products of the husbandman. The tillage of the soil is the foundation of all other employments and the true key to national wealth in a country possessing a soil and climate like ours. Taxation, therefore, which lays its heaviest burdens upon this most essential calling must be unwise and mischievous. Here is a point to which the grangers would do well to direct special attention. It is sometimes said that tobacco and spirits are luxuries, and that it is all right to tax them as such. But they are no luxuries to him who produces them. The labor which it takes to produce them is as hard as any other, and is entitled to its reward without unjust and unequal taxes being levied upon it. We are also told that the tax falls not upon the producer, but the consumer, by making him pay an enhanced price. But plain common sense, as well as the simplest principles of political economy teach that if the *demand* for these articles is such that consumers will pay the high prices for them, they would buy them at the same or nearly the same high prices if the tax were taken off, which would thus be a clear gain to the producer. Whoever buys tobacco from the farmer to manufacture and sell again will of course pay the farmer a less price for it when he knows he has to pay another price for it in the shape of a tax. These principles seem to me self-evident, and clearly prove the fallacy of the doctrine that the producer loses nothing by the tax on what he produces.

But these taxes bear unequally upon certain sections and States. Nearly all the tobacco is grown in seven or eight of the thirty-seven States. The tobacco belt is as well defined as the cotton region, and includes Maryland, Virginia, North Carolina, Tennessee, Kentucky, Missouri, Arkansas, and parts of Ohio, Indiana, and Illinois. It is a southern and western interest. By taxing it you impose a disproportionate burden on these already depressed communities, and allow the rich States of the Northeast to escape their just share of revenue exactions; this, too, while they have plenty of money themselves, and persistently refuse to allow any expansion of the currency so that the West and South could command the means to pay the heavy taxes thus levied on them.

For all the reasons mentioned, and others which I must pass over, this whole system of internal taxation ought to be uprooted and other means for raising the necessary revenue devised. I know we have a large debt to pay growing out of the war, and the current expenses of the Government must be met. But I am sure these latter expenses might be retrenched greatly. It is incredible that a government which cost but seventy-five millions annually fifteen years since, under what was then denounced as an extravagant administration, should now cost one hundred and seventy-five or two hundred millions, if proper economy prevailed. Then, as to the debt, we should only aim to keep the interest paid and a very small annual amount on the principal to show that we mean to pay it, and postpone the payment of the main debt till the next generation, when this country will be one of the richest and most populous on earth and can pay off this debt without feeling it. If this plan be adopted we can so curtail the amount of money required that a moderate increase of duties on imports will provide for all our wants; and however we may regret to see the tariff increased, it will certainly be less objectionable than the present system of internal revenue, which could thus be dispensed with. Both the old whig and democratic parties always agreed that a tariff for necessary revenue was good policy; they only differed in those days as to the propriety of going further than this.

If, however, the internal-revenue system is to be continued, amendments ought to be made which would ameliorate its evils and burdens. I have already suggested some of these amendments in the course of my remarks, among which are the election of the chief revenue officers, (practicable by altering the Constitution, if not by congressional enactment, and essential, if the system is to be perpetuated,) and allowing the amount of tobacco raised, or spirits made, to be given in by the producer, as the States now require taxables to be listed, and without the surveillance of informers and spies. Besides these, many other amendments should be made. The tax on brandy should be abolished; for it brings into the Treasury a comparatively small revenue, while it seriously harasses a large number of citizens. Store-keepers at small distilleries ought to be dispensed with. In my district many distilleries do not average a product of more than ten gallons of spirits daily, on which the tax is seven dollars; and yet at each one of these distilleries a store-keeper is required, whose pay is four dollars a day. This and other expenses make the cost of collection in such cases greater than the amount collected. Surely the people can be trusted far enough to allow them

to give in their own statement of spirits made at these little distilleries, such for instance as do not exceed a capacity of twenty-five gallons a day. I have introduced a bill, which was referred to the Committee on Ways and Means, providing that in these cases the distiller shall report his monthly product of spirits to the collector, store-keepers to be dispensed with. The bill also contains a section reducing the tax on brandy to fifty cents per gallon. I hope this bill may receive favorable consideration in this House.

Another very great injustice is done by the law to the producers of tobacco. It is the provision which forbids the tobacco-grower from selling to anybody except to a licensed dealer, a manufacturer, or an agent buying for exportation. This limits the purchasers to a small number of men, and of course reduces the price. So extraordinary a law ought not to exist a day longer. Why refuse to the grower of tobacco the privilege of a free and open market? Why not let him sell to whoever will pay him the most for his commodity? Everybody else can do this. Why discriminate against him in this unjust manner?

There are many other points in connection with this subject which I should be glad to touch did time permit. But I see my hour is running out and I must close. If what I have said shall induce the House to take this matter into consideration and either abolish the internal-revenue system, or at least reform its most flagrant evils and abuses, I shall be well repaid for the trouble of making these remarks.

I thank the House for the patience and attention with which it has heard me.

Improvement of the Flint, Chattahoochee, and Apalachicola Rivers.

SPEECH OF HON. R. H. WHITELEY,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

May 8, 1874.

The House being in Committee of the Whole, and having under consideration the bill (H. R. No. 1025) to provide for the improvement of the Flint and Chattahoochee Rivers in the State of Georgia—

Mr. WHITELEY said:

Mr. CHAIRMAN: Whatever differences of opinion may have existed in the past as to the power of Congress to devise and carry out a system of internal improvements, it may be assumed at the present day as beyond serious debate. The continuous exercise of the power so to do, illustrated in every section of the Union and indorsed by repeated verdicts of the people, forbids the practical statesman to hesitate or doubt. Nor can the policy of such an exercise of power be doubted when we look at the magnificent results of the workings of the system, as evidenced in every locality where the watchful eye of the nation has discovered the need of and furnished the necessary aid.

What are some of these results? Look at the development of the great West and the increased vitality of her industries. Look at the wilderness redeemed and made productive; at the cities and villages which have an existence from and through internal improvements alone; at the miles of dreary waste made from the same causes to blossom and become auxiliary to the wealth of the nation, and you will see some of its beneficent results.

With a view to the increased development of the section I have the honor in part to represent, I moved during the first session of the Forty-second Congress for a survey of the bay and harbor of Apalachicola, and also for the survey of the Chattahoochee River, one of the tributaries of the Apalachicola, which surveys were allowed and provided for in the act of July 11, 1870. The surveys being incomplete at the opening of the second session of the Forty-second Congress, I again moved for their continuation, and for the survey in addition thereto of the Apalachicola and Flint Rivers; which was allowed and provided for in the act of June 10, 1872.

The surveys being incomplete during the Forty-second Congress, no application for an appropriation to carry on the work of improvements was made. On the 7th of January, 1874, a bill was introduced into the House, being that which we are now considering, appropriating the sum of $100,000 for the improvement of the Flint and Chattahoochee Rivers. To the locality and character of these streams I invite your attention.

APALACHICOLA, FLINT, AND CHATTAHOOCHEE RIVERS.

The Apalachicola River is formed by a union of the Flint and Chattahoochee Rivers at or about the southwest corner of the State of Georgia, and runs about due south through the State of Florida, emptying into the Atlantic Ocean through the bay of Apalachicola.

The Chattahoochee River rises in Northeastern Georgia, runs southwest until it reaches the line of Alabama and Georgia, at or near West Point; and thence south, being the dividing line between the States of Georgia and Alabama, from near West Point to where it strikes the northern boundary of the State of Florida; and thence to its junction with the Flint, being the boundary line between Georgia and Florida.

The Flint rises in the Blue Ridge Mountains in Northwestern Georgia, and runs nearly due south until it intersects with the Chattahoochee and forms the Apalachicola River.

The navigable length of these rivers is as follows:

	Miles.
The Apalachicola from its mouth to the junction of the Flint and Chattahoochee Rivers is about	150
The Chattahoochee from Columbus, Georgia, to its junction with the Flint, about	250
The Flint from Bainbridge, Georgia, to its junction with the Chattahoochee River about	50
Being a total navigable length of	450

We find in Executive Document No. 241, of the second session of the Forty-second Congress, page 7, the following information as to the immediate surrounding of these rivers.

On the Chattahoochee River are the flourishing cities of Columbus and Eufaula, six towns, seven warehouses, and ninety-one other landings.

On the Apalachicola River are the city of Apalachicola, the towns of Bristol and Chattahoochee, two warehouses, and thirteen other landings.

On the Flint, Bainbridge, two warehouses, and ten other landings.

While the following railroad connections are shown in the above report to connect with this line of water navigation:

Centering at Columbus, are—

1. The Georgia Central, through Macon to Savannah, with a branch from Macon to Atlanta.
2. Mobile and Girard, through Union Springs, where it crosses the Montgomery and Eufaula, to Girard, its present terminus.
3. Columbus and West Point, (Georgia.)
4. (Under construction.) Bainbridge, Cuthbert and Columbus.
5. (Under construction.) North and South, from Columbus to Rome.

Centering at Eufaula, are—

1. Eufaula and Montgomery.
2. Southwestern Railroad, (from Eufaula to Macon.)
3. (Under construction.) Vicksburgh and Brunswick, (built as far as Troy.)

At Fort Gaines—

A branch of the Southwestern.

At Chattahoochee—

Jacksonville and Pensacola, (running from Jacksonville to Chattahoochee.)

North, east, and west do these lines of railroad, in addition to the water transportation furnished by the Mississippi and its tributaries, connecting therewith by steamers from New Orleans to Apalachicola, carry to and from this line of four hundred and fifty miles of water navigation the productions of the several States bordering thereon, and in addition bring to be borne thereon the grain and bacon of the great West, which yearly is shipped in large quantities to meet the demands of the cotton-planters of Georgia, Alabama, and Florida.

I now ask your attention to the character of the obstructions in the rivers being considered, and to the necessity of the improvement of the same.

APALACHICOLA RIVER.

The principal obstruction to the safe navigation of the Apalachicola River is at a point known as the "Moccasin Slough or Bryan's Cut-off." In regard to this point A. N. Damrell, captain of engineers, in Executive Document No. 65, first session Forty-third Congress, says of Mack's survey of this river:

He reports a sufficient depth of water all along the river, except at Moccasin Slough or Bryan's Cut-off, where the river, obstructed by piles driven by the confederate authorities during the war, and by an accumulation of drift-logs since, has forced a narrow and very crooked channel through its bank into the river Styx.

The straightening and widening of this channel and the removal of the snags in the river are considered all that is necessary to insure a depth of water of six feet and sufficiently good navigation at all seasons, and $80,333 is estimated as the cost of these improvements.

An appropriation of $30,000 is recommended for the prosecution of these works during the fiscal year ending June 30, 1875.

Assistant Engineer Mack, who in person made the survey of the Apalachicola River, says in the same document, page 9, in regard to this obstruction:

The most serious difficulty to be met with on the river occurs thirty-seven miles above Apalachicola, and commonly known as Moccasin Slough. (See sheet No. 2.) During the late war the confederate authorities caused obstructions, consisting of piles, logs, &c., to be placed near this point, for the purpose of preventing the United States vessels from ascending the river. These obstructions were the means of stopping the descending trees, drift, &c., till after a time a complete dam was formed. The water, prevented from following its natural course, forced a passage at about one and a half miles above the obstructions through to the river Styx, a distance of 3,100 feet, and, following the Styx for about three-quarters of a mile, reached the Apalachicola again. The passage from where it leaves the Apalachicola to where it strikes the Styx is called Moccasin Slough. On the sketch made by Mr. C. F. Trill, accompanying this report, and marked A, it is designated as Bryan's Cut-off.

In descending the river, the entrance to the slough is very difficult, caused by its running a short distance parallel with the river, but in an opposite direction. It is only from eighty to one hundred feet wide, and is also very crooked. The current is over five miles per hour, due to a fall of 2.8 feet, for it is to be borne in mind that the distance via the slough and Styx is from two to three miles shorter than by way of the old channel, which accounts for the heavy fall and strong current. It has, however, from ten to twenty-six feet of water throughout.

I would strongly recommend the widening and straightening of the slough, as indicated in heavy red dotted lines on sheet No. 2, as the cheapest means of obtaining a good channel through this difficult place.

The only objection that can be urged against it is that the current produced by the rapid fall is too great, but this is of slight moment, particularly as the improvement will enable the steamers to pass with a full head of steam, while the cost of removing the obstructions would be enormous in comparison with the benefits to be derived from it.

These statements, both as to the existence and nature of the obstructions on the Apalachicola River, as well as the necessity for

and cost of their removal, will I hope be sufficient to satisfy the House as to the real condition of that river, and the justice of making an appropriation for its improvement.

CHATTAHOOCHEE RIVER.

Walter Griswold, assistant engineer in charge of the survey of this river, says in his report of the survey, to be found in Executive Document No. 65, first session Forty-third Congress, that—

The Chattahooche River is a navigable stream from Columbus, Georgia, to the junction with Flint River, a little above Chattahoochee, Florida, a distance of one hundred and sixty-two and one-half miles, sixty-two and one-half miles of which were surveyed in the year 1871, under the direction of General Simpson.

The country along the river for nearly its whole length consists of extensive plantations having plenty of timber and water, but at the present time sadly neglected, yet capable of the highest state of cultivation. Its banks are composed of limestone and sand, and are protected by a thick growth of trees of different kinds. At Eufaula they rise to a height of 50 feet, and gradually diminish till they become only 10 feet at its junction with the Flint. The fall per mile at Eufaula is 8 inches, at Gordon 5 inches, and at its mouth 9 inches, while the width at the former place is 250 feet, and at the latter 500 feet.

Freshets occur annually in January, February, or March. The highest known occurred in 1831, 1841, and 1872; that in 1872 raised 70 feet above ordinary low water at Eufaula, and 20 feet at the mouth of the river, overflowing the country for a great distance. The usual rise does not exceed 43½ feet at Eufaula. The soundings have been reduced to the low water of 1872.

There are at present engaged on this river, as well as on the Apalachicola and Flint, five stern-wheel steamers, owned and controlled by the Georgia Central and Southwestern Railroad Company. These vessels draw from three to five feet of water, depending upon the weight of their cargoes. The citizens of Eufaula, and others equally interested in the commerce of the rivers, are discussing the propriety of establishing another line of boats, and are anxiously awaiting the action of the Government in relation to their improvement.

And Captain Damrell, in his report based upon that of the assistant engineer in charge of the survey, says:

Although I am convinced that a more careful examination of the obstructions to navigation on this river would reduce the figures in estimate No. 3 considerably, and that at some future time it may become necessary to increase the depth of the channel, I consider the improvements included in estimates Nos. 1 and 2 sufficient for the present requirements of navigation, and would recommend an appropriation of $50,000, to be expended in removing snags, wrecks, and loose rocks from the present channel, during the fiscal year ending June 30, 1875.

FLINT RIVER.

Henry K. Hodges, assistant engineer in charge of the survey of this river, in the report of the survey made by him, and to be found in Executive Document No. 65, says:

Flint River traverses a bed of lime-rock pretty much all the way down, and is constantly fed by subterranean streams. The duration of floods in this river is short, seldom lasting over seven or eight days, occurring after heavy rains, taking about seven days to reach the maximum height after the downfall. After reaching the maximum height it fluctuates for a few days and then falls rapidly. It has been known to keep ten or twelve feet above low water for two months at a time, but it is only kept at this stage by frequent rains. The stage of the river at the time we commenced the survey seemed to be its normal condition, to wit, about two feet above the extreme low-water elevation of 1855, a well-known low-water year all over the southern country.

The highest water known occurred in 1841, lasting from the 11th of March to the 19th, and is called the Harrison freshet. It reached an elevation of twelve feet, higher than any previous freshet within the recollection of the present generation. In 1852 it reached a greater height than it had reached since 1841, and in 1862 and 1872 it was again very high, being within two feet of the height of the Harrison freshet.

The character of the obstructions are very similar, and I might almost say a repetition of the other, being composed almost entirely of small loose rock, a soft friable fossil limestone, which hardens on exposure to the air, easy of access from the shore, but in some instances will requite the assistance of a snag-boat to remove the larger rocks.

And Captain Damrell, in his report, based upon that of Assistant Engineer Hodges, says:

The principal obstructions to the navigation of Flint River are its rock shoals formed chiefly of loose rocks of various sizes, which become more frequent as we ascend the river from its junction with the Chattahoochee.

The rocky nature of the river-bed, although somewhat increasing the cost, will insure greater permanency to the works necessary for its improvement.

Mr. Hodges makes his estimate on a basis of a three-foot channel at extreme low water, giving at the ordinary stage of the river a depth of from four to five feet, which for the class of boats usually navigating these waters I consider quite sufficient.

The cost of obtaining this depth of channel, one hundred feet wide, is estimated as follows: From Chattahoochee to Newton, seventy-one and three-fourths miles, the estimated cost is $118,105, and from Newton to Albany, a distance of thirty-three and one-quarter miles, $66,757, making a total of $184,862, or an average of $1,760 per mile.

I recommend an appropriation of $50,000 for the improvement of this river for the fiscal year ending June 30, 1875.

Having given the judgment of the engineer officers in regard to the rivers named and the amounts that should be appropriated to improve the same for the next fiscal year, I will now present the evidence of the absolute necessity for at least a *partial* performance of the work at once.

Walter Griswold, the assistant engineer who made the survey of the Apalachicola and Chattahoochee Rivers, says, in his report of the survey to be found at page 15, in Executive Document No. 65, before referred to:

The following partial list of steamers wrecked on snags on the Chattahoochee and Apalachicola Rivers will forcibly impress the necessity of their removal as one of the first steps toward the establishment of a safe navigation, viz:

Steamer Mary, near Gilbert's Landing.
Steamer Eagle, several persons drowned.
Steamer Charleston.
Steamer Mist, above Rock Island.
Steamer Harriet, at Live Oak Bend.
Steamer Alice, at Ricos.
Steamer Syrene, at mouth of Flint River.
Steamer Music, at Moccasin Slough.
Steamer Floridian.
Steamer Virginia.
Steamer Augusta.
Steamer Van Buren, at Blountstown.
Steamer Palmetto, at Hurricane, a little above Apalachicola.
Steamer Magnolia, at Hurricane, a little above Apalachicola.
Steamer Falcon, at Bloody Bluff.

The sunken steamers in turn become obstructions, and one instance is given when the steamer Laura was lost on the wreck of the J. C. Calhoun, at Bristol.

This statement applied to such streams, and admitted to be only a *partial* list of the steamers wrecked on two of the three rivers we seek to improve, will convey to the House the reasons which impel us to appeal to Congress for aid in their improvement.

Protection to life and property on the navigable waters of the Union have at all times been regarded as the highest motive that could impel the national Legislature to action, and if we do not make a case which shows that both are imperiled, then we ask what evidence will suffice?

But not only does Congress recognize its duty to protect life and property on the navigable rivers of the United States, but it stands pledged by a long series of legislative acts to make the navigation of such rivers both easy and safe. In this we have a double assurance for the aid we so much need.

We are aware it is urged that now is an unpropitious hour to enter upon the work of improvement.

We answer, no hour is unpropitious for a great and paternal Government to commence to make secure the life and property of her citizens, nor can any demands of retrenchment and economy absolve her from that obligation.

In recognition of the condition of the country we have not and will not urge an immediate commencement of the real improvements contemplated in the survey. All we ask is that such sumbe appropriated as will remove the obstructions that actually endanger *life* and *property*, and forbid the investment of capital in attempts to stock our rivers with steamers suited to our wants.

Taxation of Railroad Lands.

SPEECH OF HON. C. W. KENDALL,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

May 11, 1874,

On the bill (H. R. No. 3281) to amend the act entitled "An act to amend an act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes," approved July 2, 1864—[providing for the taxation of lands granted to the Union Pacific and Central Pacific Railroads.]

Mr. KENDALL. Mr. Speaker, very often the simplest statement is the best argument. It is so in this case. A few plain facts are more convincing than elaborate declamation, more eloquent than any rhetoric.

The bill provides for the local taxation within the States and Territories of the vast tracts of land granted by the act of July 2, 1864, to aid in the construction of the Pacific Railroads. These lands have been withdrawn from market, and severed from the public domain; they are not open to pre-emption or homestead entry; they are, to all intents and purposes, the property of the companies to which they have been granted; they are mortgaged by these companies and enormous revenues derived therefrom; yet only in insignificant degree are they subject to local taxation.

Consider the extent of these land grants. That we may see this at a glance, I refer to a report of the Commissioner of the General Land Office made to this House January 10, 1872. From this report (Executive Document No. 43, Forty-second Congress) it appears that the Pacific Railroads are entitled to receive by virtue of their grants 133,910,000 acres; but have received patents for only 1,686,442 acres. This amount only is subject to local taxation. And to come nearer to the interest of the people whom I have the honor to represent, I add this statement derived from the Commissioner of the General Land Office:

The estimated quantity of land within the State of Nevada that will inure to the Central Pacific Railroad under its grant is 5,500,000 acres.

Of this vast amount not one acre has yet been patented to the company, consequently not a dollar of revenue from all these lands has ever been derived to the State. It may be asked, what is the quality or character of these lands? Why, sir, they are among the best and most valuable in the State of Nevada. They embrace the bottom lands along the valleys of the Humboldt and Truckee Rivers. In the Sierras they include some of the finest forests in the world. There they are of immense value, but valuable only for the forests which are being rapidly swept away. These gone—as they will be very soon—the soil, the land itself, is worthless for any purpose. Sir, the settler in my State on the alternate sections contiguous to these railroad lands, struggling against the adverse forces of nature to rear his humble cabin, to reclaim the wilderness, and to make a home, im-

mediately is confronted by the tax-gatherer and, in default of payment, his land is sold, and by law of the State sold without redemption.

Do you wonder that we have felt very keenly this unequal condition of affairs, this unjust distribution of the burdens of our State and local governments? Do you wonder that this feeling has found expression in a solemn memorial of the Legislature at its last session—a memorial that sets forth so well and so earnestly this great grievance that I reproduce it here, with a copy of the record of the vote thereon, and make it a part of my remarks:

Whereas by the fourth section of an act of the Congress of the United States, approved July 1, 1862, and the sixth section of an act of the Congress of the United States, approved July 2, 1864, it is provided that whenever the Central Pacific Railroad Company shall have completed and equipped twenty consecutive miles of railroad and telegraph line, and it shall so appear to the President of the United States by the reports of the commissioners for that purpose appointed, patents shall issue conveying to said company the right and title to the lands granted in aid of the construction of said railroad and telegraph line; and whereas said railroad and telegraph line have long since been reported and certified complete throughout the entire line and route by the commissioners thereunto appointed; and whereas, in consequence of restrictive and embarrassing orders issued by the honorable Secretary of the Interior, said railroad company has neglected to apply for or receive patents for said lands lying within the bounds of the State of Nevada, and has consequently been unable to return said lands for taxation, thereby depriving the State of taxes on the same; and whereas a large portion of said land is valuable only for the timber growing upon it, and is being stripped by trespassers of the timber and rendered valueless to the State, the General Government, and said railroad company; and whereas it has been represented that the railroad company has been refused patents for their lands by the rulings of the honorable Secretary of the Interior: Therefore,

Be it resolved by the senate, (the assembly concurring,) That our Senators be, and they are hereby, instructed, and our member of Congress be, and he is hereby, requested, to use all honorable endeavors to secure the passage of a law setting aside the orders of the honorable Secretary of the Interior which prevent said railroad company from making application for patents for said lands, and requiring said railroad company to make application for said lands, and also requiring the honorable Secretary of the Interior to issue patents for said lands at the earliest day practicable.

Resolved, That each of our Senators and our member of Congress be, and they are hereby, requested to transmit, at an early day, to his excellency the governor, any information they may have relative to railroad lands in the State of Nevada.

Resolved, That his excellency the governor be, and he is hereby, requested to transmit copies of these resolutions to each of our Senators and our Representative in Congress, to the Secretary of the Interior, and to the Commissioner of the General Land Office.

ISRAEL CRAWFORD,
President of the Senate pro tempore.
CHAS. F. BICKNELL,
Secretary of the Senate.
JOHN BOWMAN,
Speaker of the Assembly.
A. WHITFORD,
Clerk of the Assembly.

(On which is the following indorsement:)

Senate concurrent resolution No. 47: Resolution relative to Central Pacific Railroad Company obtaining patents to lands. Introduced February 12, 1873, in the senate; February 21, 1873, passed by the following vote: Yeas 21, nays 0.

T. A. WATERMAN,
Assistant Secretary.

Received February 24, 1873, in the assembly; March 3, 1873, passed by the following vote: Yeas 38, nays 2.

A. WHITFORD, *Clerk.*

STATE OF NEVADA, *Secretary's Office, ss:*

I, J. D. Minor, secretary of state of the State of Nevada, do hereby certify that the foregoing is a true, full, and correct copy of the original concurrent resolution "relative to Central Pacific Railroad Company obtaining patents to lands," as the same remains now on file in my office.

In witness whereof I have hereunto set my hand and affixed the great seal of the State.

Done at office in Carson City, Nevada, this 14th day of April, A. D. 1874.

[SEAL.] J. D. MINOR,
Secretary of State.

These companies either own the lands that have been granted in aid of their roads or they do not own them. If they own these lands, they should pay taxes upon them as upon their property, in like manner as the natural person or the individual citizen is compelled to pay taxes upon his property. If they do not own them, let them revert to the Government and to the people—be open to occupation by those who will improve them and make them a source of State and national revenue and of individual wealth.

As to the value of these lands, notice what one of these companies says through an official report—the report of G. M. Dodge, chief engineer of the Union Pacific:

Our lands may be considered as divided into two classes—those that are available for settlement now and those that need continual water, or irrigation, to render them susceptible of cultivation. Of the first class we can count all the lands for two hundred miles west of Omaha, nearly 2,000,000 acres. Of the second class we have all the lands in the Platte from near Fort Kearney to Julesburgh, one hundred and eighty miles, of which we can say that 1,152,000 acres can be made immediately available without much expense to the company, as the Platte River runs centrally through this number of acres, and it could all be irrigated by simple *acequias*, or ditches, taken out by any one and at any point. To make the 1,152,000 acres between these two points available, the canals, ditches, or *acequias* would have to be carried back onto the bluffs; and until the Platte Valley proper is settled and farmed the benefit to the company would not justify the cost. At the eastern base of the mountains there are about 600,000 acres that could be irrigated. In the Laramie plains, from the Black Hills to the Bitter Creek plains, there are about 1,000,000 acres that could be readily and cheaply irrigated, either by the purchaser and farmer, or the company, as flowing at suitable distances through these lands, at right angles to their length, are the Big and Little Laramie Rivers, Cooper's Creek, Rock Creek, the Medicine Bow River, and the North Fork of the Platte, all flowing sufficient water to irrigate every acre.

From Green River to Salt Lake Valley there are about 2,000,000 acres in the valleys of Green River, Henry's, Black's, and Ham's Forks, the Muddies, Bear River, Weber River, and in the valley of Great Salt Lake proper. All these lands can be readily supplied with water from the above-named streams, not only for irrigating purposes, but these streams all furnish fine mill privileges, and flow plenty of water the year round for both purposes, so that we might answer that to-day the company have lands to the amount of 6,752,000 acres that could be placed in the market as fit for present settlement, and susceptible of immediate cultivation, without any more cost or delay to the settler than the farmers of Colorado, Utah, and California have suffered in opening up their farms. * * *

The company and the country have labored under a misapprehension as to the timber along or in the vicinity of the road. The fact that for the entire length of the road very little timber is growing immediately upon the line has created the belief that there is very little in that country. Assuming that there is only sufficient for the purpose of fuel east of the Black Hills, we can safely estimate and fully demonstrate that from that point west the pineries are so extensive that they will supply all that country with lumber, the road with ties, &c.

The belt of timber, commencing in the Black Hills, follows parallel to the line on the south, covering the slopes and filling the cañons of the Rocky Mountains that form the southern view of the Laramie Plains, the Medicine Bow Mountains, the Elk, and all the numerous spurs jutting out from the main range, while the heads of the Laramie, the Medicine Bow, the North Fork of the Platte, &c., rise in these pineries, and furnish by their waters cheap transportation for their productions to our lines, less than thirty miles away.

Passing the North Fork of the Platte, the pineries south of Sage Creek, at Bridger's Pass, Black Butte, and bordering Current Creek, will all be made available some day. No stream flows from them toward our line, but from points on the line they may all be reached by twenty or thirty miles' travel. West of Green River the slopes of the Uintah and Wahsatch, and the immense cañons of that bold range, are covered and filled with fine timber. The heads of Henry's Fork, Black's Fork, Bear and Weber Rivers, are in immense timber groves and readily accessible to the line.

On the north we find the tributaries of Green River, New Fork, &c., heading in the finest pine, hemlock, and spruce forests anywhere east of the great basin, and all the forests on the eastern slopes of the Bear River, Snake River, and Green River ranges of mountains are available to us, as their productions can be carried to Green River and floated to our crossing. I hold, and am confident, that time will justify the opinion that the road will receive an immense revenue from this source as soon as the demand is such as to justify the development of this invaluable source of wealth.

The report from which the above paragraphs are quoted was made January 1, 1868, and certainly the lands are not less valuable now; and if the timber since then has been utilized by the company, so much has been gained by it, as in the case of the Central Pacific Company above referred to, in the evasion of taxation upon what only has given these lands any value.

I have thus in the briefest and simplest manner possible to me called the attention of the House to this great and manifest injustice. In the name of good government, let the remedy be applied as this bill provides.

Centennial Celebration.

SPEECH OF HON. JOHN COBURN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

May 8, 1874,

On the bill (H. R. No. 2986) to appropriate $3,000,000 in aid of the centennial celebration and international exhibition of 1876.

Mr. COBURN. Mr. Speaker, I am and have been opposed to this appropriation of $3,000,000 for the centennial celebration of 1876. I oppose it because we cannot afford it. That amount is more than we can apply now to such a purpose. But this sum, if any is granted, must be followed by other and larger appropriations. Ten millions will be required to carry out the work respectably, and perhaps a much larger sum. This will be less than has been expended at Vienna on such an occasion, and our people cannot well afford to do less than Austria has done for an international exhibition. We can now barely pay expenses and the interest on the debt; good sense requires us to discharge these obligations first. At present the difficulties in the way of business, the stringency of the times, and the losses and hardships of the people seem to me an insurmountable obstacle to the necessary appropriations. These considerations govern me and are paramount to all others.

I hope to see a grand jubilee of all our people on the Fourth of July, 1876. I believe we will have one. I believe it can be accomplished without very great expenditures. That will be a season such as nations rarely see, and, in my judgment, should be celebrated in another way than by an international exhibition. No patriot can look to the centennial of our national birth without a glow of pride and emotions of intense interest. All good citizens glory in the approach of that day. All unite in the earnest desire that it may receive a fitting national celebration. Let that be done by our people everywhere. Let it be done especially in the great city of Philadelphia, where our Declaration of Independence was made. While I oppose this appropriation I will in all proper ways encourage and promote the grandest possible celebration of that glorious day. At some future period more auspicious I hope to witness an international exhibition outrivaling everything the world has seen. This is not the day for such a display. This is our family gathering; this is our own season "for exultation, for gratitude, and joy" over the birth of our liberties, and not a mere exposition of our resources.

Pre-emption and Homestead Entries.

SPEECH OF HON. JAMES W. McDILL,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

May 11, 1874,

On the bill (H. R. No. 3250) entitled "An act to confirm pre-emption and homestead entries of public lands within the limits of railroad grants in cases where such entries have been made under the regulations of the land department."

Mr. McDILL, of Iowa. Mr. Speaker, early in the session I introduced House bill No. 964, which under the rules was referred to the Committee on the Public Lands. It provided in substance that where the officers and agents intrusted by the United States Government with the management and sale of the public lands offered lands for sale, declared them to be subject to homestead and pre-emption entry, and induced actual settlement, and persons so settling in good faith made valuable improvements thereon, in such cases the Government should protect such persons in the enjoyment of lands so held by them, even though by subsequent decision of the proper officers the lands were held, by virtue of a legislative grant or concession, to inure to the benefit of some railroad company or other corporation. It further provided that nothing in the bill should be construed or held to interfere with the right of the grantee or concessee of the Government to obtain land scrip in lieu of the lands taken from it by the provisions of the bill. Very many other bills introduced by gentlemen residing in districts containing the public lands, and having the same general object in view, were referred to the same committee. I thought that I proposed equal and exact justice to all by the action mapped out by the bill which I introduced, and, I doubt not so thought each gentleman introducing a similar bill. While I certainly should have been proud to have had the identical bill which I introduced reported by the committee, yet, after all, this is a mere matter of personal preference, and I can and do give my hearty support to the bill reported by the excellent and learned gentlemen composing the Committee on the Public Lands, and which is intended to accomplish the object sought after by the various bills referred to that committee.

Mr. Speaker, a terrible mischief exists in that portion of our country in which the public lands are situated. No better proof of this can be given than the fact that so many bills have been introduced with one common object by gentlemen from so many different parts of the country. With reference to the mischief of which I have spoken, it is our plain duty to provide a remedy, and it should be as ample, as adequate, and as complete as the mischief has been wide-spread, demoralizing, and ruinous. I hope the House will therefore bear with me while I call up from the past certain public acts out of which, or in the train of which, the evils have sprung and the mischief has followed.

On the 20th day of September, A. D. 1850, Congress by act granted to the State of Illinois, "for the purpose of aiding in making a railroad from the southern terminus of the Illinois and Michigan Canal to a point at or near the junction of the Ohio and Mississippi River, and two branches, one to Chicago and one to Dubuque," 2,595,053 acres of land. The same act granted to the States of Alabama and Mississippi 737,130 acres of land for a continuation of the same railroad from the mouth of the Ohio to the city of Mobile.

Grants of land were again made by Congress in aid of railroads or wagon-roads in A. D. 1852, in A. D. 1853, in A. D. 1856, in A. D. 1857, in A. D. 1862, in A. D. 1864, in A. D. 1866, in A. D. 1867, in A. D. 1869, in A. D. 1870, in A. D. 1871, and again in A. D. 1872. There are upon our statute-books one hundred and six acts granting lands in aid of railroads and nine acts granting lands in aid of wagon-roads. The total number of acres thus granted are 183,432,273.72 acres.

We can poorly comprehend the vast area thus granted, an area larger than France, larger than the German Empire, larger than Austria and Hungary, twice as large as Great Britain and Ireland, and twenty-five times larger than Belgium. Divided into farms of one hundred acres each, this vast grant would make 1,834,322 farms, which, allowing five persons to the farm, would support 9,171,600 persons, or near one-fourth the present population of the United States. It may well be suggested that the generosity which prompted such grants was lavish and prodigal, but we are not here so much to criticise what has been done in the past as to legislate wisely and justly in the present. Doubtless a popular demand for aid in building railroads, which do so much to develop countries, led to the action of former Congresses in thus granting away so much of the public domain.

These grants have usually been of alternate sections of the public lands along the proposed line of the roads and for a given distance on each side, with a provision that the alternate reserved sections shall be sold at $2.50 per acre, or twice the usual price, so that in fact the purchasers of the land not granted have been required to make up the loss to the Treasury by reason of the lands granted. Each act that I have been able to examine has reserved the right of actual settlers up to the time of the definite fixing of the lines of the road. Thus, by reason of the ownership of the alternate sections reserved and retained by the Government, and the reservation of the right of sale of the lands granted until the line of the road grantee should be definitely fixed, the actual settler has been invited to make his home in the very midst of these grants. Finding abandoned homesteads and relying upon the decision of the proper land officers that such homesteads reverted to the Government, he has settled upon such lands, and now by change of views on the part of such officers, or oftener still by a new officer, a new decision is made which deprives the settler of his home.

Again, going into these regions he finds that the public lands having never been withdrawn from market are offered for sale. Relying upon these tangible facts he begins his home-building, but when his household gods have been erected and the tendrils of his heart have twined around the home of his choice, he learns for the first time that, by some inscrutable act of Congress, the terms and scope and meaning of which had not dawned upon the minds of the land officers themselves, his home is to be taken from him. The bill reported by the committee and now under consideration proposes relief for such men, and it is a noble work. While it is no doubt true that the Government cannot and ought not to be held to all the results of agency as applied to individuals, yet it does seem right to say that when, possessed of a great public domain, she intrusts the sale and disposition of her public lands to just and honorable men, who are, or at least ought to be, learned in the law, *they* mistake the true meaning of the law and loss ensues, the loss should fall on the Government, and not upon the unfortunate man who has been misled by the action of the appointees of the Government.

Probably no one can be found who would dispute this proposition in a question solely between the Government and an individual; but in the cases under consideration a third party, claiming to be the donee of the Government, appears. The railroad companies organized to to receive the grants claim that they have vested rights in the settler's home, and that though the Government seek to do justice and right, they will interfere and hold if they can the settler's cottage. Owners of empires, princes by landed right, these lordly grantees are willing to take the poor man's home, and if permitted will turn him out of it without mercy. The greed grown by the great grants which have fed it seems to know no limit. In their view the empire of grand dimensions already given must not be lessened even by the few acres upon which stands the settler's humble cottage. And it must be admitted that this bald, bare, and bloodless claim cannot be hastily dismissed even when contrasted with the humane and living equities of the settler's claim. Sorrowful as the heart may be in view of the painful duty, the tongue of the just must give even to Shylock his pound of flesh, if so nominated in the bond; but we may be excused if while doing so we long for a Portia who shall find in this disgusting flesh the crimson blood which may be the basis of that nobler and better decree which shall save to the settler his hearth-stone and home.

And to the question of right I here with trembling heart turn my thoughts. From what I have formerly asserted I think it may be indisputably claimed that the *spirit* of the legislative grants reserves and protects the right of the actual settler. I now go further, and claim that the letter of the grants so reserves and protects his rights; that the acts actually contemplated and invited actual entry and settlement upon the very tracts contained within the limits of the grant. I here quote the almost unvarying words of the legislative grants:

> But in case it shall appear that the United States have, when the line or route of said road and branches is definitely fixed by the authority aforesaid, *sold any part of any section hereby granted, or that the right of pre-emption has attached to the same*, then it shall be lawful for any agent or agents appointed by the governor of said State to select other lands, &c.

From this language and the general text of these grants nothing can be clearer than that Congress intended to protect the rights of actual settlers up to that moment of time when the last act should be consummated by the grantee necessary to vest a title, and that act the grants themselves declare to be the definite fixing of the line of the road. These grants are clearly, from the language used, not grants *in presenti*, but are in the nature of a *float*. The question as to the nature of these acts was early presented. On the 19th day of December, A. D. 1856, Hon. Caleb Cushing, then Attorney-General of the United States, decided that the grants were in the nature of a *float*. The question was directly presented with regard to the grant to the State of Iowa for railroad purposes. This opinion will be found on pages 512 and 513 of Lester's Land Laws. From this very able opinion I desire here to quote a passage which I think has a bearing upon phases of the cases provided for by the bill under consideration. Mr. Cushing says:

> I think all the precedents in the action of the Government as applied to previous grants in the same or similar terms tend to confirm this conclusion, for in the analogous cases the contingent strips of public domain subject to such future railroad location were withdrawn from private entry by proclamation of the President, thus implying that *without such withdrawal* private entries would go on as usual; and the power of the President to make such withdrawal the means, and the *only* means, of preventing anticipatory private appropriations in the case of railroad grants has been recognized by a recent act of Congress.

The act cited by Mr. Cushing is the act of March 27, 1854, which provides—

> That every settler on public lands which have been or may be withdrawn from

market in consequence of proposed railroads, *and who had settled thereon prior to such withdrawal*, shall be entitled to pre-emption, at the ordinary minimum, to the land settled and cultivated by them: *Provided*, They shall prove up their rights by such rules and regulations as may be prescribed by the Secretary of the Interior and pay for the same before the day that may be fixed by the President's proclamation for the restoration of said lands to market. (United States Statutes at Large, volume 10, page 269.)

This act clearly justifies the inference made therefrom by Mr. Cushing. If I am right in concluding that no right vests in the railroad companies till the line of the road is definitely fixed, and that the lands can be granted, sold, and pre-empted until withdrawn from market, enough has been established to justify my declaration now made that no vested right on the part of the railroads interferes with the relief proposed by sections 1 and 2 of the bill under consideration.

Section 1 provides that when lands have not been withdrawn from market, or after restoration to market, entries or settlements made in good faith are confirmed.

Section 2 provides that when at the time of the withdrawal lands were held by valid existing homestead or pre-emption claimants, and afterward abandoned and re-entered by other claimants, such entries shall be deemed valid.

Section 3 provides for entries made in good faith where the grantees were in default in the performance of the conditions of the grant. Such entries are declared valid.

It scarcely requires an argument to show that a person who is to receive property on the performance of conditions has no vested right in the property till the conditions are performed. These grants are almost all made to the States, and for a purpose, namely, to aid in building railroads. The State is a trustee. The acts of Congress contemplate regrants to railroad corporations, and upon such conditions as shall insure the faithful performance of the trust. Hence a failure to perform conditions which by their very nature must be conditions precedent leaves the grantee of the State without any right to the land, and hence no vested right interferes with the performance of the noble act of justice and humanity proposed by this bill. I call attention to the fact that this bill only seeks to confirm the title of settlers *in good faith* under the circumstances above set forth.

I wish, Mr. Speaker, I had time and ability to amplify and paint in all its beautiful and touching colors all that is implied in those sweet words, "Good faith." The good faith here spoken of is faith in the best and most beneficent government—a government founded upon the very basis of the protection of the sacred rights of the people. All our glory as a nation, sir, has been achieved by upholding and sustaining the rights of the people. All our shame, if we have ever suffered any, has been from forgetting or failing to protect the rights of the people. The only discord that has ever marred the sweet sounds of the grand anthem of liberty which has been sounding over this land since 1776 has been the groans of individual men, our brothers, whose sacred rights were forgotten or denied. Our rapid progress, our wonderful intellectual and material growth, our free discussions, our ready accord, as a rule, of the least right to the humblest citizen, have led our people to a faith in this Government which reaches sublimity, and nothing is needed to prove this grand faith except to point to that grand rally at the nation's call in 1861.

Sir, it was with such a faith, so begotten, that the rough and honest yeomen of the West, with their families, went upon your public lands to build their humble homes. There they have dwelt for many years, and at each setting sun laid their weary bodies down to rest in their homely cottages with a confidence in their Government only excelled by their confidence in their God, to whom they looked for protection while they slept and light with the returning day. So it was with these brave-hearted, trusting people for five long years—no doubts, no lack of faith; but each returning day brought buoyant hope and bright prospects for the future. At last the day comes for the reception of the title, which shall make the little spot, now so dear by all the hallowed associations of time and toil, the family home in perpetuity. Then for the first time the settler learns that a princely, soulless corporation claims his home, and he is liable to be driven out at any time.

Mr. Speaker, if we could be present at the time when the honest settler, returning to his cabin with the light of hope dimmed in his eyes, gathers his family around him and with faltering lips tells his dear wife and loving children what he fears, and could hear how they cling to the thought that the United States will protect them, conscious as they are of the good faith of all their acts, we might then better realize than in any other way what a glorious privilege the people esteem their citizenship to be; and it might teach us how terrible a crime we would commit if by any act of ours the people were brought to lessen their estimation of this citizenship.

Sir, in view of scenes like this, which are real and not painted, as every western man can testify, the cry of vested rights coming from the railroad companies strikes my ear like the hoarse croaking of the raven or the cry of the jackal of the desert.

With others be the task of looking out and protecting these pretended vested rights of grasping corporations. It will be my pride and boast, sir, if at the end of my legislative career, be it long or short, I shall be able to say that no word or act or vote of mine ever impaired or limited the vested rights of the people.

Freedman's Savings-Bank.

SPEECH OF HON. F. G. BROMBERG,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

May 14, 1874.

The House having under consideration the bill (H. R. No. 3265) amending the charter of the Freedman's Savings and Trust Company—

Mr. BROMBERG said:

Mr. SPEAKER: I shall pursue a very different policy from that of the gentleman from Kentucky [Mr. DURHAM] in the manner in which I shall lay this question before the House. The gentleman from Kentucky has confined himself to glittering generalities and vague statements. I intend to lay before the House the official reports which have been denied to the House and the country by the committee; which have been smothered or attempted to be smothered by that committee; and I will show to the House that every statement made by the gentleman from Kentucky is controverted by the official figures of the examiners; and first, I will send to the Clerk's desk to be read a resolution which was introduced by myself and adopted by the House.

Mr. MERRIAM. Not adopted, but referred to the committee.

Mr. BROMBERG. Very well; referred to the committee. The House can see how far the committee has complied with the intention of the House.

The Clerk read as follows:

Resolved, That the Committee on Banking and Currency be, and is hereby, instructed to inquire into the management and condition of the National Freedman's Savings and Trust Company; and whether said company has violated its charter, and to report, by bill or otherwise, such measures as shall best protect the interests of the class for whom said bank was chartered.

Mr. BROMBERG. That resolution was introduced on the 3d of February. The Freedman's Savings and Trust Company was organized, as stated by the gentleman from Kentucky, in 1865. In the fall of that year agents of the company came down to the city of Mobile for the purpose of establishing a branch. I was the only white citizen of Mobile who gave them any countenance. I lent the aid of my name to their advisory board, to give it character before our people—it may seem egotism for me to say it—a name respected and honored for nearly forty years in South Alabama as a synonym for integrity. Ever since I have stood by that bank. Why? Because it met a need of the South, because the act passed by the Congress established a board of trustees, comprising some of the most honored names in this country, who seemed to me a guarantee that the professions of the incorporators would be faithfully made good, and that the institution would be worthy of my support. In addition to that, I found in the charter a clause which seemed to completely protect depositors and place them beyond the reach of individual frailty or corruption by restricting rigidly the investment of every dollar of deposits to United States securities; not a dollar was authorized to be invested in any other way. This was the law until 1870. In that year there was passed through this body an amendment to the charter, an amendment which came not from the Committee on Banking and Currency, but from the Committee on the District of Columbia of this House, although the provision was designed to affect the whole country, inasmuch as the bank had then branches in half of the States of the Union. That amendment allowed investments in other securities than those of the United States. It reads as follows:

That the fifth section of the act entitled "An act to incorporate the Freedman's Savings and Trust Company," approved March 3, 1865, be, and the same is hereby, amended by adding thereto at the end thereof the words following: "And to the extent of one-half in bonds or notes secured by mortgage on real estate in double the value of the loan; and the corporation is also authorized hereby to hold and improve the real estate now owned by it in the city of Washington, to wit, the west half of lot No. 3, all of lots 4, 5, 6, 7, and the south half of lot No. 8, in square No. 221, as laid out and recorded in the original plats or plan of said city: *Provided*, That said corporation shall not use the principal of any deposits made with it for the purpose of such improvement."

This was the only additional authority given with regard to the form of investments. I saw no danger in this amendment, if honestly executed, because I knew nothing at the time of the circumstances of its passage. I continued my countenance to the bank, giving it all the assistance in my power. Last September, during the panic, when the institution suspended payment as other banks did, and an injured depositor resorted to legal proceedings, obtained an attachment, put the sheriff in possession of the branch at Mobile, and locked it up for more than one day, I was one of the two sureties to procure its release from the hands of the officers of the law, that it might go forward in its work, and did my best to stay the panic among the colored people. I think that after this record no man can stand upon this floor and charge me with being unfriendly to the institution.

This institution, however, goes out before the country under a charter which does not provide a single particle of machinery for making public its accounts. It has gone on enticing from the laboring man of the South his hard-earned pittance and his last cent of savings, and yet denied him any scrutiny into its affairs. I therefore offered in this House the resolution which, upon my motion, was referred to a committee I thought would act fully upon it, so that if there were

any wrong in the management of the bank, the facts would be laid by it before the country and the people who have a right to know them. That committee has deliberately nullified the purpose of the resolution, and smothered the evidence which it was the object of the resolution to elicit.

Mr. MERRIAM. I do not want to interrupt the gentleman more than a moment; but he should do us the justice to say that this Congress authorized the Comptroller of the Currency last year to put an examiner into that bank, which was done.

Mr. BROMBERG. And the result was embodied in public documents which ought to have gone broadcast through the country, showing that this company was improperly managed and in a bad condition. However, I knew nothing of that at the time I introduced the resolution, (February 3.) That was called forth by facts which incidentally came to my knowledge. I heard, indirectly, that at Montgomery every dollar of the deposits, instead of being forwarded to Washington, as was done at Mobile, had been used upon the spot in worthless or insecure investment; the examiner of the bank has since confirmed that information, and admits in his official report that there is a loss there of over $5,000. Inasmuch as every dollar that was deposited at Mobile was rigidly sent to Washington upon the demand of the authorities here, because, as they said, the law commanded it, it was with astonishment that I heard that in Montgomery the practice had been exactly opposite. As soon as I reached here last fall I consulted with the gentleman representing the district in which Montgomery lies as to the proper means to remedy the wrongs if any had been committed. Finally it was agreed not to push an investigation by a select committee, but rather to let a standing committee examine the matter, lest we might create a panic and possibly do damage to innocent parties. For myself, I thought that possibly at Montgomery there had been nothing worse than a little favoritism. The cashier at that place had been a paymaster in the Freedman's Bureau. The president here was a former member of the American Missionary Association; and it seemed probable that on account of past relations there had possibly been a little leeway in the management of affairs allowed by the one to the other.

Therefore, as the result has shown, with misplaced kindness, instead of pushing for a select committee, I referred the resolution of inquiry to one of our standing committees, the Committee on Banking and Currency. Knowing that the majority of that committee represented the party which has made colored men special objects of protection, I thought that class would find full protection at their hands. My confidence was misplaced.

I will proceed now, Mr. Speaker, as promised, to the testimony, and first simply call attention to the fact that I tried to get that testimony printed, but was met by opposition so intemperate in its zeal as to be more fitting to a paid attorney of some powerful criminal, caught in the meshes of the law, than a Representative standing here in behalf of the people of the United States.

I will first call into court the examiner, Mr. Meigs, and ask the Clerk to read the report made by him on the general condition of this Freedman's Bank.

Before, however, the Clerk reads, I will say that that report of the examiner unmistakably aims to give a favorable coloring to the conduct of the officers of the banks, and to smooth over their illegal proceedings. He is clearly a friendly witness, and although he may not have intentionally suppressed facts, yet his assertions and conclusions are culpably inaccurate, and founded on imperfect data. I will state to the gentleman from Kentucky, [Mr. DURHAM,] in denial of the statement made by him, that so far from having gone over and examining the branches, the examiner, when he made his report, did not have a single report of a branch before him, except those of New York, Baltimore, Richmond, Norfolk, and Washington, twenty-nine having been as yet not heard from. In addition to the bad and doubtful debts, amounting to two hundred and seventeen thousand and odd dollars admitted by him, there are reported by the sub-examiners of the branches $300,000 of bad and doubtful debts which Mr. Meigs knew nothing of, and nevertheless makes an official report intended to have the effect of an exhibit of all the facts in the case. I now ask the Clerk to read the report, and for order in the House that members may hear it. It is an important document, and, carefully studied, shows that this bank is absolutely insolvent. It damns while struggling to save its managers.

The report is as follows:

WASHINGTON, D. C., *March* 10, 1874.

SIR: In accordance with your instructions, I have just completed an examination of the affairs of the Freedman's Savings and Trust Company, Washington City, and respectfully report as follows:

The figures are of January 24, 1874. Referring to my report upon this institution of February 5, 1873, I would remark that I find no material change in the general character of the loans and investments, as the financial disturbances of the past year have resulted in a reduction of the deposits and other liabilities of more than $1,100,000, and as a natural consequence the work of the year has been mainly in the direction of liquidating liabilities and but few new loans have been made.

The panic which has just passed over the land has had much to do with this large reduction of deposits, and has occasioned sacrifices and losses in the effort to sustain the institution under such an extraordinary drain upon its resources. At a late day of the recent panic they availed themselves of the usual custom of savings-banks to demand sixty days' notice previous to payment of any considerable sum, and all such notices have been either paid in full or the notice withdrawn.

The resources and liabilities of the institution, as shown by the records, are as follows:

	Resources.	Liabilities.
Cash, loans, and investments, as per schedule herewith	$3,227,510	
Less bad and doubtful debts	106,500	
Amount due depositors		$3,298,569 21
For checks outstanding		31,026 94
Cash borrowed upon collateral		9,300 00
Total	3,121,010	3,338,896 15

Showing a deficiency of $217,886.15, or in other words, the depositors are secured to the extent of about ninty-three cents on the dollar.

The causes which have led to this deficiency appear to be as follows:

1. The large expenses attendant upon the erection and maintenance of branches which have been established upon the basis of a business beyond what has resulted in the way of deposits received at said branches.

2. Hopes arising from the authority originally given to the cashiers of the branches to make loans and to enter into mercantile transactions foreign to the business of a legitimate savings-bank.

This authority was withdrawn some two years since, and no loans are now made except under the sanction of the trustees of the home office.

3. The effort to follow the example of other savings-banks, who were not liable to such heavy expenses in allowing 6 per cent. interest on deposits, has induced the managers, in the hope of realizing large rates of interest, to make loans looking more to *profit* than to *safety* of the principal sum.

I consider this practice of allowing high rates of interest upon savings deposits as wholly and entirely wrong, as attention is thereby diverted from the *safety of the deposits*, which should be the governing motive in handling the savings of the poor.

4. Sacrifices made to raise money during the late panic and shrinkage in investments.

There is discrepancy in the amount due depositors as between the deposit ledgers and the general ledger of about $40,000; but from a careful examination of these ledgers I am inclined to the opinion that this is merely the result of carelessness in carrying accounts forward and in opening duplicate accounts, and as the general ledger amount is made up from the aggregate amount of the daily receipts and disbursements, I incline to the opinion that the general ledger is the most likely to be correct.

I find it to be the opinion of the officers that there is an amount of deposits which is not likely ever to be claimed of from $100,000 to $200,000, and measures are being taken to get a clear idea of what amount is so situated, as this is a very material question in getting at the liabilities of the institution.

I would respectfully request that the managers be required to adhere *more strictly*, in the future, to the requirements of the act of incorporation, and particularly to sections 3 and 5, which refer to the manner of making and character of investments, which will result in greater security to the depositors.

The by-laws were so amended in June, 1873, as to read "after January 1, 1874, such interest only shall be allowed to depositors in the future as shall be *warranted by the profits* of the institution," and notice given to the depositors. If the depositors will exercise reasonable forbearance for six to twelve months under this regulation, it will give the institution time to recuperate from the misfortunes of the past, and add largely to the safety of the depositors.

I would suggest that *all* of the unprofitable branches be closed up as soon as possible in order to reduce expenses, and in fact measures are now in progress to this end.

In conclusion, I beg to repeat the recommendations contained in my last report,* and to ask the fostering care and forbearance of Congress for an institution that has done and may continue to do great good to the freedmen, in inducing habits of industry and frugality in the care of their earnings.

All of which is respectfully submitted.

CHARLES A. MEIGS,
National Bank Examiner.

JOHN J. KNOX,
Comptroller of the Currency.

WASHINGTON, D. C., *February* 14, 1874.

DEAR SIR: A careful examination of the Washington branch of the Freedman's Savings and Trust Company has developed the following results:

The amount due depositors at this branch on the morning of the 29th January, 1874, as per the general ledger, was		$324,009 00
My trial balance of the deposit ledgers shows the amount due depositors to be	$450,753 97	
Less overdrafts	20,859 29	
		429,894 68
Excess of balances over general ledger		45,795 68

The above discrepancy I believe to be entirely the result of gross carelessness in the keeping of the ledgers. Many of the accounts are undoubtedly duplicated, having been transferred to other ledgers without being closed out in the original account. Thus, in taking off balances, two or more accounts would appear to be open, and one depositor would be represented by two or three balances on the balance-sheet. There has been an entire omission to secure the correctness of debit and credit entries by checking off with the respective books when posting. And I find that deposits and drafts have been made by dealers, and the amounts not posted to their accounts in the ledgers until several months afterward, and the errors only discovered on the presentation of pass-books. Under such a system it is impossible to prove the books, save by checking back all the entries to the opening of the branch or calling in the pass-books. Either would be a labor of months, but one or the other should be done. In some instances debits have been posted as credits, and credits as debits. With the assistance of the clerk who was deemed most competent to discover and reject duplicated accounts, I very carefully revised the balance-sheet, and was thus enabled to reduce the difference sheet about $7,000. There appear to be nearly six thousand accounts, running through eleven ledgers, and no ordinary memory could pick out more than a few of the duplicates. The overdrafts were mostly temporary, excepting some *old ones*, dating back for several years. Mr. Stickney says that the actual loss upon the overdrafts will not exceed $5,000.

I would repeat most emphatically my suggestions of last year, that all the accounts be transferred from the old ledgers and properly indexed, which, with a proper system of checking the ledger entries, *rigidly enforced*, and trial balances

* Report of the Comptroller of the Currency upon the condition of the savings-banks of the District of Columbia, Senate Miscellaneous Document No. 88, Forty-second Congress, third session.

taken *off* at *least* quarterly, would enable them to steer clear of such discrepancies in the future and make a less discreditable showing.

I cannot find any improvement, so far as the branch book-keeping is concerned, the result showing a difference in balances twice that of one year ago. I append a statement of the condition of the branch on the morning of January 29. The item "Principal office" stands to the credit of the branch on the books of that office. Also a statement of the cash on hand, same date, which appears to be over $27.55.

Very respectfully, yours,

A. M. SCRIBA,
Assistant Bank Examiner.

CHARLES A. MEIGS, Esq.,
National Bank Examiner, Washington, D. C.

Statement.

	Resources.	Liabilities.

Mr. BROMBERG. The examiner hopes that Congress will extend its fostering care to this bank. He is unmistakably a friendly witness. Now I ask the House to mark the date of that report. It is March 10.

Mr. MERRIAM. What year?

Mr. BROMBERG. March 10, 1874.

Accompanying that report, as furnished by the Comptroller of the Currency, are certain schedules. I hold in my hand copies of twenty-two official reports made by the various national-bank examiners of the different branches, every one of them, with four exceptions, of later dates than that under which the chief examiner writes, March 10, 1874.

I present herewith to the House the reports by the sub-examiners:

*There is a discrepancy here. The principal office has $872.58 less to the credit of the branch. The explanation is that the difference is previous *short cash*, not yet charged to profit and loss.

NEW YORK, *March* 4, 1874.

	Resources.	Liabilities.
Cash in American Exchange National Bank, New York	$12,084 05	
Legal-tenders and national-bank bills and fractional currency in tills	4,646 23	
Gold coin and notes	1,048 00	
Silver	296 70	
Total cash	18,075 00	
Checks on country banks and short sight-drafts received from other branches and deposited in American Exchange National Bank for collection	6,764 50	
Ditto, with out-of-town agents	2,674 84	
Loan on bonds and mortgages on improved property in Orange, New Jersey, valued at $6,000 or more	3,000 00	
Loan on $500 railroad bond	275 00	
$500 first-mortgage bond, Chesapeake and Ohio Railroad, at sixty cents	300 00	
Amount due depositors		$322,316 26
Total	31,089 34	322,316 26

Of the amount due depositors, about $50,000 is what may be called business deposits, and the balance savings deposits.

Number of open accounts on books, 3,555.

About three-fourths of the depositors are colored people.

Amount deposited since 1866	$3,559,298 02
Amount drawn out	3,236,981 76
Total annual expense for 1873, (rent $2,000)	12,721 00

The habit of this branch, as well as all the others, has been to remit all surplus deposits beyond a working cash balance to the parent bank, Washington, and the loans on hand were authorized there.

A steady diminution of their deposits has been going on for some time past in this as well as at many other branches, and Manager Harris manifests considerable anxiety as to the working of things at the parent office.

CHARLES A. MEIGS,
National Bank Examiner.

BALTIMORE.

WASHINGTON CITY, *February* 18, 1874.

The business of this branch appears to be confined entirely to the receipt of deposits, the payment of drafts against the same, and the remittance to the parent institution at Washington of all sums deposited over and above a working balance of cash of $5,000 to $10,000.

The total amount due depositors this day appears to be	$303,716 27
Total cash on hand	4,488 22
Amount loaned on good security	1,423 61

The total number of open accounts is 3,500, and the great majority of the depositors are colored people.

Current expenses about $4,700 in all.

The books and accounts are well and clearly kept, and the last trial balance of liabilities show a discrepancy of fourteen dollars only.

The banking-house owned by the bank consists of a plain three-story brick building, No. 80 West Baltimore street, and I should think worth considerably *more* than the cost ($16,600) at which it appears on the books of the bank.

The deposits are mainly of a savings character, and the receipts and disbursements vary from $500 to $2,000 per day each way.

CHARLES A. MEIGS,
National Bank Examiner.

NORFOLK, VIRGINIA, *February* 24, 1874.

The only business transacted at this branch consists of receiving deposits and making payments upon the same, and remitting to the parent bank all moneys on hand over and above a cash balance of $5,000 to $8,000, retained to meet drafts.

The cashier's assistant has been sick for some time, and the books are only written up to February 1, 1874.

Amount due depositors	$128,637 08
Amount of cash on hand	7,738 97
Number of open accounts	2,577

Expenses, say $2,810 per annum in all.

CHARLES A. MEIGS,
National Bank Examiner.

SAINT LOUIS, MISSOURI, *March* 13, 1874—9 a. m.

	Resources.	Liabilities.
United States bonds and securities	$100 00	
Due from other banks	496 15	
Furniture and fixtures	2,347 90	
Expense account	187 90	
Cash items	133 75	
Bills of national banks	2,542 00	
Fractional currency	107 23	
Specie	157 05	
Loans to principal office	58,613 66

Total	64,685 64	64,685 64

W. D. W. BARNARD.

RICHMOND, VIRGINIA, *February* 21, 1874.

The business of this branch is confined to the receipt of deposits, payments on the same, and the remittance to the parent bank of all moneys on hand over and above a moderate working balance of cash to meet the daily demands of depositors.

Amount on deposit at this date	$168,331 00
Amount of cash on hand	800 17

Number of open accounts of depositors is 3,850; amount of overdrafts is $51.15, mostly considered good.

The force employed consists of—

Cashier, (white man,) salary	$1,200
Clerk, (colored,) salary	500
Rent of banking-house	500

The great majority of the depositors are colored people, and the average amount due each depositor is less than forty-five dollars.

CHARLES A. MEIGS,
National Bank Examiner.

MEMPHIS TENNESSEE, *March* 26, 1874—9 a. m.

This is one of the few branches of the Freedman's Savings and Trust Company where the cashier is allowed to loan the deposits on such securities as he deems safe.

He has loaned to E. R. Knight, of Forest City, Saint Francis County, Arkansas, a large land-holder, $38,257.09, and holds as collateral: First, 100 M staves at New Orleans, held by the cashier of their branch there and worth $100 per M, or $10 per 1,000 at forced sale; second, a mortgage on Knight's homestead at Forest City, worth he estimates $30,000, mortgage $10,000; third, two trust deeds for $10,000 and $5,000 and fourth, notes which I listed, amounting to $14,436.07; total, $49,436.09. He assures me the sureties are ample.

Another loan of $10,000 to W. L. Marsh, secured by two trust deeds on property estimated at $14,000. He thinks $10,000 could be realized if payment were pressed. He holds besides good land notes amounting to $5,150 as further collateral on Marsh's loan of $10,000. The remainder of the $55,573 loaned is in sums from $2,000 secured by trust deeds, down to $25, with various collaterals, and he assures me every dollar is good.

The $12,211.48 of overdrafts are also loans on collateral, except a few small ones allowed on the credit of the drawer, all, he says, good, except $841.41, which was abstracted by a dishonest colored clerk, some one or two years ago or more. Of this the principal office is cognizant.

Coin	530 99	
Profit and loss		$878 30
Individual deposits		136,996 68
Total	137,874 98	137,874 98

The system adopted by the home institution is simple, and it is easy with proper care to keep balances straight.

Commenced examination by making a full list of depositors, amounting to $138,697.90, being $1,701.22 more than the general ledger balance shows. Of these, $3,973.47 have stood over five years without change. They are fifty-eight in number, and the cashier has little or no knowledge of the parties.

The home office do not allow of any loans being made here, nor do they leave the funds here beyond about the amount reported at this time, so that when depositors draw their cash (except in small sums) they are paid by draft on the home office or one of its branches.

THOMAS WILLIAMS, *Examiner.*

LEXINGTON, KENTUCKY, *March* 12, 1874—9 a. m.

Total	34,998 89	34,998 89

I cannot say as much of his success in banking, although I have no doubt of his integrity. I find he cannot make his individual deposit ledger agree with his general ledger by $1,305.84; it is so much short, and I think it must be that this sum is entered on the pass-books of depositors while it has not been placed to their individual accounts.

I think a sharp hint from the Comptroller that his individual ledger should be made to prove by the general ledger would do him good.

Exchange account		871 93
Total	50,466 61	50,466 61

This branch was organized in October, 1868, and now has 2,542 accounts with depositors, five of the largest amounting to $8,791. The system of book-keeping is very loose. Much more so under the administration of the former cashier than the present one.

Mr. John A. Smyth, the present cashier, entered upon his duties December 19, 1872, and no balance of the books was taken at that time, although some of the accounts were overdrawn, the largest one being the account of the retiring cashier, and that account now stands overdrawn $2,016.99, and is included in "overdrafts, $2,850.40." The cashier informed me that he attempted at one time to balance the books, but they varied two or three thousand dollars, and he had not found it, and since that time had made no attempt. I took off a trial balance and found $2,923.77 short. This branch has made no loans, and owns no real estate. The advisory committee number nineteen, and as the branch makes no loans, but sends the money to the parent bank as fast as it is deposited, there is really nothing for them to do. The last minute on the records was in May, 1873, and was in reference to a change of office.

J. A. TALMADGE,
National Bank Examiner.

CHARLESTON, SOUTH CAROLINA, *March* 16, 1874—9 a. m.

	Resources.	Liabilities.
Due from parent bank	$231,210 35	
Expense account	15,763 22	
Cash	9,631 17	
Due to depositors		$253,168 56
Exchange		3,336 18
Total	256,504 74	256,504 74

This branch was organized in December, 1865, and now has 5,295 depositors.

The books of this branch balanced within eighty-eight dollars, after making allowance for an error which existed previous to Mr. Ritter's administration, and is regularly entered on the records of the branch by the inspector for the parent bank; amount, $3,700. This branch have made no loans. The parent bank owns the banking office, and it is valued at $6,000, but could not be sold for that sum at present.

All the branches are required to send to the home bank daily statements. The amount and its expenses and exchange are the totals since the branches were first organized.

J. A. TALMADGE,
National Bank Examiner.

BEAUFORT, SOUTH CAROLINA, *March* 21, 1874—9 a. m.

	Resources.	Liabilities.
Loans	$126,166 61	
Cash on hand	3,603 24	
Due from Charleston Bank	2,368 98	
Profit and loss	10,963 10	
Overdrafts	4,294 11	
Expense account	14,249 12	
Due to depositors		$77,216 79
Exchange account		15,485 28

Loans on collateral	37,000 00
Beaufort County, South Carolina, scrip, par	30,764 48
Total	126,166 61

The loans I have divided into classes as they are all overdue:

Loans considered good	$22,670 59
Second class	48,968 31
Third class	23,382 95
Taxes paid on real estate	380 28
Beaufort County scrip, par	30,764 48
Total	126,166 61

I am unable to arrive at any market value of the real estate on which money has been loaned, but schedule is based upon statements made by the present cashier. Profit and loss account, debtor, $10,963.10, and overdrafts, $4,924.11, were made by the former cashier Mr. Scovel, and the company have sued on his bond of $6,000, and trial set for 6th of April.

The amount $2,065.25 "short" has been accumulating since the branch first started. There are twelve hundred depositors with this branch. One account called "deserters'-account" has a credit of $11,564.58, which is money deposited by soldiers and has never been called for.

The parent bank own the building occupied by this branch, and it is valued at about $6,000.

Total	29,548 93	29,548 93

Cash items, $5,883.21, are memoranda left by Philip Cory, the former cashier.

Overdrafts, $161.90, considered not good.

Short, $1,939.67, reported by Philip Cory as stolen February, 1873.

February, 1, 1874, Philip Cory was arrested as a defaulter.

This work (calling in the books) is not finished as yet, and full amount of defalcation by Cory is not known.

The amount at present is $8,000.

This branch has made some loans and all the papers relating to them sent to the parent bank, and no record of them appears upon any book of the bank. All the loans were made without the advice or consent of the advisory committee, so I am informed; and no record of the meetings of the committee are to be found.

The branch own no real estate, but rent an office at a monthly rent of twenty dollars.

Philip Cory gave a bond in the sum of $6,000.

J. A. TALMADGE,
National Bank Examiner.

AUGUSTA, GEORGIA, *April* 3, 1874—9 a. m.

National Bank Examiner.

JACKSONVILLE, FLORIDA, *March* 28, 1874—9 a. m.

	Resources.	Liabilities.
Loans	$91,824 34	
Overdrafts	37,067 50	
Collecting	487 00	
Profit and loss	920 72	
Expense	16,841 22	
Cash	11,429 87	
Due depositors		$60,399 41
Exchange		30,970 44
Due parent bank		67,200 80
Total	158,570 65	158,570 65

Loans are overdue, but interest is paid regularly on $13,066.06.

Loans on real estate	$13,032 18
Single-name paper	38,278 06
Largest loan to any one party	21,343 46

This loan was made to Allen & Farrar, and their affairs are in the hands of a receiver and the bank have got judgment against him and have allowed the receiver to overdraw his account $34,567.98, and try and work out the indebtedness by running the saw-mill, and on this account allowed the overdraft.

Loans considered good	$18,878 63
County and State scrip, market value	3,673 42
Interest on loans	2,699 39
Second-class paper	23,472 62
Third-class paper	43,882 66
	92,606 72

These loans were made by the former cashier. The present cashier, Mr. J. W. Swain, informs me that he considers none of this worthless at the present time, but it will be a long time before it is all paid, and it is on his statements I have made this classification. The books of this branch are kept in a very loose way, and it took nearly all day to get a balance. This bank kept a general ledger at one time, but it has not been posted since September 1, 1873, and the cash-book is not written up since the 13th of this month. The bank keeps some merchant accounts and pays no interest on them. The amount of non-interest deposits is about $5,000. There are eighteen hundred and fifty depositors with this branch. The parent bank own the building occupied by this branch, which is valued at $40,000. They have a fine office-vault and safe, and the building also contains two stores and large hall and six offices, which are rented.

J. A. TALMADGE,
National Bank Examiner.

Statement of the Mobile branch of the Freedman's Savings and Trust Company.

MOBILE, ALABAMA, *April* 25, 1874—3 p. m.

	Resources.	Liabilities.
Cash, currency	$10,192 14	
Cash, gold	135 24	
Expenses	19,890 75	
Parent bank	61,143 57	
Due depositors		$89,212 62
Exchange		2,149 08
Total	91,361 70	91,361 70

Number of depositors 2,650. No depositor to an amount of over $2,000. Amount due white persons, $1,000. No loans made at this office, and no collection business done. Meetings of advisory committee not well attended.

The cashier, C. A. Woodward, was removed April 16, 1874, on account of having taken funds to the amount of $3,375, which he claims as services rendered the Freedmen's Bureau. This amount Woodward charged to the parent-bank account on exchange account. The parent bank would not allow the claim, and removed the cashier; and the parent-bank inspector, Mr. A. M. Sperry, is in charge of the office.

The Freedman's Savings and Trust Company have commenced suit on Mr. Woodward's bonds of $10,000 for the recovery of the money. The office now occupied by this branch is the old Bank of Mobile building, and they pay at the rate of $1,000 a year rent.

The books appear in fair shape. Present business small.

J. A. TALMADGE,
National Bank Examiner.

MONTGOMERY, ALABAMA, *April* 15, 1874.

SIR: In accordance with your instructions, I have this day made an examination of the affairs of the Montgomery branch of the Freedman's Savings and Trust Company, Montgomery, Alabama. It appears that Mr. E. Beecher, the cashier, made some loans without the advice or consent of the advisory board of the parent office, the probable loss on which will be about $5,000 or more. The result of this transaction is that the Freedman's Savings and Trust Company entered into a contract with E. Beecher & Co. on the 23d of February, 1874, whereby the Freedman's Savings and Trust Company agree to close their Montgomery branch and transfer their business and assets at this branch to E. Beecher & Co., E. Beecher & Co. to carry on the business and assume the amount due to the parent bank and depositors, and gave the Freedman's Savings and Trust Company a bond of $60,000 for the fulfillment of their part of the contract. The Freedman's Savings and Trust Company are now liable to the depositors at this branch to the amount of $10,810.24, and E. Beecher & Co. now owe the parent bank $23,330.79.

The statement of the branch at the time of transfer to E. Beecher & Co. is as follows:

	Resources.	Liabilities.
Amount due depositors		$28,048 39
Amount due parent bank		19,569 62
Exchange		4,254 97
Expense account	$3,489 98	
Cash, including loans	47,863 00	
Total	51,852 98	51,852 98

When depositors present their books at the bank for deposit or draft, E. Beecher & Co. take up the Freedman's Savings and Trust Company's book and issue their own instead, if the depositor will agree to the transfer. E. Beecher & Co. have two years from the 1st of January, 1874, to make these payments or transfers, and if any amounts remain due by the Freedman's Savings and Trust Company to depositors at the expiration of the two years, E. Beecher & Co. agree, to pay the amount to the Freedman's Savings and Trust Company, and the depositors must look to the parent office for it.

J. A. TALMADGE,
National Bank Examiner.

Statement of the Huntsville branch of the Freedman's Savings and Trust Company.

HUNTSVILLE, ALABAMA, *April*, 23, 1874—1 p. m.

	Resources.	Liabilities.
Principal office, Washington, District of Columbia	$25,058 71	
Due from State banks and bankers	1,579 20	
Current expenses	5,926 83	
Bills of national banks	437 00	
Fractional currency	15 50	
Coin	428 16	
Exchange		$520 05
Due depositors		34,961 85
The individual-deposit ledger shows more due depositors than the general ledger shows reported to the principal office by	2,034 56	
Cash short	1 95	
	35,481 91	35,481 91

Cashier Robinson seems to be a clever fellow, and is much more astonished at the result of listing the balance due depositors than I was, notwithstanding he read them off to me himself.

He says the inspectors from the principal office never list them, nor require him to do it.

The following morning, as I was about taking leave, Robinson came to the hotel and called my attention to the sum of $259.98 paid depositors yesterday that should have been deducted from amount due depositors.

After I left, when reflecting how it should be that these branches are all in the same kind of discrepancy, I called to mind no one of them had shown me any account for interest credited and paid on deposits, and I doubt whether the account is kept, as there is no such item printed on their blanks. The very next visit to one of these branches I will look after this item.

THOMAS WILLIAMS, *Examiner.*

NASHVILLE, TENNESSEE, *April* 8, 1874.

	Resources.	Liabilities.
Overdrafts	$31 55	
Exchange in balance to debtor	182 16	
Principal office at Washington, District of Columbia	62,755 87	
Amount expense	12,247 20	
Bills	1,328 88	
Individual ledger deposit list in excess of what is shown and reported from general ledger	859 94	
Short cash, Cary says, was shown up to the last inspection from principal office	216 26	
Individual deposits		$77,620 86
	77,620 86	77,620 86

Cashier Cary is a quiet, clever colored man. He, like most whom I have met in these branches, fails of the necessary care to prove up his books and keep his two ledgers in balance. He is long on his deposits and short on his cash. Of the latter, he says the inspector who last visited him from the principal office found it so; but I have not learned from him or others, that the inspector had taken pains to list and prove up their ledger, or required them to do so.

The system adopted by the principal office in daily reports of all deposits, drafts, and checks is good, and if faithfully carried out, and proved monthly, would be advisable.

The principal office made a poor investment here at Nashville in a building. Cary says it and lot cost $27,000. He estimates that they receive $1,250 rent, besides their banking-office room. This is a very small income on the rent.

THOMAS WILLIAMS, *Examiner.*

The House will see that the reports from those branches which bear most heavily upon the status of the bank, those at which the grossest irregularities and most dishonest proceedings have been practiced, were not before Mr. Meigs when he wrote his statement; and yet, without them, he has had the assurance to inform the Comptroller that the bad and doubtful debts of the Freedman's Bank were only $106,500, and that the bank was within seven cents on the dollar of solvency.

The reports of eleven branches, including New Orleans and Vicksburgh, are not yet even in the hands of the Comptroller of the Currency, and those from Mobile, Tuscumbia, Huntsville, and Montgomery, and Nashville and Columbia, Tennessee, have come in so recently that they still lie upon the table of the Speaker.

It is clear, therefore, that to arrive at any well-founded conclusions respecting the bank we must examine the official figures and schedules for ourselves. So much for the examiner's sins of omission, whose exact amount I shall discuss somewhat later. I shall now proceed to show further inaccuracies upon the part of the examiner, and these will be sins of commission. I hold copies of two schedules furnished by him as a part of his report, and which I lay before the House.

Schedule of loans of the Freedman's Savings and Trust Company, Washington City, January 26, 1874, on real estate.

Henry Wells, June 3, 1870, on square No. 597; interest paid to August 22, 1872	$2,000 00

RECAPITULATION.

Total amount of loans on sundry securities	535,160 56

CHARLES A. MEIGS,
National Bank Examiner.

JANUARY 24, 1874.

One is a schedule of loans on "sundry securities" made by the Freedman's Savings and Trust Company, covering twenty-seven pages of legal cap. Another is a schedule of loans by the Freedman's Savings and Trust Company, Washington, January 26, 1874, purporting to be made on "real" property, and covering fifty-nine pages of legal cap. In that list of "real-estate securities," amounting to $1,473,226.55, he has classed as real estate the following, (I hope the House will mark his inaccurate classification:)

"Sundry" securities listed as "real estate" by the examiner.

T. Roesale & Son, November 22, 1870, page 6, real-estate schedule; chattel mortgage on furniture and fixtures in the Arlington house	$28,000 00
W. P. Drew, received rent of O. O. Howard, February 18, 1871, page 9, real-estate schedule	400 00
Elizabeth Barrett, September 10, 1872, page 46	800 00
Mrs. M. J. Hunt, notes, August 20, 1873, page 56	1,000 00
Mrs. M. J. Hunt, notes, August 16, 1873, page 56	2,000 00
James D. Burke, notes, August 28, 1873, page 56	300 00
C. H. Underwood, notes, November 1, 1873, page 57	1,100 00
J. E. Zulg, notes, November 10, 1873, page 57	1,370 70
John B. Bloss, notes, November 10, 1873, page 57	600 00
George Angermann, notes, November 10, 1873, page 57	250 00
J. W. Barker, notes, November 10, 1873, page 57	150 00
J. H. O. Carmel, notes, November 10, 1873, page 57	475 00
Charles B. Beall, notes, November 10, 1873, page 57	450 00
Mary J. Warner, notes, November 10, 1873, page 57	1,170 00
Aaron Jones, notes, November 10, 1873, page 57	600 00
H. G. Jacobs, notes, November 10, 1873, page 57	300 00
F. D. Loftus, notes, November 10, 1873, page 57	150 00
Samuel E. Smoot, notes, November 14, 1873, page 58	2,600 00
Robert H. West, notes, November 14, 1873, page 58	1,700 00
George T. Armes, notes, November 18, 1873, page 58	1,900 00
George H. Simonds, notes, December 22, 1873, page 58	1,000 00
Robert T. Fleming, sundry, January 12, 1874, page 58	26,000 00
Clement Morgan, notes, January 20, 1874, page 59	350 00
James M. Latta, trustees' notes, $3,500, January 30, 1873, page 59	3,500 00
E. R. Knight, Memphis branch, Arkansas scrip, May 6, 1872, page 59	1,700 00
Total "sundries" listed as "real"	77,866 70
These subtracted from total "real," as given by Meigs	1,473,226 55
Leaves total "real securities"	1,389,269 41

These "sundry securities," which are admitted to be totally illegal, without a shadow of law to warrant them, amount by the statement of the examiner to $535,560.56. If the House desires closer acquaintance with the character of some of those loans, let the members peruse the list which was presented in the earliar part of the argument. The total loans, for instance, to Vandenburgh, one of the prominent contractors for District improvements, whose name is well known to those acquainted with District affairs, are $144,164.83. The collaterals in this case consist of District of Columbia 8 per cent. bonds, $95,250, face value; auditor's certificates, $61,262.94, face value; and acceptances of Magruder, the treasurer, $6,500; total, $163,012.94.

Now, if we take the figures given by Inspector Meigs, and these schedules of real investments and sundries, we have this total: for real estate, as given by him, $1,473,226.55; loans erroneously entered "sundries," $77,866.70; real total, $1,395,359.85. The total sundries given by Meigs are $535,560.56, less American Seal Lock Company's stock, $1,289.50. Meigs's total of sundries in illegal securities, then, is $534,271.06. Add to that what he erroneously classes as real estate, $77,866.70, and we have as the amount of illegal assets held by that bank $612,137.76, out of a total of assets of but a little over $3,000,000.

And now come the errors of omission to which I call the attention of the House. Meigs makes in his report a deficiency of $217,866.15, having before him but four reports of branches. I recall to the attention of the House the reports of the branch examiners before set forth. There will be found in them the following statements. At Memphis, Tennessee, discounts and overdrafts, $67,931.99. At Little Rock, Arkansas, overdrafts, $1,022.58. At Wilmington, North Carolina, there are reported short and overdrafts, $5,774.17. At Beaufort, South Carolina, short loans and overdrafts, $141,423.82. I call especial attention to the character of the transactions at this point. At Atlanta, Georgia, overdrafts, $161.90. At Jacksonville, Florida, loans and overdrafts, $128,891.84. At Montgomery, Alabama, $28,380.79. At Nashville, Tennessee, $3,155. Total at twenty-two branches, loans, short, and overdrafts, $373,621.64, not included in Meigs's statement of loans furnished to this House, but included in the reports of the branch examiners which have been sent in from time to time by the Comptroller of the Currency, which I sought to have printed, but which members of the Committee on Banking and Currency prevented from being printed. The debts at the branches reported estimated to be bad and doubtful by the examiners are $302,669.05. Out of the total amount of $373,621.64, there are claimed as good and first-class debts only $42,571.80. We have now the following data, furnished by the various examiners, from which to deduce the report that should have been made by Mr. Meigs. Total resources, $3,227,510; bad and doubtful debts admitted by Meigs in his report, $106,500; bad and doubtful debts at the branches according to the sub-reports, $302,669.05; add claim of C. A. Woodward, cashier, at Mobile, Alabama, $3,375. These give a total of $412,544.05 of bad and doubtful debts, making the net resources $2,814,965.95. The liabilities, according to the examiner, are $3,338,896.15; the deduction is a deficiency, not of $218,000, but of $523,930.20, out of the three millions of reported resources. But the bad debts as given by the examiners are only $106,500. I ask the House to look for a moment at this list of sundry securities and see how near the truth he came. I find, to begin with, on page 2 a loan of $3,250 to Joseph B. Stewart, loaned March 14, 1871, on $5,000 Union Pacific bonds in the hands of H. G. Fant; bonds in suit as to ownership. I find on the same page $74,000.91 to the Central Branch of the Union Pacific Railway, balance of their note of $175,000 of August 17, 1871, secured by contract for sale of portion of the Kickapoo reserve lands, Kansas. Bonds of A. S. Barner, R. M. Pomeroy, and E. H. Nichols, interest paid to December 12, 1872, last payment on account May 19, 1873, $7,500; lands sold on one to ten years' credit, about one hundred thousand acres. On page 3 I find $50,000 to Hallett Kilbourn and John O. Evans, January 2, 1872, on $75,000 second-mortgage bonds of Maryland Mining and Manufacturing Company, that I am told are not worth a cent at this date. Here are two items alone of $124,000. And yet the examiner comes in here with his statement that the amount is $106,500.

I find further, on the next page, James C. Kennedy, March 29, 1872, on $20,000 Maryland Mining and Manufacturing Company's bonds on demand, no interest paid, $12,000. I find on page 4 $1,289.50 loaned on $7,000 stock of American Seal Lock Company, a corporation which has no existence at all, and on $5,000 Metropolis Paving Company, also defunct. I find on page 10, F. W. Brooks, April 18, 1873, $5,500 loaned on $12,500 stock of International Steamship and Railroad Supply Company, no interest paid and not worth a cent. Page 7, $3,000 to S. C. Pomeroy on demand. Page 10, March 1, 1873, "$3,000 to Hallett Kilbourn, on note National Junction Railroad Company, $2,950 and interest, H. Kilbourn, president, past due, no interest paid," and other similar items.

So far from Meigs being correct in his estimate of $106,000 for bad loans in Washington, he should have made the amount at least $165,540.41 by his own reports.

The account therefore is:

Total resources, (examiner's figures)		$3,227,510 00
Bad and doubtful debts at Washington	$165,040 41	
Bad and doubtful debts at branches	302,669 05	
Claim of C. A. Woodward, cashier at Mobile, Alabama	3,375 00	
Total bad and doubtful		471,084 46
Leaving net resources		2,756,425 54
Liabilities, examiner's report		3,338,896 15
Deficiency		582,470 61

Or one dollar out of six.

But in arriving at the present condition of the bank, account must be had of the resources not wholly bad, but totally unavailable to meet emergencies:

UNAVAILABLE.

Arlington House furniture, page 6, real-estate schedule	$28,000 00
Rock Creek Church bonds, page 23, real-estate schedule	1,500 00
Fifteenth street Baptist Church, page 26, real-estate schedule	10,000 00
Vestry Rock Creek Church, page 46, real-estate schedule	3,000 00
Trustees Fifth Baptist Church, page 46, real-estate schedule	7,000 00
Howard University, page 50, real-estate schedule	75,000 00
130 shares Young Men's Christian Association, approved bills against colored-school trustees, and 4,055 real-estate notes, page 58, real-estate schedule	26,000 00
Total	150,500 00
To this must be added the difference between the total loan to Vandenburgh, contractor, of $147,164.83 and the present value of $166,012.94 collaterals, estimating District of Columbia 8 per cent. bonds at eighty cents and public-work certificates at 33⅓ per cent. Making a total of "unavailable" to-day of	197,877 59

SUMMARY.

Net resources, as previously stated	2,756,425 54
Unavailable	197,877 59
Available	2,558,547 95
Liabilities	3,338,896 15
Deficiency	780,348 20

Or nearly 25 per cent.

In arriving at the above result, no account has been taken of such investments reported by Examiner Meigs, appearing on the books in Washington, as for instance:

F. W. Osborn, Florida, page 31, real-estate schedule	$2,500 00
Nashville Branch Colored Agricultural Mechanical Association, Tennessee, page 37	4,000 00
Samuel Suit, Prince George's County, Maryland, page 41	24,000 00
Douglass Institute, Baltimore, Maryland, page 41	10,000 00
Odd-Fellows' Hall, Alexandria, Virginia, page 44	1,000 00

St. John's Chapel, Alexandria, Virginia, page 52	2,500 00
George. W. Mason, New Berne, North Carolina, page 53	1,250 58
Thomas Ewing, jr., Topeka, Kansas, page 53	5,890 78
E. R. Knight, Memphis, Arkansas scrip, page 59	1,700 00
Frank Quarles, Fulton County, Florida	1,000 00
Total	53,841 36

Nor has there been opportunity to examine the appraisements upon which loans have been made, many of which a cursory examination of the descriptions shows to have been excessive and far beyond the market value. This excess ought to have been taken into account by the committee in making an exhibit of the actual present condition of the company, and is alluded to to show how far the estimated unavailable and deficiency—$780,348.20—must fall short of the actual amounts.

[Here the hammer fell.]

Having disposed of the questions involving the accuracy of the examiner's estimate of the present condition of the bank, I pass to that of the bank in the matters of cash and United States securities, and will show a deficiency in those items from the amounts required by the law to be held of more than $1,200,000.

March 10, 1874. Meigs's total real securities, (my correction)		$1,389,269 41
Meigs's total sundry securities, (my correction)		618,228 20
		2,007,497 61
Real estate. Value of branch banking-houses	$165,374 38	
Real estate. Value of Washington banking-house	313,218 26	
		478,592 64
Total securities and real estate		2,486,090 25
Loans, short and overdraft, at twenty-one branches, not included in examiner's statement		373,621 64
Total loans, short and overdraft, and real estate counted as assets		2,859,711 89
Total assets of bank examiner's report		3,227,510 00
Total cash, parent office and branches, and United States securities		367,798 11

Eleven branches to be heard from.

Cash on hand at various branches, as per statements of the examiners.

Washington, District of Columbia, February 14, 1874	$23,032 42
New York, New York, March 4, 1874	18,075 00
Baltimore, Maryland, February 18, 1874	4,488 22
Richmond, Virginia, February 21, 1874	800 17
Norfolk, Virginia, February 24, 1874	7,738 07
Saint Louis, Missouri, March 13, 1874	2,940 03
Memphis, Tennessee, March 20, 1874	3,281 58
Louisville, Kentucky, March 9, 1874	3,252 58
Lexington, Kentucky, March 12, 1874	1,878 84
Little Rock, Arkansas, March 31, 1874	3,926 15
Wilmington, North Carolina, March 13, 74	2,176 11
Charleston, South Carolina, March 16, 1874	9,531 17
Beaufort, South Carolina, March 21, 1874	3,603 24
Macon, Georgia, April 10, 1874	949 14
Savannah, Georgia, March 24, 1874	3,873 27
Augusta, Georgia, April 3, 1874	4,689 66
Atlanta, Georgia, April 8, 1874	1,012 23
Jacksonville, Florida, March 18, 1874	11,429 87
Mobile, Alabama, April 25, 1874	10,327 38
Montgomery, Alabama, February 23, 1874, (closed)	----------
Huntsville, Alabama, April 23, 1874	880 66
Nashville, Tennessee, April 8, 1874	1,328 88
Total	119,214 65

Twelve branches to hear from, including New Orleans; Alexandria, Virginia; Columbus, Mississippi; Columbia, Tennessee; Lynchburgh, Virginia; Natchez, Mississippi; New Berne, North Carolina; Philadelphia; Raleigh, North Carolina; Shreveport, Louisiana; Tallahassee, Florida; Vicksburgh, Mississippi.

These twelve at date of examiner's report had deposits amounting to	$650,423 00
Out of a total of	3,299,201 00
If cash were held by them in the same proportion as in the other twenty-two, the amount would be, (estimated)	29,273 00
Which added to reported in twenty-two cases	119,214 65
Would give total cash at branches	148,487 65
Subtract this amount from	367,798 11
And there remains, as the maximum possible, of United States securities and cash held by the parent bank	219,310 46
According to the law there should be	1,669,448 07

These flagrant violations of law were made with deliberation and in the face of the warnings of the watchful Comptroller of the Currency.

On the 23d of February, 1873, (Senate Miscellaneous Document No. 88, Forty-second Congress, third session, page 2,) in his report, that officer uses the following decided language:

From this statement it will be seen that the total amount of deposits at that date was $4,008,642.34. The bills payable were $460,000. The bank holds $718,050 of United States bonds, a portion of which have been pledged as collateral security for its bills payable. The bank also holds Washington City securities and claims against the board of public works amounting to $54,175.63. Its loans upon real estate, chiefly in the city of Washington, amount to $1,794,478.05. Loans have also been made upon vouchers of the board of public works amounting to $189,000; upon chattel mortgage, $37,000; and upon other collateral and personal security to the amount of $250,653.40. The security for loans upon real estate is generally estimated to be good for the amount of the loan; but a large portion of these loans have been made upon security not equal to twice the value of the loan, as required by law.

It is claimed that the loans upon vouchers of the board of public works, upon chattel mortgage, and upon personal security are authorized by section 6 of the act above quoted. Many of the securities upon which these loans are made are believed to be worth the amount of the loan. The value of other securities is not known, and other additional loans seem to have been made upon the security of promissory notes rather than upon the collateral security held by the bank.

Only a small portion of these investments can be considered "available" for the purpose of raising money in the market to meet the unexpected calls of depositors, and it is believed that it was not the intention of the act of incorporation to authorize investments of this character. The officers and trustees of the institution have violated the act under which it was organized by establishing branches in the different cities of the Union, by purchasing real estate and erecting buildings, by loaning money upon real estate of less than one-half of the value of the loan, by loaning money upon collateral security not immediately available for the payment of de posits, and by borrowing money.

The rate of interest offered to depositors for some time past has been 6 per cent., and it is believed that the undesirable loans held by the bank have been made, to a large extent, from the desire of the trustees to invest as speedily as possible the funds of depositors at high rates of interest. Section 6 of the act under which the bank was organized should be amended so as to prevent investments being made except upon securities of well-known marketable values. The branches of the bank, if they are to be continued, should also be authorized by act of Congress, and the rate of interest to be offered to depositors should also be limited by law, and the bank required to accumulate a surplus to provide against future losses. The act under which the institution was organized was evidently drawn without sufficient consideration, and it is suggested that a new organization act be passed and the present law repealed. With proper legislation and necessary restrictions the bank would be able to correct the mistakes already made, to retrieve its present and prospective losses, and be enabled to continue a business of great usefulness to the class of depositors for whose benefit the institution was organized.

Examiner Meigs, in his report February 5, 1873, which forms part of the document, (page 9,) says:

The question of the improvement of their lands in Washington City seems to be clearly a violation of their charter, and is submitted without further comment.

The funds of the institution are loaned in sums of fifty to fifty thousand dollars, and these loans are widely spread as to location and diversified as to character. The majority of the security for the loans upon real estate is located in the District of Columbia.

Many of the loans are of a character that should not appear upon the records of a savings-bank, and will finally result in some loss to the institution; but the probable amount of such ultimate loss it is very difficult to determine at this time.

A more full inquiry as to values in certain cases is now in process, the result of which will be communicated in due course.

The executive officers are, in my opinion, men of the most undoubted integrity of character, devoted to the best interests of the institution, working for small compensations, and have educated themselves to the practical knowledge of the business of a savings-bank to a degree that promises a prosperous future for the institution.

I would respectfully suggest the repeal of all the present laws under which savings-banks of the District of Columbia are now doing business, and which admit by inference, if not directly, of such wide departures from the line of safety in the pursuit of undue profit in the use of the sacred funds committed to their charge as have passed under my observation in my present examination of all the savings-banks of the city of Washington.

Notwithstanding such decided official warnings, these officers of "undoubted integrity of character," who had "educated themselves to the practical knowledge of the business of a savings-bank to a degree that promises a prosperous future for the institution," "in the use of the sacred funds committed to their charge," deliberately continued in a policy publicly branded as illegal and dangerous.

Of the total loans to Vandenburgh, the contractor, amounting to $184,989.62, $92,127.21 were made *after* the date of the above report, February 5, 1873, and of the list of twenty-seven pages of loans on "sundry securities," eighteen pages, or two-thirds, are of that class made *after* the same date. I leave to men who believe in strict adherence to law and safety in the management of a "sacred trust," involving the scanty earnings of the classes who toil with their hands for daily bread, and to all men who think that faith should be kept, even with a poor negro, in the promises made to him to induce him to put his savings into others' keeping for use, how far the managers of this bank deserve the apologies made for them by the gentleman in charge of the bill.

So far as security to depositors is concerned, the bill provides for nothing that was not already fully covered by the old laws, except the single clause limiting the amount of any one loan to $10,000. The section copied from the national-bank act elaborating vengeance for the petty clerk or branch cashier does not guard against the real danger to the depositor. As usual, the net is spread only for the little fishes.

The insolvent condition of the bank to-day is the result not of pilferings and embezzlements by petty clerks, but of investments and management of funds made in the teeth of the present law, by gentlemen higher up in the scale than the committee's bill reaches. There is in the new bill not an additional safeguard against a willful violation of law. There is no machinery for punishing it; there is no provision, as in the case of national banks, enabling the sworn officer of the Government on behalf of the people to step in and protect the interests of the people; there is no contrivance by which depositors can ever attain knowledge of the condition of affairs of the bank. The Comptroller may examine and report; but he has no power to act, and his reports are never to see the light. And, finally, when the affairs of the concern are clearly desperate, instead of placing them, as in the case of other banks called into life by acts of Congress, in the hands of the Comptroller of the Currency, the representative of the power of the people, they are given without check or restraint for final disposition to the very men who have already been proved false to their trusts, and already have squandered a half a million of poor men's savings upon "rings" and "favorites." Verily, the kindness of the friends of the managers of this bank for the poor negro is akin to that for the wolf as against the lamb.

I desired to make an argument against the constitutionality of the clauses recognizing and legalizing branches, but I have only time to indicate it.

It has been clearly decided in McCulloch vs. State of Maryland (4 Wheaton) that the United States has no general power to charter a corporation, but can charter one only so far as it is a means toward executing one of the declared powers of the Constitution and subserves some purpose of the Government. This decision is in accordance with the reasonings of the leader of the federalists, Mr. Hamilton, that of Judge Story in his Commentaries, and has been adhered to in all subsequent decisions. This bank is a charitable institution, subserving no purpose of any expressed power of the Government, and having no relationship to the national-bank system. So much of the act, therefore, legalizing operations outside of the District, within the limits of sovereign States, is clearly beyond the pale of the Constitution, and void. I can only express my surprise that a prominent member of the party, professing jealousy of State rights almost as a religion, should have consented to assume the responsibility for such attempts upon State rights as is made in this bill.

In conclusion, I maintain that this bank cannot be propped up by any legislation. It is an edifice with crumbling walls and undermined foundations. A prolongation of its existence is not kindness but cruelty to the present depositors and the colored people in general. The longer the day of its dissolution is put off the larger will be the number buried under its ruins when the inevitable crash shall come.

The fact that, since the resolution of inquiry introduced by me, and referred by the House, at my request, to the Committee on Banking and Currency, a great change has been made in the *personnel* of the officers of this bank, only appeals more strongly to my sympathy and makes me redouble my efforts. These new men, inexperienced in matters of finance, knowing nothing of and unknown to the moneyed world, have been put in charge of a ship, with timbers eaten through by worms, and canvas rotten with the mildew. In the first rough sea their craft will go down, bearing with it their reputations and the precious freight, the "sacred fund," of the poor people of the South.

I await with calmness and confidence the judgment of that day to decide between myself and the supporters of this bill, as to who was the true friend of the colored man.

Cheap Transportation.

SPEECH OF HON. GEO. W. HENDEE,

OF VERMONT,

IN THE HOUSE OF REPRESENTATIVES,

May 19, 1874.

The House, as in Committee of the Whole, having under consideration the President's annual message—

Mr. HENDEE said:

Mr. SPEAKER: Very much has been said during this session by eminent gentlemen upon this floor on the question of cheap transportation, but it seems to me that the subject has not yet been exhausted or been considered in its most important relations. And it is not my present purpose to discuss the question so fully as its importance warrants, but I shall do so at some future time, when the subject is before us in a more definite form. To my mind the proposition which has brought out so many able, earnest, and instructive, speeches, is not the one which can bring that substantial and permanent relief now demanded by the producing and other commercial interests of the country. I believe we should be very cautious about embarking in any project which can bring about only temporary and partial aid.

Our country is broad and possesses unlimited wealth. Our Government is substantial; the people are intelligent, united, and liberal, and as their representatives they cannot afford to have nor do they expect us to take narrow views or adopt insufficient and doubtful measures upon subjects of such national importance. This great question settled as it should be is settled for all time. No half-way measures that shall be adopted by us can or will satisfy the people, and such means must fall far short of meeting the demands of the producers of the West and the consumers and manufacturing interests of the East. The consumer must have his breadstuffs at reasonable prices, and the producer must in order to continue his work receive ample profits. Our country is a live, progressive country. It is not vigorous and healthy to-day and dead or dangerously diseased to-morrow.

Enterprise has no stand-still, but is continually moving and demanding more room. The great West does not one year produce a given amount of cereals and the next year a less quantity, but since settlements commenced in that land of harvests productions have annually increased, and must for all time to come. At the same time the demands of the eastern consumer and those of foreign countries will still exist, and will increase in proportion. The West must feed the East from its fields, and the East in turn must clothe the West from its manufactories, and furnish her with her groceries and luxuries from its markets, and each with profit to itself. Legitimate wealth and not poverty should be the result of these sectional yet national industries, and to this great end the two sections should be brought as near together commercially as possible. The granaries of the West and the markets of the East must be made accessible each to the other.

Mr. Speaker, this country is yet in its youth; has hardly attained its manhood, and *now* in my judgment is the time and the occasion to provide for its proper development and full age. Then in its wet day it will take no harm, panics will be unknown, and the cry for more currency never uttered.

Sir, I fear the people, especially those of New England and the Atlantic States have not yet stopped to consider this great question. They do not seem to realize its importance or the magnitude of the benefits which must result from its favorable solution.

The West has for many years been talking, working, and holding conventions in the interest of cheap transportation, while the East has been comparatively unmoved. I say the West is awake, and so she is; and yet thus far this session all she has offered on this floor is the so-called McCrary bill. To me this is but an apology. Its relief is too weak, too doubtful, and too short-lived; and if here I should probably have voted for the bill, because if, as its friends believe, it is to be a benefit to the producers of the West it must be of value to the people of the East. If it will reduce freight charges from the West to the Atlantic, it must do the same from Vermont to her markets. But that it is to answer the demands of the country I do not believe. That it is to be the great panacea for all the troubles and complaints of the farmers of the West it seems to me cannot be true, and for these reasons:

First. The board of commissioners created by the bill must be a political board, and you at once bring the railroads and producers into a war with each other on the question of who shall control the appointing power.

Second. If the railroads are not allowed by the board of commissioners what they believe to be reasonable rates, or are allowed more than the shippers think reasonable, appeals will be taken to the courts, and we have the whole matter tied up in litigation by suits at law, bills in equity, and injunctions for years. This will occur first in one State and then in another, and before the questions can be settled and the law brought into full power it will have lost its force and will fail in its purpose.

Third. The natural tendency will be, as I have said, to bring on a war as to which party shall control the appointing power, and the contest will not stop there, but will go back into the elections of Legislatures, judges, and other officers of the law, and while this is going on the law will furnish no relief. And such strifes I fully believe would be injurious to the best interests of the railroads, and to the producers as well, and put off too long the day of permanent cheap transportation.

Again, suppose the McCrary bill, if it should become a law, did furnish all the relief its friends have promised, still it will come far short of the requirements of this growing country. And why? It is admitted that the railroads are transporting the productions of the West and the merchandise of the East between the great distributing points, Chicago and Saint Louis and the Atlantic, at nearly as low rates as they can afford to; and yet it cost to ship a bushel of wheat from Chicago to Boston by rail in 1873 about forty cents and at this price there is but little profit to the producer, and this of course is the cause of his complaint.

Now, sir, the McCrary bill will not remedy this, because no commission would compel the railroads to carry freight at less than cost or without a profit. If they did it would kill the railroads, and when you do this you ruin the producer. In my judgment neither can exist without the other.

Abuses should be corrected, monopolies broken up, combinations and unjust discriminations prevented, and differences adjusted; and to this end the McCrary bill may have some utility if it can be justly executed. But the question is, will it cheapen transportation where most needed, between competing cities in the West and the Atlantic? I think not.

But it may be said the bill will regulate railroad freights between Chicago and points West and South, and between Saint Louis and points West, and between local points in different States that do not have the benefit of healthy competition; and this I think should be the extent of the claim of its friends.

But, sir, the producers of the West cannot afford to wait until their war growing out of this bill, if it should become a law, is ended. They should seek another remedy with all consistent speed. And what is that remedy? I answer, one or more great water-routes from the Mississippi to the Atlantic.

On the 16th of December, 1872, the Senate of the United States adopted the following preamble and resolution:

Whereas the productions of our country have increased much more rapidly than the means of transportation, and the growth of population and products will in the near future demand additional facilities and cheaper ones to reach tide-water; and whereas in his recent message the President of the United States invites the attention of Congress to the fact that "it will be called upon at its present session to consider various enterprises for the more certain and cheaper transportation of the constantly increasing western and southern products to the Atlantic sea-board," and further says "the subject is one that will force itself upon the legislative branch of the Government sooner or later, and I suggest therefore that immediate steps be taken to gain all available information to insure equitable and just legislation; * * * I would therefore suggest either a committee or a commission to be authorized to consider this whole question, and to report to Congress at some

future day for its better guidance in legislating on this important subject:" Therefore,

Resolved, That a committee of seven be appointed, to whom shall be referred that part of the President's message relating to transportation routes to the sea-board.

And on the 26th day of March, 1872, the following resolution was passed by the Senate:

Resolved, That the Select Committee on Transportation Routes to the Sea-board be authorized to sit at such places as they may designate during the recess, and to investigate and report upon the subject of transportation between the interior and the sea-board; that they have power to employ a clerk and stenographer, and to send for persons and papers; and that the actual and necessary expenses attending such investigation be paid out of the contingent fund of the Senate upon vouchers approved by the chairman of said committee.

This committee was appointed and Senator WINDOM, of Minnesota, made chairman. The other members of the committee are Senators SHERMAN, of Ohio; CONKLING, of New York; WEST, of Louisiana; CONOVER, of Florida; MITCHELL, of Oregon; NORWOOD, of Georgia; DAVIS, of West Virginia, and JOHNSTON, of Virginia.

This committee occupied quite a portion of last summer and fall traveling through the country examining the different routes, and in taking testimony upon the subject they had in charge. That committee reported to the Senate but a few days since. Their report is printed and contains over eleven hundred pages, including the evidence upon which it is based. I have examined it with much care and interest, and take this opportunity to say that it is a valuable document, prepared with great study, and evidently with great caution that it should be reliable. It should be in the hands of every true friend of cheap transportation. To it I am indebted for very much of the statistical information I shall before I close bring to the attention of this House. I most earnestly bespeak for the report that consideration which the magnitude and importance of the subject of which it treats demand.

This report brings to us a proposition for the construction of four water channels from the grain-growing fields of the western world to the Atlantic and to the markets and consumers of the East. They are designated as the "Mississippi route," the "northern route," the "central route," and the "southern route," and the improvements suggested by the committee are set out in these words:

The improvements necessary on the Mississippi route are: 1. The opening of the mouth of the river so as to permit the free passage of vessels drawing twenty-eight feet; estimated cost $10,000,000. 2. The construction of reservoirs at the sources of the river, (if upon a careful survey they shall be deemed practicable;) estimated cost $114,000. 3. Improvements upon a system to be provided by the War Department, at all intermediate points, so as to give from three to five feet navigation above the Falls of Saint Anthony, from four and a half to six feet from that point to Saint Louis, and from eight to ten feet from Saint Louis to New Orleans, at the lowest stages of water; estimated cost $5,000,000.

The total cost of the Mississippi improvements may, we think, be safely estimated at $16,000,000.

THE NORTHERN ROUTE.

The improvements suggested on this route are—

1. The Fox and Wisconsin Rivers improvement, by which five feet of navigation will be secured during the entire season from the Mississippi River to Green Bay, thereby affording the shortest and cheapest connection between the centers of wheat production and the eastern markets, and a continuous water channel from all points on the Mississippi River and its tributaries to the Atlantic Ocean. Estimated cost, $3,000,000.

2. The construction of the Hennepin Canal (sixty-five miles long) from a point on the Mississippi River, near Rock Island, to the Illinois River at Hennepin, thereby affording the shortest and cheapest route from the largest areas of greatest corn production to the East, and a connection by water between the river system of the West, the northern lakes, and the Atlantic Ocean. Estimated cost, $4,000,000.

3. The enlargement and improvement, with the concurrence of the State of New York, of one or more of the three water-routes from the lakes to New York City, namely: The Erie Canal, from Buffalo to Albany; the Oneida Lake Canal, from Oswego to Albany; or the Champlain Canal, from Lake Champlain to deep water on the Hudson River, including such connection as may be effected between Lake Champlain and the Saint Lawrence River, with the co-operation of the British Provinces. Estimated cost, $12,000,000.

Total cost of northern route from the Mississippi River to New York City, $19,000,000.

The enlargement of the Welland Canal, now in progress, with the construction of the Caughnawaga Canal, and the proposed enlargement of the Champlain Canal, will enable vessels of 1,000 tons to pass from western lake ports to ports in Vermont and to New York City. The Erie Canal, enlarged as proposed, will pass vessels of about 700 tons.

THE CENTRAL ROUTE.

The plan of improvement for this route contemplates—

1. The radical improvement of the Ohio River from Cairo to Pittsburgh, so as to give six to seven feet of navigation at low water. Estimated cost, $22,000,000.

2. The improvement of the Kanawha River from its mouth to Great Falls, so as to give six feet of navigation at all seasons. Estimated cost, including reservoirs, $3,000,000.

3. A connection by canal or by a freight-railway from the Ohio River or Kanawha River, near Charlestown, by the shortest and most practicable route, through West Virginia, to tide-water in Virginia; the question as between the canal and freight railway to be decided after the completion of careful surveys and estimates. If by canal and slack-water, the estimated cost is $55,000,000; if by a freight railway, the cost would probably not exceed $25,000,000.

The total expenditure necessary for the improvement of the Ohio and Kanawha Rivers is estimated at $25,000,000. The amount necessary to complete the connection with tide-water depends upon the nature of the improvement, as above stated.

THE SOUTHERN ROUTE.

The plan suggested by the committee for the southern route contemplates, 1. The improvement of the Tennessee River from its mouth to Knoxville, so as to give three feet of navigation at lowest stages of water. Estimated cost $5,000,000. 2. A communication by canal, or freight railway, from some convenient point on the Tennessee River, in Alabama or Tennessee, by the shortest and most practicable route to the Atlantic Ocean. The railway, if constructed, will be about four hundred and thirty miles long; the question as between the canal and railway to be decided after a careful survey and estimate of both shall have been completed. If by canal, the cost will be about $35,000,000. If by railway, probably about $30,000,000. Large portions of all of the above routes have been surveyed, and careful estimates prepared by the War Department. It is recommended that appropriations be made at the present session of Congress for completing the surveys of the entire system of improvements proposed, in order to determine accurately the cost of each route, and to enable the Government to enter at once upon the work, if the same shall be deemed practicable and expedient, after such surveys shall have been completed.

Now, while I concede the importance of all these routes and shall not antagonize either, I shall confine myself for a short time to the consideration of the northern route. This route I shall maintain is the most important, can be completed at the earliest day, and for the smallest expenditure by the Government. I assume from the facts found by the committee that it will furnish the relief sought for to the greatest number and to the largest commerce.

This route has two branches from the Mississippi River to Lake Michigan, and then is common to the entrance of the Welland Canal on Lake Erie. From that point to Troy, New York, it has three routes, and from Troy to the Atlantic it becomes common again, that is down the Hudson River to New York City.

Before I proceed to a consideration of this route I wish to show, first,

THE NECESSITY FOR ITS CONSTRUCTION.

I have said the consumer must have cheap bread, and the producer must at the same time receive a fair profit for his labor.

Years ago, when we had no inhabited West, New England and the Northern Atlantic States were compelled and did raise their own breadstuffs, and it had only to be transported from the field to the granary, which added nothing to its cost. At a later day and as the West began to be settled and to produce, the New England farmer found he could not compete in the raising of grain, and turned his attention to the raising of cattle, horses, sheep, and hay, and the making of butter and cheese for market, and to-day New England is one grand field of pure grasses and rich pasturage, covered with fine horses and innumerable herds of cattle and sheep, with streams noisy with moving machinery and cities active in commerce.

The population of New England is now over three and one-half millions of people, and they are dependent on the fields of the Northwest and lake regions for their daily bread. The grain shipped into New England for consumption last year was over forty million bushels.

What I have said of this section will apply to New York and other Atlantic States. New York alone consumed in 1873 of grain raised outside her borders, near forty-five million bushels.

Again I ask your attention to statistics which are authentic and reliable, and which of themselves are a sufficient argument in support of my first proposition. These figures not only show the amount of cereals raised, but the increase from 1840 to 1870.

Statement showing grain produced in the ten States that will be directly accommodated by this great northern water-way for the years 1840, 1850, 1860, *and* 1870.

Illinois alone raised more than twenty-four times as much wheat as all New England, and nearly thirty times the amount of corn produced by the six Eastern States.

It may not be out of place to give in this connection the population of these ten Western States in 1830, 1840, 1850, 1860, and 1870:

States.	Population.				
	1830.	1840.	1850.	1860.	1870.
Ohio	937,903	1,519,467	1,980,329	2,339,911	2,665,260
Michigan	31,639	212,267	397,654	749,113	1,184,059
Indiana	343,031	685,866	988,416	1,350,428	1,680,637
Illinois	157,445	476,183	851,470	1,711,951	2,539,891
Wisconsin		30,945	305,391	775,881	1,054,670
Minnesota			6,077	172,023	439,706
Iowa		43,112	192,214	674,913	1,194,020
Kansas				107,206	364,399
Nebraska				28,841	122,993
Missouri	140,455	383,702	682,044	1,182,012	1,721,295
Total	1,610,473	3,351,542	5,397,518	9,091,879	12,926,930

Now, sir, these figures show that the increase in productions and population have kept pace with each other. Of course this increase will continue, and as new farms are taken up and the Territories become settled it will be more rapid than heretofore. In my judgment it has no bounds, and no probable or anticipated circumstances, however adverse to progression, can give any limit or interfere with its onward step.

Now, Mr. Speaker, I will attempt to show how much of this grain was transported beyond the territory that produced it, because this must be one and perhaps the main fact relied upon in determining the demand, yes, the absolute necessity, for securing to the people at an early day cheap transportation. For my present purpose I shall only give the amount which would naturally have been floated through this northern route had it been in existence.

In 1872 there were transported into the New England States for their consumption 41,132,225 bushels of grain from the West. During the same year New York consumed over 45,000,000 bushels of western cereals. In the same year the number of bushels of wheat, including flour at 4½ bushels per barrel exported from the United States, was 37,738,487, and of corn the amount was 35,726,990 bushels; total, 73,465,477 bushels. In 1873 the exports from the United States were 93,080,400 bushels, an increase of several millions over 1872.

Now, sir, of the 73,465,477 bushels of wheat and corn exported in 1872, 43,718,445 bushels were exported from the ports of Portland, Boston, and New York. In the same year there were exported of wheat and corn from Montreal raised in the United States 15,113,029, bushels, making a total of 144,963,699 bushels of grain, nearly all of which would have been carried through this route, or parts of it. In addition to this I wish to give the statistics which I find in Senator WINDOM's report relative to the amount of grain and other articles shipped from Chicago east by rail, and also by the lakes, in the year 1873, and first by rail:

Articles.	Quantities.	Tons.
Flour ..... barrels..	1,773,467	177,346.7
Wheat ..... bushels..	8,149,209	424,476
Corn ..... do....	2,194,561	61,447.7
Oats ..... do....	9,599,635	152,954

I give this by months for the purpose of showing the time during the year when the lakes were open to navigation, though this question I treat further on. It will be seen by these figures or tables that over 15,000,000 bushels of wheat were transported by water against a little over 8,000,000 by rail; and that of corn there was shipped from Chicago by water over 34,000,000 bushels as against only a little over 2,000,000 by rail. Now, if you add to the wheat and corn shipments the tonnage of the other articles named in the tables I have given, I have no doubt that the traffic through this northern route from West to East will exceed 6,000,000 tons annually.

The return tonnage of course is not nearly as large, but is annually on the increase. Reliable information will bear me out in this statement that shipments west from the Eastern and Atlantic States, including imports, are full one-half in tonnage of the shipments from West to East. If this is correct the freight passing through this route when completed would not be less than 10,000,000 tons annually.

Mr. Speaker, another essential element which should enter into the discussion of the question of necessity is the subject of cost of transportation by the existing means and by the proposed means. And first, I assume that it will be admitted that the cost of transporting grain and other merchandise has much and in many instances all to do with the question whether the commodity can be produced at all or not; and again, that distance from market, and the facilities with which producers of competing nations can reach these markets must be and are matters that should be considered in this connection; and for the purpose of my remarks at this time I will only refer to the effect of these conditions on the production of wheat and corn in the United States.

From 1860 to 1872 inclusive the United States exported into the United Kingdom of Great Britain 257,852,380 bushels of wheat, and Russia exported during the same period into the same territory 224,035,760 bushels, and Germany 154,761,283 bushels. From this it will be seen that the United States has two formidable competitors, Russia and Germany, in wheat-raising for exportation.

Our competitor in the shipping of corn to the United Kingdom is Turkey; we having exported in the same years, 1860 to 1872 inclusive, 123,273,007 bushels, and Turkey 107,581,577 bushels.

In the matter of wheat exportation Russia has been rapidly gaining ground, as will be shown by these facts: From 1860 to 1864 inclusive, five years, Russia exported to the United Kingdon 47,376,809 bushels, and the United States 127,047,126 bushels. From 1868 to 1872 inclusive, five years, the same country received from Russia 117,967,022 bushels, and from the United States 116,462,380. An increase from Russia of over 70,000,000 bushels, and a decrease from the United States of over 10,000,000. Now, why is this, and to what can it be attributed? It is not because Russia, Germany, and Turkey can produce at any less cost, but because they are nearer the British markets and their facilities for transportation more favorable and hence the cost less.

If our western farmers had no competitors the question of distance and means of transportation would be of little importance, because Europe must be fed, cost what it may; but the competition exists and our western producers must be put on an equal footing with those of Russia, Turkey, and Germany. It is stated by the report of the committee "that the value of American wheat in the British market is about 7 cents per bushel over the average from all other countries, and about 5 cents per bushel above that imported from Russia." Now, unless this difference is overcome in some way, we shall in a few years be driven from the markets of Europe and shall only be known there when the crops of Russia, Germany, and Turkey are a failure.

In order to keep this trade, which is the life of the West, we must furnish the producers cheap transportation. To my mind this solves the whole question. Bring the wheat and corn fields commercially as near to the consumers of foreign countries as is in our power and within reasonable expenditures, and we shall retain and strengthen our position in the British markets, and shall become permanently the food-producing country for the entire United Kingdom, France, and many other of the foreign countries.

I will now speak of the cost of transport of wheat and corn by present means between the West and the Atlantic.

In 1872 the average rate between Chicago and New York through the year on wheat on all-rail lines was 33¼ cents per bushel; by the lakes, Erie Canal, and Hudson River, 26.6 cents; by lake to Buffalo and thence by rail, 28.8 cents. The charges from the Mississippi River to New York the same year were an average of 16½ cents per bushel more than from Chicago. That is, the rate from the river to Chicago was 16½ cents per bushel; the cost per bushel from Chicago to Boston and other competing points in New England was 37 cents per bushel; and a little over 50 cents from the Mississippi River by the way of Chicago or Milwaukee.

I now ask your attention for a few moments to the probable rates for the moving of wheat and corn by this northern route. This class of freight can be moved by water for about one-third the cost by rail, and I think many good and experienced men put it at less. I have but little knowledge upon this subject, and must rely somewhat upon statistics and the opinion of others.

Careful estimates have been made as to the cost of moving grain through this northern water-way from Chicago and other lake ports in the West to the Atlantic and to points in New England, as well as from the Mississippi River to the same destination.

The cost or rate for the carrying of wheat from the Mississippi River to New York will be about 28 cents per bushel, and to Boston about 30 cents per bushel. The cost from Chicago to New York will be about 18 cents, and to Boston a trifle more. As I have shown, the present rates are about 18 cents per bushel larger; a saving well worth contending for. To say that the saving will be 15 cents upon every bushel of grain transported is perfectly safe. The saving will depend somewhat upon the kind of vessel used. Upon this question I will

quote from Hon. John Young, of Montreal. In a communication to Mr. WINDOM, as chairman of the Cheap Transportation Committee, he says:

The cost per ton from Chicago to New York by sailing vessels would be $3.76, or about 11 cents per bushel; and by steam vessels $6.21, or $18.6 cents per bushel.

I will here read an extract from his communication upon this point in which he compares the cost by the three routes to New York: that is, by Buffalo and Erie Canal, and Hudson River; by Oswego and canal to Troy, and Hudson River; and by the Saint Lawrence and Caughnawaga Canal, Lake Champlain, and Hudson River.

He says:

The Champlain route thus improved will have the further advantage of the more economic use of vessels of the *largest class proceeding* from any port on the lakes, without breaking bulk, direct to New York, and also the diminished length of canal navigation by that route. The construction of the Caughnawaga Canal will enable such vessels to land and receive cargo at Burlington and Whitehall, from whence western freights can be carried to and from Boston by railways *cheaper than by any other route to that city.*

This Caughnawaga Canal into Lake Champlain would thus open a large portion of New England to this route, and add largely to the revenues of the Welland and Saint Lawrence Canals, and give value to the railways of Western New England, which terminate at Lake Champlain. The Caughnawaga Canal built, the State of New York would not long hesitate in the enlargement of the Champlain Canal, so as to allow the vessel of 850 tons to sail from the interior lakes to New York direct without breaking bulk.

The following table of the cost of transport by the several routes is made up from Chicago, as a starting point common to all, from which vessels of 850 tons will perform the duty as far eastward as they can be navigated on each route. The routes through the Erie Canal, both by the way of Buffalo and of Oswego, will require the voyage of the large vessels to terminate at these ports, and the cargo to be transferred into canal-boats of 250 tons.

TABLE.

First. From Chicago to New York by the way of the lake to Buffalo, the Erie Canal, and the Hudson River to New York:

Route.	By sailing-vessels.	By steam-vessels.
From Chicago to Buffalo, 914 miles lake navigation, at 2 and 3½ mills per ton per mile	$1 83	$3 20
From Buffalo to West Troy, 353 miles canal navigation, at 8 mills	2 82	2 82
From West Troy to New York, 151 miles river navigation, at 3 and 5 mills	45	76
Transferring cargo at Buffalo	20	20
1,418 miles, per ton	5 30	6 98

Second. From Chicago to New York, by the way of the lakes and Welland Canal to Oswego, and thence by the Oswego and Erie Canals and the Hudson River to New York:

Route.	By sailing-vessels.	By steam-vessels.
From Chicago to Oswego, 1,057 miles lake navigation, at 2 and 3½ mills	$2 11	$3 70
Additional expenses on Welland Canal, 28 miles, at 3 mills	08	08
Oswego to Troy, 202 miles canal navigation, at 8 mills	1 62	1 62
West Troy to New York, 151 miles river navigation, at 3 and 5 mills	45	76
Transferring cargo at Oswego	20	20
1,410 miles	4 46	6 36

Third. From Chicago to New York, by the way of the lakes, Welland Canal, Saint Lawrence, Caughnawaga, and Champlain Canals, and Hudson River to New York.

Route.	By sailing-vessels.	By steam-vessels.
From Chicago to New York, 1,632 miles, at 2 and 3½ mills per ton	$3 26	$5 71
Additional expenses on the Saint Lawrence, Welland, Caughnawaga, and Champlain Canals, 167 miles, at 3 mills	50	50
1,632 miles	3 76	6 21

This is the statement of a very prominent engineer, Mr. McAlpine, and Mr. Young corroborates it, and so does Mr. Kirkwood and Mr. Child, two other noted engineers who have thoroughly investigated the subject.

If we can rely upon the judgment of these gentlemen, and certainly I find no reason to question their statement, the saving on each bushel of wheat or corn will be from 15 to 20 cents.

And upon this point the committee use this significant language:

From all points on the Mississippi River between Minneapolis, Minnesota, and Quincy, Illinois, the average railway rate to lake ports in 1872 was 17 cents per bushel of sixty pounds. From Chicago to New York, by rail, the average charge during that year was 33½ cents per bushel, and the average rate by water was 26.6 cents per bushel, making the all-rail charges through from the Mississippi to New York 50½ cents, and the rail and water charges, exclusive of all terminals, 43.6 cents per bushel. In the section of this report devoted to the Fox and Wisconsin Rivers improvement and the Hennepin Canal, we have shown that an average saving can be effected through their agency of at least 10 cents per bushel on all the cereals transported from points west of the Mississippi River and north of the southern line of Iowa.

It is believed by those who have studied the subject that the enlargement of the New York canals, so as to pass boats of six hundred to one thousand tons, will reduce the cost of transportation on that part of the line 50 per cent. The establishment of reciprocal trade relations with the Dominion of Canada, which shall induce the construction of the Caughnawaga Canal, (if such an arrangement can be made,) and which will encourage Canadian ship-masters to compete for the carrying trade on the lakes, will also materially cheapen the cost of transport to New England. The evidence taken by your committee fully justifies the opinion that by the enlargement of the New York canals, the construction of the Caughnawaga Canal, and the use of the enlarged Canadian canals, the cost of transport from Chicago to Burlington, Vermont, and to New York City will not exceed from 12 to 15 cents per bushel, making the entire cost from the Mississippi River to Burlington, Vermont, or to New York, not more than 22 cents per bushel, against the present cost of 43.6 cents by water and 50½ cents by rail. We may, therefore, reasonably estimate that by the proposed improvements upon this route a saving can be effected of 20 cents per bushel, or $6.70 per ton, on all the east tonnage moved between that river and the East.

During the year 1872 the average cost for transporting a bushel of grain from Chicago to the New England States was 37 cents. The average cost for the last five years has been 39 cents. Now, if it can be transported by this northern route for the prices named at a saving at least of 15 cents per bushel, the amount of benefit to the consumers of New England alone would be annually, taking the shipments of 1872 as a basis, $6,169,834. If you say this ought to be divided between the producer and the consumer, the saving to each would be $3,084,917. If the improvements between the Mississippi River and Lake Michgan proposed by the committee are made, a further saving of at least 5 cents per bushel would be realized, which would amount to $2,056,605 more, or $8,226,439 in all.

Thus far I have been laboring to show the existing necessity for the immediate construction of this great northern water-line, and I will close this part of my remarks by calling your attention to the opinions of others bearing upon this same point.

Sir Morton Peto, in his very interesting work on the Resources and Prospects of American Agriculture and Commerce, makes the following truthful observations:

How far is the amount of tonnage employed in inland intercourse in America adequate to the wants of the country? In considering this point we have to regard the very great length over which traffic has to be carried, and, looking at those distances, no reasonable doubt can be entertained that the inland navigation of America is very inadequate to the wants of the people. It has not, in fact, kept pace with the population and progress of the country. * * * A vast mass of produce is yearly destroyed from the inability of the carriers to forward it. The owners are ruined, and parties in the Eastern States who advance money on this produce must charge excessive rates to cover the risks of delay. The grain producers of the Western States are quite unable to find sufficient means of conveyance for their products, because the railroads from West to East are choked with traffic. * * * The produce of the Western States has, in fact, increased faster than the means of transport, and additional facilities for the conveyance thereof are urgently needed. * * * The prosperity of the West, the value of its produce, the value of its land, and the extent of land cultivated, indeed, all the material interests of the country therefore depend upon increased facilities for the conveyance of its products to market.

These are but a few and very brief extracts from the observations of that very astute and keen-sighted Englishman on this subject of "cheap transportation" between the East and West which he has recorded in his book. These observations were made more than ten years ago. Since then our agricultural products have vastly increased, while the means and facilities for transporting them to an eastern and European market have not been enlarged at all, and while the costs of transit on most articles have been nearly doubled.

The Chicago Tribune, in speaking upon this same subject, more than two years ago, stated that "the West is even now at the end of its transit ability. Not another ton of freight can be moved from the West to the East with the present means and facilities of transportation, immense as they confessedly are."

Governor Merrill, of Iowa, in a letter to Colonel L. A. Thomas, dated October 4, 1871, in commenting upon this statement, says:

If this was true at that time, (and I have not the slightest doubt of it,) how much more emphatically is it the case at the present day; the facilities of transportation thus fully occupied then, have not been increased, yet the population of the West in that period of time has been augmented by nearly, if not quite, a million of people, nine-tenths of whom are agriculturists, who by their industry and energy are adding immensely to her agricultural products, even while the fruits of their labor yield them little more than a bare living. And no amount of probable increase of railroad facilities will be adequate to the demand.

I now quote from the proceedings of different conventions, boards of trade, and legislatures in the West that have taken action upon this subject.

The commercial convention, held in the city of Dubuque, in May, 1864, by delegates from nearly all the Northwestern States, in their resolutions to Congress say: "The increasing development of the vast agricultural, mineral, and commercial resources of the Northwest, and more especially of the Upper Mississippi Valley, require and demand the opening, at the earliest possible periods, of a water communication between the eastern sea-board and the Mississippi River, by the nearest, cheapest, most expeditious, and most practicable route."

A commercial convention of the people of Missouri, Iowa, Illinois, Minnesota, and Wisconsin, held at the same place, on the 14th and 15th days of February, 1866, in their report and memorial to Congress say: "Many of the great staples are nearly valueless; and never before, in the history of the country, did the fruit of the laborer produce so little comfort. Corn, in many places, is used for fuel; oats in the stack rot unthrashed; barley and rye cannot be moved, and wheat, except of the first quality, leaves no margin to the shipper. If animal products form an exception, it is only because of the scarcity war has produced, and their price will soon reach the low level of the cereals. In all this there is a great want, a sore need; and if no remedy can be found, production in this region must diminish, and the

strongest arm of the nation must wither. But one means of relief can be afforded, which is to provide cheaper transportation to the markets of the world for our heavy products. * * * The good results to flow from the successful accomplishment of this great purpose can hardly be enumerated. They are as multiplied as the industries of the nation, and vast as its wonderful resources."

The commercial convention of delegates from all the States of the Mississippi Valley, held at Keokuk on the 7th day of September, 1867, in their proceedings say: "Uninterrupted water transportation from the Mississippi Valley to the Atlantic Ocean is indispensable, and an imperative necessity."

In a memorial to Congress, extensively signed by the people in the Upper Mississippi Valley, and forwarded to their respective representatives in 1866, 1867, and 1868, they say: "The experience of the whole country for the last few years has most abundantly proven that new, cheaper, and more direct commercial communications must be speedily opened up between the East and the West, or the expansion and continued prosperity of the latter must very soon reach a limit beyond which it cannot pass. Railroads are entirely inadequate to supply that need. We confidently affirm that nothing but a continued water communication between the eastern sea-board and the Mississippi can, by any possibility, obviate this difficulty." These memorials further say: "This region (the Upper Mississippi Valley) will raise and send to market this year (1868) about seventy million bushels of wheat, or two million tons. There will also be imported hither at least one million tons of merchandise and other freight, making in all three million tons, besides beef, pork, and other agricultural products which must seek an eastern market.

The city council of the city and the board of supervisors of the county of Dubuque, in a memorial to Congress on this subject, say: "That upon the speedy completion of the great national thoroughfare from the Mississippi by way of the Wisconsin and Fox Rivers, the great lakes, the River Saint Lawrence, and Lake Champlain, to the tide-waters of the Atlantic at New York City, depends in a very great measure the future development and continued prosperity of the entire Northwest."

The twelfth General Assembly of the State of Iowa, in a memorial to Congress in relation to this question, say: "That the great want of our State is cheap transportation for our heavy products to the markets of the world. That the most feasible plan to secure this end is to provide a direct and continuous line of water communication between the Mississippi River and the Atlantic sea-board.

The executive committee of the commercial convention held at Detroit in 1871 passed the following resolution:

Resolved, That the business men in all parts of the country interested in cheap transportation between the West and East be invited and requested to meet in convention at Detroit, in the State of Michigan, some time this autumn, to devise ways and means of opening up, at the earliest practicable period, a continuous water and steam navigation route, of maximum capacity, from the Mississippi Valley, around the Falls of Niagra on the American side; thence by the way of Lake Ontario and River Saint Lawrence, Lake Champlain, and Hudson River, to the Atlantic Ocean by the nearest, cheapest, and best route; also to petition Congress to assist in the consummation of this great continental as well as national enterprise, by making an appropriation adequate to the construction of the works at Niagara Falls.

The following is a petition presented to the Legislature of Iowa in 1869:

To the honorable the General Assembly of the State of Iowa:

The undersigned, citizens of Iowa, would state that the people of the entire country, and more especially of the Northwest, have become deeply interested in the question of uninterrupted water communication between the Mississippi Valley and the Atlantic sea-board, and more particularly in relation to the route by the way of the Wisconsin and Fox Rivers, the great lakes, the River Saint Lawrence, and Lake Champlain, to New York City. Although this great transcontinental work must be mainly carried out (if at all) by individual enterprise and capital, the interposition and assistance of the General Government will be indispensable to its final success. We would therefore respectfully request the Legislature to memorialize Congress for such legislation and material aid as may be necessary to secure a speedy consummation. Also, to invite the co-operation of the Legislatures and people of the country, and more especially of the Western and Northern States, in this work. And also to suggest some plan of operation whereby the influence, energy, and capital of the whole country can be successfully concentrated upon this great national and continental enterprise.

This was signed by Lewis A. Thomas and many other leading citizens and business men of that State.

In 1872 the Legislatures of Iowa, Kansas, Minnesota, Wisconsin, and Ohio, each memoralized Congress in behalf of this national water-way and I think all but one described the route by the way of the great lakes, Saint Lawrence River, Lake Champlain, and the Hudson River.

It seems to me that further words and opinions upon the point are unnecessary.

I will now answer one or two objections that are made against the northern line. It has been urged by some, and I fear in a spirit of selfishness, as an objection to this route that it will be closed with ice so long each year as to seriously affect its value. In answer to this objection I will call attention to a statement which is official in character and prepared by Henry Orvis, deputy collector at Rouse's Point, New York; it is dated October 13, 1873:

Statement showing date of the opening and closing of navigation on Lake Champlain, at Rouse's Point, from 1859 to 1873 inclusive.

Year.	Opened.	Closed.	Number of open days.	Year.	Opened.	Closed.	Number of open days.
1859	April 5	Dec. 2	242	1867	April 21	Dec. 1	225
1860	April 16	Dec. 5	234	1868	April 7	Dec. 2	240
1861	April 3	Nov. 29	241	1869	April 23	Dec. 3	225
1862	April 24	Dec. 1	222	1870	April 18	Dec. 1	228
1863	April 11	Dec. 6	240	1871	Mar. 28	Nov. 27	244
1864	April 11	Dec. 9	243	1872	April 28	Nov. 30	217
1865	Mar. 31	Dec. 5	250	1873	April 27		
1866	April 19	Dec. 13	239				

Another fact I may be allowed to state here is that the Saint Lawrence route is open and free to navigation several days longer each year than the Erie Canal, a line that has for years been doing an immense business and is now largely relied upon as the New York and Boston water line for western produce.

This question is settled by this statement of facts, found in the report of Mr. CONGER, from the Committee on Commerce, on the Detroit commercial convention memorial, made to this House during the Forty-second Congress. That document says:

These tables demonstrate that for fifty-three years prior to 1867 the average time of actual navigation down the Saint Lawrence to the Atlantic Ocean was 272 days. On the Erie Canal for forty years prior to 1864 the average time was 232 days, or 40 days less than down the Saint Lawrence. On the Hudson River the average time of navigation was 270 days, or 2 days less, and on the lakes 280 days, or 8 days more than down the Saint Lawrence.

ACTUAL TIME OF SUSPENSION OF NAVIGATION.

The average time of actual suspension of navigation for fifty-three years prior to 1867 on the Saint Lawrence was only 93 days; on the Hudson, 95 days; on the Erie Canal, 133 days; and on the lakes, 85 days in each year. Actual suspension of navigation for about the same period from Saint Paul (or Fort Snelling, a few miles above,) to Saint Louis on the Mississippi, 130 days.

From 1848 to 1868 the Welland Canal was open to navigation an average of twenty-one days each year longer than the Erie Canal.

I have already shown that the transportation of wheat and corn in 1873 from Chicago East by water was about five bushels to one shipped by rail, and that the heavy traffic in these articles on the lakes was in the months of April to November inclusive; a period when this northern line will always be open for navigation.

Mr. Speaker, there is nothing in fact in this objection.

It is said also that this is longer than either of the other routes. In distance it is, but in time it is not; and in cost of maintaining and operating it it has the advantage of either the Erie or Oswego routes.

In 1858 Mr. McAlpine said to the Montreal harbor commissioners that—

By way of Oswego a transshipment must be made from the lake vessel to canal-boats, and the extra cost of canal transport and tolls must be added to that route; while by way of Lake Champlain to New York no transshipment is required. And again, the Champlain route thus improved will have the further advantage of the more economic use of vessels of the largest class, proceeding from any port on the lakes directly to New York without breaking bulk, and also the diminished length of canal navigation by that route. On the whole, the economy of time and transport by the Lake Champlain route could not fail to attract to it a very large share of the trade between the Western States, New England, and New York.

In this statement he was fully sustained by both Kirkwood and Child.

I wish now to quote from the able speech of Hon. Smith M. Weed, delivered in the New York Assembly April 15, 1873. In speaking of the relative merits of these routes, he said:

Distinguished engineers have demonstrated that with the Champlain Canal enlarged to a capacity for boats of a little over five hundred tons, and the Caughnawaga Canal constructed as proposed, a ton of freight could be transported by the Champlain route at from 40 to 60 per cent. less than by the Erie or Oswego route. This, it will be remembered, is with a canal capable of passing boats of five hundred tons.

On the question of time, Mr. WINDOM says in his report this:

Assuming the speed of boats on canals, of the dimensions proposed, to be four miles per hour when propelled by steam, and the speed of propellers on the lakes and rivers to be eight miles per hour, and adding ten hours to the time by the Oswego and Buffalo route for the transshipment from lake-vessels into canal-boats, we find the time required to move grain from Chicago to New York by the three routes to be as follows:

By Caughnawaga route, 234 hours, or 9¾ days.
By Oswego route, 222 hours, or 9¼ days.
By Buffalo route, 237 hours, or 9⅞ days.

In practical business operations the time by each route may be considered to be ten days.

The committee do not, of course, present this as a precise statement of the actual comparative merits of the three routes, but simply as an estimate, based upon data which appear to be approximately correct.

It is stated by Hon. John Young, of Montreal, that on the eastward trip by the Caughnawaga route vessels can avoid twenty-two locks, of 102 feet lockage, by passing down the rapids. In that case the time of the eastward voyage by the Caughnawaga route will be reduced to about 9½ days. This would not, however, affect the general statement just made. Vessels, in making the westward passage on the Caughnawaga route, would of course be obliged to pass through all the Saint Lawrence canals, and the time, as before stated, would be 9¾ days.

Now, sir, the main reason why it is as short in time and the least expensive line to operate, is because it has more open free lake and river navigation and much less canal, fewer locks and less lockage. By this route there is no transshipment, while there must be on both the other routes; on one at Buffalo, and on the other at Oswego.

I will go no further on this point, as it is my purpose at another time to discuss more fully the relative merits of these different routes.

I come now to the consideration of the route; what is being done and what is contemplated, and the cost.

The route has two branches from the Mississippi River to Lake Michigan. One from a point on the Mississippi River, near the mouth of the Missouri River, and thence by the Illinois and Michigan Canal, now constructed, or by the Hennepin Canal, proposed to be constructed, and the Illinois River. The other by the Wisconsin and Fox Rivers, connecting the Mississippi River with Green Bay, an arm of Lake Michigan, a distance of 278 miles. From these points the route is through Lakes Michigan, Huron, and Erie to the Welland Canal; by that canal into Lake Ontario, and through that lake into and down the Saint Lawrence River to the village of Caughnawaga, a few miles above Montreal; thence by the proposed Caughnawaga Canal, 29 miles, to the Richelieu River at Saint John's; thence into Lake

Champlain, and through the same to Whitehall; and thence by the Champlain Canal and Hudson River to New York City.

Now what is being done. The State of Illinois is improving the first-named branch from the Mississippi River to Lake Michigan, and has recently appropriated $400,000 toward that work. The other branch, Wisconsin and Fox Rivers, is being improved and its commercial facilities enlarged by the General Government. This House has already passed the river and harbor bill, which appropriates a large sum for that purpose, I think $300,000.

The Canadian Government is now enlarging the Welland Canal, so that vessels of one thousand tons' burden can pass between Lakes Erie and Ontario. This work will soon be completed, and will obviate for many years, if not for all time, all necessity for the construction of the Niagara Ship-canal.

The rapids on the Saint Lawrence are being improved, so that vessels on the downward trip will avoid the use of the canals. A charter, liberal in its terms, for the Caughnawaga Canal has been granted by the Dominion Parliament, and a portion of the stock already subscribed.

The New York Legislature, which has recently adjourned, appropriated $500,000 for the improvement of the Champlain Canal. It will be seen from this short statement that large sums of money are being expended on the entire line. It is really being constructed, and many of these improvements will be completed within comparatively a few months.

It is not expected that the United States Government will expend money in the construction of the Caughnawaga Canal; but if this Government will continue its expenditures upon the Wisconsin and Fox Rivers, and do what New York shall fail to do in the enlargement of the Champlain Canal and improvement of the Hudson River above Troy, the Caughnawaga Canal will be built at once. This is a work of vital importance to the through line, and of comparatively small cost. This letter which I read is the estimate of an engineer who has given this matter his study and time. It is addressed to Hon. Levi Underwood, of Burlington, Vermont:

PEEKSKILL, *May* 14, 1870.

SIR: Your favor of the 12th is at hand. You suggest that the estimate of the cost of the Caughnawaga Canal be so modified as to contemplate the same to be one hundred and fifty feet wide, (which I conclude is the width of the surface of the water, the canal being full,) which will require thirty feet additional width at bottom; also to increase the length of the locks one hundred feet, making the same three hundred feet in length.

I have made an approximate estimate of said modifications, and present them in bulk form, excluding details. My estimate of the cost of said canal, made twenty-two years ago, was $1,814,408; the canal to be eighty feet wide at bottom, and the locks to be two hundred feet in length.

The enlargement of the prism of the canal, as suggested, will cost $211,200, and the lengthening of the locks will cost $120,000.

Then we have—

Former estimate	$1,814,408 00
Enlargement of prism	211,200 00
Lengthening of locks	120,000 00
Making	2,145,608 00

In view of the present state of things, in a financial point of view, as distinguished from the state of the same twenty-two years ago, I conclude there should be a certain percentage added to the estimate of the cost of the canal to make the same better conform to the present state of the affairs in the country. This is simply a financial question, of which you can judge as well as I. But I think we ought to add at least 20 per cent. to the estimate as above, which will be $429,121, making the whole estimated cost $2,574,729; which I think will perform the work. Such a canal and locks as you suggest will well accommodate a vessel of one thousand tons, cargo, and in accordance with all estimates of the progress, advancement, and increase of the business of the country she will have enough to do.

I remain, sir, your obedient servant,

J. B. MILLS.

Hon. LEVI UNDERWOOD.

Again I remark, if the United States Government will do its share, simply what is demanded of it by the commerce of the country, Canadian and New England capital will build this connecting link between the waters of the Saint Lawrence and Lake Champlain. And even if the Government should withhold its aid and New York should fail to carry on its work between Whitehall and Troy, yet I have no doubt the Caughnawaga Canal will be built; and why? Because New England demands it.

With this canal built and the Welland Canal improvement completed, vessels of one thousand tons' capacity could pass from Chicago, Milwaukee, Du Luth, and all other lake ports to the harbors of Burlington, Saint Albans, and Swanton, on Lake Champlain, without breaking bulk. The time used in the trip from Chicago would not exceed seven days; and the cost of shipping a bushel of grain from Chicago to Burlington would not exceed 15 cents. The saving to New England alone in one year would pay the entire expenditure in building the Caughnawaga Canal.

So far as New England is concerned the building of this canal is all that is required to bring her the relief now so much needed. And the producers who have reasonable facilities for reaching the lakes would be benefited proportionately. The Caughnawaga Canal built and the first great step in the advance toward permanent cheap transportion is taken. Let the Government and New York take the next, and the great prize, the northern water-line suggested by the committee, is secured. Will the Caughnawaya Canal be built and have we the facilities for distributing the productions and freights coming from Chicago and other lake ports through this water-way into Lake Champlain among the consumers of New England and for transshipment to foreign countries? I answer most emphatically yes.

With this line completed Lake Champlain would become one grand harbor and the City of Burlington the great central distributing point. Saint Albans and Swanton are also accessible points, and from all these railroads will be running in all directions, reaching nearly every town in New England. Upon the point whether the Caughnawaga Canal will be built and whether we have the facilities for distribution through New England, I will read from the speech of Mr. Weed, to which I before referred. He said:

Let us, Mr. Chairman, look at this question of building the Caughnawaga Canal in another aspect. There can be no question but that it will be built, and that, too, speedily. And I desire to call your attention to the important fact that it will be built by the capital of New England, and built by that capital for the purpose of diverting the western trade down the Saint Lawrence, and through this canal into Lake Champlain, to seek tide-water at eastern ports by the numerous lines of railroads now built and in process of construction.

The eastern ports—Portland and Boston—have built and are now not only projecting but building new railroad lines to intercept the western commerce over the Canadian canals at Lake Champlain, and it is under the auspices of these two important cities, and similar New England interests, that the Caughnawaga canal is being advanced to bring vessels of large tonnage upon the lake unbroken, and from thence to transport the cargo by their railroads to the sea-board.

A glance at the history of the enterprise of New England capital will show you that it is unlimited, and that what it undertakes to do it will accomplish.

From Burlington there are now two roads running to tide-water: The Central Vermont, by the way of Concord and Lowell, to Boston; the Rutland and Burlington, by the way of Rutland and Fitchburgh, to Boston, with a line south from Bellows Falls to New London, Springfield, and New Haven. The distance from Burlington to Boston by the Central Vermont Railroad is two hundred and forty-five miles only, and by the Rutland and Burlington two hundred and thirty-four miles. Still another and independent railroad is being built between tide-water at the city of Portland, Maine, and Lake Champlain, touching it at two points, Burlington and Swanton. This is known as the Portland and Ogdensburgh Railroad. By this line the distance from Burlington to tide-water at Portland is only two hundred and twenty-five miles, and the distance from Swanton Harbor is the same. This road has most desirable connections by contract with roads running to Boston and roads running through the States of New Hampshire and Maine, and also with the marginal railway at the city of Portland.

All these lines are first-class, well and substantially built, and will have all the equipment necessary for any business that may come upon them. The harbors at Burlington, Saint Albans, and Swanton are each large, safe, and with ample depth of water for the largest vessels. There is no better point from which to distribute the produce and other property destined for New England than Burlington. Not only this, but in my judgment vast quantities of the cereals raised in the Northwest for export will seek this line as the cheapest, quickest, and safest, and will be taken by these New England trunk lines from Lake Champlain to the harbors at Boston and Portland for transshipment.

With this contemplated water-way open, the vast and increasing commerce between New England and the West, and a great portion of the export and import trade between Europe and the northwest and lake regions, would pass through Lake Champlain. And, as the committee has said, "store-houses or depots of supplies could be established at Burlington, and the produce of the West could be brought to these depots during the season of open navigation and stored for fall and winter distribution by the railroads" which I have referred to.

Already the city of Burlington is one of the most extensive lumber markets in the East, second only to Albany. Millions of feet of pine lumber are annually shipped from the forests on the great lakes and the Ottawa country through the Saint Lawrence and Richelieu Rivers into Lake Champlain, resting at Burlington long enough for manufacture and sale, and then is distributed to all parts of the country.

Mr. CONGER says in his report to the last Congress, to which I have referred, that "there are probably nearly five thousand million feet of pine lumber annually moving on the upper lakes, a very large proportion of which goes east to supply the markets of New York, Pennsylvania, New Jersey, and the New England States. This water line open," the amount of lumber entering Lake Champlain would be double what it now is, and this is a very important argument in favor of the route I now advocate.

Now a few words as to cost.

It has been thought by a great many of the people of the Northwest and also by many in the East that in order to secure this water-route it would be necessary to construct the Niagara Ship-canal. My friend from Michigan [Mr. CONGER] so thought, and some of the western legislatures have so resolved; but this idea is now nearly exploded. The cost of such a canal is estimated at $12,000,000. I think I can safely state and easily maintain that if the necessity ever did exist for this canal, it has passed away and the country is saved the $12,000,000 for the present at least. The present capacity of the Welland Canal is sufficient for the passage of about five million tons annually, and when the improvements now being made are completed it will be ample for all the business of this great northern route.

Will the members on this floor from the great Northwest listen to the fact just stated? Your conventions, commercial and political, your Legislatures, and your producers and traders have time and again memorialized Congress to construct the Niagara Ship-canal. They

believed it necessary, and were in earnest. They have been made to believe that this northern route was valueless without it. I now ask you and your people to pause and examine the facts. This $12,000,000, as I have said, can be saved, and still this great water-line secured.

Take, sir, the $12,000,000 and expend it on the Wisconsin and Fox Rivers, Hennepin Canal, and on the Champlain Canal and Hudson River, and your line is complete.

The committee on cheap transportation admit there is no necessity for this expenditure, but think it may be required in the future.

Their language is this:

The enterprise of Canada, by the enlargement of the Welland Canal, a work now in progress, has preceded action in this country. By means of this enlargement a large proportion of the vessels of the upper lakes will be able to pass from Lake Erie into Lake Ontario. While there does not appear to be an immediate necessity for the construction of an additional canal on the American side of the Niagara River, in view of the fact that American vessels are accorded by the Dominion government the same privileges as Canadian vessels in passing through the Welland Canal, yet the committee are of the opinion that the shorter distance between the navigable waters of Lakes Erie and Ontario, and the more favorable topographical features of the country on the American side, point to the necessity for the construction of an American Niagara Ship-canal at no distant period, in order to meet the demands of the rapidly increasing commerce between the East and the West.

Build only what is needed, and then await events that shall call for the Niagara Canal.

I have already called your attention to the statement or estimate of the committee of the cost of each of these routes. Now, sir, I maintain that to secure the business which will come over this route from the States I have named, except Missouri and Kansas, all that is necessary west of Lake Michigan is the expenditure of $3,000,000 on the Wisconsin and Fox Rivers, and the expenditures in the State of New York, estimated by Mr. Weed in his speech to the New York Assembly at about $8,000,000. Twelve million dollars at the outside is all that is required of the Government. The total cost of the Mississippi improvements is estimated at $16,000,000.

The cost of the central route is estimated at $50,000,000, and that of the southern route $40,000,000.

Now this northern route is as important to the United States as any of the proposed lines, and if it can be built for $4,000,000 less than either of the others, it should be the first to receive the attention of Congress.

With this line completed, the western producer can compete successfully in the markets of Great Britain, and his surplus grain would all be called for, the granaries and store-houses of Chicago and the Northwest would not be, as they are now, full and the producer short of money, nor would the farther West farmer be burning corn for fuel.

Give the country cheap transportation and her industries will start. It would be the best currency bill you could pass. Had you placed in the hands of the West one or more of these water lines five years ago, you would never have heard of a farmers' war on your railroads. What they want and must have is a free, open water-way to the Atlantic, one that will allow the vessels of one country or company the same rights through it as any other country or company. Open it to all competitors and you have secured competition and its result—cheap transportation.

Let me say to the members here from the great Northwest that New England and New York propose to take your people by the hand in this matter, and I believe they cannot afford to refuse the proposition. This route built, its benefits would reach every farmer, every mechanic, every laborer, yes, every hamlet in all New England, and at the same time enrich the western producer and give new life to all the industries of our great country.

Admission of New Mexico.

SPEECH OF HON. S. B. ELKINS,

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

May 21, 1874.

The House, according to order, proceeded to consider the bill (H. R. No. 2418) to enable the people of New Mexico to form a constitution and State government, and for the admission of the said State into the Union on an equal footing with the original States—

Mr. ELKINS said:

Mr. SPEAKER: I desire to urge the passage of the bill now pending before the House, providing for the admission of New Mexico as a State into the Union, on the following grounds and for the following reasons, in the presentation of which I beg the patience and indulgence of this House:

First. Because she is entitled to such admission as a matter of right, having the requisite population prescribed by law and the capacity to support a State government.

Second. She is entitled to admission into the Union by reason of the promises and assurances made by our Government to her people previous to the ratification of the treaty of Guadalupe Hidalgo, by which she was ceded to the United States, as also by the terms and stipulations of the treaty itself.

POPULATION.

In 1850 the population of New Mexico was 61,547, and in 1860, 93,516; showing an increase in ten years of about 32,000, or about 50 per cent. In 1870, according to the census—which was necessarily imperfect owing to remote settlements and Indian hostilities—the population was 91,871, showing an apparent decrease from 1860 to 1870. This is owing to the fact that during that time the Territory of Arizona was organized out of New Mexico, taking 9,000 of her people, and there was annexed to Colorado the northern tier of counties, containing a population of about 15,000—making in all taken from New Mexico during this period 23,000 people. If a correct census could have been taken in 1870, it is believed it would have shown a population of about 110,000 inhabitants, not including the Pueblo Indians, recently decided by the supreme court of New Mexico to be citizens of the United States. Taking, however, the census of 1870, and considering the 23,000 given to Arizona and Colorado Territories, it will show the increase in the population of New Mexico from 1860 to 1870 to have been about 35 per cent., notwithstanding during most all this period the Territory was cursed by sanguinary Indian wars, her people killed, and her property stolen; her mining, stock-raising, and other industrial enterprises paralyzed, and the nearest railway a thousand miles from her borders.

The average increase of twenty or more of the older States during that time was only about 20 per cent., and the actual increase proper of New Mexico has been about 10 per cent. greater in the last ten years than that of Alabama, Connecticut, Georgia, Arkansas, Delaware, Indiana, Kentucky, Louisiana, Maine, Massachusetts, Mississippi, New Hampshire, New York, North Carolina, South Carolina, Ohio, Pennsylvania, Rhode Island, and Tennessee.

The present population is estimated to be about 135,000. The southern, northern, and eastern portions of the Territory are rapidly settling, and have been since 1870, with a very substantial class of inhabitants, devoted as they are for the most part to stock-raising and farming. This increased impetus given to immigration to the portions of the Territory just named is owing to the fact that for the last three years New Mexico has been free from Indian hostilities, for which reason also, since 1870, in those portions large mining districts have been opened and occupied.

In the memorial to Congress unanimously adopted at the last session of the territorial Legislature, asking and praying for the passage of an enabling act, the following language is used:

Your memorialists, the council and house of representatives of the Legislative Assembly of the Territory of New Mexico, would most respectfully represent, that the Territory of New Mexico at this time, we believe, has a population of 135,000, aside from the Pueblos or Village Indians, who from time immemorial have been agriculturists and among the best citizens of our Territory, and who now number little short of 10,000, making a total population of over 140,000 people, mostly a quiet, pastoral people, and as truly loyal to the Government under which they live as any people under the sun; that at the time of taking the last census there were in this Territory at least 10,000 people, living in the many various mining districts, remote from the mass of the settlements, and residing on the extreme borders of this Territory, who could not be reached by the census officers without great danger and risk, and were for that reason not included in the census; and that since said census was taken a very large immigration has come into this Territory from the States and European countries, amounting to at least 20,000, who have settled permanently in our Territory, bringing with them capital and means; that this new population is dispersed very generally throughout the Territory, but will be found mostly in the mining regions, which are fast becoming developed. We believe that outside of the native Mexican population of this Territory, there are at least 40,000 people of American and European descent among us, who are permanent residents.

Fifteen States have been admitted into the Union with a less population than New Mexico had even in 1870, as shown by the following table:

	Date of admission.	Population.
Vermont	1791	85,339
Kentucky	1792	73,077
Tennessee	1796	77,302
Ohio	1802	41,915
Louisiana, largely foreign	1812	76,556
Indiana	1816	63,805
Mississippi	1817	75,512
Illinois	1818	34,620
Missouri	1821	66,586
Arkansas	1836	52,240
Florida	1845	54,447
Iowa	1846	81,920
Oregon	1849	52,465
Nevada	1864	40,000
Nebraska	1866	60,000

And it is asked, "If fifteen of the twenty-four States admitted since the original thirteen have been so admitted on an average population of less than sixty-three thousand, shall not New Mexico, with an admitted population of sixty or seventy thousand in excess of this average, be allowed this long-denied right?" And, in addition to this, two States are now in the Union with a less population than New Mexico, and two with about the same. The ratio of representation entitling a State to admission into the Union has been as follows:

At first it was 30,000; in 1793 it was 33,000; in 1813 it was 35,000; in 1823 it was 40,000; in 1833 it was 47,700; in 1843 it was ,680; in 1856 it was 93,420. No less than four States have been itted without the required ratio, as follows:

	Date of admission.	Population.
Florida	1845	54,447
Oregon	1849	52,465
Nevada	1864	40,000
Nebraska	1866	60,000

New Mexico having more population than either of these States at the date of their admission.

The ability of New Mexico to support a State government is not doubted by those acquainted with her condition and resources. She will start on her new career as a State with virtually no debt, the sum being now only about $75,000, with a sure prospect of being liquidated in a year or two at furthest. Not a county in the Territory has created a debt of any kind for any purpose. The warrants in most of the counties are worth one hundred cents on the dollar. The people favor the cash system. They are wisely conservative in all monetary affairs, and are averse to creating either a territorial or county debt, and their conservatism has been greatly strengthened by the fact that they see in other portions of the country the inhabitants are groaning beneath town, city, county, and State debts, often recklessly incurred. New Mexico being an old country, her improvements and wealth are substantial, the result of two centuries. Her people have been censured for want of enterprise and public spirit, but now that they owe comparatively nothing, and there is no necessity for any increased taxation, the Territory becomes peculiarly inviting to those seeking homes. While New Mexico is but little known throughout the country generally, her merchants have been long and most favorably known to the commercial world in the cities of New York, Philadelphia, Chicago, Baltimore, and Saint Louis.

The resources of New Mexico are not surpassed by those of any State or Territory in the Union. She always has produced and always will produce enough to support her population. For the last ten years she has done this, and with the surplus supplied the Army and the Indians now on reservations in the Territory. Her beautiful and fertile valleys yield an abundant return to the farmer for his labor, and as a wheat-producing country she is certainly surpassed by none and equaled by but few of the States and Territories.

Her boundless plains and plateaus, covered with the most nutritious grasses known, make her take rank pre-eminently as a stock-growing region. This branch of industry is now encouraged by accessions to her stock-growers from all parts of the country. The receipts for wool and hides shipped to Saint Louis, Philadelphia, and New York amount annually to about $2,000,000, and the cattle sent to the eastern markets, together with beef supplied to the Indians and the Army, amount to near $2,000,000.

The Territory abounds in minerals of all kinds, principally coal, iron, lead, copper, silver, and gold, and in inexhaustible quantities, but little developed and worked for want of machinery and railway connections. It is estimated that her mines yield annually, of gold, silver, and copper, about $2,000,000. The observations of all scientists and travelers who have visited the Territory confirm in the amplest manner her claims to immense coal-fields and iron deposits, rivaled only by those of the State of Pennsylvania and being almost equal to hers in extent and quality.

It is estimated by one of the best authorities in the whole country that in the completion of either the Atchison, Topeka and Santa Fé or the Kansas Pacific Railway to Cimarron, New Mexico, there will grow up in a short time a coal trade of three thousand tons per day to supply the six hundred miles of country reaching from the base of the Rocky Mountains down the valley of the Arkansas River far into the neighboring State of Kansas. This coal must be supplied from New Mexico; it can come from no other quarter; and this will be only the beginning of the coal trade, not to speak of the copper, lead, iron, and precious ores that will be shipped for reduction.

New Mexico must become a manufacturing country. She has all the elements necessary to this end. Unskilled labor and the necessaries of life are cheaper in New Mexico than in the Atlantic States and in the Mississippi Valley, and when it is considered that New Mexico has in the greatest abundance coal, iron, lead, copper, and silver, also wool and hides, the time is certainly not far distant when she will have manufactures of all kinds, and instead of paying high freight for cloths, carpets, shoes, machinery, farming utensils, and railroad iron, she will not only from her own manufactures supply the wants of her people, but compete with the manufactories of the East in supplying less favored sections.

Five lines of railway are under construction, and pointing to New Mexico: The Texas and Pacific, Atlantic and Pacific, Atchison, Topeka and Santa Fé, Kansas Pacific, and Denver and Rio Grande; three are within ninety miles of her borders, with a fair prospect of being rapidly extended, and three will terminate within the heart of New Mexico, and two it is supposed will become transcontinental.

EDUCATION.

Although education has been much neglected in New Mexico, I have pleasure in stating that the people have become aroused to its transcendent importance, and in 1871 the Legislature passed an act establishing a common-school system throughout the Territory, and provided for the support thereof that there should be set apart not only the poll-tax and one-fourth of all other taxes, but a certain surplus in the various county treasuries. This act has been in operation about three years, and according to the report of the secretary of the Territory there are now established and in full operation one hundred and thirty-three public schools. From this it will be seen that New Mexico appropriates a larger share of her taxes for the support of her public schools than any other State or Territory in the Union, and as yet she has had no help from any source whatever for school purposes. In addition to the public schools there are a number of colleges and high schools in the Territory.

It is often asked why Territories seek so zealously to become States To those who have lived in Territories no answer to this interrogatory is needed, but to those who have not enjoyed this experience I desire to say, that the interests of a Territory to the General Government are necessarily secondary. The Territories have no vote and no power, and are therefore not heard. The long arm of the Government cannot reach to distant and remote sections and jealously guard the rights of the people, anticipate their wants, and build up their interests. In trying to do so the Government is attempting too much, and what was never contemplated. The Territories want local self-government, because they can better build up their own interests and insure their own prosperity as States. The history of the whole country attests that States flourish and increase more rapidly than Territories. The following table will show these facts:

Tennessee admitted in 1796; population in 1790, 35,791; in 1800, 105,602.
Ohio admitted in 1802; population in 1800, 45,365; in 1810, 230,760.
Louisiana admitted in 1812; population in 1810, 76,556; in 1820, 153,407.
Indiana admitted in 1816; population in 1810, 24,520; in 1820, 147,178.
Mississippi admitted in 1817; population in 1810, 40,352; in 1820, 75,448.
Illinois admitted in 1818; population in 1810, 12,282; in 1820, 55,200.
Missouri admitted in 1821; population in 1820, 66,586; in 1830, 140,455.
Arkansas admitted in 1836; population in 1830, 43,388; in 1840, 97,574.
Michigan admitted in 1837; population in 1830, 31,639; in 1840, 212,267.
Florida admitted in 1845; population in 1840, 54,477; in 1850, 87,445.
Wisconsin admitted in 1848; population in 1840, 30,495; in 1850, 305,391.
Iowa admitted in 1848; population in 1840, 43,112; in 1850, 192,214.
California admitted in 1850; population in 1850, 92,597.
Minnesota admitted in 1858; population in 1850, 6,077; in 1860, 173,855.
Oregon admitted in 1859; population in 1850, 13,294; in 1860, 52,465.
Nevada admitted in 1864; population in 1860, 6,857; in 1870, 42,491.
Nebraska admitted in 1867; population in 1860, 28,841; in 1870, 122,993.

The idea of a Territory to the people of the East suggests want of law, want of protection to property and life, want of society; indeed, the word is a synonym for disorder and lawlessness, for which reason emigration and capital find their way so slowly into the Territories; but, on the contrary, a State carries with it the idea of law, order, strength, and dignity, and has invariably attracted immigration and promoted prosperity.

But, in addition to all this, the keeping and holding large bodies of people in remote localities in territorial bondage and subjection; governing them by laws they have no part in enacting; taxing them without representation; denying them the right to elect their own officers; appointing to the highest places among them entire strangers who have no interest in the country, who sometimes prove to be mere political adventurers, is not only unjust and unrepublican, but hostile to our ideas of true government.

It is often said you have a Legislature and a Delegate in Congress. This is worse than no answer. The first is a farce, a political hybrid, without sovereignty; the second only a beggar at the doors of the Executive and Congress, without power. Then, to escape from this vassalage, subserviency, and injustice, where there is no growth, no encouragment, but where everything is dwarfed and limited, we ask to be admitted as a State.

Mr. Cass, in his great speech on territorial governments in the Senate in 1850, said:

A great principle is involved in this controversy—the inseparable connection between legislation and representation. And what paramount necessity calls for its violation? Are not the people of the Territories competent to manage their own internal affairs? Are they not of us and with us; bone of our bone, flesh of our flesh? The same people, with the same views, habits, and intelligence; all, indeed, which constitute national identity? Ay, sir, and exhibiting by the very act of emigration a spirit of enterprise which commends them the more to our respect. Cannot such a people administer their own government safely and wisely? Experience says they can. They have in every instance proved their capacity for self-government.—*Appendix Congressional Globe*, volume 22, page 59.

New Mexico has been in her pupilage about twenty-six years. She has had her Delegates during that period on this floor, who like other Delegates, in season and out of season, have implored and importuned the General Government for attention to the wants of the people, showing that their necessities were great; but for the most part Congress, I learn, has been deaf to their entreaties.

The Constitution has vested this power of admission in the discretion of Congress:

New States may be admitted by the Congress into this Union.

Mr. Sumner said in his speech on Kansas:

New States *may* be admitted; out of that little word *may* comes the power, broadly and fully, without any limitation founded on population.

As to the proper exercise of this discretion Congress should exercise it wisely, fairly, and impartially. She has the power to refuse any Territory admission, but not the right when such Territory comes properly prepared. On this point Mr. Holmes, a member from Massachusetts, speaking on the admission of Missouri, said:

What would be a fair construction of this? Surely not that Congress might hold a Territory in a colonial condition as long as they choose, nor that they might admit a new State with less political rights than another, *but that the admission should be as soon as the people needed, and were capable of supporting a State government.*—*Appendix Congressional Globe*, volume 22, page 251.

Mr. Barbour, then a Senator from Virginia, in speaking on the same subject, said:

And even this power is subject to control. *Whenever a Territory is sufficiently large and its population sufficiently numerous your discretion ceases, and the obligation becomes imperious that you forthwith admit; for I hold that, according to the spirit of the Constitution, the people thus circumstanced are entitled to the privileges of self-government.*—*Ibidem.*

Mr. Hardin, from Kentucky, in speaking on the same subject and the exercise of this discretion, uses the following language:

The manner in which that discretion has been exercised has been so uniform and invariable that it amounts to a law. It is, Mr. Chairman, a proclamation to the inhabitants of all the Territories, that whenever their numbers approach to fifty or sixty thousand they shall be at liberty to burst from around them the bonds and chains of territorial servitude and vassalage, and assume and exercise the rights of self-government—the inalienable rights of mankind.

And again, in language stronger than I can command, a high authority has declared:

The Territories of the United States are rightfully held in pupilage as long as their infancy unfits them for self-government or admission into the Union, but unjustly detained in bondage whenever their maturity arrives. At that period they have a right to demand admittance into the political family as equals, or the enjoyment of liberty as independent States. Power may enslave them longer, but the laws of nature and of justice, the genius of our political institutions and our own example, proclaim their title to break their bonds and assert their freedom.—*Appendix to Congressional Globe*, volume 22, page 251.

By applying for admission, New Mexico testifies her willingness to relieve you of the expense of continuing in existence a territorial government, and enables you to reduce your annual appropriations at a time when economy and retrenchment is the popular demand. She has shown herself amply able to support a State government and keep her credit; and above and beyond all, she has shown her devotion to our institutions and her fitness to become a member of the Union by giving up the lives of some of her noblest sons to maintain the one and preserve the other.

Unlike many of our own people, more fortunate, who had been born and educated under our flag, the Mexican population did not hesitate, did not doubt, but saw their duty clear; and when the proclamation of the President of the United States came, calling for troops, for help; when the cause of the Union looked dark and doubtful, and when General Sibley's trained soldiers from the confederate armies were already on the soil, these people as one man rallied under their adopted flag, and fought gallantly to preserve the Union into which they now seek admission. How well they did their duty let the graves at Fort Craig and Peralta, on the banks of their own loved Rio Grande and at Apache Cañon, testify. They loved the Union well enough to fight for it, and the Union ought to love them enough to adopt them as her sons in truth and in fact.

But apart from all these considerations, which it would seem were of themselves overwhelmingly sufficient to induce Congress to at once provide for the admission of New Mexico into the Union, I claim her right to admission on still higher grounds and for stronger reasons, which cannot, certainly ought not, to be disregarded by Congress. I claim it by virtue of the stipulations of the treaty of Guadalupe Hidalgo and the promises and assurances of our Government previous to the ratification of the same.

It will be remembered that during the Mexican war General Kearney was the officer in charge of the troops that marched against New Mexico. On the 31st of July, 1846, he issued the following proclamation:

Proclamation to the citizens of New Mexico by Colonel Kearney, commanding the United States forces.

The undersigned enters New Mexico with a large military force for the purpose of seeking union with and ameliorating the condition of its inhabitants. This he does under instructions from his Government, and with the assurance that he will be amply sustained in the accomplishment of this object. It is enjoined on the citizens of New Mexico to remain quietly at their homes and to pursue their peaceful avocations. So long as they continue in such pursuits they will not be interfered with by the American army, but will be respected and protected in their rights, both civil and religious.

All who take up arms or encourage resistance against the Government of the United States will be regarded as enemies, and will be treated accordingly.

S. W. KEARNEY,
Colonel First Dragoons.

CAMP AT BENT'S FORT ON THE ARKANSAS, *July* 31, 1846.

After advancing about two hundred miles farther into the Territory, in an address to the people on the 15th August, 1846, at Las Vegas, he said:

Mr. Alcalde and people of New Mexico, I have come among you by the orders of my Government to take possession of your country and extend over it the laws of the United States. *We consider it, and have done so for some time, a part of the territory of the United States. We come among you as friends, not as enemies; as protectors, not as conquerors. We come among you for your own benefit, not for your injury.*—*Appendix to Congressional Globe*, volume 22, page 777.

He next speaks to the people of New Mexico in a proclamation dated August 22, 1846, and used this language:

Proclamation to the inhabitants of New Mexico, by Brigadier-General S. W. Kearney, commanding the troops of the United States in the same.

As by the act of the republic of Mexico a state of war exists between that government and the United States, and as the undersigned, at the head of his troops, on the 18th instant, took possession of Santa Fé, the capital of the department of New Mexico, he now announces his intention to hold the department, with its original boundaries, on both sides of the Del Norte, as a part of the United States, and under the name of "the Territory of New Mexico."

The undersigned has come to New Mexico with a strong military force, and an equally strong one is following close in his rear. He has more troops than necessary to put down any opposition that can possibly be brought against him, and therefore it would be but folly or madness for any dissatisfied or discontented persons to think of resisting him.

The undersigned has instructions from his Government to respect the religious institutions of New Mexico; to protect the property of the church; to cause the worship or those belonging to it to be undisturbed, and their religious rights in the amplest manner preserved to them; also to protect the persons and property of all quiet and peaceable inhabitants within its boundaries against their enemies, the Eutaws, the Navajoes, and others; and when he assures all that it will be his pleasure as well as his duty to comply with those instructions, he calls upon them to exert themselves in preserving order, in promoting concord, and in maintaining the authority and efficacy of the laws; and he requires of those who have left their homes and taken up arms against the troops of the United States to return forthwith to them, or else they will be considered as enemies and traitors, subjecting their persons to punishment and their property to seizure and confiscation for the benefit of the public Treasury.

It is the wish and intention of the United States to provide for New Mexico a free government with the least possible delay, similar to those in the United States; and the people of New Mexico will then be called on to exercise the rights of freemen in electing their own representatives to the territorial Legislature. But until this can be done the laws hitherto in existence will be continued until changed or modified by competent authority, and those persons holding office will continue in the same for the present, provided they will consider themselves good citizens and willing to take the oath of allegiance to the United States.

The undersigned hereby absolves all persons residing within the boundaries of New Mexico from any further allegiance to the republic of Mexico, and hereby claims them as citizens of the United States. Those who remain quiet and peaceable will be considered good citizens and receive protection; those who are found in arms, or instigating others against the United States, will be considered as traitors, and treated accordingly.

Don Manuel Armijo, the late governor of this department, has fled from it. The undersigned has taken possession of it without firing a gun or spilling a single drop of blood, in which he most truly rejoices, and for the present will be considered as governor of the Territory.

Given at Santa Fé, the capital of the Territory of New Mexico, the 22d day of August, 1846, and in the seventy-first year of the independence of the United States.

S. W. KEARNEY,
Brigadier-General United States Army.

By the governor:
JUAN BAUTISTA VIGIL Y ALARID.

In the first proclamation he says under instructions from his Government he seeks union with and desires to ameliorate the condition of the people, and his military force is for that purpose. In the second he says by order of his Government he comes to take possession of the country, and extend over it the laws of the United States; that he came as a friend and not an enemy, as protector and not as conqueror. In the third he declares it is the intention of the United States to provide New Mexico with a free government similar to that in the United States. He then absolves the people from their allegiance to Mexico, and claims them as citizens of the United States. In other words, our Government wanted to acquire New Mexico. She promised in return friendship and free government. But I beg especial attention to that portion of the last proclamation which says:

It is the wish and intention of the United States to provide for New Mexico a free government with the least possible delay, similar to those in the United States; and the people of New Mexico will be called on to exercise the rights of freemen in electing their own representatives to the territorial Legislature.

This language contains a promise, and that promise was made by the Government to the people of New Mexico, because General Kearney was not only a military officer in our service, but he was clothed with extraordinary powers from our Government in respect to his conduct in New Mexico, and had full power and authority to make the assurances he did. Under this promise the people at once ceased all opposition to our forces, laid down their arms, believing they were to be rewarded for so doing—and how? "With a free government with the least possible delay, similar to those in the United States, and to exercise the rights of freemen in electing their own representatives to the territorial Legislature." The people believed at that time that this language created an obligation on the part of the Government to admit them as a State at once; and acting on this idea, immediately after the treaty they applied for admission. Their leaders and the intelligent portion of the whole Territory so construed the proclamation and address of General Kearney, and with this idea they gave in their adhesion to our cause and did not fire a gun; it was with them a contract, a bond of faith, for the keeping of which they were to be "admitted into the Union, as they believed, and to the exercise of the rights of freemen."

And I submit just here, with and to a people unaccustomed to our institutions, and but partially acquainted with our governmental system, Constitution, and laws, was not this construction natural, fair, and just? I know it may be claimed that the import of the language was that they should be admitted to a territorial condition, but I know they did not so understand it. They construed the words "free government similar to those in the United States" to refer to States; and this was entirely correct, because there is no such thing in a Territory as free government. They were willing and anxious to

become a part and portion of our Government. Many American merchants had for a long time previous resided there, and not an inconsiderable commerce had grown up between New Mexico and the States, and the people had become attached to our institutions. But let us proceed to the treaty.

About two years after the date of this proclamation New Mexico was ceded to the United States by the ratification of the treaty, the ninth article of which contained in substance the promise made in the proclamation of General Kearney, which is as follows:

Mexicans who, in the territories aforesaid, shall not preserve the character of citizens of the Mexican Republic, conformably with what is stipulated in the preceding article shall be incorporated into the Union of the United States, and be admitted at the proper time (to be judged by the Congress of the United States) to the enjoyment of all the rights of citizens of the United States, according to the principles of the Constitution.—*United States Statutes at Large*, volume 9.

By section 8 of the treaty it was provided that Mexican citizens who should elect to retain their character as such should do so within one year after the date of the treaty, and those who should fail to do so should become citizens of the United States. At that time New Mexico contained about forty thousand inhabitants, out of which number only about three hundred elected to retain their character as Mexican citizens, the remainder *en masse* acting upon the idea that the promise of General Kearney, confirmed by the treaty as they supposed, would admit them as a State, enthusiastically transferred their allegiance from the government of Mexico; and although disappointed in their hopes of absolute rights, they have ever been loyal and law-abiding.

But as to the exact and known policy of our Government both before and after the treaty in respect to New Mexico and California we are not left to conjecture, but have the most positive proof from the highest sources.

President Taylor, who followed the policy of President Polk, in avowing his action in a message to Congress, said:

I did not hesitate to express to the people of those Territories my desire that each Territory should, if prepared to comply with the requirements of the Constitution of the United States, form a plan of a State constitution and submit the same to Congress with a prayer for admission into the Union as a State.

And he again said:

In advising an early application by the people of these Territories for admission as States I was actuated principally by a desire to afford to the wisdom and patriotism of Congress the opportunity of avoiding occasions of bitter and angry discussions among the people of the United States. (See Appendix to Congressional Globe, first session Thirty-first Congress.)

This was in accordance with the promise of General Kearney.

President Taylor also, in his annual message of 4th of December, 1849, said:

The people of New Mexico will also, it is believed, at no very distant period present themselves for admission.

Here we have the policy of the Government immediately after the treaty unequivocally set forth. The President declares he did advise the people of those Territories to apply for admission. He could not do otherwise, because he was bound by the promises made by the officers of our Government previous to the treaty which secured New Mexico and California without a struggle.

But, Mr. Speaker, let us admit for a moment that there were no promises nor assurances made by our Government to the people of New Mexico previous to the treaty that were binding, and that their claims to admission must rest solely in the discretion of Congress, as provided in the words of the treaty, "to be admitted at the proper time, to be judged of by Congress."

Now I beg to inquire when should this discretion and judgment be exercised? How long can it be delayed? Can Congress arbitrarily prolong the exercise of it; or should it be a sound discretion, like the discretion of a court, to be exercised within a reasonable time, wisely, equitably, and impartially? In my opinion it means and obliges this Government to deal and act with the people of New Mexico just as it would and has with her own people in like cases and under similar circumstances. It certainly means this much, in other words, that Congress would require no more of New Mexico for admission than it did at the time of the admission, or since, of any other Territory not protected by the treaty. Has Congress done this? Not at all. She has admitted Oregon, Kansas, Nebraska, and Nevada, and denied New Mexico admission; ignored her petitions and memorials, although she had more population than either of these States when they were admitted. This seems to me a clear and positive violation of the treaty and of our pledged faith.

As to the proper construction of the ninth article of the treaty, I desire to refer to the speech of Mr. Peck, of Vermont, made in the House in 1850, on the admission of California. He says, referring to the proclamation of General Kearney and other officers:

These provinces were conquered, and, by the treaty of peace, ceded to this country. What effect these proclamations had upon the conduct of the inhabitants, it is difficult to determine; but the assurances made by those acting under the authority of the Government *have not been carried out*. No government has been established. We ought not to lose sight of the obligations imposed upon us *by the acts of the authorized agents of the Government and by the terms of the treaty*. By the ninth article of the treaty Congress, it is true, is to determine the time when they shall be admitted into the Union. The matter is left to the discretion of Congress; but in order to carry out in good faith this stipulation, the discretion to be exercised should be a sound one, one not influenced by caprice or controlled by formal objections. These Mexican citizens, in conjunction with American citizens who have emigrated from the different States of the Union, now claim to be admitted. Considering all the circumstances of the case, the population of the Territory and its character, the extent of her commerce and the necessity of some regularly organized government, can any one seriously doubt that it is the duty of Congress, in the proper exercise of its discretion, to admit her as a State? Sir, it will be recollected that the treaty with the French Republic by which we acquired Louisiana contained a stipulation very similar in its terms to the ninth article of the Mexican treaty. It will also be remembered that when Louisiana applied for admission the application met with very serious opposition from northern statesmen, on constitutional grounds, they insisting that Congress had no power, under the Constitution, to acquire foreign territory and admit it as a State. The question was much discussed, and Mr. Poindexter, the Delegate from the then Territory of Mississippi, after replying at great length to the various arguments urged against her admission, and referring to the third article of the treaty, put an inquiry which is not inappropriate to the present case: "And are we here sitting to deliberate whether we will perform the solemn engagements which have been entered into by the constituted authorities, and which are presented to us in the imposing attitude of the supreme law of the land?" Sir, what satisfactory response could we make on the present occasion to a similar inquiry? None, in my judgment. France was then all-powerful, and could enforce the due observance of any treaty stipulation with a foreign power. This Mexico cannot do, but this fact does not lessen our obligations.—*Appendix Congressional Globe*, volume 22, page 516.

This language was used immediataly after the treaty was ratified, when the history of the whole transaction and the facts were fresh in the minds of the people. Twenty-six years have passed by and the treaty still stands violated in respect to New Mexico. Could we if called on make any proper or reasonable answer for our conduct? If Mr. Peck's speech was timely and his construction correct then, how much more imperative is it the duty of Congress to admit New Mexico now? In my opinion there was no answer to his argument then, and there can certainly be none now. California was admitted under this construction of the treaty.

Senator HAMLIN, of Maine, who is still honored and distinguished in the public service, in speaking of the proper construction to be given to the ninth article of the treaty, in his speech on the admission of California says:

There is in the ninth article of the treaty of peace with Mexico a stipulation that the Territories ceded to our Government shall be incorporated into the Union of the United States. There should be no obligation of a nation *more sacred or more faithfully complied with than that which is contained in its treaties with other governments*. Our treaty with Mexico imposes upon us *an obligation* which *we cannot disregard at this time*, unless *we mean to be faithless to our treaty stipulations*. Now, such Mexicans as remained in the Territory twelve months after the ratification of the treaty of peace with Mexico became thereby American citizens. Under the ninth article it is expressly stipulated that they shall be incorporated into the Union of the United States, and be admitted at the proper time (to be judged of by the Congress of the United States) to the enjoyment of all the rights of citizens of the United States. Taking the existing state of things into account, who can doubt for a single moment what is our duty, and whether we should not give our assent now? True, we are made the tribunal which is to judge of the time. In the exercise of that power we are to deal justly; and with the population now in California, and with its rapid increase, we are bound by the highest consideration to admit California. To my mind there can be no reasonable doubt. It is certainly no more than fair to admit that, when California has a population as large as she has now, we should admit her at once and without delay.—*Ibidem*, page 248.

Senator HAMLIN uses clear and forcible language and makes the duty and obligations of the Government under the treaty plain. If he was right then, what answer is there or what excuse can be pleaded for denying New Mexico admission for twenty-six years? Our Government has continued this mistake and injustice toward New Mexico too long, and it should be only too willing to correct it by her immediate admission.

But that the entire duty of Congress in the premises may be made clear and relieved of all doubt, I beg to refer to the assurances contained in the letter of Mr. Buchanan, Secretary of State, to the minister of foreign relations of the Mexican government, dated March 18, 1848, in respect to the alterations made in the ninth article of the treaty by our Senate. It will be remembered that owing to these alterations, one of which was inserting the words "to be judged of by the Congress of the United States," the Mexican government refused to ratify the treaty because her statesmen were fearful the people in the territories about to be ceded would not be admitted to all the rights of American citizens. In the letter referred to Mr. Buchanan used this language:

Congress, under all the circumstances, and under the treaties, are the sole judges of this proper time, because they, and they alone, under the Federal Constitution, have power to admit new States into the Union. That they will always exercise this power as soon as the condition of the inhabitants of any acquired territory may render it proper, cannot be doubted. By this means the Federal Treasury can alone be relieved from the expense of supporting territorial governments. Besides, Congress will never turn a deaf ear to a people anxious to enjoy the privilege of self-government. Their desire to become one of the States of this Union will be granted the moment it can be done with safety.—*Ibidem*, page 415.

On this assurance the Mexican government ratified the treaty, and I claim we are solemnly bound by it. That the people of New Mexico confidently believed they would be admitted as a State into the Union, induced to this belief by General Kearney's proclamation, the letter of Mr. Buchanan, and the treaty, is amply established by the fact that as soon as possible after the ratification of the treaty they called a convention, framed a constitution, elected United States Senators, and presented a memorial to Congress praying for admission in which they used the following language, referring to General Kearney's proclamation:

We were promised at the time New Mexico was taken possession of by the American forces in 1846 the extension of a civil government over us and protection against the savage foes that surround us, and under the treaty with Mexico we were assured of our being speedily placed under the full protection of the Constitution with all the rights and privileges of citizens of the United States. *We relied confidently on the promises held out to us; we relied still more on the treaty stipulations.* (See Senate document No. 76, first session Thirty-first Congress, volume 14.)

This memorial was adopted in 1850 by the State convention, and

shows clearly how the assurances of our Government and the treaty were construed. Admission was refused New Mexico at that time only because of the agitation of the slavery question, and for no other reason. Mr. Buchanan's assurance and construction were that Congress would never turn a deaf ear to a people anxious to enjoy the privileges of self-government. Yet for more than a quarter of a century the United States, in the face of this solemn assurance, which in part secured the ratification of the treaty, have been deaf to the petitions of New Mexico for admission. He further assured the government of Mexico that the desire of the people to become a State *would be* granted as soon as it could be done with safety. Now, I beg to submit if it is now or ever has been unsafe at any time within the past twenty-six years to admit New Mexico?

If the construction placed by me upon the assurances of our Government and the treaty be proper and fair, and it must be because it is not only justified by the language itself but by the whole history of the transaction, the known intention of the contracting parties at the time, and the understanding of the people upon whom it operated, then to refuse the passage of this bill would, in my opinion, be a violation of the pledged faith of the nation.

This Government is making history; and as we build, not only is a sister republic anxiously looking on, deeply concerned for the welfare of her sons, who, though torn from her by the fortunes of war, she endeavored to protect by treaty, but we are standing in the presence of the nations of the world; and as we keep our faith and guard our honor, so shall we be judged and esteemed. Congress can better afford to yield to a liberal construction of the treaty than abate one jot or tittle the smallest right guaranteed under its provisions. This application for the admission of New Mexico is not only based on her clear right independent of the treaty, but on the treaty itself; and the question reduces itself not to what may be desirable or expedient, or whether there will be more power in the Senate or on this floor, but what is the entire duty of Congress in the premises.

I might rest with confidence the cause of New Mexico just here; but being anxious to make it doubly sure, I desire to claim that under a fair interpretation of the treaty the ratio prescribed at its date should be the governing one, and the only one, and not the ratio now.

Florida, with a treaty stipulation similar to the ninth article of the Mexican treaty, claimed admission on this ground, and was admitted with a less population than prescribed as the ratio at that time. The sixth article of the treaty with Spain by which Florida was ceded says:

> That the inhabitants of the territories which His Catholic Majesty cedes to the United States by this treaty shall be incorporated into the Union of the United States as soon as may be consistent with the principles of the Federal Constitution, and admitted to the enjoyment of all the privileges, rights, and immunities of citizens of the United States.

Mr. Sumner, with an ever-jealous regard to a faithful performance of our treaty obligations and the doing of exact justice by the whole country, in the greatest speech of his life, "The crime against Kansas," lays down the same rule. In volume 4, page 220, of his Works, he says:

> If any ratio is to be made the foundation of binding rule, it should at least be that which prevailed when Kansas was acquired from France, under solemn stipulation that it should be incorporated in the Union of the United States and admitted as soon as possible, according to the principles of the Federal Constitution.

And in doing this he referred to the treaty stipulations with Florida, and incorporated into his speech the memorial of the people of that State.

Mr. Sumner was a great international lawyer, and this rule has much force, having received his sanction; tried by it, New Mexico must be admitted, because at the date of the treaty the ratio was about eighty thousand. There is no escape from this position.

Then, Mr. Speaker, I ask, and appeal to this House, if with such a record as this; with 135,000 people with neither county nor territorial debt to speak of; with good credit; with good public schools liberally supported; with a fixed and permanent population; with substantial wealth; with a traffic and internal commerce of her own, built up with her own energies and without aid; with such agricultural, pastoral, and mineral resources, such a brilliant future; with more population than some of the States now in the Union have, and more than fifteen States had when they were admitted into the Union; with precedent, and, above all, with treaty obligations thrown around her, is it strange or unnatural that New Mexico should ask admission into the Union, a seat at the table of States, and a right to local self-government? Is it not stranger that, under all these circumstances, that admission has been so long delayed and an act of obvious justice to her people so deliberately evaded by the Congress of the United States?

She has seen other States admitted and her claims ignored; she has passed and presented memorials but to see them cast aside without action. She now brings you the last appeal, praying for admission, with the earnest hope that the unjust discrimination and distinction made in her case in the past be no longer continued against her. The people of New Mexico are becoming sensitive on the subject of admission into the Union, and wonder if the unvarying precedents and constant practice of this Government for three-quarters of a century can be departed from in her case, and the treaty stipulation, made so strong in their behalf, means anything, or if its obligations in respect to them can be slighted and disregarded and there be no appeal. There is certainly no good reason for this treatment on the part of the Government. Nothing can be urged against the people of New Mexico.

They are loyal and law-abiding, peaceable, well-disposed, and wedded to our institutions. They love our country, our Union, and our laws. Though our adopted sons by the fortunes of war, their conduct during the rebellion furnishes a bright example of patriotism and loyalty which certainly deserves a better recognition now than injustice and discrimination.

The admission of New Mexico has been too long postponed; this simple act of justice too long delayed. It is a question which addresses itself now to the nation's conscience, to be settled in the light of precedent and treaty obligations, and demands immediate action. The time for indifference and delay has long since passed.

HISTORY AND RESOURCES OF NEW MEXICO.

Mr. Speaker, New Mexico being so little known beyond her borders, with the view of substantiating to some extent my statements in respect to her great wealth, I beg the indulgence of the House for a few moments longer, that I may refer briefly to her history, location, and relations to the whole country, as also furnish some statistical information as to her resources.

New Mexico is a portion of that vast territory, an empire within itself, which was acquired by the United States from Mexico.

As early as the year 1526, and within thirty-four years after the discovery by Columbus, bold and adventurous leaders of Spanish colonists were traversing her plains, crossing her rivers and mountains, in search of the far-famed El Dorado and the fountain of perpetual youth, stimulated and quickened in their arduous undertakings by the traditions and tales of the natives that both might be found in the land toward the going down of the sun.

New Mexico was known to the Europeans nearly a century before the landing of the Pilgrim Fathers, and two centuries before the Declaration of Independence. She has passed under and formed a portion of the history of three governments. If the date of the taking of the city of Mexico and the imprisonment of Montezuma, in 1519, by Cortez, in the name of his master, the King of Spain, perfected as it was by the boldest act of perfidy and cruelty on record, can be assumed as the time when Mexico became a portion of the colonial possessions of Spain, then for more than three hundred years she was a province of that kingdom and ruled by her kings. In 1821 Mexican independence was established, and she became a part of the republic of Mexico, and continued so until 1848, since which time she has been a Territory of the United States.

Santa Fé, the capital, is the oldest town in the United States except San Augustine, Florida, and has always been the seat of the civil and military government under Spain, Mexico, and the United States, and the chief commercial city of the Territory. "*Te Deum laudamus*" was sung, as it is now, in her churches two hundred and fifty years ago. And her palace, old and unique, but dear to the people, furnishes a home for the present governor, as it has done for his long line of Mexican and Spanish predecessors reaching back for nearly three hundred years.

Her claims to an old civilization, large population, and immense wealth anterior to the advent of the Europeans is not only confirmed by history, but by the frequent discoveries of the ruins of ancient cities, canals, and mines at this day in portions of the Territory, the people of the cities, as tradition teaches, being tributary to the princes of Montezuma, and her mines worked to increase their fabulous wealth. The people found in New Mexico by the Europeans were the descendants of the Aztecs—the Pueblo Indians—now reduced to twenty villages and about eight thousand souls, the last remnant of the worshipers of the sun. They are a quiet, peaceable, self-sustaining, and well-behaved people, dependent on agriculture and stock-raising for means of support. They are honest and law-abiding. In twenty-six years only about three of all their number have been charged with crime. Such a parallel cannot be found in the history of this or any other country; and so successfully have they resisted contact with European and American civilization in its best and worst forms, that the accounts given of them—the names of their villages, their customs, manners, modes of dress, and means of support—by Cabeza de Baca and Coronado, three hundred years ago, so faithfully translated and graphically described by Mr. Bancroft, would be true and perfect history to-day.

New Mexico, according to its present boundaries, is included between 32° and 37° north latitude and 103° and 109° west longitude, lies south of Colorado and east of Arizona Territories, and embraces an area of 121,000 square miles, or about 77,000,000 acres of land, 7,000,000 of which, it is estimated, are now covered by private land grants and military and Indian reservations, leaving 70,000,000 acres of public domain.

The Territory is more than three times as large as Ohio, one hundred and sixteen times as large as Rhode Island, three times as large as all New England, and larger than New England and New York. The average altitude in the southern portion of the Territory is about 4,000 and in the northern portion about 6,000 feet above the level of the sea. The great chain of the Rocky Mountains, stretching from British America into the republic of Mexico, passes through the middle and western portion of the Territory, which is watered by the Rio Grande, Pecos, San Juan, Red, Mora, and Puerco Rivers, and many other smaller streams. The Rio Grande, the largest of the rivers, is the "Nile" of America, and runs from north to south through the middle portion of the Territory. The valleys on both sides em-

brace as rich lands as can be found in the world; having been cultivated for more than two centuries, they grow richer instead of their strength being depleted, owing to the matter and *debris* deposited from the river at each irrigation.

CLIMATE AND HEALTH.

In the southern portion of the Territory, which is about the latitude of Montgomery, Alabama, snow is almost unknown. In the northern portion, however, we have snow; but it never lasts more than a few days, except high up in the mountains. The summers at Santa Fé are never oppressive. The highest observed temperature during the year 1872 was 85° and the mean of the temperature for the year 48°.

Dr. Kenon, one of our leading physicians at Santa Fé, formerly surgeon in the United States Army, says:

The lowest death-rate from tubercular disease in America is in New Mexico. The censuses of 1860 and 1870 give 25 per cent. in New England, 14 in Minnesota, from 5 to 6 in the different Southern States, and 3 per cent. in New Mexico.

I have never known a case of bronchitis brought here that was not vastly improved or altogether cured; and asthma as well.

I have no doubt that when means of access to this country are better, and therefore being better known, it will rival or supersede Florida, Madeira, Nice, or Dr. Bennett's much-vaunted paradise of Mentone as a sanitarium. The country is far distant from either ocean; it is utterly free from all causes of disease. The atmosphere is almost as dry as that of Egypt. The winters are so mild that there are not ten days in the whole year an invalid cannot take exercise in the open air. The summers are so cool, that in midsummer one or two blankets are necessary to sleep under. The whole Territory has been always astonishingly free from epidemic disease.

Dr. McKee, formerly professor in Jefferson College, Louisville, and late surgeon in our volunteer forces, in his book on the resources of New Mexico, says:

The climate of New Mexico is very salubrious and bracing; in fact, it is unsurpassed by that of any other Territory or State in the United States. The atmosphere is light and dry, even electrical and invigorating to such an extent as to make life and existence a delight, independent of any other source of enjoyment.

RESOURCES.

The resources of New Mexico are principally agricultural, pastoral, and mineral. The whole Territory abounds in fertile valleys, whose soil is as rich as can be found in any portion of the United States. She excels as a wheat-producing country, and with means of transportation her flour will be sold in competition with the flour of Kansas and Missouri on the Missouri River. Irrigation is necessary to insure crops, but the large yield more than compensates for this extra expense and labor not incurred in countries where irrigation is not necessary.

It may not be improper here to refer to the grapes of New Mexico and her capacity as a wine-producing country, which is certainly not surpassed in the United States. The valleys of the Rio Grande and Pecos Rivers especially produce grapes in the greatest profusion. Although cultivated in a rude and imperfect way as yet, the wine produced is a good table wine, and compares favorably with many of the Rhine wines. In the town of Bernalillo alone, with about five hundred inhabitants, there are annually produced five hundred barrels of wine, one-half of which is consumed in the town and the other half sold at from fifty to sixty dollars per barrel. It is estimated that an acre of land well set with grape-bearing vines is worth from three to five hundred dollars per acre, and that in the valley of the Rio Grande the area of the grape lands is about one thousand square miles or about six hundred and forty thousand acres, and on the Pecos River about three hundred thousand acres. As early as 1804 Baron Humboldt was at El Paso, and in his book on New Spain says:

The environs of El Paso are a delicious country, which resembles the most beautiful parts of Andalusia. The fields are cultivated in corn and wheat. *The vineyards produce excellent wines, which are preferred even to the wines of Parras and New Biscay.*

This grape-growing area extends up the Rio Grande River into New Mexico, a distance of about three hundred miles, in which fruits of all kinds can be raised.

PASTORAL RESOURCES.

The broad plateaus of New Mexico are covered with the richest and most nutritious grasses known, the grama grass principally, and they can never be used for anything but grazing purposes, and New Mexico is claimed to-day, as she is without doubt, the best grazing and stock-producing country in the United States, and will continue to be so. Stock is never housed and never fed, therefore the cost is but trifling compared with other portions of the country. No person who has paid any attention to stock-raising in New Mexico, and especially sheep, but has enjoyed a large return for the labor and capital invested. Some of our citizens own from sixty to one hundred thousand head of sheep, many from ten to twenty thousand, and some as high as twenty thousand head of cattle. The climate is so dry and mild that epidemics never occur among the sheep or cattle.

One-half or more of all the lands of New Mexico are grazing lands, say forty million acres, and never can be used for any other purposes; and even if by a system of artesian wells or reservoirs waters could be collected and had in abundance for purposes of irrigation or agriculture, these lands would not be used for these purposes, because stock-raising is more profitable.

In 1871 Colonel J. F. Chaves, in a letter to Governor Arny, estimated the number of sheep in New Mexico to be 1,500,000. This being the case, we can safely estimate the whole number now to be 3,500,000. Governor Arny, in his book on New Mexico, page 45, says:

For the profitable raising of horses, mules, cattle, goats, and sheep, and on the most extensive scale, no portion of the world can rival this district. Its mild climate presents no rigors, while its mountain slopes, valleys, and plains are unlimited extents of pasturage.

And again, at page 41, he says:

Colorado, New Mexico, and Arizona are pastoral countries, unsurpassed in the United States for the rearing of stock with but little expense and in great abundance; the climate, the nature of the country, and abundance of nutritious grasses throughout the year fit this country peculiarly for the rearing of sheep and cattle with no expense but that of a few herders to look after them, as they are never fed or housed at any season of the year.

The natural configuration of this vast Rocky Mountain region is not the least of the many desirable advantages it presents. It is situated many thousand feet above tide-water, fanned by the purest atmosphere, and supplied with innumerable salubrious streams running from the mountain springs and furnishing pure water, one of the essential elements for the sustenance of both man and beast. This country has a high and dry range, so conducive to the health of all animals, especially *sheep*, which animal, I believe, if properly reared and improved, will prove a greater source of wealth than even our untold and vast mineral deposits.

Our mesas and mountain gorges and many portions of our valleys are most prolific in a variety of herbage suitable for all classes of animals, but especially adapted to sheep, and during winter they afford a supply of pasturage so abundant that no additional food is required. The animals can have access to a continuous supply of good food and pure water during the winter, and by a judicious management the only expense of rearing sheep and cattle in this country is the hire of herders, which is comparatively a trifle.

This combines the unanimous testimony of all people who have visited New Mexico, and of those who have written on her resources. There is no doubt or question about the accuracy of these statements in any respect.

In regard to the mineral resources of New Mexico, which all agree combine all varieties and in the greatest abundance, I beg only to place before Congress the testimony of scientific men known to the whole country, and who have no interest in New Mexico.

General William J. Palmer, new president of the Denver and Rio Grande Railway Company, in his report of surveys across the continent in 1867-'68, on the thirty-second and thirty-fifth parallels, for a route extending the Kansas Pacific Railway, says on pages 90-93, in substance, that coal is found on the line from the Raton Mountains to Albuquerque, and further down the Rio Grande to El Paso, a distance of about five hundred miles, and from the Rio Grande River, at Albuquerque, west as far as the Moqui villages, a distance of one hundred and fifty miles. And in places where examined he says (page 90) this:

Coal apparently is as good as the Westmoreland coal of Pennsylvania.

In concluding this subject, (page 95 of his report,) General Palmer says:

The coal trade will in all likelihood be one of the largest sources of business the road will have, and if they prove as well adapted to the reduction of iron, as they undoubtedly are to locomotive use, the supplies at Cañon City, Vermajo, Placer Mountains, and along the Rio Grande, will prove of the greatest value in consequence of their occurring in connection with rich beds of iron ore and close to limestone, and before long we may expect this country to be filled with furnaces and rolling-mills like the rugged mountains of Wales.

General Palmer further says in his report (page 135) that—

The deposits of iron are numerous, and mentions that several veins of magnetic and specular iron ores were found, and on that portion of the line in New Mexico.

He also says:

Gold, silver, copper, lead, China clay, salt; all these have been developed in great abundance.

On page 137 he says:

On the San Ysidro Mountain (which is in New Mexico) there are numerous lodes of copper, as well as silver and gold, which were worked many years ago, before the memory of the oldest inhabitant. The ruins of numerous furnaces and arastras are to be seen.

He further says, pages 147, 148:

From the above necessarily hasty repertoire, which follows consecutively along the route, it is clear that the hills and mountains over this extended range contain an amount of mineral wealth of all kinds, the useful as well as the precious, which may be considered practically inexhaustible. Furthermore, that these subterranean treasures are not confined to a few localities far apart, but have a remarkable diffusion along the route. Indeed, from the Arkansas River to the western spurs of the Coast Range, near San Francisco, a distance of fifteen hundred miles, the mountains, which one is never out of sight of, may almost be said to possess continuous deposits of one kind or another of valuable mineral, which, beginning with the coal and iron of Colorado, end only with the quicksilver of New Almaden.

It will be borne in mind that in this survey there accompanied General Palmer a number of scientific gentlemen, mineralogists and geologists, among whom may be mentioned Professor Le Conte, of Philadelphia.

Hon. Rossiter W. Raymond, commissioner of mining statistics, who is known and conceded to be one of the best mining engineers in the world and the acknowledged head of the profession in the United States, and a man of undoubted integrity, in speaking of New Mexico, in his report for 1871, says:

The climate of New Mexico is mild and healthy, the sky as clear as that of Italy, and the air transparent and pure. In fact, the very act of breathing in this country makes existence in it a pleasure. The soil is fertile wherever water for irrigation is at hand. Most of the plains are covered with a very nutritious grass, (grama grass.) The mountains are covered with pine, cedar, oak, &c., and, together with the flowery meadows in the valleys, present a very pleasing scenery to the eye.

The mountains between Taos, Picuris, and Embuda contain gold mines, which have been worked in former years. The mountains and gulches near Mora contain float quartz and gold, but are not much prospected. Some gold has been brought to Santa Fé during the past year from San Juan, but no particulars could be learned about it. Excellent fire-clay exists near Santa Fé.

Near Santa Fé two veins of anthracite coal are opened five feet in width. It contains 87.5 per cent. of fixed carbon, and when burning shows only the blue flame of carbonic oxide. As far as its practical application for all practical purposes is con-

cerned it is undoubtedly fully equal to Pennsylvania anthracite, and really the best fuel so far discovered in the West.

Two miles north of Santa Fé a layer of coal mixed with iron pyrites occurs.

Coal crops out near Taos.

A large lode of specular iron has been found of late near Embuda, between Taos and Santa Fé.

No attempt has been made to smelt iron, although it exists in great abundance and of great purity in the immediate vicinity of anthracite coal and contiguous to fire-clays and limestone.

Sooner or later it will be known that New Mexico need not shrink from a comparison with her sister Territories, none of them surpassing her in natural resources and riches, and many of them stand below her in the scale.

The following minerals are known to exist: Gold, silver, lead ores, copper, manganese, iron ores, carbonate, hematite, specular iron, magnetite, coal, anthracite, bituminous, salt in springs and lakes, precious stones, garnets, turquoise, opal, quicksilver, soda, gypsum, lime, cement, sulphur, sulphuret of iron, chromic iron, &c.

Dr. McKee in speaking of our mines, after reciting the vast amounts of gold and silver produced by the mines of Nevada and California, says:

New Mexico will yield equally as much, or even more, for the metals are known to exist within her in the greatest abundance, and capital only is required to develop the hidden treasures.

The Commissioner of the General Land Office in his report for 1868, page 54, says:

Valuable minerals are found in every portion of New Mexico. In numerous localities may now be seen shafts and drifts, the work of former generations, and the only monuments left of their energy, activity, and industry, while the almost daily discovery of new lodes of gold and silver bearing quartz and auriferous placers indicate that mining operations in the future will be as productive as in the past, (as in the days of Montezuma and Cortez.)

Dr. F. V. Hayden, United States geologist, in a partial examination of the mines of New Mexico, reports the following minerals of commercial value:

Iron pyrites, copper pyrites.—Mostly auriferous, widely distributed in veins over the flanks of the Rocky Mountains in New Mexico, and in numerous lesser chains of granitic and metamorphic rocks.

Malachite, green vitriol, blue vitriol.—Principally from decompositions of the above wherever the ores have been exposed to weathering. Widely distributed in veins over the flanks of the Rocky Mountains in New Mexico, and in numerous lesser chains of granitic and metamorphic rocks.

Zincblende, (often argentiferous.)—Sandia, &c.

Galena, (often argentiferous.)—Maxwell's, near Mora.

Brittle silver.—Maxwell's, near Mora.

Fahlerz.—Maxwell's, near Mora.

Specular iron ore.—Real Dolores, near Ortiz mine.

Red and brown hematite.—Widely distributed; Old Placer, &c.

Magnetic pyrites.—New Placer.

Coal.—Raton Mountains, Maxwell's, Real Dolores, &c

Cerussite.—Maxwell's.

Anglesite.—Maxwell's.

Native gold.—Arroyo Hondo, Moreno, Brahm lode, New Placer, &c.

Native silver.—Maxwell's.

Horn silver.—Maxwell's.

Titanic iron ore.—Real Dolores.

Smithsonite.—Sandia.

Silver glance.—Moreno, New and Old Placers.

Light and dark ruby silver.—Maxwell's.

Spathic and micacious iron ores.—Real Dolores.

Turquoise.—Cerrillos, between Santa Fé and San Lazaro Mountains.

Professor Hayden says in his report, page 130:

The valuable ores abound almost everywhere in the granite and gneiss of the Rocky Mountains, and the economic question is not to find the material, but the capital and labor with which to work. The country over which these investigations were made is replete with those minerals which by their decomposition are found by experience to most enrich the soil, as it is with the before-mentioned minerals of commercial value.

ANTHRACITE COAL AND IRON.

Professors Owen and Cox, eminent geologists from the State of Indiana, in their report on the minerals of New Mexico, say:

Near the Placer Mountain we examined a bed, almost five feet thick, of the best anthracite, altered by porphyritic contact.

Anthracite coal, (from Placer Mountain.)—Luster bright, submetallic fracture, conchoidal. Resembles in outward appearance the anthracite from Pennsylvania:

Coke	92.00
Volatile matter	8.00
	100.00
Fixed carbon	87.00
Ashes, (red)	5.00
Volatile combustible matter	4.50
Moisture dried at 300° Fah	3.50
	100.00

Having seen a hand specimen which we recognized as excellent anthracite, we were especially desirous to visit this locality from which it was obtained, and we did so before leaving. The entrance to it is a ravine, with slaty rock for a few feet over the roof. * * * The coal-bed is very accessible and easily worked; it measures from four feet eight inches to four feet ten inches in thickness, and is generally very free from earthy or other impurities. It seems a true anthracite, not semi-bituminous, but as destitute of bitumen as the Pennsylvania variety.

Comparisons of coal.

1. PENNSYLVANIA ANTHRACITE.

Fixed carbon	87.45
Ashes and clinkers	7.37
Volatile matter	3.84
Moisture	1.34
	100.00

2. ANTHRACITE COAL FROM PLACER MOUNTAIN.

Fixed carbon	87.00
Ashes, (red)	5.00
Volatile matter	4.50
Moisture dried at 300° F.	3.50
	100.00

(Analysis by Professor Cox.—Owen and Cox's Report on Mines of New Mexico, page 58.)

Says Professor Cox:

It will be seen from the analysis that the fixed carbon in the two is nearly the same; the Placer Mountain coal contains a little more volatile combustible matter and moisture, while the Pennsylvania coal has the largest quantity of ash.—*Owen and Cox's Report,* page 59.

Dr. McKee also in his book, page 95, in reference to anthracite coal and iron in New Mexico, says:

Good iron ore is also obtained at Placer Mountain, near the center of the Territory. Here it is not so abundant as at the Mimbres; but inasmuch as it is only six miles distant from an anthracite coal-bed, it is more valuable on that account. This anthracite bed is in a ravine, very accessible and very easily worked, only twenty-three miles south of Santa Fé. The coal is of an excellent quality, as good as the best Pennsylvania, and is entirely free from bitumen. The vein is from four to five feet wide, clean and free from all impurities.—*Professor McKee's New Mexico, &c.,* page 5.

Commissioner Raymond in his report of 1870, pages 414–417, in speaking of mines of New Mexico, and especially anthracite coal, says:

The occurrence of anthracite coal in workable beds in the Western Territories near the gold and silver districts, is of such great importance that I cannot conclude this report on New Mexico without giving a detailed description of the anthracite mines at the Old Placer Mountain. They are situated near the northwestern foot-hills of that range, about twenty-three miles southwest of Santa Fé, and respectively four and one-half and six miles from the mining town of Real de Dolores. * * * * * * * *

The coal from the coal mines to be described in the following presents all these qualities, and there is consequently no doubt that it is really anthracite.

After referring to the locality of the mines and to what extent they had been worked, he says:

About 280 tons of coal have been taken from this mine. It shows all the qualities of a true anthracite and contains 87.5 per cent. of fixed carbon. * * * As the material does not coke in the least, it is evident from this test that it is perfectly adapted to use in blast furnaces, though it will require a higher pressure of blast, on account of its density, than charcoal or coke.

In every county in the southern portion of New Mexico silver, copper, and lead mines have been discovered, and some of them are now being worked. The products of the Silver City mines in Grant County, worked without improved machinery, are about $10,000 in silver per week. The ore from the copper mines in this county is transported six hundred miles in wagons, and shipped to Baltimore for smelting. On the completion of the Texas and Pacific Railway through Southern New Mexico, it is estimated that the yield from copper mines will be greater than from any portion of the United States. Some of the copper mines worked by the Spaniards more than one hundred and fifty years ago, and the ores taken to the city of Mexico, are now being worked. In all portions of the Territory old mines and shafts may be found, but more particularly in Grant, Doña Aña, Santa Fé, Santa Aña, and Socorro Counties.

Dr. Wizlezeines, a scientific German miner, who examined New Mexico before the annexation of the United States, says:

A third much-neglected branch of industry in New Mexico are the mines. Great many now deserted mining places in New Mexico prove that mining was pursued with greater zeal in the old Spanish times than at present.

Again:

The mountainous portions of New Mexico are very rich in gold, copper, iron, and silver. Iron, though so abundantly found, is overlooked. Coal has also been discovered in different localities.

A very recent report made by Professor C. D. Wilbur, of Chicago, Illinois, known to be one of the ablest scientific minds in the country, with a practical experience, extending over twenty years, in inspecting and studying the coal-fields and iron deposits of Indiana, Illinois, Missouri, and Iowa, and reporting thereon, and personally known to many gentlemen on this floor, in speaking of the Trinidad coals in Southern Colorado, says:

We trace the same system to the west and southward to Cimarron, New Mexico; thence to Santa Fé and beyond, where this system of coal deposits has been changed to anthracite by the same forces or causes as have produced the anthracite coal-fields of Pennsylvania.

The distance between the points here spoken of is more than two hundred miles, and adjacent to these coal-fields iron ore in great quantities has been discovered.

In the same report Professor Wilbur further says:

The coals of this region, which may be referred to as the Trinidad coals, because by that name they are readily known, are much superior to the Colorado coals found in the vicinity of Cañon City and Denver. They are by far the best that have been discovered in the Rocky Mountains. They are equal to the best bituminous coals of Illinois, Ohio, or Pennsylvania.

He further says:

In proof of this statement I will quote from the report of Mr. Eilers before the American Institute of Mining Engineers at Easton, Pennsylvania, October 22, 1873, on *coke* made from *Trinidad* coal:

"This is the first good coke for smelting purposes ever made from lignite *alone* in America. It has so far always been found necessary to mix bituminous coal, from the coal measures, tar, or similar material, with lignite, in order to produce a coke, which even then was in most cases only an indifferent fuel for the shaft-furnace.

"The coke here presented will answer for all purposes of lead and copper smelting in shaft-furnaces, and if made in proper coke-ovens it will probably be sufficiently dense to carry the high smelting columns of the iron blast-furnace. One pound of Trinidad coal furnishes 4.25 cubic feet of purified gas without the use of an exhauster, and 55 per cent. of the coal remains as coke."

The importance of this bed of coal for the metallurgical purposes of the far West cannot be overrated when we know that at present eastern coke costs at Denver twenty-two dollars, and at Salt Lake City thirty dollars per ton. The recent analysis of Dr. J. A. Sewell, State chemist of Illinois, made late in December, 1873, still better confirms our statement as to the extra value of these coals. The analyses were made from the New Mexico and Trinidad coals with the same results.

LABORATORY UNIVERSITY OF ILLINOIS, *December* 16, 1873.

Results of analysis of coals sent me by Professor C. D. Wilbur from New Mexico, December 4, 1873:

Specific gravity	1.2215
Water	5.80
Ash	4.17
Total incombustible matter	9.97
Volatile matter	36.81
Fixed carbon	53.22
Total combustible matter	90.03

Coke firm and very persistent; ash light, resembling the ash of wood. It contains a trace of silver. The coal bears only a slight trace of sulphur. It yields splendid illuminating gas. For locomotive use these coals must rank among the very best. *The coke is the most firm and persistent of any I have ever seen.*

J. H. SEWELL, M. D.,
Analytical Chemist, Illinois State University.

Professor Wilbur adds:

It would seem that nothing more could be said setting forth the quality of New Mexico and Trinidad coals.

It will be borne in mind that these great coal-fields are distant from Kansas City, Missouri, about seven hundred miles, and from the coals of the State of Kansas at Emporia about five hundred and seventy-five miles, there being no coal between Emporia and the Rocky Mountains. Now, owing to the superiority of the New Mexico coals, the facility with which they can be mined, the New Mexico coal can be transported to Atchison, on the Missouri River, and sold in competition with the Kansas and Missouri coals. On this point Professor Wilbur says:

We are aware that the Kansas coals are reached between Emporia and Topeka, and that there will be competition at Emporia, (Missouri, Kansas, and Texas Railway crossing,) but the extraordinary quality of the New Mexico coals will as certainly bear these rates as the best Blossburgh, Hocking Valley, and Pittsburgh coals now bear the same rates in Chicago.

The Kansas and Missouri coals are far inferior in quality and must fail in any comparison with these already described. Besides, the Kansas coals are very scarce, occurring in thin veins and patches, and are mined at great expense per ton. It is difficult to determine the number of tons per day that would be required to be distributed between Cimarron, New Mexico, and Atchison, Kansas, within three years from the completion of the road. It must be understood that the entire supply of coal for the great Arkansas Valley, to the extent of fifty miles on each side of the railroad or river, must come from New Mexico. Add to this the supply of the plains from Granada to Cimarron, two hundred and three miles, not only for the towns and stations but for every farm and ranch, and for every mill and manufactory, and also for smelting works, to say nothing of coals for locomotive uses, and it is certain that the coal transportation must be immense.

We do not overestimate it when we put the daily demand at three thousand tons, or three hundred carloads, or ten trains of thirty cars each.

As soon as the Atchison, Topeka and Santa Fé Railroad is completed to Cimarron, every station from that point becomes a coal depot for the surrounding country, and is furnished with a reliable first-class coal mine to all intents and purposes, so that every farmer and ranchman can certainly depend on his supply of the best coal at very cheap rates.

The country described here extends from the Missouri River to the Arkansas River, and up that stream to the base of the Rocky Mountains, the commencement of these coal-fields, and embraces an area of two hundred and fifty million acres of farming and grazing lands, fuel for three-fourths of which must be supplied from the New Mexico coals. On this point, in the report referred to, Professor Wilbur further says:

The coal region so briefly described in this report is a portion of the largest coal-field in the world. It reaches from the British possessions far into Mexico, over fifteen hundred miles in length, and is from one hundred and fifty to four hundred miles in width, all embraced in the tertiary and cretaceous formations of the Western Territories. The relation of this magnificent coal-field both to the Rocky Mountains and the plains is the basis of a new empire.

The plains have no fuel, and the Rocky Mountains are plethoric with valuable ores. Their bases are iron, their sides gold, and their summits silver. Coal is so placed in the foot-hills and lower ranges as to be most accessible both to the farmer or herdsmen and the miner, whose united industries will soon develop the region so long known as the American desert.

He concludes by saying:

Ten years ago the mineral wealth of New Mexico was hardly supposed to exist. It is now known to be immense, far surpassing the wealth of "Ormus or of Ind." The entire Territory needs to be minutely studied and examined, not by mere amateur fossil-pickers and specimen hunters, or by the innocent bands annually sent out by eastern colleges, who are predestined to find a "new species," write a monogram, and have one day of glitter as heroes in some metropolitan newspaper, but by practical mineralogists and geologists whose character and success will command the attention and confidence of capitalists of America and Europe.

Such is the testimony of impartial and disinterested witnesses as to our mineral wealth. I have no disposition to add one word; they speak for New Mexico much better than I can, except to say that the explorations west of the one hundredth meridian, now being conducted under the supervision of General Humphreys, Chief of Engineers, known as the "Wheeler expedition," because they are immediately under the charge of Lieutenant Wheeler, one of the ablest engineers in our service, promises not only a confirmation of the above statements, but beneficial results in bringing before the whole country exact and accurate information of the geology and mineralogy of a portion of our continent now almost unknown.

From these facts it is safe to conclude that New Mexico must some day become, as indeed the whole Rocky Mountain region, not only a stock-growing and mining country, but also manufacturing to a great extent. It is often asked if New Mexico has such elements of great wealth, why is it in twenty-five years she has not made greater progress? The answer to this is, that under the treaty the United States promised to protect the people from Indian depredations, but instead of doing so during all this time New Mexico has been constantly subjected to Indian wars, which have prevented all progress. Now that Indian hostilities have ceased, New Mexico is making wonderful progress.

Most all other Territories and States have had assistance in some form or other in building railways; New Mexico has had none. Heretofore too little attention has been paid to the wants of the great Rocky Mountain regions. They embrace an empire in themselves, and will in the future rival even the Atlantic and Mississippi Valley States in contributing to the wealth of the entire country, and adding to the greatness and glory of the Republic.

The various chains of mountains in the United States, with their minerals, maintain peculiar relations to the whole country and its commerce.

The mountains of old New England! We love her people as children only love a father; we hold them in the same grateful reverence that youth has for old age. They have given the country an intelligent, God-fearing, and liberty-loving people, and the Republic a whole race of distinguished statesmen. In addition to this they have their place in our internal commerce: they furnish, and will continue to do so, that which we cannot spare, the granite and marble that lift to the skies our lofty public edifices and give strength to our less imposing but palatial residences.

Farther to the West and South the Alleghany Mountains and their grand system and far-reaching ramifications have done and will continue to do their great office in supplying the coal and iron and building up manufactories between the East and the Mississippi Valley, but their capacity and transportation unite in saying beyond this you cannot go, here you must stop; your boundaries are fixed, and your territory determined. From the Mississippi Valley to the Pacific coast, a distance of near two thousand miles, nature has not been unmindful of the wants of those who are scattered over this vast area, nor of the wants of the unborn millions that must come after them; but with her unsparing and generous hand she has stored away in her great storehouse, the Rocky Mountains, not only the coal, iron, lead, and copper that will furnish the basis of a thousand industries and be required for thousands of years to come, but the gold and silver that must not only ultimately redeem our present national debt, but supply our wants in the great future.

The Rocky Mountains not only maintain a peculiar relation to the great plains that lie between her base on the Missouri River, so ably set forth by Professor Wilbur, but with the whole country. The Mississippi Valley and the Pacific coast are no longer divided by an inseparable barrier; they have shaken hands across the back-bone of the continent, and become wedded in a common interest, the ceremony having been performed in the presence of the majestic and snow-clad peaks of the Sierra Nevadas who stood as the grand and silent witnesses to this happy union, which has been recently more closely strengthened by bands of iron.

The Rocky Mountains rest on vast coal-beds. Here, in the not very far future, we must go for coal, the great desideratum of our civilization, the basis of almost all power and nearly of all wealth, without which the world would suddenly stop, but with which it will move on to new and astonishing conquests in science, art, mechanics, and manufactures.

By an unnatural usurpation cotton was once called and believed by some to be king; but time and the natural laws of commerce have served to dispel this delusion, and coal, with his ebon brow, has come to the front and by unanimous consent been crowned king forever; and from his dark throne, with his brother iron, wields the scepter of empire over all human industries, his realms being measured only by man's ingenuity.

In the United States, the home and throne of this king is in the Rocky Mountains; his children live and rule in the Alleghanies and the Mississippi Valley. The Rocky Mountains will play no ordinary or secondary part in the future of this country. So long unknown, light is beginning to dawn; we are but catching glimpses of the future grandeur and glory of this great empire.

In New Mexico the time is not far distant when a thousand furnaces for the reduction of ores will light up the sides of her vast mountains, and this ore, drawn by a thousand engines busy by day and by night, will be poured into the lap of the Mississippi Valley; and millions of sheep, cattle, and horses will feed on her boundless plateaus.

Civil Rights.

SPEECH OF HON. JAMES L. ALCORN,

OF MISSISSIPPI,

IN THE UNITED STATES SENATE,

May 22, 1874.

The Senate having under consideration the bill (S. No. 1) supplementary to the act entitled "An act to protect all citizens of the United States in their civil rights and to furnish the means for their vindication," passed April 9, 1866—

Mr. ALCORN said:

Mr. PRESIDENT: I did not intend to appear before the Senate in the capacity of a speaker upon this occasion; but I have concluded that I

could not well discharge the duty which I owe to my constituents without being heard upon the bill now under consideration.

It has been said that there are those advocating the passage of this bill who do not desire that it should become a law. I cannot say how true that is. I can only speak for myself, that while I advocate it, I desire in my soul that it should become the law of this land, and I have reasons for this declaration and for this desire. I represent in my person and the cause which I advocate to-day strongly the result of the revolution in which we have been engaged. From the South I come. From among the slave-holding class I come. Born in the midst of slavery, identified all my life with the institution, a rebel in the revolution, to-day an advocate for the civil-rights bill, am I prompted by the desire to secure the colored vote, as has been charged to those who support this bill? If moved by no higher consideration than this, then my position here and my advocacy of this bill would be deplorable indeed. But I am moved, I trust, by higher considerations than these. Let me now, in order that I may be understood, state the conditions upon which I stand here.

The negro has been characterized here as an inferior race. Yes, he is inferior in point of education, and I may say in point of numbers, in this nation of ours. Inferior though he be, he controls the destiny of the State from which I come. The power of the Legislature of Mississippi, the political sovereignty of that State, is to-day in the hands of this race. The taxing power belongs to him, the power to legislate with regard to my property, and every right that I enjoy under the guarantees of the State constitution is held at the hands of the negro race, a government of the people, subject to their will in its fundamental and its statute law, what checks and balances have we save those limitations prescribed in the Constitution of the United States? The executive, the judicial, and the ministerial officers of the State are all chosen, if not directly indirectly, by the colored people of that State. I here declare myself in favor of that policy which that colored man declares is necessary to the protection of his race throughout the Union. We need no civil-rights bill there. So far as Mississippi is concerned, we have a civil-rights bill of our own more stringent than any you will pass in this Congress, its penalties more severe, its workings more in detail—complete in itself for the protection of the colored people. They stand here through their representative declaring that so far as Mississippi is concerned they desire no legislation upon the part of Congress; they are able to take care of themselves. But they do demand that their race shall be recognized in every State in this Union as they are recognized in the State of Mississippi. Brought under the rule, by reason of the revolution, of the colored people of Mississippi, is it strange that I should advocate a bill guaranteeing the personal rights of the citizen throughout the nation?

Sir, self-protection, if I had no higher consideration, would move me to advocate the passage of this bill, not in the limited sense in which the bill is now presented to the Senate, but in that fuller and more comprehensive sense in which I hope to see it made before it is submitted to the vote of the Senate. The people of my State demand that they shall have all that the fundamental law guarantees to citizens of the land. There is in this demand a signification that I need not elaborate.

Was the Government under which we live changed by reason of the revolution; as a result of the revolution? Did not the thirteenth, the fourteenth, and the fifteenth amendments change the form of this Government? They extended the limits of this Government; they gave an increased power to this Government; and they gave a force to this Government that it did not possess until the revolution had decided in favor of the Federal interpretation of the Constitution. The Constitution of the United States was the emanation of a rare order of political intelligence. Clashes of thought, feeling, and interest gave form to its text. As the beautiful colors are reflected through a prism, so were the different castes of mind, heart, and purpose entering into its provisions reflected into the Constitution of the United States as it existed when the war began. The federal principle lay in that Constitution side by side with the doctrine of the sovereignty of the States, and no sooner had the Government begun its operations than the antagonisms thus reposing side by side in that instrument arose as opposing forces, were debated for years in Congress and before the people, were finally adjourned to the arbitrament of war, and after a most bloody conflict were decided in favor of the federal principle; and the Constitution for the first time in the history of this country became harmonious, smooth, and even in its working. The principle of the sovereignty of the States was struck down, and under the fourteenth amendment the citizen of the State was declared to be a citizen of the United States, and it was the fourteenth amendment to the Constitution of the United States that gave form to and that created the being whom you call a citizen of the United States. Those guarantees that were given previous to the war and secured to the citizen by the different State constitutions were now confided as a result of the war to the United States. When the slave was touched by the results of the revolution he became a new being; he became a citizen of the United States residing in the States of this Union; his rights, his privileges, his immunities then belonged to him as a citizen of the United States, and were explicitly guaranteed by the amended Constitution. Am I correct in this?

I listened with interest to the Senator from Wisconsin [Mr. HOWE] just a moment ago when he was descanting on the fugitive-slave law, and I was struck with the harmony that existed at the time that law was passed and was being executed between the extreme sections of this country with regard to the powers of Government. The Constitution of the United States read by him declared in these words:

> No person held to service or labor in one State, under the laws thereof, escaping into another, shall in consequence of any law or regulation therein be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

While the honorable Senator was speaking I sent for the Globe, for the purpose of showing how the extreme northern and southern view harmonized in construing the powers of the Government. To show that he is correct in presenting the view common to the extreme sections when he asserts the fact that no power was lodged in Congress to enforce the provisions of that article in the Constitution, I send to the desk and ask the Clerk to read from a speech delivered by Hon. Jefferson Davis, of Mississippi, upon the occasion of the mob in Boston, to which the honorable Senator has referred, at the time the fugitive slave Burns was arrested. I read it to show the opinion of Mr. Davis at that time, who was a leader of the South, upon the subject of the power of Congress to enforce the fugitive-slave law.

The Chief Clerk read as follows:

> The Government of the United States has power to suppress insurrection and to repel invasion. What insurrection do you suppose is contemplated? Only insurrection against the authority of a State in which civil government shall be paralyzed by physical power. The occasion, too, must be sudden and ephemeral. If the masses of any State choose, they have the power, and it is undeniable, to change their whole form of government. An insurrection, then, must be one against a State, and a State may seek the aid of the Federal Government to justify it in introducing its power in the State for the purpose of suppressing insurrection. In the better days of the Republic, may I not say the purer days of the Republic, the militia of the States were relied upon for the enforcement of the laws against those who resisted them within the borders of the States. Thus General Washington's Secretary of War called on the militia of Pennsylvania to put down the whisky insurrection. He did not call on the Army and Navy of the United States.
>
> But, sir, the case in Boston seems to be the legitimate result of an event which occurred not long since, when the officers failed to do their duty, and the marshal who so failed was not removed. What was this but a direct encouragement to a free-negro mob to set aside the law and to oppose the officers if they attempted to execute it? I am not one of those, however anxious I may be to see this law enforced, who would advocate the use of the Army to secure its enforcement. I hold that when any State in this Union shall choose to set aside the law it is within her sovereignty, and beyond our power. I hold that it would be a total subversion of the principles of our Government if the strong arm of the United States is to be brought to crush the known will of the people of any State in this Union. Such is my theory of this Government.

Mr. ALCORN. We see that Mr. Davis declared that however anxious he was to see the law executed he would not favor so extreme a measure as sending the troops of the United States to Boston for the purpose of arresting the fugitive slave Burns. And in following up this opinion held in the North, Wisconsin, the State from which my honorable friend comes, declared by a decision of the supreme court of that State that the fugitive-slave law was unconstitutional, and that its provisions should not be enforced within its jurisdiction; and following this, that State passed liberty bills and declared that no fugitive should be arrested within her borders; and many of the Northern States, taking a similar view, passed like bills in defiance of the fugitive-slave law, and declared that their citizens should not be held liable for violations of that law.

This simply showed the inharmony of the Government. It did not take the eye of a prophet to see that a government like this could not long continue to exist; that one or the other of these forces must triumph; that either disunion must take place peaceably, or that war must come. The States declared—and they had the power if not the right under the Constitution to declare—that they would not enforce the provisions of the Constitution of the United States, and there existed no power in Congress to coerce them. What, then, was to become of the Government? It must go to pieces, or it must vindicate itself in sufficient strength to establish and maintain it.

Here is another clause in the Constitution that I will read now for the purpose of enforcing what I say. It exists and is in full force to-day:

> A person charged in any State with treason, felony, or other crime who shall flee from justice, and be found in another State, shall on demand of the executive authority of the State from which he fled be delivered up, to be removed to the State having jurisdiction of the crime.

There is a plain provision of the Constitution. Now suppose the governor of the State of Florida, as he to-day does, shall refuse to give up a person who is indicted for a felony in the State of North Carolina. The governor of the State of North Carolina has power to demand him as he does, but the felon is not delivered up; the criminal is not surrendered. If you were to undertake to give force and vitality to this provision of the Constitution by an enactment of Congress, I apprehend you would be met on this floor successfully with a denial of the power to pass and enforce any such law. It would be declared to be an invasion of State rights—whatever of State rights is left—for some still insist we have State rights; and would not Senators on both sides of this Chamber declare that there was no power in this Government to go with the Army under a law of Congress to take an escaped felon from the protection of one governor to surrender him to another? But if this provision of the Constitution was followed by a clause declaring that Congress should have power to *enforce* this provision by appropriate legislation, then our way would be clear and the duty would be unmistakable.

When the thirteenth amendment came, declaring that slavery and involuntary servitude should no longer exist, it was followed by a clause declaring that Congress should have power to enforce the arti-

cle by appropriate legislation, using the strongest language known to the vocabulary. It was the first time that the Constitution had declared that Congress should have power to *enforce* any of the provisions of the Constitution of the United States. It is true that under the eighth section of the first article of the Constitution which says that Congress is "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers and all powers vested by this Constitution in the Government of the United States, or in any department or officer thereof," Congress had the power to pass laws; but how could Congress enforce those laws? Suppose when Congress passed a law attaching to the citizens of the State, the State should throw the arm of sovereign protection around the citizen to shield him from the legislation which Congress had deemed proper to pass, where was the power in this Government before the war to enforce it? It was denied. And so it was that there was no vitality or force existing in the Government before the adoption of the thirteenth amendment to enforce the provisions of the Constitution itself. Although it was decided by the Supreme Court that there was such a being as a citizen of the United States, when you undertook to trace the existence of that being he was very distant. Was a citizen of the District of Columbia a citizen of the United States? He did not live in any one of the States. Was a citizen of a Territory a citizen of the United States? He did not live in any one of the States of the Union. A citizen of the United States was one declared to be by the courts a citizen of one of the States of the Union. But the Constitution comes after the war, and it enlarges altogether the citizenship and declares that there is such a being as a citizen of the United States, and that a man born or naturalized here is a citizen of the United States, wherever you find the jurisdiction of the United States extending, the conditions of citizenship being otherwise complied with.

I have said that with the amendments came the clause, "The Congress shall have power to enforce, by appropriate legislation, the provisions of this article." How enforce it? If Congress has the power to enforce it, must not Congress be left to judge of the manner of enforcing it? Is not the question of enforcement a question that belongs to Congress itself? If the fourteenth amendment made no change and conferred no greater powers upon the Congress of the United States than existed before, why was it necessary in that amendment to declare that "all persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside?" Why was it necessary to enact and recite the following: "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws?" It had been declared by the Constitution, as it existed before the adoption of the fourteenth amendment, that "the citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States." Now, the recitation of these guarantees and limitations in the fourteenth amendment was made for no other purpose than to bring them unmistakably under the jurisdiction of Congress, that they might be held subject to that clause of the amendment which declared the power of Congress to enforce by appropriate legislation the rights, privileges, and immunities set forth.

Congress, remember, under this article, has power to enforce the provisions of the article. Who is left to judge when these privileges are invaded or denied by the States? The Congress of the United States. This is the tribunal. The power belongs to Congress; it rests with Congress; and whenever Congress in its judgment may decide that the citizen is deprived of any of his liberties, rights, privileges, and immunities, Congress can step in under this article of the Constitution, guarantee them to him by enactment, and enforce the enactment by calling on the power of this nation, its Army and its Navy. By the adoption of the thirteenth, fourteenth, and fifteenth amendments the Constitution of the United States was changed; the powers of the Government were enlarged. There can be no secession now. The Government of the United States is the *sovereign*. I will not say that centralization is complete, for that might be offensive, but I am here to declare the unmistakable strength of the Government, and its undoubted and unlimited power over the questions now under debate.

But it has been said that this bill if passed by Congress will bring about social equality; that this law is degrading to the white race. I deny this. Society exists and is governed by its own laws. They are unwritten, but they are none the less determinedly maintained. The Senator from New Jersey [Mr. STOCKTON] this morning said that it brought the degraded race to a level with that of the most exalted. I do not quote his language but the idea. That is true as far as law can make it so. The war in one fell swoop leveled all distinctions between the most exalted citizen and the humblest slave from whose limbs the shackles fell by the touch of the emancipation proclamation. To-day we stand one people equal before the law. There is no middle ground to occupy.

But, sir, it is said that there is no necessity for this bill, and the decision in the *Slaughter-house case* is read for the purpose of showing that the bill is unconstitutional. I am very free to admit that if the court had had this case before them and had decided precisely what they did decide in the Slaughter-house case, then the argument of the gentleman is very plausible indeed. I would not be prepared to dissent from the conclusion he draws from that decision. But there was no case like this before the Supreme Court at the time of this Slaughter-house decision. The rights of the colored people were not involved in that decision. It was a mere *obiter dictum* on the part of the court on a case that was not before them. But to-day we stand without reference to the decision of the Supreme Court. This is one branch of this Government, the legislative department; the judiciary is another branch; and we go forward without regard to the opinions of each other unless those opinions have taken the form of judicial decision rendered in answer to the demands of a case properly brought before the court.

Mr. Justice Miller in delivering the opinion of the Supreme Court in the Slaughter-house case sets forth the fact that the citizen of the United States is entitled to the protection of the Government, and that it is the duty of the Congress of the United States to give that protection. Reading of the case of Crandall *vs.* Nevada, the opinion says:

> It is said to be the right of the citizen of this great country, protected by implied guarantees of its Constitution "to come to the seat of Government to assert any claim he may have upon that Government, to transact any business he may have with it, to seek its protection, to share its offices, to engage in administering its functions. He has the right of free access to its sea-ports, through which all operations of foreign commerce are conducted, to the sub-treasuries, land offices, and courts of justice in the several States. And quoting from the language of Chief Justice Taney in another case, it is said "that for all the great purposes for which the Federal Government was established, we are one people, with one common country, we are all citizens of the United States;" and it is as such citizens, that their rights are supported in this court.

Very well, the citizen has a right then to come here—to travel. That implies his right to free travel. But suppose the railroads of the different States should deny the colored man the right to travel. Suppose they say he shall ride in a box-car, or that he shall ride upon a platform-car, or suppose they say he shall not ride at all. Here are thoroughfares chartered by the different States. He has the right guaranteed to him of free transit through the country. Are we told that it would be unconstitutional for Congress to interpose and say that he may travel, being a citizen of the United States, precisely as other people travel? If he cannot travel precisely as other people travel, where does the distinction stop? Under our theory of government, if the right of travel is guaranteed, where can you make the distinction? Where can you put the limitation? What does the bill under consideration do? It declares that he shall travel just like other people; no more and no less. Where is the great wrong that is done to the white race in declaring that the colored man who is a citizen of the nation shall travel just like other people travel? Does it wrong anybody? Is the right of any one invaded by this?

But, says the Senator from New Jersey, you invade burial-grounds. Well, sir, we say that he shall have the right of burial in a public burial-ground. Suppose a citizen of my State having traveled here, the right of travel being guaranteed to him, has reached the city of Washington and after arriving here dies, where will you bury him? You cannot go into a private burying-ground for the purpose of finding a resting-place. You cannot go on the private property of any citizen and say "we will bury him here." Where shall the colored man find a burial-place? Not in a private burial-ground. O no; he cannot go there. Not on private property; he cannot go there. Well, are we to be told that the Congress of the United States shall not have power to declare that this man shall have a right of burial in a public burial-ground of the District of Columbia? This is a strange Government if the Congress of the United States cannot guarantee to the citizen this right; and that is all there is in that provision of the bill; simply that in public cemeteries, ground kept up by taxation, owned by companies that are chartered, and are protected by the law, the colored man shall have a right to be buried the same as a white man. Suppose this burial-ground shall be invaded by mob violence and you call on the militia to protect it, who is called upon? The citizen of the United States, the *posse comitatus*, or the militia if you please, and the colored man composes part of these. The colored man is called upon to come forward and bare his bosom to the danger of protecting this public property, for the public property is under the protection of the Government. He must go there to defend it. Shall a law exist that he shall not be buried there if he should fall in the act of protecting the property itself? Does it not belong to the Government of the United States when his right is contested to declare that in the public burial-ground he shall have the right of burial?

Mr. President, the South does itself injustice when it comes here to make objection to this bill upon the clause which I have mentioned. In many an old family burial-ground in the South you will find a tablet erected to the memory of some faithful servant, some faithful slave who served the family in days past, and has now gone to rest, resting there in the burial-ground by the side of the members of the once happy family. Throughout all the land you can find the evidences of the affection that existed between the races in the days of slavery. Ah, Mr. President, I said to you awhile ago that I was born in the midst of slavery. Yes, sir, I was. I was transferred to the arms of a colored nurse. I drew in my infancy from the bosom of that colored nurse the nourishment upon which I fattened and grew. That colored nurse watched over my childhood. She

watched me in my early manhood. She lives to-day in my own family, a favorite member of that family, having belonged to four generations of my race as a slave. In her decrepit old age she is led by my little children, who love her as I loved her, whose hearts dwell with her as mine has ever dwelt. Shall I say that when she dies I would be dishonored were her remains to be placed in my burial-ground? Ah, no, sir; for her aged husband who lived with her for fifty years, a faithful and affectionate servant of my ancestors, and who died before the war began, rests to-day in the family burial-ground, near where my honored father and mother sleep.

Mr. President, slavery is forever dead. Though flowers may not be strewn upon its tomb as they were on the tomb of Nero, freedom can well afford to bend over it and pay its memory the tribute of justice.

The southern people were not more responsible for slavery than were the people of the North. Born a slaveholder, I was no more responsible for the institution than the man who was born in Massachusetts. It was an institution of the country; it belonged to the nation; it was protected by the laws of the land—a property that had been established in the colored man by our forefathers. Eighty years ago we find that Indiana, protected though it was as a Territory by the Ordinance of 1787, possessed one hundred and ninety slaves; we find that the State of New Hampshire had one hundred and fifty-eight slaves; Rhode Island had one thousand slaves; Connecticut had three thousand slaves; Pennsylvania had four thousand slaves; New Jersey had eleven thousand slaves, and New York had twenty-one thousand slaves. These slaves were not set free. They under the law of the land were sold to the people of the South, and they were sold as barbarians, and they were a barbarous race at the time they came to the South; and I may say we can trace our own origin to barbarous races. They were held by the South for from fifty to seventy years as slaves; they were christianized, they were civilized, and when they were made free this nation, which had in its keeping the protection of the liberties of the people, declared that they had been so far civilized under the refining teachings and influences of the southern people as to be entitled to the high prerogative of citizens of this nation. They were admitted as citizens, and it was a compliment; it spoke much for the teachings of slavery and for the *peculiar* institution of the Southern States; and to-day if you of the North can take as an equal the man who has been my slave in the past, I in the South who instructed him, who civilized him, who elevated him, will not stand back, but I will step forward and extend to him the hand of fellowship.

Are we of the South prejudiced against the negro? In my childhood the negro was my playmate; in my early manhood he was my confidant; in my mature years he was my friend; as my slave he was my friend, and often I counseled and advised with him. He shared with me the pleasure of my triumphs and sympathized with me in the hour of my disappointments; and when the war ended and the relation of master and servant ceased, he still continued to be my friend. He chose me as governor of the State of Mississippi. Although I espoused the cause of the colored man and asserted his rights before the law in Mississippi, and was elected by him governor of the State, when I was chosen to the Senate the colored man voted side by side with every white man in that Legislature to send me here. Every vote of that Legislature, white and black, was cast for me to elect me to the position I now hold. I did not incur the prejudice of the white people there by advocating equality before the law for the colored man. The long-continued relation in the South of master and servant would have the effect of removing everything like prejudice from the mind of the master. His opinion of the negro would assume the form of judgment; it would no longer be painted with prejudice. Prejudice would only exist with those who were unacquainted with the negro; it would only continue between races that were unknown to each other. Contact would necessarily wipe out prejudice. No, it was not prejudice; this will not account for the action of the southern people since the war toward the negro. They held that the northern people intended to insult them by the enfranchisement of the colored race; and it was, in their minds, an insult which they were quick to resent. They did not at once comprehend the subject, but took hold of it as an effort on the part of the North to degrade them, and they resented it as such, and in their passion they have oftentimes permitted themselves to be guilty of gross injustice to the colored people; they have estranged the colored people from them. I trust the estrangement will not be of long duration.

But now let us go further. You say that you do not want the schools mixed. Well, I am not in favor of mixing them; and I contend that this bill does not mix them. There is no mixing in this bill. How is it in my State? There, as I told you, the colored people control; they make the laws; they levy the taxes; they appoint the school boards. The whole machinery is in their hands; yet there is not a mixed school in the State of Mississippi, and we have civil rights there. Why is it? Simply because the colored people do not desire it; because they believe the interests of both races will be promoted by keeping the schools separate. The colored people, however, believe that legislation is necessary by Congress in order to secure the advantages of education in some of the States, North as well as South. If Congress legislates at all, it must legislate in conformity with the requirements of the Constitution. Equality before the law demands that legislation should not be colored with the distinctions of class. In Mississippi satisfactory opportunities are provided for all. Every child in the State has the benefit of a common-school education, we have no prohibition declared. You have a right to send your child to any school you choose. That is the citizen's right; but it is simply a right that the colored people exercise by sending their children to the colored school; it is a right that the white people enjoy by sending their children to the white school. But a colored man removes, if you please, from the State of Mississippi, where he has the government in his own hands, where he has been enjoying citizenship in its largest and most extended sense, to the State of New Jersey, for example, and he finds there that he is not permitted to enter the white schools. He finds no colored school; he cannot go to the public school. There are no private schools for colored children. What will he do for the education of his child? Will he go without education? Will he be denied the privileges of education simply because he is black? Is it a stretch of the power of Congress; is it beyond the power of Congress to declare that no State shall deny to the citizen of the United States any privilege or immunity or right that belongs to the citizens of the United States? Is not education one of these? Congress certainly has the power to step in and say that this colored child shall have the right of admission to the public schools. Is there anything very startling in a proposition like this? Is there anything here that looks like overreaching and overstepping the power of Congress to declare that the right of admission into the public school shall be awarded to all the children of this nation?

But it is objected that this bill provides that the colored man shall be admitted to the theater. Yes; the theater is a licensed institution. The policy of the State government is to license theaters. It is held, and justly too, that the theater is a place where our intellects are improved, where vice is portrayed, and where virtue is exalted. When properly conducted it is an institution of instruction that has been held by all civilized nations to be refining to the taste and conducive to morality; one to be appreciated by intelligent people everywhere and fostered and cared for by them. If Ford's theater here in the city of Washington should be assaulted by a mob, it is the duty of the Government to protect it. The militia would be called out. The colored people largely compose the militia in the District of Columbia. They would have to go there for the purpose of protecting this property of a private citizen, which has been incorporated and is called a theater. When you have the power to call upon the citizen to go there and protect that property, shall you permit the proprietor to deny this citizen the right of admission if he pays his money as other citizens? Will the Government permit this proprietor who holds a license under its authority, to discriminate against the citizen because of the color of cuticle? Shall the citizen be denied the privileges of the play because he is black? Play-actors and theaters have been at all times and in all ages favorites of men of culture. We find an example of this even in the sacred writings, where the Apostle Paul, showing his appreciation of the play-actor, and the writer quotes from Euripides, the heathen poet and dramatist, and says in language which I will here repeat for the benefit of my friends, "Be not deceived; evil communications corrupt good manners."

Let the colored man go to the theater. The colored people from my State complain that when they come to this aristocratic city of Washington they are not permitted to go to the theaters here as other people. They complain that when they go to the cities of the North they are not treated as other citizens. I seek this legislation for the benefit of my northern friends; for I remember that when my wife and myself were going on a tour in the North, in the days of slavery, and we had reached the border of New York, the privilege of the first-class car was denied to our servant, and so much was I annoyed by this, finding she would not be permitted to travel with us without the inconvenience of being separated in the cars, that I had to send her home that she might continue to be in a State where her rights and privileges were recognized. [Laughter.] A mob could have been raised in any of the cities or towns through which we passed to seize and carry her away that she might be made free. This we did not suppose was prompted by humanity or patriotism, but held it to be fanaticism. They objected to the slave woman on their soil and stood ready to declare her free; but no sooner was she free than she was denied the rights of a free person. This we held to be *prejudice*.

Objection is made that the bill provides that the colored man shall have accommodations at public hotels. If he is denied accommodations at the public hotels, where will he get accommodations if he sees proper to travel? When upon a journey, he has no right to go to a private house. If the public houses refuse him, then an American citizen becomes a pariah in the land which guarantees to him the right of travel. The hotels are licensed institutions. When the grant of a license is made, the municipality demands of the keeper a bond for the faithful performance of his contract. The condition of the bond is that he shall provide food and lodging for the traveling public. Practically this bill requires him to comply with the conditions of his bond. He cannot be permitted to stand at his door and turn away men from the accommodations which he has in his bond agreed he would furnish on account of their complexion. He must not be permitted to look into a man's face to decide by the color of his skin whether the food and lodging shall be provided which he has obligated himself to furnish. It would be a strange government indeed that would tolerate a proceeding like this. The colored people

make their complaint; they demand legislation as necessary to their convenience and comfort in this respect. It is one of the rights and privileges that belong to the citizen. Congress is called upon to legislate, and when it comes to legislate it must legislate, as I before said, in conformity with the Constitution—equality before the law. The legislation, I repeat, must not be tainted with distinctions of class. All that Congress can do, if it does anything, is to see that the accommodation shall be extended to all the people alike. Let us be logical and we shall be just.

Mr. President, the injustice that the southern people have done themselves on the question now under discussion is one that attaches to-day to their welfare and their material prosperity. If in Georgia, for example, a colored man is denied his equality before the law, if in Tennessee he is denied his equality before the law, may not the colored people in my State put in operation the *lex talionis*? May they not legislate and deny the white people in Mississippi their equality before the law? I ask our friends from North Carolina, Tennessee, Georgia, and elsewhere, having suffered as we have in a common cause, a cause in which our hearts were all enlisted, bound together as we are by the memories of the past, sacred to our hearts, a common misfortune having overtaken us, living in that gloom which overspread the land at the South when the war ceased, will they imperil the prosperity, will they imperil the liberties, will they imperil the safety and the well-being of the white people who live in the colored States by declaring that they will deny to the colored man his rights under the law in their States?

What is to be the effect of legislation of that character? Suppose the Government here in forming the policy of this nation should see proper to deny that this legislation shall be extended; what would be the effect? Would not the effect of it be to drive the colored people from other States, from the States of the North and the States of the South, to Mississippi, Louisiana, South Carolina, and States like these where they can get their rights? The colored people have pride, and they will not exist under an inferiority recognized by the State Legislature.

They know the fact of their ignorance; but am I here to taunt them with their ignorance? Is there a Senator here who stands ready to taunt the colored man with this?

A man's a man for a' that.

It is an ignorance that results from the fact that for two hundred years his race writhed in the grasp of slavery; and South Carolina, I repeat, was no more to blame for that than was the State of Massachusetts. In the organization of the Government the majority of the slaveholding States were in favor of terminating at once the African slave trade. Georgia and South Carolina were for continuing it. The five Eastern States voted solidly, in the lead of Massachusetts, for the continuation of this trade until 1808. By this that barbarous traffic was continued, under the protection of the Government, for over twenty years of time. If either section can be charged with the responsibility of continuing this traffic, it lies with the Eastern States. The merchants of Boston sent their ships to the coast of Africa to capture and bring to our shores the natives. They did this because they could find purchasers for the blacks among the people of the South. They were not particular as to whether they should bring them in families, but they caught them as they would have captured wild animals; they stood not on the order of their taking, but took such as they could get, because there was gold in them all. The choice ones were worth $100, the small ones were worth less, and so the barbarous traffic was kept up for over twenty years, in opposition to the sentiment of the Middle and Southern States, Georgia and South Carolina excepted. But I stand not here to cast blame upon any section. The spirit of that age tolerated slavery, the Government threw around it the strong arm of its protection; but a new light has dawned, a new civilization has come, and now the Government throws its arm, increased in strength, as a shield of protection in the maintenance of the freedom of all men of whatever race.

But, sir, it is said that the colored people pay no taxes, that the white people pay all the taxes! As a general rule that is the fact, and it is not very remarkable that it is so. The white people have never been denied their freedom, while the colored people were slaves until the war ceased. Is it remarkable, then, that the property of the country should be with the white race? But let me show you that perhaps there is some error existing in the minds of gentlemen on this subject. I happen to have before me a message which I delivered to the Legislature of the State of Mississippi when I was governor of that State. I had gathered a little information on the subject of the two races from the time the war ceased. I will present a few figures from that message for the consideration of the Senate. In 1870, in seven counties of the State of Mississippi, three white, three black, and one where the races were about equally balanced, selected because presenting a fair average of the State, 69 colored people owned $30,680 worth of real estate; 3,798 colored people owned personalty to the gross value of $630,860; and 178 owned both realty and personalty to the gross value of $220,700; making in all $882,240. Multiply this by ten, there being seventy counties in the State, and it would give us as a result, the colored people in the State of Mississippi, in 1870, owning $8,822,400 worth of property. I think it fair to presume that the colored people of Mississippi are property-owners to the extent of $20,000,000 at this time; that the last four years of their existence as freemen presenting increased opportunities for the acquisition of wealth, have been more prosperous to them than the four years following emancipation. They are tax-payers in the State of Mississippi. They are not a pauper race there.

Why, sir, the third man on the list of large cotton-growers in the State of Mississippi is a colored man. Without a single drop of white blood in his veins, he to-day stands third in the list of cotton-growers in that State; and Mississippi has about as large cotton-growers as any State in the Union. I venture to say that he stands not less than sixth among the cotton-growers of the Southern States; and here I will relate an anecdote of him as illustrative of what we may reasonably hope for from men of his class under proper teachings and the promptings of a laudable ambition for the accumulation of wealth. He is a very excellent citizen. Finding that a white man whom I had appointed a member of the board of supervisors of one of the wealthiest counties of the State, and an old southerner, too, by the way, had been faithless to his trust in the county in which this colored man lived; having the appointing power in my hands, I was very much in want of a member of the board of supervisors who would protect the property-interests of the people of the county of Warren, and so I tendered the appointment of president of the board of supervisors to this negro, Ben Montgomery. Ben Montgomery wrote me a very polite note, (for he writes a good hand and is an intelligent man, though he was a slave up to the end of the war,) saying to me that he was very much obliged indeed for the compliment I had paid him and for the confidence I had manifested in him in tendering him so responsible an office, but stating at the same time that his business was such and his duties were such, so engrossed was he with his private affairs, that he had no time to bestow upon public offices, and that he would be very much obliged to me if I would confer the office upon his neighbor, whose name I will not mention, who had been a slave-holder when Ben was a slave, which neighbor, Ben assured me, was very anxious for the place.

Now, Mr. President, I do not wish to detain the Senate, and I will not detain it much longer in discussing this question. I have already said more than I intended. But I will add a few words in addition. The obstinacy, the passive as well as active resistance that the southern people have given to that destiny and to the workings of that Providence in whose hands we are, has retarded their prosperity and has almost deprived them in the negro States of any voice in their government. This action on the part of the better classes in the South is not due to prejudice, as I said a while ago, but to an inherent pride of soul. They believe that the action of the Government in the legislation which has characterized reconstruction was intended to insult and degrade them, and it is this feeling that has led them into a false position and a false relation toward the colored man.

Why, sir, but the other day when the Legislature of the State of Mississippi attempted, through the machinations of a class of knaves who are in that body, to cast an imputation upon me, as far as they could to degrade me in the eyes of the nation, by passing a resolution asking me to resign my seat, and when that resolution came before the senate, who rose there to vindicate me against the foul aspersions that were attempted? Can I ever forget? The lieutenant-governor of the State of Mississippi, whom I had known as a slave in the past, a man and a gentleman, came with others of his race to my rescue and defended me against the assault, and co-operating with men of my own race, to whom I owe gratitude, the resolution was ignominiously defeated.

Do you tell me that I can feel a prejudice against men like these? Do you tell me that the people of the South who have been associated with the colored people in the relation of master and servant from childhood, who during the war left their families under their protection, and when the bloody strife went on trusted with a confidence that was rarely violated, and who to-day look back in wonder at the fidelity of the slave—that these brave southerners will let the colored men have just grounds to charge them with ingratitude? When the North bid them take up arms against us and freedom was the prize, when liberty was the watch-word, the colored man stood guard at the door of his southern mistress whose husband in the distant battle-field fought that the slave power might be perpetuated. The property of the slave-master was protected by the colored people he left behind him. They stood around the bier of the dead confederate soldier, shedding tears of grief from their hearts and mingling with the family in all the sorrows that befell them. Do you tell me, I repeat, that we feel a prejudice against the colored people? It is unnatural. It is not possible. I say the southern heart does itself an injustice, a foul wrong when it stands here to declare men like these unworthy to be free—that men like these should be denied the fullest measure of equality before the law.

I see before me the honorable Senator from South Carolina, [Mr. ROBERTSON,] who was a slaveholder in the past, and who stood forth in the State of South Carolina, which he now so ably represents, from the close of the war to the present hour the friend of the colored man. He stands to day with all his heart urging the passage of this bill. He believes with me that it will give quiet to his people, that through it he can remove those obstacles that have stood in the way of good government in South Carolina.

Sir, why is it that we hear the cry of distress coming up from that stricken and afflicted State to-day? It is because the South Carolinians, acting upon the principle I have just now sought to describe,

have wronged themselves in turning their backs upon the colored people, and have opened an easy way for the intriguing whites to win the confidence of the credulous colored people, who prize liberty and equality above every other consideration. The white man, who seeks to despoil the State, who designs the robbery and plunder of the people, holds out to the negro the promise of the civil-rights bill, of equality before the law. He points to the southern white, who refuses this; who stands aloof, and declares he will regard this bill as a bill of abominations. Is it not reasonable that the colored man should act as he does? You cannot hope for colored support while you withhold from the colored man that legislation which is necessary to the assertion of his right as a citizen. The low white demagogue will put his arms around the negro's neck, whisper love and civil rights, and while he does so slip his hand into his pocket and rob him of his money. [Laughter.] He leaves his victim with the injunction, "Remember the civil-rights bill!" Because the colored man will not turn and denounce this thief as a robber he is denounced as a fool and as being himself dishonest. It must be remembered that this intriguing, dishonest white man has charmed the colored man with the visions of happiness to be enjoyed under the workings of the civil-rights bill. He yields to the present demands of the robber in the hope that for all this the coveted prize of *civil rights* will be delivered to him bodily by and by. All men of every race despise inferiority. Let us not find fault with the colored man that he holds his liberty and his equality before the law above every other earthly consideration. The liberty and equality of the colored people is the talismanic word of the adventurer who comes South to rob us. By this our country has been plundered, and unless we can end this fruitful source of licensed larceny the downward speed of the States south will not be arrested until ruin shall hold carnival over the fairest portion of this great nation.

How often have I heard the old master remark the fact that in everything except in the use of the ballot his old slaves reposed in him the most implicit confidence! In trouble, the colored man comes with his story of distress; when in doubt, he applies for his judgment; when trespassed upon, the colored man comes with his appeal for help; but when the day for voting comes he withdraws from the presence of the old master and seeks advice of the knave who stands ready with promises of the happy day of *civil rights*.

How easy the solution of the secret! The old master denies the colored man his equality before the law; he withholds from him his *civil-rights bill;* he abuses the republican party because it is pledged to grant the coveted prize. Is it strange that the colored man will not take his advice, possessed as he is of the purposes of the old master to thwart the hopes of himself and his posterity in achieving the triumph of his soul—*his equality before the law?* Come and let us reason like men who realize what the revolution hath wrought, who realize the spirit of the age in which we live, who can discern the hand of Providence as we follow destiny.

The colored people, intent upon their liberty, watchful of it, and hearing the cry that it is being assaulted, turn naturally to the men who promise to guard it, and thus it is that the men who are ever ready with promises are enabled to obtain office whereby they rob and plunder the State. It is not the colored people that have plundered the Southern States; it is not the colored people that have wronged the Southern States. Not a colored man in the South to-day stands enriched at the sacrifice of any of the white people's property. They have been used, I know, as instruments; and it is precisely the want of this civil-rights bill and the opposition to measures like this that have enabled these knaves that wear the skin of white men to rob the South. It is through these instrumentalities that they have been able to work all the wrongs they have inflicted upon us. I would remove them out of the way. I want to make this law so broad that it shall reach into every avenue of society, touch every man there is in the land, and lift him up to the dignity of a citizen of the United States, and say to him, "The protection of the Government rests upon you." Then, sir, we shall have peace, and then these men can no longer stand between the white people and the colored people.

But I wish to say, lest I may be misunderstood, that we have received valuable men from the Northern States who have become citizens of the Southern States, and we hope to see their numbers augmented. When these have obtained office we have not been wronged; but such men find difficulty in holding positions when a work like this is left unfinished, while the demagogue abounds in promises and the colored man's imagination is the theater for action. Pass this bill with a careful regard that it confers every right and you at once strip from the hand of the white knave, whether he came from the North or is, as many of the meanest are, "to the manner born," the wand with which he moves the colored masses in the South. Good men will then come together, honest men of both races will join hands in the brotherhood of political equality, and our State governments will stand redeemed from the adventurer whose presence is a standing insult to free government.

Remove the barrier that now separates the political fellowship of the races and we will be friends. Give quiet to the minds of the colored people; inspire confidence in your truth and political fair dealing, and he will at once join you in driving every unworthy white man from office!

But now I come to express my surprise at the language of the amendment offered by my honorable friend from Massachusetts, [Mr. BOUTWELL.] I heard from him the other day expressions that I did not expect to hear from Massachusetts, and I see in his amendment words that I did not expect to come from that State. Ah, sir, we are not satisfied with this amendment. When the revolution had ceased, when the fiat had gone forth, in the hour in which the victory was proclaimed, your aristocracy in Massachusetts was swept down as was the aristocracy in the South. But here comes the Senator from Massachusetts and proposes an amendment to the bill. He moves to strike out in section 1, lines 7, 8, and 9, the following words:

> And also of common schools and public institutions of learning or benevolence, supported, in whole or in part, by general taxation.

And insert in lieu thereof:

> And also of every common school and public institution of learning or benevolence, endowed by the United States, or that may *hereafter* be endowed by any State, or supported, in whole or in part, by public taxation.

Ah, yes, "hereafter!" with your institutions finished, with your endowments already made! Do you seek thus artfully to deprive the citizens of my State from coming to your public schools? Massachusetts cannot even here, with all its power, with all its eloquence, and its subtlety, escape the consequences of this legislation. We propose to strike out, and before I leave the floor I shall ask that the word "hereafter" be stricken out of that amendment, so that the revolution shall be recognized in all its workings in its full scope and power. Let there be no heretofore or no hereafter so far as liberty is concerned, but now and forever let equality before the law be maintained.

I beg the honorable Senator to quiet his imagination if he supposes that he can maintain his aristocracy of education in the State of Massachusetts. We intend that the colored youth shall go into every school that there is in this broad land that he sees proper to enter, when it is supported and endowed by the Government of this great nation, or when it is supported by taxation. That is the demand of the colored people, and it is a demand that will be realized. While I speak to-day, there stand eight hundred thousand colored men at my back. They are united on this specialty, and they are able to work that legislation which they deem proper and demand at the hands of this Congress, and they will do it. If you say your Constitution is not sufficient, if the courts of the country shall say that the Constitution stands a barrier, these eight hundred thousand men will make it known to the nation that it shall be made sufficient to answer all the ends of equal government and justice to every man in the land. If you want to know what is to be the destiny of this nation, look not to the Constitution, but look into the faces of the people. The people in a revolution like this, for the revolution still goes forward, trample down constitutions and they disappear as flax before the flame. The demands of the people of this free Government are not to be turned aside; they are to be listened to; and I say to you, sir, that this demand will be heard. Having felt their strength, I realize the power that lies in the hands of the masses of the American people. When reconstruction was decreed the Constitution gave no warrant for the enactment, but the people spake and the Constitution responded, "Here am I; the power is given!"

Sir, my heart yearns for peace. I look with a sad heart upon the poor, stricken South. Torn by faction she lies bleeding at your feet. Robbed of her treasure, despoiled of her beauty, her people grope their way in the gloom of political midnight. May the sunshine of hope once more be vouchsafed to my native land, that the hearts of my countrymen shall be made glad in the enjoyment of that prosperity which industry will bring and which good government will preserve.

The colored people of my State demand the passage of this bill. I yield to that demand. My refusal would excite them to anger; they would keenly feel the injustice and wrong. I bend gracefully to their will. My heart tells me they ask no more than I would demand were our positions reversed. Can I refuse to give that which I hold to be a right? No. Mr. President, I occupy the position of one who appeals to the colored people of my State. I have in the past and shall again appeal to them to deliver the State from the body of that death which is now enthroned at her capitol. I shall appeal to them to lift the cloud and let the sunlight in, and so appealing to them I must give them an earnest of my sincerity of soul, give them the right of travel, the right of the hotel, the right of the school-house, the right of the college, the right of the university; and, finally, every right, including the right of burial, guaranteed by the Constitution to the citizen of the United States.

Civil Rights.

SPEECH OF HON. A. S. MERRIMON,

OF NORTH CAROLINA,

IN THE SENATE OF THE UNITED STATES,

May 22, 1874.

The Senate having under consideration the bill (S. No. 1) supplementary to the act entitled "An act to protect all citizens of the United States in their civil rights, and to furnish the means for their vindication," passed April 9, 1866—

Mr. MERRIMON said:

Mr. PRESIDENT: I deprecate the fierceness of the spirit manifested by the majority in forcing us to proceed with this important discus-

sion to-night. Already the Senate has been in continuous session for eleven hours, and every one present must be much fatigued. A number of Senators have said in good faith that they desire a fair opportunity to discuss the pending measure, but they are told the vote shall be taken before an adjournment, and they must speak now or not at all. In my judgment this is unfair and unjust to the Senate and the country. I am much fatigued and in poor condition to proceed with the discussion now, but I will do so, nevertheless, at the hazard of making my remarks desultory. Indeed, I have not had time to arrange my thoughts in order, not expecting to be forced to speak at this late hour.

Mr. President, in the first place, in my judgment, Congress has no power under the Constitution to pass the pending bill commonly called the "civil-rights bill." I think the impression that it has such power has grown out of a public sentiment warped and corrupted by an abnormal state of political affairs in this country for the last half century, produced by the anti-slavery agitation. I believe that the unduly excited passions of the American people, and especially of those who live in one section of the Union, have had much to do with controlling their judgment and shaping their views of our system of government—views which would not be tolerated, if pure reason, right, and public policy, looking to the best interests of the country, could be allowed to prevail.

I propose to examine somewhat into the structure, nature, and origin of our system of government, in order to ascertain exactly where we stand to-day and what are the powers of the Federal Government, what are its purposes, and more particularly the powers of Congress which it is claimed authorize the passage of this measure, and what are the powers and purposes of the State governments, and what are the powers and purposes of our system of government as one grand whole. And if I shall succeed in making myself understood in this behalf, I undertake to say, and I have a thorough conviction of the fact, that every unprejudiced mind must conclude that the bill is one that Congress cannot pass.

The groundwork of the theory of construction of the Constitution contended for by the advocates of the bill, as appears, not only from this debate, but also from elaborate debates touching similar measures in the past, is founded in the Declaration of Independence. It is said that that instrument embodies the grand principles of universal liberty and equality of right, civil and political, the principles of truth which underlie this measure and all similar measures. The broadest construction of it, without any limitation of any kind whatsoever, is insisted upon. Now, sir, in the very outset of my remarks I desire to examine briefly that instrument, and see whether, giving it a reasonable construction and treating it as the firm foundation of our system of government, it has any such effect as that now claimed in fixing and measuring the powers of Congress.

The thirteen original States—at first called the thirteen Colonies—were subject to the Crown of Great Britain, and they were governed by the constitution and laws of that country. The colonists were oppressed in various ways by the mother-country; their oppressions continued and increased until they became "too intolerable to be borne," and all suffering alike, in a greater or less degree, they resolved to become free and independent; and accordingly the Colonies, collectively and severally, framed and passed that immortal instrument of liberty called the Declaration of Independence, whereby they declared that they were free and independent States; that they were no longer subject to the Crown and constitution and laws of Great Britain; that they were separate and independent powers—States—in the world, with all the sovereignty and political power that could inhere in any people or any government. That instrument contains these words, and they are all of it material for my present purpose:

> We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness.

Now, Mr. President, in view of the circumstances which surrounded the Colonies at the time this declaration was made, and in view of the declaration itself, its purposes as expressed in terms and the circumstances which happened immediately after its adoption, what was the manifest end contemplated by the clause which I have read? Plainly it was that the colonists should secure the grand ends mentioned and defined in this clause, according to their own will and judgment, through such form of government as they might devise, amend, and change from time to time. It seems to me that that is too manifest to require elucidation.

How, then, did they determine that these ends were to be secured? The history of that time tells us beyond question or controversy. Each of the then thirteen States had its own government; each of them, by virtue of the Declaration of Independence, became absolutely sovereign and independent; and each of them as a society of men could exercise any power, civil or political, that any government on earth could exercise. They were absolutely sovereign and independent by virtue of this declaration, and while they were in that condition no superior, supreme, or federal government could control them in the exercise of any power whatsoever. For a considerable period of time they continued to exist without any federal league or head; without any federal government or any pretense of such a government, and during this time each State made such laws as it deemed wise to secure the liberty and equality of rights asserted in the declaration.

The inference then is, and it seems to me it is plain, that the way and manner in which they at first proposed to secure the political and civil privileges which they sought to secure by this declaration, was by virtue of and through the State governments as they existed at that time, and by the very terms of this declaration they continued to enjoy these rights under those systems of government until in the progress of time, in the exercise of their judgment and wisdom, they undertook to secure these ends by another form of government, or the same form of government modified by themselves, and so they did continue to do until the thirteen States by common consent, for their joint and several benefit, agreed among themselves to establish what is known in our history as the Confederation.

Articles of Confederation were agreed upon in Congress; they were submitted to the thirteen States and the States accepted them. That confederation was in aid of the State governments which existed in their sovereign capacity by virtue of this declaration, and it was an advance step in government with a view to make more secure the great ends of society declared in that instrument. But that Confederation could scarcely be styled a government. It did not possess all the elements of government as we understand it. There were no coordinate branches of government; there was no executive power provided by the Articles of Confederation; there was no judicial power provided. All the powers of government, executive, legislative, and judicial, so far as such existed, were concentrated in the Congress of the United States; indeed, the Congress was mainly an advisory body; it could compel neither the States nor the people to do anything.

The powers thus conferred upon the Congress were comparatively very few, and they were to answer general purposes, and were such as simply enabled the Congress, looking to the general interests of the whole thirteen States, to recommend to the several States what ought to be done for the common benefit. The truth is, no absolute executive power whatsoever was conferred upon Congress, nor was there any judicial power conferred upon them. They were to all intents and purposes a power charged to recommend to the several States what was necessary to be done for their common benefit, and it remained with the States to do what might be recommended or not to do it, in their pleasure. The only thing pledged for the performance of the duties which they promised by these articles to perform, was their faith and honor, and history tells us that in many instances that faith and honor were not kept. The States retained their absolute sovereignty not only by the tenor and spirit of these articles, but by their express words, for it was plainly said that the States reserved their sovereign authority. So I apprehend that the thirteen original States were absolutely sovereign and independent, and might do as they would, uncontrolled by any power, supreme or otherwise, save only their sovereign will. I repeat, Mr. President, that I apprehend the thirteen original States continued absolutely independent and could do as they would, and were uncontrolled by any power whatsoever until the adoption of the present Constitution of the Union.

The thirteen States, after their experience under the Declaration of Independence first, and then under the Confederation, found that they could not in all probability maintain their political existence as a separate and independent people and carry out successfully the great purposes of the Declaration of Independence; unless they should cooperate to promote their common interests; and to that end, it became manifest to the statesmen, indeed to the whole American people of that day, that a *national government* was necessary, nay, indispensable. Hence a convention was called, and assembled in the city of Philadelphia to form a system of national government, the better to secure the purposes of independence.

Here, sir, in the pathway to the truth let us pause to consider the exact condition of the thirteen States at the time they thus resolved. I have already said that each of them was absolutely sovereign and independent; each of them possessed all the political power of Great Britain or France or any political power on earth at this day. There was no limitation upon their power. They were absolute; and being absolute, it was competent for them to make a treaty with each other or to make a treaty with any foreign government, or to incorporate themselves into any other government, or to make a common government for their common benefit. And they could—is there any reason why they could not? I cannot conceive of any—confer upon a common government such portion of their sovereign powers as in their judgment they might see fit.

It seems to me plain they had power to do that, to say "certain elements of our sovereignty, certain rights which we possess as an independent political power, we will confer, with such limitations as we shall establish, upon a general government; a general government which is to be common to us all and for our common benefit, to preserve our integrity as one people and the sovereign rights which we reserve unto ourselves as States among ourselves, and to protect us against invasion and assault from abroad, to promote our common industries and our common defense, our common happiness and our common welfare." In other words, in pursuance of the Declaration of Independence, they were marching on in the highway of nations, and modified their form of government, enlarging it, expanding it, as they had the power and the right to do, in order to secure the great

ends of society set forth and declared in the Declaration of Independence; and in pursuance of this purpose they framed the present Constitution of the Union, except the amendments thereto, which were afterward, in furtherance of such purpose, adopted.

That Constitution, then, together with the constitutions of the State governments, was an *enlargement* of their system of government, a *change* of government, an *advance* in it, for the purpose of better securing the great ends of the equality of all men, their inalienable rights, their life, their liberty, and their pursuit of happiness. How did they do it in that case? They had declared that all men are created equal. How are we to understand what they mean by this declaration? Certainly by what they did and said. We are to construe their language in connection with their acts. What do we know touching their acts, apart from what appears in the Constitution itself? We know from history, we know from tradition, we know from men living at this day, that the institution of negro slavery existed at the time independence was declared and at the time the Constitution was adopted, by the sanction of law in the thirteen original States; we know—whether it was right or wrong—that the American people held the negro race among us in bondage and as slaves; and when they said, therefore, that all men are created equal, it is manifest, the conclusion is inevitable, that they did not at that time include the negro race in that declaration, and that their frame of government did not apply to or embrace that race as a race of freemen or entitled by virtue of the Declaration of Independence to the benefits of free government.

On the contrary, the framers of the Constitution—let men say and do what they will now—recognized the institution of negro slavery and provided for it, held the race in bondage; and if it is to be regarded as a stigma upon one section of the country, it is a stigma alike upon every section, and it is likewise a stigma upon the name and fame of the immortal men who established the system of government that we live under to-day so happily, and for which we bless and revere their memories, and I trust in God shall continue to do so to the latest generations. Our fathers gave us negro slavery, and the Constitution and laws recognized and upheld it for more than three-quarters of a century. If it was an evil and a wrong, this generation is not alone responsible for it, nor is one section of the country alone responsible for it.

Now, let us see if I am correct about this; for I do not propose to make a declaration that I am not willing to be responsible for. If I shall inadvertently make an improper or false statement, I trust some one will promptly correct me. To show you, sir, that the framers of the Declaration of Independence, the framers of the Confederation, the framers of the Constitution of the Union, did not embrace the negro race in the declaration itself, I propose to read from the Constitution. I read the first clause of section 9 of article 1:

> The migration or importation of such persons as any of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year 1808, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

Every one familiar with the history of this country knows that that clause had reference to the importation of the African from his native country and for the purposes of slavery, and while our fathers looked to a time when they would prohibit the importation of Africans to this country for such purposes, it seems they had some compunctions of conscience upon that subject; still they were willing that the practice of such importations should continue for a time on the part of such States as might deem it wise and proper to pursue it; but the Government itself, taking the whole responsibility of it, incorporated it into their organic law, providing that that government should have power to tax and to raise revenue from such importations. In view of this provision of the organic law made to effectuate the purposes of the Declaration of Independence, to say nothing of the practice of the governments, State and Federal, who can pretend that the negro slave was intended to be embraced within the declaration or the Government, as a freeman?

But, sir, that was not all they did. I read further to show the purpose and meaning of our fathers, the framers of this sacred instrument which we all vie with each other in praising as embodying the grandest system of free government among the nations of the earth, the world has ever seen. I read now from the third paragraph of section 2 of article 4:

> No person held to service or labor in one State, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

Now, sir, in view of the history of the past, in the recollection of everybody in this presence, referring to statutes but lately repealed, do we not all know, does not the world know, does not the negro race itself know, that that clause in the Constitution was framed for the express purpose, if the slave should escape from his master, of enabling him to reclaim his slave and still hold him in bondage? There can be no question about this, and there can be as little question that our fathers proposed to secure the great rights and purposes embodied and defined in that Declaration of Independence by this system of national and State government which they prescribed in the State constitutions and the instrument from which I have just read? Thus they then sought to secure these great ends of independence and freedom.

I may add, slavery was also recognized in the second clause of the second section of the first article of the Constitution. It provides as follows:

> Representatives and direct taxes shall be apportioned among the several States which may be included within this Union, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including *those bound to service* for a term of years, and excluding Indians not taxed, three-fifths of all other persons.

I have deemed it worth while to advert to what was meant by the Declaration of Independence, because the leading advocates of this bill insist seriously that it empowers Congress, by virtue of its general purposes and scope, to pass it. They insist that this declaration is the great foundation of our system of government. I have endeavored to show that, if this is true, those who established independence prescribed a fixed fundamental organization by which they thought best to secure human rights and happiness and the means of promoting them, and that they placed a different construction on the declaration from that now contended for by the advocates of this bill.

Well, sir, what frame of government was established at first to secure and perpetuate the rights declared and proclaimed in the Declaration of Independence? We have seen that the States were at first absolute; that the people established the general or common Government with general limited powers, reserving certain powers not granted to the States. Did I say reserving certain powers? I correct that. Absolute power was reserved unto the States, sovereign power was reserved to the States, except in so far as they delegated certain powers to the General Government. In certain respects, therefore, and in most respects, the States remained absolutely sovereign. In certain other respects the Federal Government became a great sovereignty, absolutely sovereign as any power on earth within its sphere; the States remaining all the time absolutely sovereign as any power on earth within their respective spheres, and the General Government and the State governments together for certain purposes and in certain respects absolutely sovereign in their collective power as one of the great nationalities of the earth. But as was provided, the Federal Government could only exercise certain general powers conferred upon it for the common benefit of all the States.

It has not been pretended, it cannot be seriously contended, that under the Constitution of the Union and under the constitutions of the several States, under our system of government, to secure the grand ends of right, freedom, and of government, as manifested in the Declaration of Independence, Congress could pass the bill now pending for the benefit of the negro race up to the time of the adoption of the thirteenth amendment to the Constitution. It is not pretended that Congress had such a power until the thirteenth amendment was adopted, except by those who are so rash as to insist that the power is derived from the Declaration of Independence. It not only appears so by the Constitution itself, by the uniform practice of the Government from the adoption of the Constitution down to the time the thirteenth amendment was adopted, but it appears also by the exposition of that instrument by Congress, by the Federal and the State courts, by the Executive of the Federal Government and the executives of the State governments, that Congress had no such power. By all departments and authorities of the Government, both State and Federal, it has been settled from the beginning to this day, that anterior to the thirteenth amendment, Congress had no power to pass the pending bill. I believe that nobody ever pretended that Congress had such power by virtue of any *constitutional* provision. Senators learned in the law and in the Constitution of their country have conceded that up to the time that I have mentioned it possessed no such power.

Not only that, the supreme judicial tribunal of this country in repeated cases have decided under circumstances of the most extraordinary character, circumstances of great pressure, circumstances of great stress, after long and most mature discussion, that no such powers as contained in this bill could be exercised by the Federal Government I shall have occasion to refer to some such decisions of that court in the course of what I have further to say.

Then, sir, the discussion is narrowed down to the thirteenth, fourteenth, and fifteenth amendments to the Constitution; if the power to pass the bill exists at all, it exists by virtue of one of these amendments, or by one or more or all of them together. I therefore come to the consideration of them, and propose to treat them seriatim and see whether they confer upon the Federal Government any such power as that claimed in this debate and in the pending proposition.

In proceeding to examine these amendments I am not moved by the spirit of a partisan, or a desire to reach a particular conclusion to serve a special purpose, but by a spirit that is anxious to ascertain truth and to come to a just conclusion touching a matter of the gravest moment, one which involves the integrity of the Government, its whole nature and its character. The importance of the construction of these amendments cannot be overestimated, for if the construction contended for by the advocates of the pending bill is the true one, then the whole nature of our Government is changed, and we have a grand central government and the State governments have ceased to exist, except as they exist by permission of the Federal Government and under its supervision, direction, and control. If the Federal Government can control the State government in the respects contended for, then it may do so to such extent as makes the State governments the creatures of the Federal Government, and possessed of few or no absolute powers.

I mention this to show how important this matter is and how carefully we ought to proceed. Surely it is a matter of no small moment to the American people, to say that the whole nature of the Government should be changed by these amendments, and we ought certainly to come to such a conclusion if such change is provided, cautiously, calmly, and deliberately, free from passion or prejudice.

But to proceed. The thirteenth article is in these words:

Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

What is the plain meaning of the words contained in that amendment? "Slavery" is a term that is well understood. It is understood in all civilized countries. It is understood by every one who is capable of understanding the meaning of the English language and who is capable of understanding any language. It is understood in France, it is understood in Germany, it is understood in Russia, or the word tantamount to that in the languages of those countries. It is not only thus understood by the common people, but it is likewise understood in a more logical and in a legal sense. It has, I may say, a technical meaning, and especially has it certain, definite meaning in this country. It means the holding of a human being in a state of servitude against his will and subject to the will of a master.

That is not only the plain meaning of this word, but that meaning appears more forcibly, more clearly when we look at this amendment in the light of the condition of our country at the time it was adopted and in the light of the history of our Government. From the foundation of our Government, as I have shown, the negro race in this country were held in a state of bondage, in a state of servitude; they were slaves. The white people of the country held them in bondage, used them, controlled them, and disposed of them as property, as chattels. They not only did so, but, as I have shown beyond successful contradiction, they did it in some sense by virtue of the Declaration of Independence, by virtue of the Articles of Confederation, and by virtue of three express provisions contained in the Constitution of the United States. The institution was known as the institution of negro slavery in this country, and sanctioned by the constitutions of many of the States of the Union, and sanctioned by the Constitution and laws and policy of the Union.

There was a large portion of the American people who came, in the course of time, to dislike this institution. They said and believed many of them most sincerely, that this institution contravened the laws of nature. They believed that no human being had a right to hold another human being in bondage. That, it seems to me, was natural. Not only did they entertain these views, but the great body of the civilized world outside of one section of the Union entertained like views. It was not surprising that the people of the States where negro slavery prevailed, believed otherwise. Many of them believed sincerely that negro slavery was an institution ordained by the Almighty himself. At all events, they believed that it was not morally wrong or wrong in any sense; that, on the contrary, it was an institution that blessed both the slave and the master. They were educated in that belief. They were educated in that belief from the very foundation of our Government; indeed their education in that behalf began before the foundation of this Government. They inherited it from the mother-country. It was instilled into them through successive generations. It became a part of their nature to believe that it was just and right and beneficial to humanity and to civilization. It affected their social condition, their religious and political convictions, and made up a large and controlling part of their wealth. Indeed, sir, it had such an influence upon the fortunes of the people where it prevailed, that it established a distinctive civilization, which I undertake to say, so far as those were concerned who could enjoy the benefit of it, surpassed that of any age.

As I said, a large portion of the American people in the course of time became opposed to this institution. They became hostile to it and made war upon it, and they were co-operated with in this respect by many persons opposed to it in foreign lands. The spirit in favor of it in those sections of the Union where it prevailed, became intensified and aggressive. The spirit of opposition in like manner became zealously aggressive, and these two aggressive spirits came together, first in moral, then in political conflict, and finally conflict of arms. That conflict resulted in the absolute destruction of that institution by force. It cannot be pretended, I believe it is not pretended, that it was destroyed by any lawful authority under the Constitution of the Union or under the constitutions of the States, or under the constitutions of the Union and the States co-operating as the organizers of a great nationality. But be that as it may, these two opposing and aggressive spirits came in conflict; a civil war resulted; and the result of that civil war was the destruction of negro slavery in this country.

The statesman and the politician and any one anywhere may say what he will, the great civil war in this country was founded upon negro slavery. If there had been no negro slavery in this country we never should have heard of secession; we never should have had the late civil war. Whatever other attendant circumstances contributed to bring it on, slavery was the great prime moving cause that led to it.

As I said a moment ago, that civil war resulted in its abolition, in its destruction, in its absolute overthrow; but after it was thus overturned, after the slave was turned loose throughout the States where that institution prevailed, he was nevertheless still in contemplation of law a slave; the institution still might exist. The power of arms and the force of the proclamation of the President had no legal effect to abolish negro slavery. It became necessary to have an organic provision in the Constitution of the Union to effectuate the destruction of negro slavery, and therefore it was that Congress, in its wisdom, under circumstances which I need not advert to now, proposed to the American people at the termination of the war, that the practical result of the war in abolishing slavery should meet the formal sanction of the American people by incorporating into their organic law a formal provision abolishing it.

The intentional effect then, Mr. President, of this thirteenth article was to abolish the institution of negro slavery and to provide that slavery could not exist within the compass of the jurisdiction of the United States in any form or manner whatsoever; and that is the whole extent of this provision, no more and no less. I know that there are those who are rash enough to say, that by virtue of the thirteenth article, aided by that clause of the Declaration of Independence which I have cited and commented upon, Congress might go on and pass this bill and other measures like it with a view to secure the rights of the late slaves of this country to the extent that it is now sought to secure them. But, sir, I have shown that the Declaration of Independence did not mean any such thing and it was impossible to place such a construction upon it; that it means that the great ends contemplated by it shall be secured as the American people provided at the time of its adoption and as they amended and might amend their form of government from time to time. In pursuance of the sovereign power which they exercised under their organic system, the adoption of the thirteenth amendment was simply another step in the direction of securing the great ends of government which were declared in the Declaration of Independence. They said in the course of nearly a century, and after a civil war almost unparalleled in the history of the world, that the time had come when these great ends must be secured and enlarged by another advance in civilization; negro slavery must be abolished; and all men, of whatsoever race or color and particularly the negro slave in this country, must enjoy the blessings of free government as embodied in our organic law both State and Federal.

What, then, was the effect of this thirteenth amendment? It was simply to abolish negro slavery. In what condition did this leave the negro? He was thereby made a freedman; but even that did not confer upon him citizenship. It did not confer upon him rights any further than to be free from his master. I apprehend at the time he was thus freed, he was in the condition of an alien in this country; and it seems that the Congress of the United States and the American people took that view of his condition. Why do I say so? I say so, because after this thirteenth amendment was adopted and became a part of the Constitution, Congress passed an act making every freedman a citizen of the United States. Now, let me call attention to that act and see what it provides. As I said, Congress seeing that the negro was simply freed, that he enjoyed no rights beyond those of an alien in our midst, and because he was born upon the soil, because of his previous servitude, they deemed it wrong to confer upon him his liberty without conferring upon him certain rights under our system of government, and upon due and solemn consideration and debate, Congress passed an act approved April 9, 1866. Let us see what it provides. I will read the first section:

That all persons born in the United States and not subject to any foreign power, excluding Indians not taxed, are hereby declared to be citizens of the United States; and such citizens of every race and color, without regard to any previous condition of slavery or involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall have the same right in every State and Territory in the United States to make and enforce contracts, to sue, be parties, and give evidence, to inherit, purchase, lease, sell, hold, and convey real and personal property, and to full and equal benefit of all laws and proceedings for the security of person and property as is enjoyed by white citizens, and shall be subject to like punishment, pains, and penalties, and to none other, any law, statute, ordinance, regulation, or custom, to the contrary notwithstanding.

It was by virtue of that act, after the adoption of the thirteenth amendment which I have read and commented upon, that the negro became a citizen of the United States, and only by virtue of that act. The Senator from Wisconsin [Mr. HOWE] this morning laid great stress upon that act as showing that the thirteenth amendment had enlarged the powers of Congress. He talked very much, and in rather a declamatory way for a strict logician, about the rights which that section of this act conferred upon the negro. He said, if I understood him correctly—I am sure I do not wish to do him injustice—that this act had received the sanction of the Supreme Court of the United States. With all respect to the honorable Senator, I deny that the Supreme Court said any such thing. He referred to the case of Blyen *vs.* The United States, in 13 Wallace, to be found at page 581 of that volume, as sustaining his declaration. The only point decided by the court in that case was that the court had no jurisdiction, and the court expressed no opinion whatsoever as to the effect of this act or what it effected. In the first place, the court having decided that they had no jurisdiction, had no right to say a word beyond that, and if they had gone beyond it, it would have been merely the opinion of a number of legal gentleman sitting upon the Supreme Court bench. But they did not undertake to decide whether this act was valid or invalid. They did make a suggestion that it was a far-reaching statute in its character, but, careful as they always are, they did not attempt to put a construction upon it, and no construction has been put upon it by the Supreme Court of the Union.

But, sir, I propose to put a construction upon it, as I have a right

to do. I say that the force and effect of that act was simply this: to make the freedmen of this country citizens of the United States, and in doing that, to confer upon them the rights of citizens of the United States, no more and no less. At that time Congress had no power, the Federal Government had no power, to make a citizen of the United States a citizen of the several States. It is not pretended that they had such a power; they had power to make the freedman a citizen of the United States, but then as a citizen of the United States he did not even enjoy the benefit of that clause of the Constitution which I will now read. I read clause 1, of section 2, of article 4:

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

This citizenship of course conferred upon the freedman all the benefit he could get under the Constitution of the United State and no more, and the act of 1866, from which I have read, in undertaking to confer upon him any power beyond that conferred by this Constitution, was absolutely null and void. This clause, as I have shown, did not confer upon citizens of the United States any such power as that provided or sought to be provided by the pending bill. It never was pretended that Congress had such power under this clause of the Constitution, and therefore Congress had no power to confer upon the negro race any right that could not have been conferred upon white men anterior to the adoption of the thirteenth amendment; but the thirteenth amendment, aided by this act of 1866, did confer upon the negro race of the country all the rights that were enjoyed by white men under the Constitution of the Union, simply as citizens of the United States, and I say that in so far as this act undertook to confer other rights than such as are provided in this section of the Constitution, it was absolutely null and void.

But, Mr. President, while the Supreme Court of the United States have never passed upon this act of 1866, and I do not know that they have had an opportunity to do so, other courts of high character have passed upon it, and they have declared that it was null and void in many very material respects. I will cite the authority for this statement, for, as I said in the outset, I shall say nothing that I do not have authority for. I read now from the notes to the second volume of Brightly's Digest of the Laws of the United States:

Congress has no power to prescribe rules of evidence for the State courts; and therefore this act—

That is, the act of 1866, which I read a while ago—

so far as it professes to do so, was held by the supreme court of Delaware to be unconstitutional. (State *vs.* Rash, 15 Pittsburgh Law Journal, 61.)

This decision was made by the supreme court of Delaware, a court of high respectability. But some one may say that the supreme court of Delaware, being the court of a State where slavery prevailed, was a prejudiced court, and therefore any decision of theirs must be taken with a great deal of allowance. Such an objection could have no weight with fair and reasonable men. It is a very respectable court, and whatever may be said upon the hustings, or in the heat of debate, the lawyers of this country have great respect for it. But, sir, if anything might be said against that court, I will cite the decisions of other courts, whose integrity and ability cannot be questioned even upon such flimsy ground as that. I cite the opinion of the supreme court of Massachusetts. The annotator says:

So, it was said by Chief Justice Bigelow, of the supreme court of Massachusetts, that "we entertain grave doubts whether it is within the constitutional authority of Congress to enact rules regulating the competency of evidence on the trial of cases in the courts of the several States, which shall be obligatory upon them; we are not aware that the existence of such a power has ever been judicially sanctioned; there are numerous and weighty arguments against its existence." (Carpenter *vs.* Snelling, 97 Massachusetts Reports, 458.)

With great respect, I commend that to the honorable Senators from Massachusetts, who advocate the pending bill so zealously.

The same doctrine was held by Chief Justice Breese, in the supreme court of Illinois, who said that "to hold that Congress can enter into these courts, and prescribe what shall be evidence therein, is so revolting to all our notions of Federal and State power as to compel us to refuse to yield any acquiescence to such a doctrine." (Craig *vs.* Dimock, 9 Internal Revenue Record, 129; same case, 1 Chicago Legal News, 179.)

I am gratified to see that they have such courts and such judges in the State of Illinois. That was decided in the case of Craig *vs.* Dimock, citing some authority with which I am not acquainted. So it was decided in Quinn *vs.* Lloyd, (2 Balt. L. Tr., 760.) The author, Mr. Brightly, a very learned lawyer, says this in commenting upon these authorities:

It is a subject of congratulation, that the State judiciary are, at length, returning to the old landmarks in the construction of Federal legislation.

So that I say, this act of 1866, called "the civil-rights bill" of that day, in so far as it undertook to confer any right upon the freedman that could not be conferred upon a white man anterior to the adoption of the thirteenth amendment, was absolutely null and void. All the courts that have passed upon it up to this time have so decided, and I do not hesitate to say that the supreme judiciary of the Union will so decide, if it shall become necessary in the future so to do. The court could not do otherwise, unless the amendment I am now commenting upon enlarged the powers of Congress by simply abolishing slavery.

What, then, was the effect of the thirteenth article? Simply to place the negro as a citizen of the United States upon the same equal footing with the white citizen of the United States—the negro could have no higher or greater right in any State as a citizen of the United States than a white man who was simply a citizen of the United States. That was all the right he had, and the full measure of his right; no more, no less; and Congress could not confer any higher power because it existed under and by virtue of the Constitution and was bound by it, and whenever it transcends that instrument the courts interpose and restrain it by declaring its exercise of unconstitutional power inoperative and void.

What is the purpose of these three new amendments to the Constitution, the thirteenth, fourteenth, and fifteenth? Does anybody doubt that the great purpose is, and was from the beginning, to abolish slavery and make the slave a free man under the constitutions of the States and the Union, just as white people are free? Had any person up to the beginning of the late war expressed, has any person expressed at any time since the war, dissatisfaction with the organic law of the Union except in so far as it tolerated negro slavery? I never heard any such complaint. I never heard of such complaints in Congress. I have never heard of such complaints in the Legislatures of the several States. I never heard of such complaints among the American people in any section of the Union. Every consideration goes to show that the only end that was sought to be accomplished by these three new amendments to the Constitution was, to accomplish the abolition of negro slavery, and to put all men on an equal footing, *under the constitutions, State and Federal*, in the same way and measure of right as free men were before the late war, and to give a citizen of the United States citizenship in any State when he shall go there to reside, and have the right to vote as others enjoy that right; to provide that the negro should not be discriminated against in the matter of *voting* alone because of *race, color*, or *previous condition of servitude*.

The grand purpose plainly is to make the negro a free man and confer upon him all the rights that the white people in this country enjoyed, in the same measure and in the same way, and subject to the same *restrictions* and *limitations* under the State government and under the Federal Government, no more and no less. There was no circumstance, there was no manifestation of a will on the part of the American people which indicated a desire to change their organic law in any other respect. I challenge any one to point to any consideration set up or suggested for a change of the organic law so as to change our system of government. Does anybody believe, will anybody pretend, that there was a purpose on the part of the American Congress or the American people to elevate the negro to a higher citizenship and invest him with higher and greater and other rights than the white man? I apprehend no one will be so rash as that. The simple purpose, the manifest object, was to liberate the negro and confer upon him the same rights as the white man had before the adoption of these amendments and to make all citizens in this country equal under the Federal Government, equal in right under the several State governments, and equal according to the Constitution and the law. There is no provision of the Constitution from which it might even be inferred that there was any other purpose than that I have mentioned.

This opinion is not only sustained by the plain language of the three amendments mentioned, by reason and by the history of the times, and by reasonable inference, but the highest judicial tribunal in this country, after long and serious reflection, after hearing able arguments upon the subject, after they themselves had all the lights which they could command, have solemnly said in an opinion which they delivered not a great while ago, that such was the purpose of these three amendments to the Constitution; and I want to read what the court say upon this point. I propose to read now an extract from the opinion of the court in the "Slaughter-house case," 16 Wallace, page 1; but before I begin to read from this opinions of the court, I wish to say a word or two in reference to the circumstances under which this opinion appears in the reports of the court and before the country.

The opinion of the court is the judgment which binds Congress and binds the whole country, and this opinion of the court is the only authoritative exposition of these three amendments to the Constitution. It is true, there are dissenting opinions filed by a minority of the judges. These opinions amount to no more than the opinions of as many respectable lawyers. They have no judicial weight whatsoever; and they are entitled to no more consideration than the opinions of three lawyers who have no judicial office or authority. I repeat, the only authoritative exposition of these three amendments to the Constitution, is the opinion of the court, from which I am now about to read. I know that these minority opinions have been laid on the desks of Senators with a view, I suppose, to influence their opinions. It was very improper that they should come here as having any judicial weight. They are no more than the opinions expressed by some distinguished lawyer in New York, or New Orleans, or elsewhere, which he or others might have seen fit to bring in and lay on our desks to inform our judgment, but having no official weight whatsoever. What do the court say in reference to the subject I am now discussing and in reference to the purpose of these three amendments to the Constitution?

The court say:

We repeat, then, in the light of this recapitulation of events, almost too recent to be called history, but which are familiar to us all, and on the most casual examination of the language of these amendments, no one can fail to be impressed with the one pervading purpose—

That is strong language—

found in them all, lying at the foundation of each, and without which none of them would have been even suggested; we mean the freedom of the slave race, the security and firm establishment of that freedom, and the protection of the newly-made freeman and citizen from the oppression of those who had formerly exercised unlimited dominion over him. It is true that only the fifteenth amendment, in terms, mentions the negro by speaking of his color and his slavery. But it is just as true that each of the other articles was addressed to the grievances of that race, and designed to remedy them, as the fifteenth.

We do not say that no one else but the negro can share in this protection. Both the language and the spirit of these articles are to have their fair and just weight in any question of construction. Undoubtedly while negro slavery alone was in the mind of the Congress which proposed the thirteenth article, it forbids any other kind of slavery, now or hereafter. If Mexican peonage or the Chinese cooly labor system shall develop slavery of the Mexican or Chinese race within our territory, this amendment may safely be trusted to make it void. And so if other rights are assailed by the States which properly and necessarily fall within the protection of these articles, that protection will apply though the party interested may not be of African descent. But what we do say, and what we wish to be understood, is that in any fair and just construction of any section or phrase of these amendments, it is necessary to look to the purpose which we have said was the pervading spirit of them all, the evil which they were designed to remedy, and the process of continued additions to the Constitution, until that purpose was supposed to be accomplished as far as constitutional law can accomplish it.

So it appears, not only by the circumstances attending the adoption of these amendments to the Constitution, not only by the history of the times, not only by reasonable inference, not only by the language in which these amendments are couched, but it appears by the solemn opinion of the supreme judicial tribunal of the Union, the last and proper exponent of the meaning of the Constitution, that the purpose, the great pervading purpose, the sole purpose of these amendments to the Constitution, was to make the slave a freeman and to put him upon an exact equality with all other freemen of this country and to secure the ends of his freedom. Therefore it is, that the court in this very opinion go on to say in terms unmistakable and that will live while the Constitution lives, and prevail as I believe, while the Constitution prevails, that there is no power conferred by these amendments upon the Congress of the United States, or upon any co-ordinate branch of the Government, save only such powers as might have been invoked for the benefit of a freeman anterior to the adoption of these amendments. That is the spirit, that is the substance of the opinion of the court in the "Slaughter-house cases." That is authoritative; that is the decision of that co-ordinate branch of the Government authorized to expound the Constitution in the last resort; and they have so held not only in that case, but in repeated cases, as I shall be able to show before I take my seat.

Mr. President, I now proceed to consider the fourteenth amendment. No one has seriously insisted yet, as I believe, except perhaps one or two very anxious and zealous advocates of the pending bill who have ventured so far, to declare that the thirteenth amendment authorizes the passage of this bill in any of its features; no one who has the serious, sober judgment of a thinking lawyer has ventured in this presence to make any such suggestion. If such power is conferred, it is by the fourteenth amendment; and now let us see what that provides. It is in these words—I read from the first section of the article—the other sections have no bearing on the subject before us:

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

The first clause of the section is in these words:

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.

What is the manifest effect and purpose of that clause? The legal world know, and the intelligent lay world know, that anterior to the adoption of this amendment, it was a mooted question whether there was any such thing as citizenship of the United States. I never doubted myself that there was such citizenship. It was perfectly competent for a person in the United States not to have any rights whatsoever under a State government, but still such person might have rights under the United States, and could enjoy all the benefits of the powers and rights that could be conferred by the powers delegated by the States to the United States; and therefore when an alien came into this country and became naturalized—and the United States had the sole power of naturalization—that foreigner became at once, upon naturalization, a citizen of the United States, although he might not be a citizen of a State at all, and he could be protected in many respects as such citizen of the United States; but he had no rights whatsoever as a citizen of a State, except so far as the constitution and laws of the State might extend to him rights and protection; he could not by virtue of his citizenship of the United States, claim rights under the constitution and laws of a State.

In order to settle the question, however, as to citizenship of the United States, this clause was incorporated in the fourteenth amendment. The draughtsmen of this clause were familiar with our Constitution; familiar with its history, we are bound to infer so; familiar with the judicial decisions of this country, State and Federal on the subject; familiar with the controversy that had existed among the courts and the legal profession and the statesmen of the country as to whether there was a citizenship of the United States. How natural, therefore, it was that the question should be settled in the fourteenth amendment, and especially in view of the fact that four millions of freedmen had been made, and there might arise a controversy about their legal status. It was therefore provided that "all persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside."

It provides not only that they shall be citizens of the United States, and thereby gain all the benefits of the rights guaranteed and conferred by the Constitution of the United States, but also, that whenever they shall *reside* in any State they shall be citizens of such State, and entitled to all the benefits of a citizen of such State according to its constitution and laws. That is the plain and manifest meaning. This provision goes to show that Congress in devising this amendment, and the American people in adopting it, recognized in the most solemn manner, by putting it into their organic law, that there was a distinction between the citizenship of the Government of the United States and the citizenship of the several States. Is it not very plain? What folly it would have been to say that a person shall be a citizen of the United States and then also of the State in which he may reside, if the purpose was to consolidate both citizenships, and to confer on the Federal Government the total power to control citizenship in every respect! It is perfectly clear, therefore, that in the first place, it conferred upon every citizen within the jurisdiction of the United States, whether born there or naturalized, all the rights that could be conferred upon a citizen of the United States by virtue of any power the United States possessed. But that was not sufficient; that was limited. That did not confer upon a citizen all the blessings of government; and the purpose was to enlarge the rights of a citizen of the United States by conferring on him, by this new amendment, the right by going into a State, of having citizenship in the State where he might reside. What sort of citizenship? Was it any peculiar citizenship; any citizenship other than that of a citizen in the State where he might go and enjoy? Certainly not. I see no ground, no word, reason, inference, or necessity, which warrants such a suggestion. Therefore, although I might, in the city where I reside, retail spirituous liquors or sell them by the wholesale, I could not, because I had such right there, go from North Carolina into the State of New York, if a valid statute of the latter State prohibits the sale of spirituous liquors at all, and insist that I shall have a right to sell such liquors there. Why? Because, when I go into the State of New York to reside, and by virtue of this clause of the Constitution become a citizen of that State, I am no more and no less than a citizen of that State, and I must accept and be subject to the laws of that State, as all other citizens thereof must do; my rights must be measured by the constitution and laws of New York as I find them, and by the same measure as the rights of other citizens there.

To put another case to illustrate my meaning: If I might in the State of North Carolina keep a public theater, and require fees of admission to it from the persons who visit it, if I should quit that State and go to the State of Massachusetts, where public theaters are prohibited by statute, I would not have the right because I had a right to open a theater in North Carolina, to go there in the face of their statute and open a public theater in Boston. When I go to Boston I must take the laws and citizenship of Massachusetts as I find them. I must be on an equality with the citizens of Massachusetts; my right must be measured by their right and my citizenship when I go there, must be measured by their citizenship; no more and no less. That is the legal force and effect of this clause of the Constitution.

The next clause provides in these words:

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

That provision is merely surplusage; if there was a citizenship of the United States before the adoption of this amendment to the Constitution, the States could not abridge the rights of a citizen of the United States before its adoption. There was no provision of the Constitution that allowed them to do so, and if they could have exercised such a power, they might have destroyed virtually the Federal power. The States before the adoption of this amendment could not pass a law abridging the rights of a citizen of the United States. They could not deprive him of any right conferred by the Constitution of the United States before the adoption of this amendment, and therefore this clause was surplusage, except that it is appropriate when taken in connection with the clause which precedes it, declaring who shall be a citizen of the United States. As I said a while ago, it was a debatable question whether there was any such thing as citizenship of the United States. This amendment provides in terms such a citizenship, and in order to make the provision complete it was appropriate, if not necessary, to provide that "no State shall make or enforce any law which shall abridge the privileges or immunities of a citizen of the United States." The citizenship is conferred in terms, and then the protection of that citizenship is conferred in terms, and it is only in that view that this clause was material at all. It never, at any time, could have been pretended with any tolerable show of reason, any more than it can be pretended now, that the States could abridge any right which is conferred by the Constitution of the United States. Such a power in the States would have contravened the very life-principle of national government.

The next clause is:

Nor shall any State deprive any person of life, liberty, or property, without due process of law.

What does that mean? It means that no State by statute or any authority shall take a man's life, liberty, or property from him otherwise than as the law may direct under the Constitution; that no State shall have power to pass a statute, for example, that men shall be hanged without judge or jury or any trial. That clause has a technical meaning; it means that whenever a man shall be deprived of his life or his liberty or his property, it shall be done in an orderly, legal way, in accordance with a law passed in pursuance of the Constitution; and when that is observed at all, it cannot be pretended that the Constitution of the United States confers upon Congress or any other Federal authority the right to interfere with the States in controlling the life, the liberty, or the property of the citizen thereof. All the State is bound to do under this limitation of its power, if it may be termed a limitation, is to exercise it according to some law passed in pursuance of the Constitution, in pursuance of our system of government.

Then the next clause admits of more latitude of debate. That clause is:

Nor deny to any person within its jurisdiction the equal protection of the laws.

What is the meaning of that clause? It means plainly, it seems to me, that if I, a citizen of North Carolina go to the State of New York and a statute there undertakes to confer on citizens born in New York certain privileges and protection of right which it withholds from me because I happen to go there, that statute shall be void. It is intended to prevent any discrimination in the protection of rights of any kind for any cause against individuals or classes as such. All, every one, in the exercise of the same right must have the same protection and the same measure of protection of the law. But this clause cannot be construed to mean that a State for the public good may not *regulate the exercise of rights* of one sort or another, provided the law protects all exercising rights so regulated equally in degree and manner. The manner of exercising rights may be regulated and the citizen must avail himself of his rights according to such regulation; but each citizen shall have the same protection of the laws in protecting his rights as regulated by law as every other citizen.

But, sir, as I said a while ago, if a stranger shall go into a State, being a citizen of the United States, he must take the laws there as he finds them, provided those laws make the citizens of the State where he goes equal in point of rights conferred by the constitution of that State; and therefore it is, if the State of North Carolina shall provide by statute that in the matter of schools, females shall be educated in one class of schools and males shall be educated in another class, and that the two sexes shall be educated separately, any one who shall go into the State of North Carolina with his family must accept the public schools there as he finds them. If he is allowed to send his female children to the female school, he has an equal right with everybody else; if he is allowed to send his male children to the male school, he has his equal right with everybody else, and he is bound to accept the schools in that way. The Senator from Indiana [Mr. MORTON] admitted, yesterday, when I interrogated him upon this point, that the State would have power to make a police regulation of that sort, and when I pressed him to point out the difference between that case and the exercise of the police power so as to provide that the negro race should be educated in one class of schools and the white race in another, he did not answer, and I should like to hear anybody point out a legal difference. Therefore it is that I say, if in the State of North Corolina, the Legislature shall see fit to provide that the colored race shall be educated in one class of schools and the white race in another class of schools, it is perfectly competent for the State to do so. Where is the restriction on the power of the State to do so? I ask where is the clause in the Constitution of the Union which restricts the power of the State in that respect? If the Legislature shall provide that the colored children shall be educated in one class of schools, and that the white children shall be educated in another class of schools, and a stranger shall go into North Carolina and take with him children, whether he is a black man or a white man, he goes there on terms of perfect equality with black children and white children in that State. In case he is a colored man, if he is allowed to send his children to the colored school, he is on a perfect equality with everybody else and is protected in all his rights as is provided by this clause of the Constitution.

Will it be said that because the difference is on account of color it will not do? That objection is unfounded, it seems to me. There is no provision in the Constitution of the United States which protects color any more than sex or age. If there was any purpose to protect *color* against the exercise of the police power of the States, and prevent the States from exercising their powers to regulate right and society, why was it not so provided? Are the States to be deprived of the absolute right to exercise the important power of police upon the merest speculative inference? Surely not. That it was not contemplated that any such restriction on the States was thought of intended, or provided, appears in the provision contained in the fifteenth amendment, that no person shall be deprived by the United States, or any State of his right *to vote* on account of *race, color, or previous condition of servitude.* Why was this provision limited to the right to *vote* alone? Can any reason be given or suggested? It was easy to have provided that no distinction for any cause should ever be made because of *race, color, or previous condition of servitude*, but no such provision was made. I repeat, why this restriction—this limit to voting alone?

The fifteenth amendment is in these words:

The right of citizens of the United States *to vote* shall not be denied or abridged by the United States or by any State on account of *race, color, or previous condition of servitude.*

Why was that phrase "race, color, or previous condition of servitude" put in that section, limited to voting? Because it was well known that without it, the States might refuse to confer on the freedman the right to vote; it was deemed important that he should have that right in order to secure equality of right civilly, and therefore this amendment was adopted. There was no question that the States might without such constitutional provision, prevent freedmen from voting, and on account of their race or color, or previous condition of servitude. In all other respects, the several States were left to exercise their absolute powers as if the fifteenth amendment did not exist. There is no word in any one of the three amendments under consideration which purports to abridge the police powers of the State. Can it be that this essential power, this vital power of the States, was to be taken away without any mention of such a purpose? I cannot so believe; I do not think any one so believes. It is monstrous to take such powers away from the States, to change our whole system of government, by a forced construction. If Congress shall for any cause attempt it, the courts will not allow it, the American people will not tolerate it or seriously think of doing so.

Will it be said the negro child has not the right to go to a white school? Then I answer, the white child has no right to go to the negro school. It is as broad one way as it is the other, and the principle in this case does not differ from the principle in the case where a law provides that males shall be educated only in male schools and females only in female schools. I cannot understand or comprehend a distinction in point of principle between the power to educate the sexes in separate schools and that to require the races to be educated in separate schools. Like equal legal provision must be made for each race, and this is the equality of right and protection required by the Constitution. The State may exercise the power to distinguish on the ground of race, so as to provide for the education of the races in separate schools equally provided for in all material respects. But, even apart from the police powers, I cannot see wherein one man is injured and deprived of any right in the one case more than he is in the other.

Can it be denied that the States have power to regulate theaters—the manner of conducting them? Have they not always exercised power to do so? They are supreme in that respect. If they judge that it is necessary that one class of people shall go into one apartment and another class into another, with a view to good order and decency, why is it not competent to do that? It is admitted that it is competent to license one class of people with certain qualifications to sell spirituous liquors by retail; it is competent to license another class with other qualifications to sell the same by wholesale; it is competent to license one class of citizens peculiarly qualified to practice law and not allow another class to practice law, to license one class fitted as physicians and not license another; all this authority is embraced in the police power of a State in regulating its society for its own benefit and promoting the general ends of government contemplated by the Declaration of Independence; and when the States shall exercise this power there is the end, and there is no clause in any one of these amendments that confers upon Congress authority to regulate it in any way whatsoever. By our system of government, the States are left to regulate society within their separate jurisdictions. The powers of the General Government are not intended for or adapted to such purposes.

I shall show, I trust, before I take my seat, that there are wise reasons why the natural distinction of race should be kept up and perpetuated, not only in the interest of the white, but in the interest of the colored race as well. I merely advert to it now, so that what I say at this point may be taken in connection with what I shall show hereafter on that subject.

Then I pass to the consideration of the fifteenth amendment. It is in these words:

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

The first observation I make here is that there is a limitation on the power of the United States. The United States have no power to deny or abridge the right of citizens of that Government to vote for the causes specified. All races are secured by the Constitution the right of equality in voting; they cannot be discriminated against on account of race, color, or previous condition of servitude. The States shall not deny the right to vote on any one of these three accounts. What are those accounts? They are "race, color, or previous condition of servitude." What right is not he denied or abridged? The right *to vote.* Why did they say "the right to vote" more than any other? Does that limitation mean anything? It seems to me so, or it would not have been used. It means that "the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State" on one of three accounts: "on account of race, color, or previous condition of servitude," and, therefore, if an Indian should be

naturalized by the United States, he has a right to vote, or rather the United States cannot prohibit him from voting because he is an Indian, nor can any State where he may happen to be prevent him from voting because he is an Indian. So in the case of a Chinese. If he shall be naturalized here, the United States Congress cannot pass an act after he is naturalized prohibiting him from voting for officers of the United States, and because he has been naturalized by the United States, if he shall go to live in a State, that State cannot prohibit him from voting because he is a Chinese. He is protected in the matter of his race, in the matter of his color, in the matter of whether he was previously in a condition of servitude, as to his right to vote, and in no other respect. But notwithstanding that inhibition, it is perfectly competent for any State to have a provision in its constitution providing that no person shall vote unless he can read or write. Indeed, in some of the States any one who cannot read, is prohibited from voting.

But will any Senator deny that it is perfectly competent for the people of North Carolina to put into their constitution a provision that no negro shall hold office? That is perfectly competent. If the people of North Carolina or any other State had seen fit to provide that no person should vote if he could not read, it would have been within their power to do so. Any State in the Union may provide, if it will, in the constitution that a negro shall not hold office. Why? Because the State is absolutely sovereign in all respects except in so far as its powers are restrained by the Constitution of the United States, and there is no provision in the Constitution of the United States restraining the power of the States in the exercise of *political* power in the matter of holding office. Indeed, I believe the history of the times shows, that that provision was omitted in the fifteenth amendment because it was understood that it might be very necessary to provide in some localities that the negro should not be allowed to hold office. I believe, however, the people of no State have exercised that power, and it is another evidence of the kindly relations which exist between the two races in the South, no matter what may be said by interested parties to the contrary. In my State, and in Virginia, and in Georgia, and in other States, the negroes might have been deprived of the right to hold office, but they have not been, and in other respects as citizens, and in exercising political power as well as civil rights, they have been made equal with the white race in all respects.

This, Mr. President, seems to me to be a correct view of these three amendments: First, the general purpose of them was to liberate the negro race and to confer upon them exactly the same civil rights that are enjoyed by the white citizens of the United States, as citizens of the United States and as citizens of the several States, and in no other respect whatsoever; and these amendments to the Constitution confer no higher power upon the United States or upon the Congress of the United States than was conferred upon the Congress of the United States in reference to white people before the adoption of these amendments to the Constitution. I say that that was the general purpose; and then I say when we come to criticise and examine carefully the various provisions of these several amendments, it appears that that general purpose was carried out in apt terms, and the Constitution has not changed our system of government at all, further than to make everybody free; they have taken in the black race and made them equal in point of civil rights with every other race; they have not, however, made them under the Constitution of the Union equal in point of political rights. There is a marked distinction between civil and political rights. There is no provision in the Constitution of the Union as to who shall hold office in the several States and who shall not hold office there, and that right is left to the States to this day, and they control that matter as absolutely as they did before the adoption of these amendments.

But these views of the amendments to the Constitution are not simply my views. In my judgment they are sustained by reason, and I believe that these reasons must be satisfactory to the disinterested mind. But if there be doubt about their correctness, then I point with unfaltering confidence to the judicial exposition of them by the Supreme Court of the Union, which puts an end to controversy. By the Constitution of the Union, by the laws of the Union, the Supreme Court of the United States is the last and final expounder of what the Constitution means. The Supreme Court has settled this question and settled it beyond contradiction or reasonable controversy, not only in one decision but in repeated decisions, and I propose now to call the attention of the Senate to them. I want to read a long paragraph from the opinion I read from a while ago in the "Slaughter-house cases," and the reasoning is so clear, that I wish every American citizen could hear it, that every Senator here would read it as he ought to read it, take it to heart, and lay aside his prejudices or predilections, and let his vote on this occasion be governed by this high authoritative exposition of the Constitution of his country. The court say:

> The first section of the fourteenth article, to which our attention is more specially invited, opens with a definition of citizenship—not only citizenship of the United States, but citizenship of the States. No such definition was previously found in the Constitution, nor had any attempt been made to define it by act of Congress. It had been the occasion of much discussion in the courts, by the Executive Departments, and in the public journals. It had been said by eminent judges that no man was a citizen of the United States except as he was a citizen of one of the States composing the Union. Those, therefore, who had been born and resided always in the District of Columbia or in the Territories, though within the United States, were not citizens. Whether this proposition was sound or not had never been judicially decided. But it had been held by this court in the celebrated Dred Scott case, only a few years before the outbreak of the civil war, that a man of African descent, whether a slave or not, was not and could not be a citizen of a State or of the United States. This decision, while it met the condemnation of some of the ablest statesmen and constitutional lawyers of the country, had never been overruled; and if it was to be accepted as a constitutional limitation of the right of citizenship, then all the negro race who had recently been made freemen, were still not only not citizens, but were incapable of becoming so by anything short of an amendment to the Constitution.

How forcibly, how strongly, that shows the necessity of putting this question of citizenship at rest by the fourteenth amendment which I have read and commented upon. The court go on to say further:

> To remove this difficulty primarily, and to establish a clear and comprehensive definition of citizenship which should declare what should constitute citizenship of the United States, and also citizenship of a State, the first clause of the first section was framed:
>
> "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside."
>
> The first observation we have to make on this clause is, that it puts at rest both the questions which we stated to have been the subject of differences of opinion. It declares that persons may be citizens of the United States without regard to their citizenship of a particular State, and it overturns the Dred Scott decision by making *all persons* born within the United States and subject to its jurisdiction citizens of the United States. That its main purpose was to establish the citizenship of the negro can admit of no doubt. The phrase "subject to its jurisdiction" was intended to exclude from its operation children of ministers, consuls, and citizens or subjects of foreign states born within the United States.
>
> The next observation is more important in view of the arguments of counsel in the present case. It is, that the distinction between citizenship of the United States and citizenship of a State is clearly recognized and established. Not only may a man be a citizen of the United States without being a citizen of a State, but an important element is necessary to convert the former into the latter. He must reside within the State to make him a citizen of it, but it is only necessary that he should be born or naturalized in the United States to be a citizen of the Union.
>
> It is quite clear, then, that there is a citizenship of the United States and a citizenship of a State, which are distinct from each other, and which depend upon different characteristics or circumstances in the individual.
>
> We think this distinction and its explicit recognition in this amendment of great weight in this argument, because the next paragraph of this same section, which is the one mainly relied on by the plaintiffs in error, speaks only of privileges and immunities of citizens of the United States, and does not speak of those of citizens of the several States—

I wish to impress that clause upon every Senator who is not asleep—

> The argument, however, in favor of the plaintiffs rests wholly on the assumption that citizenship is the same, and the privileges and immunities guaranteed by the clause are the same.
>
> The language is, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States." It is a little remarkable, if this clause was intended as a protection to the citizen of a State against the legislative power of his own State, that the words "citizens of the State" should be left out, when it is so carefully used, and used in contradistinction to citizens of the United States in the very sentence which precedes it. It is too clear for argument that the change in phraseology was adopted understandingly and with a purpose.
>
> Of the privileges and immunities of the citizen of the United States, and of the privileges and immunities of the citizen of the State, and what they respectively are, we will presently consider; but we wish to state here that it is only the former which are placed by this clause under the protection of the Federal Constitution, and that the latter, whatever they may be, are not intended to have any additional protection by this paragraph of the amendment.
>
> If, then, there is a difference between the privileges and immunities belonging to a citizen of the United States as such, and those belonging to the citizen of the State as such, the last must rest for their security and protection where they have heretofore rested, for they are not embraced by this paragraph of the amendment.
>
> The first occurrence of the words "privileges and immunities" in our constitutional history is to be found in the fourth of the articles of the old Confederation.
>
> It declares that the better to secure and perpetuate mutual friendship and intercourse among the people of the different States in this Union, the free inhabitants of each of these States, paupers, vagabonds, and fugitives from justice excepted, shall be entitled to all the privileges and immunities of free citizens in the several States; and the people of each State shall have free ingress and regress to and from any other State, and shall enjoy therein all the privileges of trade and commerce, subject to the same duties, impositions, and restrictions as the inhabitants thereof respectively.
>
> In the Constitution of the United States, which superseded the Articles of Confederation, the corresponding provision is found in section 2 of the fourth article, in the following words: "The citizens of each State shall be entitled to all the privileges and immunities of citizens of the several States."
>
> There can be but little question that the purpose of both these provisions is the same, and that the privileges and immunities intended are the same in each. In the article of the confederation we have some of these specifically mentioned, and enough perhaps to give some general idea of the class of civil rights meant by the phrase.

I will read another paragraph:

> It would be the vainest show of learning to attempt to prove by citations of authority that, up to the adoption of the recent amendments, no claim or pretense was set up that those rights depended on the Federal Government for their existence or protection, beyond the very few express limitations which the Federal Constitution imposed upon the States—such, for instance, as the prohibition against *ex post facto* laws, bills of attainder, and laws impairing the obligation of contracts. But with the exception of these and a few other exceptions, the entire domain of the privileges and immunities of citizens of the States, as above defined, lay within the constitutional and legislative power of the States, and without that of the Federal Government. Was it the purpose of the fourteenth amendment by the simple declaration that no State should make or enforce any law which shall abridge the privileges and immunities of citizens of the United States, to transfer the security and protection of all the civil rights which we have mentioned from the States to the Federal Government? And where it is declared that Congress shall have the power to enforce that article, was it intended to bring within the power of Congress the entire domain of civil rights heretofore belonging exclusively to the States?
>
> All this and more must follow if the proposition of the plaintiffs in error be sound. For not only are these rights subject to the control of Congress whenever in its discretion any of them are supposed to be abridged by State legislation, but that body may also pass laws in advance, limiting and restricting the exercise of legislative power by the States in their most ordinary and useful functions, as in its judgment it may think proper on all such subjects. And still further, such a construction, followed by the reversal of the judgment of the supreme court of

Louisiana in these cases, would constitute this court a perpetual censor upon all legislation of the States on the civil rights of their own citizens, with authority to nullify such as it did not approve as consistent with those rights as they existed at the time of the adoption of this amendment. The argument we admit is not always the most conclusive which is drawn from the consequences urged against the adoption of a particular construction of an instrument. But when, as in the case before us, these consequences are so serious, so far-reaching and pervading, so great a departure from the structure and spirit of our institutions; when the effect is to fetter and degrade the State governments by subjecting them to the control of Congress in the exercise of powers heretofore universally conceded to them of the most ordinary and fundamental character; when in fact it radically changes the whole theory of the relations of the State and Federal governments to each other, and of both these governments to the people, the argument has a force that is irresistible, in the absence of language which expresses such a purpose too clearly to admit of doubt.

We are convinced that no such results were intended by the Congress which proposed these amendments, nor by the Legislatures of the States which ratified them.

That decision of the Supreme Court of the United States was made in a case confessedly involving the provisions of the three amendments which I have been discussing, and the court in proceeding to the consideration of them, go on to declare in another paragraph of the opinion, which I have not read, that they approach the discussion of the subject and the decision of the questions presented under circumstances of the gravest solemnity, and that they do it scrutinizing every word and every thought they entertained on the subject, because of the vast consequences that would flow from this exposition of these amendments. The amendments came directly under their adjudication. This was so, and the court so knew and understood, and said they were passing upon them, and they believed they were settling the construction of these constitutional amendments for ages to come.

Mr. President, the court have adhered to that decision. It was made under the solemn and interesting circumstances that I have mentioned. Afterward, in another case, the court again recognized and reaffirmed the decision from which I have read extracts. The second case was the case of a lady in Illinois who desired to be admitted to practice law in the courts of that State. She insisted that she was a citizen of the United States, and being a citizen of the United States when she went to Illinois to reside, she thereby became a citizen of that State. She insisted that citizens of that State were entitled to practice law by complying with certain prerequisites. She qualified herself to claim those rights, and in order to test fully her right under the fourteenth amendment to the Constitution, she took her case by writ of error to the Supreme Court of the United States. The court in their opinion use these words:

In regard to that amendment, counsel for the plaintiff in this court truly says that there are certain privileges and immunities which belong to a citizen of the United States as such; otherwise it would be nonsense for the fourteenth amendment to prohibit a State from abridging them, and he proceeds to argue that admission to the bar of a State of a person who possesses the requisite learning and character is one of those which a State may not deny.

Now see what the court say:

In this latter proposition we are not able to concur with counsel. We agree with him that there are privileges and immunities belonging to citizens of the United States in that relation and character, and that it is these, and these alone, which a State is forbidden to abridge. But the right to admission to practice in the courts of a State is not one of them. This right in no sense depends on citizenship of the United States. It has not, as far as we know, ever been made in any State or in any case to depend on citizenship at all. Certainly many prominent and distinguished lawyers have been admitted to practice, both in the State and Federal courts, who were not citizens of the United States or of any State. But on whatever basis this right may be placed, so far as it can have any relation to citizenship at all, it would seem that, as to the courts of a State, it would relate to citizenship of the State, and as to Federal courts it would relate to citizenship of the United States.

The next paragraph reaffirms in terms the decision in the "Slaughter-house cases." The court further say:

The opinion just delivered in the Slaughter-house cases renders elaborate argument in the present case unnecessary; for, unless we are wholly and radically mistaken in the principles on which those cases are decided, the right to control and regulate the granting of license to practice law in the courts of a State is one of those powers which are not transferred for its protection to the Federal Government, and its exercise is in no manner governed or controlled by citizenship of the United States in the party seeking such license.

Then, Mr. President, the Supreme Court, as I learn, have decided at the recent term another case, reaffirming the doctrines which they held in the "Slaughter-house cases" and the one from which I have just read; so that it appears the Supreme Court have already placed a construction upon these three amendments by which I insist that the Congress and the country ought to be and must be bound.

I will mention this further circumstance: The court made these decisions shortly after the amendments were adopted, and they made them under the high state of party excitement in this country, growing out of the liberation of the negro race, and growing out of the results of the war. If under any circumstances outside pressure could have been brought to bear upon that high court, and we know that great pressure was brought to bear in various ways, and the court could have made the decision which the majority here seem to think the court ought to have made, they certainly would have made it. But, sitting as judges in their high place, holding the scale of justice evenly, they did not dare to make such a ruling; and I thank God we have such a court at such a time! That their decision will become the settled law of this country, I do not doubt. If this bill shall pass, I do not doubt that that court, when the appropriate time comes, will declare that it is void.

Now, Mr. President, in view of these amendments as I have read them, let us see what this bill proposes. It proposes, in the first section, to provide—

That all persons within the jurisdiction of the United States shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, public conveyances on land or water, theaters, and other places of public amusement; and also of common schools and public institutions of learning or benevolence supported in whole or in part by general taxation; and of cemeteries so supported, subject only to the conditions and limitations established by law and applicable alike to citizens of every race and color, regardless of any previous condition of servitude.

Mr. President, I want here seriously to put this question to the advocates of the bill: If Congress can under the Constitution pass it, and can confer upon the courts and the executive department of the Government the power to execute it, I ask, then, what power of the State governments to regulate any civil rights exists which Congress cannot control? I should like to see them point to one. If it is not competent for the Legislatures of the several States to regulate theaters, to regulate inns, to regulate the manner of conducting public schools, to regulate the management of cemeteries—if these several matters do not come under that class of powers known as police powers, which belong to the States and which they have always exercised and without limitation, which the court has said in "the Slaughter-house cases" they may still exercise, I confess I cannot see what power of the States the Congress cannot control at their will and pleasure. If the Constitution is as contended for by the friends of the bill, I ask where is the limit of the power of Congress? Where is the line of demarcation? Let any one answer who can.

But it is said that these police powers may be exercised in many respects, but it cannot be done in the matter of color. Why not in the matter of color? If the Legislature of a State, in their judgment, founded on the experience of the people, think and determine that the black race and the white race should be educated separately, why is it not competent for them so to provide by statute? It is said it is a discrimination against the black race. It is just as much a discrimination, in point of principle, against the white race. If there are separate schools, the black man has the same right to deny my child admission to the school where his children go as I have to deny his children admission to the school where my children go; so that we are upon a perfect equality of right in principle.

The Senator from Wisconsin [Mr. HOWE] to-day declaimed loudly against the proposition of the minority here and of the people in certain States, as tending to deprive the colored people of education. He talked about shutting the door in their faces, keeping them locked up in ignorance indefinitely or forever. Nobody has made any such uncharitable proposition. He would have the Senate and the country believe that we propose to shut them out from theaters; that we would not let the poor negro even have a place to bury his dead. Nobody has urged such an absurd proposition as that. The proposition is to allow the colored people of the country to have their own school-house; to allow the white people to have their own school-house, and that neither race shall interfere with the other; to have a proper apartment fitted up in the theater for the colored race, and a like apartment for the white race, and thereby to keep them apart, and for reasons that I shall advert to presently; in the inn, to have a comfortable place for the colored race to go, and another place for the white race to occupy.

If a city or the State shall provide a cemetery for the white race, the city or State must provide a like cemetery for the colored race. No white man shall intrude upon the cemetery of the colored man; no colored man shall intrude upon the cemetery of the white man. No colored man shall intrude upon the white man's place in the inn; no white man shall intrude upon the colored man's place in the inn. No white man shall intrude upon the colored man's place in the theater; and no colored man shall intrude upon the white man's place in the theater; and then, if they are not upon terms of perfect equality, applying to each race alike, I am not capable of comprehending a plain proposition. That is all that is proposed.

And so I undertake to say, for the reasons which I have assigned, that there is no power in the Constitution of the United States which authorizes Congress to pass a law prohibiting the States from making these police regulations for the common good of the people, to carry out the great ends of liberty and right set forth and defined in the Declaration of Independence and embraced within the broad scope of our system of government. If the power of the State to make these regulations is abridged by these amendments to the Constitution, then our system of government is changed; then we have a great consolidated government; then we have States no more. That is my judgment.

Thus, Mr. President, I have endeavored to show that Congress has no power to pass this bill. Now I propose, in the second place, to show that if it shall pass and become operative as a law, and the policy contemplated by it shall become practicable, it will establish a condition of things in the States where the black race and white race largely prevail, not only unwise, but which will contravene the natural law of races itself, in the end hybridize the races, and produce to a material degree, degeneracy and extinction of race. The uniform experience of the human race goes to show that the Almighty curses that people who defy the course of nature. Let us see if I can make this position good.

Much has been said here about the question of color and the unity of races. One Senator went off in perfect ecstasies of declamation, and said that God had made us all of one blood, and much to the same

effect. Sir, that is empty declamation, without due regard to facts and the course of nature plainly before our eyes. In discussing a question so momentous to government and races as this, we should not be carried away by a false sentimentality and declamatory parade. Let us cautiously seek the truth.

I know that it is said, and I shall not deny it here, that God "hath made of one blood all nations of men for to dwell on all the face of the earth;" but without denying that, we do know this fact, that He has made the races. We know this just as certainly as we know that we live or that the sun shines, or any other physical fact. We know, too, that by reason of race there are material and radical distinctions between classes of men which cannot be changed but by changing the course of nature. God has made the Caucasian race white. He has made the negro race black. He has made the Mongolian race, He has made the Malay race, and He has made the Indian race. We know these facts—all ages have known them—just as we know that we live, and these natural facts appear to us just as the seasons, the earth, the sun and moon and stars.

Why did God make our skins white? Why did He make the negro's skin black? Why did He make the other races of different colors? Why did He make these different races materially different, physically and mentally? Why did He make the mountains? Why did He make the seas? Why did He make the sun, moon, and stars in their orbits? Why did he make us with life? Why did he make us with souls? If you will answer one of these questions, I will answer the others. But these natural facts exist, and who shall dare to change, or attempt to change the course and harmony of nature? And who shall dare to blot out the distinctions of race? I ask Senators, where do they get the authority to change the color that God has blessed us with? Where can any authority be found to make my skin black and to change and corrupt my blood? Where can natural sanction be found for changing the color of the negro race—to change his skin and make it yellow and corrupt his blood and bring on degeneracy? Where does the Indian get the authority to change his skin and corrupt and degrade his blood? Show me that; and until you do show me that, let me hear no more of that false and scandalous doctrine of breaking down the distinctions among the races and blending all in one, by crowding and huddling all races together in school-houses, in inns, in railroad cars, on steamboats, in theaters, or anywhere else.

Mr. President, there is no one in this Senate who is freer from hostile feeling toward the negro race than myself. On the contrary, I am kindly disposed toward the colored people of this country and sincerely desire to benefit them. They are for the most part helpless; poor and ignorant; and there are causes over which they have had no control that have in great measure led to this unhappy result. They are not to blame for that, nor do I censure them. I am not here to denounce or to insult them. It is not in my nature to do so; and even if I had any such desire, it would be unbecoming in me to do so, because a very large proportion of my constituency are colored people. So far from desiring to insult them in the slightest degree, so far from desiring to injure them in any sense whatsoever, I say sincerely in this high place to the American people and to the world, that I should be gladder than I can express, to improve their condition collectively and individually; and whatever I shall do here shall be done honestly with a view to that end. When I can help that race in my place here as a Senator, when I can help them as a citizen, when I can help them in any way, I am ready and more than ready to do so according to my best judgment. They are entitled to my sympathy and that of all good men. They are entitled by all the ties of humanity, as well as by the peculiar circumstances surrounding them and the obligations of society, to such aid as I can extend to them consistently with duty to others. I desire to see them advanced in civilization; I desire to see their minds developed, to see them prosperous and happy, and live in peaceful harmony with the other races in the world. I wish to see them acquire property and become worthy to enjoy the benefits conferred upon them by the freedom which is secured to them by the amendments to the Constitution, and whatever I can do here or elsewhere to promote that purpose, I repeat, I am ready and willing to do. They need help from the white man in the South; they need his strong arm; they need the benefit of his advice and intelligence; they need his protecting guardianship in addition to the protection of constitutions and laws; they want his help to encourage them in enterprise, in industry, in developing their minds and raising their families and fit them for the true enjoyment of real liberty; they need him in all these respects, and there should be no words or causes of discord between them. They should co-operate as fellow-citizens to promote their common interests and to develop and secure perpetually the great ends of government as embodied and defined in the Declaration of Independence and our forms of government established in pursuance of it. For all these purposes the white people of the South are infinitely more important to the colored people than their theoretical, sentimental, declamatory friends elsewhere.

On the other hand, the white people of the South have high and controlling motives to see the colored people improved physically and mentally. Every consideration of humanity, every consideration affecting the industries and wholesome government in the whole country, impels the white people to desire the improvement and progress of the negro. There is no just or necessary diversity of interests between the two races. The unhappy differences that exist are manufactured by false and designing men.

Having said this much, I propose now to endeavor to show wherein I think that the proposition to bring the two races together, if it were possible to do so, in the way and manner provided by this mischievous measure is practically a violation of the laws and course of nature.

Mr. President, a pure white man is better than a hybrid; a pure negro is better than a hybrid. The cross between the white man and the negro is the mulatto; and although I have seen some very intelligent mulattoes, I undertake to say, and to state it as a physiological fact, that a mulatto is not as perfect a man or woman, physically or intellectually, as a pure white man or a pure negro man. The offspring of the second cross between the races is a less perfect person physically and intellectually than the mulatto; the offspring of the third cross is still less perfect; and this process of degeneracy continues until the races become absolutely extinct; and I challenge anybody to deny successfully this statement as a physiological fact. The policy that brings the two races together and commingles their blood, degrades the white man and in the same proportion degrades the negro man, and each side is degraded until the race becomes extinct. All history goes to show, that a hybrid race is a degenerate race, degenerate physically, degenerate intellectually, and that they continue to degenerate until the race becomes effete—extinct. Therefore, I say to the American people, that if by any policy devised by them, through any motives, good or evil, they shall by possibility force these races together, they degrade both races, they corrupt the blood of both races, and in the end it will not only result in the degeneracy, but in the eventual extinction of the races, as races have become so in the past.

This is a fact worthy of the most serious consideration; and though some may think it indelicate to refer to it, I feel it to be my solemn duty in this place to call the attention of the Senate and the country to it. Such a policy, whether developed by an act of Congress or a statute of a State Legislature, or by other means in the face of the decrees of nature, is defying to the Almighty, and any people who shall do so may certainly expect His curse. No people ever in the history of the world ran counter to natural laws without incurring penalties the most calamitous.

Why does the race become extinct in the way indicated? It is because of the contravention of the laws of nature. It is with the races of men just as it is with the races and classes of animals. The hybrid of animals is degenerate, and if you continue the cross the race becomes extinct. The inference is strong and convincing that such result would not follow if intermixture of the races did not contravene natural laws.

These facts go to show that whenever we shall in this way contravene the laws of God, His curse follows as a certain, inevitable consequence. No man or race or people or nation shall pull down and trample under foot the fiat of the Almighty!

So I say, the negro is as much interested in keeping aloof from the white man as the white man is interested in keeping aloof from the negro. I have no respect for the negro who will corrupt his blood. I have no respect for the white man who will corrupt his blood. I tell the negro race that they owe it to themselves and their race, if they wish to see it perpetuated, to keep the white race away from them; and I say on the other hand, that the white race owe it to themselves in like manner to keep the negro away from them, and not only to keep the negro race and the white race apart, but to keep the Indian race and the white race apart, to keep the Mongolian race and the white race apart. The Almighty for all-wise purposes has made this distinction of race just as He has made the stars and planets, just as He has made the sun and the moon, and the earth on which we live. He has made the races of men for wise purposes, and when we shall strike down His law for one cause or another, so sure as we do it, He will curse us. The history of the administration of the affairs of men, from the beginning of creation to this day, proves the truth of the declarations I have made.

I say, therefore, I have assigned weighty considerations to establish my second proposition. I have meant nothing insulting to the negro race by speaking of them as the negro race. That is the true designation of the race. It is not offensive to say to me that I am a Caucasian; it is not offensive to say to an intelligent negro that he is a negro. That is the truth. That is the proper, lawful designation of his race; and he ought to be, and the true man will be, proud of his race, and sustain its purity and integrity, just as the white man ought to strive to preserve and protect the integrity of his race. He is false to himself and degraded if he will not.

Now, Mr. President, it may be said, what has mixing the races in inns, in theaters, cars, steamboats, schools, and grave-yards to do with the matter I have just been remarking upon? The bill has this to do with it: It seeks to bring by statutory provision two populous races constantly and perpetually together, under such circumstances as certainly tend to bring the masses of the races and sexes in familiar contact and break down the distinctions set up by nature itself. That is the plain purpose and policy of it. Even with the barriers which have existed in the past in this country between the races, we know that there has been an intermixture of them to a greater or less extent in almost every locality of the Union; and it is not a subject to be laughed at or jeered at by one side or the other, by the black or the white race. I would not insult the mulatto, the mestizo, or the quadroon. They cannot help their origin. They are not responsible for their nature; but their parents are. They are guilty of crime when they bring such a state of things upon the country, and degeneracy upon their offspring, and they are bound by the laws of nature to prevent it. I

say whenever, therefore, Congress or the States shall pursue such a line of policy as to force these races together, then they undertake to force upon the country the policy of miscegenation and a mixture of the races; they encourage them to intermarry, and all the dreadful results that I have adverted to, come as a natural consequence. There is no escape from them. Standing in this high place to-night, I warn the negro race, I warn the white race, I warn the American people against this intermixture of blood and races, and against the policy embodied in the unnecessary and mischievous measure under debate.

Senators from the North, where the negro race does not prevail, can for one consideration or another, laugh and mock at the South, the down-trodden people there, white and black. They can talk handsomely about the ease and convenience by which this policy of theirs can be carried into practice. Sir, the white and black race of the South are more interested in this question than these gentlemen who stand here and elsewhere to advocate and force upon the country the ruinous consequences of fancy theories. They are not to be troubled with their prejudices; they are not to be bothered by bringing the races together there; but is it possible that Senators are willing to see this curse brought upon the South? Have the people there not suffered enough already? Is this measure prompted by the desire of vengeance? Have you not had vengeance enough? How long before the appetite for vengeance shall be glutted?

I repeat that the people in the South are particularly interested in this question. They ought to consider it seriously, not in the spirit of hostility between the races, one race against the other; but they ought to consider it as freemen, as friends, and consult their mutual and common interests. There is no danger of the races coming together in the Northern States; the negro is not there in any great numbers; they are in the South, and they are there in such numbers that if the two races should come together, the result which I have pointed to comes as a natural consequence, to a greater or less extent, and these dreadful evils must follow. Such a policy, such a state of things, is revolting to the moral sense; it shocks the decencies and proprieties of all well-regulated society; it is a monstrous crime against human nature! The American people of all races, colors, and conditions ought to spit upon and resent such an insult to their nature!

I repeat, Mr. President, that it is wrong to attempt to force this policy, by such a statute as it is proposed to pass, upon the country because its practical effect may be to bring about a state of things which will contravene the course and laws of nature, and in the end bring upon the people the curse of the Almighty in the extinction or degeneracy of the races. I ask if there is an American Senator, if there is any respectable portion of the American people, who desire to see the blood of the colored race or the blood of the white race corrupted, and to see the two races become degenerate, as will be the result, if this state of things shall transpire?

Sir, the southern people it is true engaged in the late civil war, but that war was inevitable, and if one section of the Union was responsible for it, the other section was likewise responsible: it came in the course of national life as other wars may come in the future. But with all the ruin, desolation, and crime which it wrought, it is over; the liberation of the negro is established; the Government is restored, and are we not your fellow-citizens? Are we not to enjoy common rights with the citizens of the States that did not engage in war against the Government? Are we not citizens of a common country? Are we not to enjoy common rights and common blessings under the General Government and under the State governments? Is not each section of the country interested in the happiness and prosperity of all the other sections? Are we not, as American citizens, one people, and are we not ready by every means within our power to promote the common interests of the whole? I trust in God, if such a spirit does not prevail to-day, that the day is fast approaching when it will prevail from one end of the Union to the other, until we know no North, no South, no East, no West, but one common country. If we are not so entitled, the Government is a cheat and a fraud.

But, Mr. President, I say, in the third place, that it is inexpedient to pass this bill. Suppose that this antipathy or distinction between the races is the result of prejudice? Here I will say, however, that I believe it is natural. I believe it is inherent in the nature of the white man; I believe it is inherent in the nature of the black man everywhere. Naturally, those of one race like their own best, until they are corrupted and brought in close contact with another, when the evil consequences I adverted to a while ago are brought on. Why, sir, I venture to say that any one may go to the Senators who expect to vote for this bill and put the plain, practical question to them—not with a view to insult anybody—"Are you willing your daughter shall attend a school with the negro children in my town?" And if he would give you a sincere answer he would tell you "nay;" and yet he would have his fellow-countrymen do what he would not do himself. He would not think of doing it, and yet he would force that state of things upon the people of the South, black and white, so repulsive to him. I maintain that this is not good-neighborship; that it does not manifest that good feeling which ought to exist between the two sections; that it is essentially wrong in sentiment as well as wrong in practice.

I repeat, there is this natural antipathy between the races. Whatever you may say about the corruption of man, there is still something that lingers and lives within his bosom and whispers to him of that law of his nature which he shall not contravene, and wherever you find him, however corrupted and degenerate, you find that whispering of conscience within him. You cannot strike it down. I say therefore, that I believe that there is this natural antipathy between the races.

But suppose I put it upon the ground of prejudice, and take it for arguments sake, that I am wrong in all I have said, it is well known to any intelligent observer that statutes cannot overcome deeply seated prejudice. You cannot do it by a statute; and I put it to Senators, whether it is wise, whether it is just, whether it is expedient, whether it is possible, treating it as a prejudice between the races as against each other in the South, to strike it down by this proposed statute? Can you force these races together in the South? You can no more do it than you can force the waters of the Mississippi at its mouth back to its source! You may annoy, harass, distress, and insult the southern people, but you cannot change their nature, their instinct, their education, their prejudices if you please to call them so, by a statute.

I say, Mr. President, treating the antipathy between the races as a prejudice, something is due to that prejudice and it cannot be broken down or wiped out by the force of a legislative enactment. I appeal to all history to prove the truth of this declaration. I appeal with confidence to the experience of every Senator who hears me in support of what I say. If this bill shall pass, an appropriate title for it would be: "An act to engender riots and armed conflicts throughout the Southern States." I do not apprehend that the white people will intrude on the black people in their appropriate spheres and places. I do not apprehend that the great bulk of the black race will intrude on the white race. I have no apprehension of that; but, sir, every one acquainted with society in this country, as well as in every other country, knows, that there are bad and seditious men in all communities; and you will find multitudes of bad white men who will stimulate idle and vicious black men, to force themselves into the theaters, hotels, cars, and boats, to go into the schools for the express purpose of stirring up strife. The result will be, that profligate, seditious men will again in the future, as in the past, ask to have the Army sent into the States ostensibly to execute the law, really to serve their own mercenary and infamous purposes.

Now, sir, I put it to every Senator here whether he is not tired and ashamed of seeing the Army sent into the States to execute the law. Are the American people not tired and ashamed of it? This Government is a government of public sentiment. It is not a government of force; and whenever in order to execute the laws you are obliged to keep a standing army for that purpose, your Government is a mockery, a cheat, and a lie, and it deserves to be crushed and dissolved. Sir, this Government cannot live without the affections and confidence of the people. It must be supported and sustained by the love of the people. While the American people have the power now to force the people of the South to do their will and to submit to unjust legislation, while they have the power to humiliate and outrage and persecute them, I say that it is unjust and unwise to the last degree to pursue such a policy. I insist that true statesmanship, a true American policy, is a conciliatory one toward the people of the South. They ought to feel and to have reason to feel, that they are indeed American citizens; that the Government exists only to bless and to benefit them. It ought to operate so lightly and beneficially upon them, that they could not do otherwise than love it. In that way it will engage their affections and respect and confidence, by the good it extends to them, by the manner in which it blesses them. But, sir, as long as you persecute them, as long as you insult them, insult their nature, or, if you please to call it so, their prejudices, by such legislation as this, just so long you keep up strife and bitter feelings between the two races in the South; just so long you will keep up disturbances and conflicts there that ought to cease forever; just so long you will perpetuate distrust and despair. The man who desires to see this state of things continue, is a bad man; he is a man with a criminal and fiendish heart; he is un-American; he is hostile to the Government; he is hostile to humanity; he does not deserve the confidence of the American people or of any constituency. That is my judgment.

One Senator to-day threw out the suggestion, that because Senators speak in the way I am now doing, and admonish the American people against such a policy as that proposed, they therefore threaten Congress and the Government. Sir, I make no threat; I intend no threat. I simply wish to state facts which are more than empty threats. It is absurd to talk about threats. Do you suppose, does anybody suppose, that I am so unwise as to believe that I could frighten the northern people or Congress by a threat? I am sure I could not do it. I am sure I am incapable of an attempt so absurd. I offer no threat. I tell you the consequences that will certainly follow this legislation, in order to satisfy the minds of Senators of its utter inexpediency. That is my purpose, and I tell the Senate and I tell the American people, that the great body of southern people as a whole, do not want this measure and its consequences. The colored people let alone, do not want it; the white people do not want it. Neither the democratic nor the republican party want it. All parties as parties there are against it, however factious meetings in one locality or another may be stimulated to suggest to Congress otherwise. Congress has been considering this subject in one way and another for years, and yet what proportion of the colored people of the South, led on by seditious demagogues, or of any people of the South, have asked for this pro-

posed legislation? The number who have asked for it, in comparison with those who have gone quietly on with their business and remain on good terms with their white fellow-citizens, are but as a drop in the sea. You cannot ascertain public sentiment on this subject from anything that you have heard here, coming from interested and very often very corrupt and seditious persons.

But, Mr. President, while such consequences are to flow from the intermixture of the races in inns, in theaters, on the highway, and in grave-yards, there is especially an objection to the intermixture of the races in the schools. If there is anything that is needed in the South at this time, and especially for the colored race, it is the blessing of popular education. I am sure, for one, I desire to see the minds of the colored people developed. I wish to put every facility for their education within their reach; and if they are to get such facilities at all, they are to come from the white race. If the white race deny them these facilities, as it is admitted they may do, and as the proposed policy will lead them to do, the colored people cannot educate their children. They are poor; they are helpless; if they are to be educated, they are to be educated mainly by the white race.

If this bill passes, you will find that in every State in the South where the people can repeal the laws which authorize and require public education, they will do so; just as sure as the time comes they will do it. Both races will do it. Why, sir, in my State, and I cite that as an example, the republican party had absolute control in framing the constitution there. They had absolute control of the first Legislature that assembled under our constitution. The republican party, with a very large percentage of the colored men in the convention and in the Legislature, passed laws providing for separate schools. Both parties in that State, with eighty thousand colored voters, have been uniformly opposed to mixed schools and in favor of separate schools. They do not want the mixed-school system. They know the manifest consequences of such a policy.

But some one may say, if that is so, then there is no difficulty about it; they will go on as they do now. Mr. President, that is trifling with a serious and solemn matter. However the masses of the well-disposed colored people may be content with their separate schools, however the masses of the white race may be content with their separate schools, there are contemptible and corrupt white and black men who would stimulate strife for the sake of strife. It would be stimulated by demagogues who want to make votes, and by worse men if possible, who want to make money by suing for penalties provided by this bill, and the result would be the disastrous consequences, I have mentioned, the repeal of all school laws, and then perpetual ignorance of the masses of the colored race.

Why, sir, if there is any portion of our people who are interested in education, it is the colored race. My hope of them is that they will be educated; that their minds will be developed; that they will become able by this development to enjoy the liberty conferred upon them by these three amendments to the Constitution and the results of the war. As it is, I do not hesitate to say they are not prepared for self-government; and if any one should require evidence of that fact, I have but to point to the South. There, sir, is an illustration of the rule of these people in their benighted condition.

Look at South Carolina—and I mean nothing offensive to the Senators from that State—they are as sensible of the condition of things there as I, and, I doubt not, lament and deplore it. There these people have absolute rule. Does anybody believe that that people if they were educated and enlightened would permit the state of things that exists in South Carolina now? Its condition is deplorable, and it seems to be without hope for the future; it is properly and strikingly called the "prostrate State;" it excites the sympathy and sorrow of every true man and patriot. It, is ruled by the negro race!

Look at Louisiana—I refer to facts and a state of things that are notorious—there is a state of anarchy and despotism existing there. Look at Texas. Look at Arkansas. Look at the controversy pending here now about Alabama. Look at the disorganized condition of every State in the South. What did it all grow out of? Everybody knows it grew out of the fact that these poor, helpless people, led on generally by bad men—willing to ever listen to the evil disposed—have in their incapacity for self-government, in their ignorance, ruined in a great measure these States; and yet it is virtually proposed to continue and perpetuate such misrule by this bill!

I pray you, Senators, I implore you as you hold that power in your hands, to save the South and save your countrymen! You must do it. You must help! Our fields, our cities, and our towns are desolate. Our people are broken-hearted. They are bowed down with a load of sorrow which they cannot cast off, and yet I fear there are those who are unchairitable enough to wish to increase it. I pray you, as American Senators, representing the American people, representing American institutions, as the guardians of American liberty, to come to ourrelief, and relieve us from this oppression and persecution, not by way of depriving the negro race of any right, but as simple justice. But if you will not help us, let us alone in peace to repair our broken fortunes as best we can.

Do you tell me we are to blame? Then I answer, all are to blame. There is cause of regret to every American citizen. Let us put the past behind us. Let us look only to the future. Let each section come to the help of the other. Let us raise each other up and make this country prosperous and happy as our fathers intended their posterity should be.

Sir, if I desired a scheme with a view to make votes and secure party ascendency, I would sit here voiceless except to cast my vote against this bill. But the matter is too serious to consult party interest or success. I tell you sincerely, that I doubt exceedingly that even the colored race will indorse it. I tell you plainly that a very large percentage of the republicans in North Carolina will not indorse it. Thay have declared against it. They have declared against it in their conventions and everywhere; they have declared against it in the Legisture; they have declared against it as a party, and thousands of them will abandon a party that thus seeks to insult and outrage them. Many colored people have declared, particularly against the mixed-school system.

Then further, sir, I have a letter here that I wish to read, and which ought to be high authority. It is from the superintendent of education of my State, a republican, a man of fine intelligence and integrity. Every Senator here can rely upon the statements of his letter; and I wish to remind you again that I do not read it in a spirit of threat, but to give facts. I read it to inform your judgments and to interest you in behalf of my State and the whole South, and to induce you to abstain from inflicting on the South the evils that must follow the passage of the bill. I will read the whole letter:

RALEIGH, NORTH CAROLINA, *January* 30, 1874.

DEAR SIR: I have just received your favor of the 28th instant. I inclose by mail copies of the school law and of my last annual report.

It will be seen by reference to sections 20, 24, 26, and 30 of the law, and to the rules and regulations adopted by the State board of education, that like provisions in all respects are made for the education of the two races, but in separate schools. You will find in my report an account of the educational convention held in this city in July last; and also a notice of the city school bill, which is still pending before the General Assembly.

No legislation in favor of mixed schools has ever been attempted in this State. Public sentiment on this subject is all one way. Opposition to mixed schools is so strong, so ingrained in the thoughts and opinions of the people, that if they are free to choose between mixed schools and no schools they will prefer the latter. The friends of education in the State would therefore deprecate and most sincerely deplore any congressional legislation which might tend to force mixed schools upon the people.

We are looking with great interest to the action of the present Congress on education. I think it would be well to aid both higher and common-school education in the States. If any action or resolution of the General Assembly now in session would be of any advantage to the friends of the education bill now pending in Congress, please inform me.

Very truly, yours,

ALEX. McIVER,
Superintendent of Public Instruction.

Hon. A. S. MERRIMON.

That gentleman is entitled to full credit and belief. I do most sincerely indorse all the writer has said. He has spoken but the truth. If this bill shall pass, I feel confident that the Legislature of North Carolina, which will meet on the 3d Monday of November next, will repeal the common-school law. In that case, the colored people in my State will have no opportunity, or next to no opportunity, for education. They have not the means to educate their children.

I have here the school law of my own State. I would be glad if time and my strength would allow me to read to the Senate the provisions of this law, showing how careful the State of North Carolina has been to make like provision for both races.

So then, Mr. President, to conclude the long speech which I have made during the late hours of the night, under such adverse circumstances, in the first place I have endeavored to show that Congress has no power under the Constitution to pass this bill; in the second place, I have shown that to pass it is to bring about a state of things, if it shall be at all practicable, that contravenes the course and laws of nature and results in the degeneracy and eventual extinction of the two races; in the third place, that it is inexpedient, in that it tends to bring about conflicts between the two races, to stir up strife that ought to be put to rest forever, and that it tends to cut the poor colored race off from the advantages of education which they can only have successfully at the hands of the white people.

I ardently desire the progress, prosperity and happiness of all races. I desire to see the colored race fitted for progress. I wish to see them fitted to enjoy all the blessings of liberty. I shall be gratified to see them join in the great march of civilization which is hastened by that system of government which blessed our forefathers before us, and which I hope will bless all our posterity to the latest generations. This unnatural measure disappoints and is destructive of such ends. It is monstrous and criminal. It shocks our nature and defies the Almighty. It contravenes all law, human and divine.

Civil Rights.

SPEECH HON. LEWIS V. BOGY,

OF MISSOURI,

IN THE UNITED STATES SENATE,

May 22, 1874.

The Senate having under consideration the bill (S. No. 1) supplementary to an act entitled "An act to protect all citizens of the United States in their civil rights, and to furnish the means for their vindication"—

Mr. BOGY said:

Mr. PRESIDENT: Although the present debate has already been protracted through many sessions of this body, and able Senators on both sides seem to have exhausted the common arguments for and

against the bill; and although darkness has already come down upon what may be the last night of this senatorial discussion, I cannot forbear to utter my solemn protest against the consummation of a measure that seems to me fraught with more social and political evils than were ever shaken from the fabled box of Pandora. And if it is to be consummated at all, night and darkness, storms and hurricanes, would be fitting concomitants of the act. In fact it seems to me peculiarly appropriate that a child like this, begotten of fanaticism and conceived in the spirit of fraternal hate, should come purblind into the world, during the hours of natural darkness, adapted as it is not to abate, but to increase, the sectional animosities and race antagonisms which have so marred our peace and prosperity in the past, and now threaten the very integrity of the nation. I am not one of the doctors on this occasion, and even if some hard calamity had forced me into such a position, I would not perform surgical Cæsarism on the poor mother to save the life of so foul a monster. I can only hope that if this bad fruit of political miscegenation should ever come to be christened, its god-father will give to the piebald thing the honest name, not of "Civil Rights," but of Uncivil Wrongs.

Mr. President, I do not wish to utter a word of unkindness toward the distinguished gentlemen who have supported this measure with eloquent speeches, and whose sentiments I doubt not were as sincere as their eloquence was fervid. I cannot help thinking and believing, however, that the whole measure is utterly and intensely wrong—wrong in its inception, wrong in its principles, wrong in its assumed facts, wrong in its conclusions, wrong in all its details, wrong in its influence upon the very class it is intended to benefit, wrong in its influence upon the white race, wrong in its bearings upon our social and political systems—in fact a great bundle of wrongs without a single right.

Mr. President, I desire to address myself to the discussion of this great subject in the spirit indicated by the Senator from New Jersey, [Mr. FRELINGHUYSEN,] when he said upon this floor a few days since:

> I invoke for the bill a calm, impartial, and unpartisan consideration; and ask its adoption only as it commends itself as consistent with the permanent interests of the nation, with the Constitution, and with justice to all classes of citizens.

I desire to accept the invitation thus tendered in the same spirit in which I assume it to have been given. I desire to enter upon the discussion not as a partisan politician who can see nothing good beyond the narrow bounds of his own political affiliations. I do not wish to consider the measure as one through which republican Senators hope to secure a million of colored voters, but as a great constitutional question, far-reaching in its influences, and underlying the very foundations of our social and political system.

The only chance of peace, prosperity, and perpetuity in our complex or dual system of government lies in the wise and careful adjustment of all the parts, a proper distribution of power that will save us on one extreme from the great evil of centralism, political Cæsarism, or imperialism; and on the other hand from having a Union without a union, a company of small, independent, erratic republics, without any common bond of unity, and each striving for its own interest without much care for the welfare of its neighbors. The whole tendency of the world is to centralism, and there is far more danger that we shall split on this rock than on the other. I am one of those who believe in that trite saying that we have the best government in the world, a government that has already been a providence of grace to mankind, and diffused unmeasured blessings to many millions of people, and which, with the proper adjustment of individual rights, and distribution of State and Federal power, will be as perpetual as the stars which are symbolized on our glorious banner. And how truthfully do these stars of heaven illustrate our Government, indicating in their laws its beauties, its blessings, and its perils!

Astronomers tell us that the solar system, of which our earth forms a part, only preserves its existence and wonderful harmony by the wise adjustment of material forces. A little more centrifugal power, and all the planets, moons, and comets would rush far away into the regions of illimitable space and be lost in eternal darkness; while an increase of the centripetal force would bring the "wreck of matter and the crash of worlds," by drawing us headlong into the great central fires of the sun. The infinite wisdom that planned and the infinite power that created and sustains this government of the skies show no marks of either secession or centralization, but such a wise distribution of forces as makes the material universe the glory of its Maker and the blessing of His children. Behold our own glorious planet in this spring-tide of its beauty, glowing in the sunlight and sleeping under the stars. Each morning comes like a new creation fresh from the hands of God, and each night is a holy sacrament to the weary limbs and fevered brain. How "seed time and harvest, cold and heat, summer and winter," come in eternal succession and pour their varied blessings upon the millions of earth's inhabitants.

The earth is like one of the States of our Republic, well organized, but not reconstructed. The Federal Government is the sun of our political system. If we are drawn too close, we shall be burned by its central fires; if we fly off in secession, we shall be lost in "outer darkness." Moon-struck politicians would make the States mere satellites—miserable moons—cold, barren orbs, shining by borrowed light and uninhabitable, so far as we can judge from the deductions of science.

Returning from the stars, let us apply the lessons they teach. I wish to show that this subject of individual rights and privileges has no business in Congress, and if we would secure the harmony and perpetuity of our system, the whole matter must be relegated to the different States, where it properly belongs. If I had doubted before that this was not the proper place for the discussion of this subject, I could have no doubt of it now. The argument made by the gentleman from Wisconsin [Mr. HOWE] astonished me; the argument made by the gentleman from Mississippi [Mr. ALCORN] astounded me; for, according to my understanding of the rights and powers of the Federal Government, reasoning of this kind is as inapplicable as it is incomprehensible. The Senate of the United States is made the high court of adjudication where the private relations of individuals are to be discussed, ascertained, and passed upon. If this is so, the day has come when the States must cease to exist politically, and when there will be but one government in the country, and that the Government of the United States. This question of Federal and State power is one of the most important that can come before us for discussion and settlement, and upon its proper solution depend the fortunes of the American Union. This question goes to the very foundation of the whole frame-work of the Federal Government; and if we can pass the bill now under discussion I see no limit to our power. If it be true that Congress can legislate upon this subject under the plea that as all persons born or naturalized in this country become citizens of the United States, and that therefore the General Government has the right to follow those individuals into the separate States and there regulate their social as well as political status, then the end of the State governments has come. They may have their courts, governors, and Legislatures, but their wise constitutions and solemn enactments will be only a delusion and a snare; for like the shorn Samson their power and glory will have all departed. All legislation finally terminates with the individual, and from that up to masses; and if the United States Government regulates and apportions all the civil and social rights and privileges of individuals throughout the country, then the States will have no power except to record and execute the edicts of the central Government.

The Senator from Massachusetts [Mr. BOUTWELL] who addressed us a little while ago, when speaking said that we were now living under a new order or system of government. It is true, and I am perfectly aware that the great principles underlying the Government have been entirely changed by the fourteenth and fifteenth amendments of the Constitution; and to ascertain the extent of the powers under the Constitution as amended, it is absolutely necessary that we should go back and examine these powers as they existed under the Constitution before it was thus amended.

Before the adoption of the fourteenth and fifteenth amendments the question of citizenship was one that belonged to the States exclusively. Whether such a thing as a citizen of the United States could exist, independent of State citizenship under the Constitution prior to the adoption of the fourteenth amendment, I will not now discuss; but that the question of citizenship originated with the States, and that they had exclusive control of the subject, there can be no doubt.

The second section of the first article of the Constitution reads:

> The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have *the qualifications requisite for electors of the most numerous branch of the State Legislature.*

Therefore, members of the House of Representatives were elected by voters, made such by the separate States. The States fixed the qualifications of their citizens to vote for members of the Legislatures, and those were at the same time qualified to vote for Representatives in Congress. Over that subject the Federal Government had no control, and they properly considered that those who were suitable persons to vote for representatives in the State Legislature should be qualified to vote for members of Congress.

Section 3 of the same article provides—

> The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years.

As already stated, the State qualified her citizens to vote for members of her Legislature. These same citizens, thus qualified to vote for members of the State Legislature, were also qualified to vote for Representatives in Congress. The same persons who became members of the Legislature also elected Senators. Thus, over the question of suffrage the States had exclusive control, and the Senators and Representatives in Congress were elected by such persons and such persons alone as were qualified to be electors by the States. How was the President elected?

> Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to to which the State may be entitled in the Congress.

The President was chosen by electors designated by the State Legislatures or by the Legislatures; the same power that elected Senators of the United States. Hence, the Executive and the legislators of the General Government were all chosen by voters designated by the State Legislatures. It was competent for the States to give character and shape to the Federal Government, because the source of power through elections was in the States.

What were the powers of Congress thus created by the States?

> SEC. 8. The Congress shall have power—
> 1. To lay and collect taxes, duties, imposts, and excises, to pay the debts and

provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States;

2. To borrow money on the credit of the United States;

3. To regulate commerce with foreign nations, and among the several States, and with the Indian tribes;

4. To establish an uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States;

5. To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures;

6. To provide for the punishment of counterfeiting the securities and current coin of the United States;

7. To establish post-offices and post-roads;

8. To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries;

9. To constitute tribunals inferior to the Supreme Court;

10. To define and punish piracies and felonies committed on the high-seas, and offenses against the law of nations;

11. To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

12. To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years;

13. To provide and maintain a Navy;

14. To make rules for the government and regulation of the land and naval forces;

15. To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions;

16. To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress;

17. To exercise exclusive legislation in all cases whatsoever over such district (not exceeding ten miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings; and

18. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof.

Well, Mr. President, before I advance further in my argument, it may be well to consider for a moment what was accomplished by this Government under the old system, and before the adoption of these amendments to the Constitution. Under that system, where the rights of the States were so well protected and so well understood, where the States were recognized to be sovereign to the extent of the powers not relinquished or delegated by them—I mean sovereign within the meaning contemplated by the Constitution—under that Constitution we progressed as no nation of the world had ever done before. We grew in strength, power, riches, and glory, until we astonished not only ourselves but the whole civilized world. The territory of the United States first reaching from the Atlantic to the Mississippi was afterward extended all the way to the Pacific Ocean. Our population of three millions soon grew into thirty millions. From weakness we grew into strength, becoming one of the great powers of the earth. Under no government in the history of the world had man enjoyed so much freedom, so much rational liberty, and such perfect protection in the pursuit of laudable designs as in the American Republic. The whole country was prosperous, and a spirit of fraternal love existed between the citizens of the different States and sections of the Union. Men of the South went North and found brothers there; men of the North went South and met brothers there; men of the West and North and South met, and mingled in fraternal relations as the members of a great social and political brotherhood.

Peace, prosperity, and fraternal love reigned throughout the country, but strange as it may appear we were not contented; and it may be the law of humanity that this should be so, and that man must be always yearning after something beyond his present possession. While this state of prosperity, concord, peace, and love existed, there was yet a worm at the core of the body-politic. During all that time this same African race that has inspired most of our legislation during the last ten or twelve years was the great stumbling-block in our way. Slavery then existed, and the only thing that could disturb the harmony between the North and the South was this question of the slavery of the African race. It stood in our way then and was fruitful in curses that remain with us to-day. This question has been the *bête noir*, the black beast, of our whole history, and the evils of the system which should have vanished with its abolishment seem likely to plague us through this and succeeding generations. While the system was a curse to the whites, it may have been to the blacks a blessing in disguise, as it raised them from the lowest condition of savages and has brought them finally into contact and association with the highest civilization of the age. The thinking men of that day saw and felt what was coming upon us, and endeavored in one way or another to avert the impending calamities through which we have passed. One of these palliating expedients was the Missouri compromise, by which my own State came through a fierce political storm and was finally admitted into the Union on the compromise line of 36° 30′. That brought temporary peace; but after a time the compromise was repealed and the agitating question of domestic slavery was renewed with more bitterness than ever before. A party grew up in the North whose leading and only purpose was the abolition of the system, and every interest and grade of society became thoroughly identified in this movement. The political hustings, the lecture-room, the legislative hall, the pulpit, the press—in fact, every agency that could create or move public opinion was brought into service. Stump-speakers denounced the system, novelists wrote romances portraying its worst features, lecturers pronounced it "the sum of all villainies," publicists wrote tracts in condemnation of it that were scattered over the country "thick as the leaves in Valambrosa," Legislatures passed resolutions of severe denunciation, the pulpit fulminated its anathemas, and the public press fired at it with squibs and leaders; the whole country was set on fire by this anti-slavery excitement, finally ending in raids from the North and rebellion in the South. This last brought on a cruel, bloody war, which ended in the emancipation of the slaves and the ruin of the southern people.

I am not here to speak at this late day and at this late hour of the day in favor of slavery. Although living in a slave State, I have never been in the proper sense of that term a pro-slavery man. I regarded it as a necessary evil of the times, which would be eradicated by the progress of public opinion and the conviction of its wrong and impolicy by the slaveholders themselves. That which would have gradually disappeared in a generation the war killed in a single day; and as all great and sudden revulsions in the elements of nature or the affairs of men leave behind them the scorched and blackened track of a tempest, so this great revolution in the industrial system of the South brought with it nameless crimes and horrors, and the poor negroes who were sought to be benefited have suffered more evils in their emancipation than they did in their enslavement.

There is no doubt that the policy of gradual emancipation was making daily progress in the minds of the southern people. My own State was exhibiting indubitable signs of opposition to slavery. It was the same case in Maryland. There was a powerful anti-slavery feeling in Virginia. In Delaware the system had but a nominal existence, and in Kentucky the tendency of public sentiment was in the same direction. The spirit of the age is opposed to human slavery; it is one of the unwritten laws of modern civilization, and neither nations nor individuals can resist the dominion and behests of that law. The Christian world was opposed to the system, and many good and great men in the South saw that slavery was not only an evil and a pecuniary damage to the people, but a great wrong in itself. That which was done in a day and amid the fierce and bloody strife of a civil war would have been accomplished gradually and with less damage to both races and far less injury to the whole country.

But that act has passed. "Let the dead bury their dead," while we grapple with the new issues that this revolution has forced upon us. With emancipation another important step became an immediate and pressing necessity. I saw it at the time. It was to confer upon this nation of freedmen the attribute of citizenship. The African was here among us, a human being entitled to recognition and protection, and southern men saw this, and were willing to extend it. Living in a slave State myself, I was heartily willing that the colored man should have ample protection. He had to be a slave, with no rights at all except the right to exist; and it may be best for his sake as well as ours that he should be endowed with this high prerogative and be educated, not only for his own sake, but for ours and for the cause of human liberty.

But, sir, there was want of wisdom in conferring this high attribute upon him too suddenly. To elevate him all at once from a servile condition, in which he had been born, and his ancestors for generations before him, into full citizenship, with authority to exercise all its powers and enjoy all its privileges, was a political blunder which is considered worse than a crime. To confer these powers and privileges upon him by the fourteenth amendment, before he was prepared by education to comprehend and discharge the duties of his new position, was in my mind the great wrong of all those measures known by the general name of reconstruction. If the transition had been gradual and he had been educated up to the new position of an American citizen, we should not witness to-day the evils that exist in the Southern States. Those States would not be in the chaotic, prostrate, helpless, and miserable condition in which they are now, and in which they are likely to remain for years to come.

Here, too, was the great wrong committed against the white as well as the black man. It has filled the Southern States with bad men—bold, unscrupulous, selfish demagogues who have gone there for no better purpose than to make tools of the colored voters and induce them to lend their assistance to the accomplishment of the most nefarious and destructive schemes—schemes that look only to the enrichment of the demagogues and the impoverishment of the people, both white and black. These evils are already cursing that whole country, and I see no prospect for their abatement. When the blacks are in a decided majority these demagogues and desperate vagabonds will become their leaders and soon run the State into hopeless bankruptcy, and drive the best portion of its people into poverty and exile. Even where they are in a respectable minority, and the whites are divided into opposite parties, they will unite with one or the other and the result will be almost as bad.

Why not give to the South the same protection that the Senator from Massachusetts [Mr. BOUTWELL] desires to confer upon the colleges of the North? Whatever he may say in the argument, the practical effect of his amendment, if adopted, will be to exclude colored persons from northern institutions, except such as may hereafter be incorporated. As New England has a full supply of well-endowed educational institutions it is not likely that she will found others for the simple purpose of accommodating colored people. Is this the love which old Massachusetts has for her colored friends?

Why should New England desire to pursue such a course? Because of antipathy? Because of hatred? No; but the people of those States are not yet prepared for this new system of amalgamation, to be consummated in the colleges and school-houses of the country. Whatever may happen hereafter, the time has not yet come, even in the minds of northern men; and hence the amendment of the Senator from Massachusetts. It speaks volumes and explains fully the feeling of all men, whether in the North or South, on this subject. The Southern man is in this position: however friendly he may be to the negro race, however kindly he may feel toward that race, he knows that they are not competent to properly discharge the duties of good citizens, to make wise and safe legislators, and perform other important duties of full citizenship, and so he finds himself forced into an attitude of opposition to the colored race.

I will here notice a few remarks made the other day (which I will read from the RECORD) by the Senator from New York, [Mr. CONKLING,] and which at the time astonished me, and the reading of which will, I think, astonish the Senate. The Senator from New York in addressing this body used the following language in speaking of this very bill:

> It punishes the keeper of an inn who commits indignity and violence upon a man, not because he is drunk, not because he is boisterous, not because he is offensive, not because he is unclean, not because he is a pauper and unable to pay, not because he awakens hostility for any reason which concerns the interest or the right of him who visits him with indignity and wrong. It punishes only the man who indulges in assault, in opprobrium, in injury of his fellow-man, merely because he cherishes a lawless prejudice, merely because he carries in his heart a base and paltry hate insulting to the spirit and civilization of the age, a hate which has been trampled out on this continent in blood, it is to be hoped forever.

Passing by the latter part of the sentence, which is inconsistent with the rest, for a thing that has been blotted out does not exist, I utterly deny the correctness of the statement. I deny it now in this body and before the country as a great outrage and wrong upon the people of the former slave-holding States. There is no feeling of dislike, there is no feeling of animosity, or of paltry, unmanly hate existing between the white men of the South and the black men of that country. As the citizen of a former slave State, I profess to be as good a friend of the black man as any one, whether of the North or South. If any Senator on this floor votes for the present measure to protect the colored man of the South from the enmity of his white neighbor, he makes a great mistake. Nay, more; the true friends of the negro race will be found in the Southern States; and the reason that the southern people are now opposed to giving political power to the colored people is because they are not yet fitted to exercise that power. The true friends of the negro are in the South; his real foes in the North. This is illustrated by the amendment offered by the Senator from Massachusetts, which in this respect is a good indication of northern feeling. While northern Senators are determined that the southern people shall associate with their colored neighbors, and that the blacks shall be admitted to the schools of the country, as well as to the hotels, theaters, &c., on an equal footing with the whites they are unwilling that they should enter the halls of learning at the North; they are unwilling to do that for them at home which they compel us to do for them in our homes. I repeat that the colored race will find their truest friends in the South. There is to-day a more kindly feeling existing between the southern man and his colored neighbor than between the northern man and the negro.

Mr. President, I hope the negro race will be able to achieve the high destiny that their professed friends on this floor so confidently anticipate, but I confess to some fears upon the subject. That there is a wide distinction between the two races cannot be denied. That the blacks are altogether inferior to the whites I will not undertake to say. That they are human beings and justly entitled not only to recognition but to kindly treatment, we all admit. That they are capable of higher attainments and greater achievements than they have yet exhibited, I will not doubt. But that the negro race can become the full equal of the Caucasian or white race, has not yet been proved. I sincerely hope that they may come up to that standard in time, and be the equal of the white man in all the higher qualities of our nature; but thus far there is nothing in their history to justify such sanguine anticipations as are indulged in by the so-called friends and admirers of the Ethiopian race. Africa has been known for many centuries. The northern part of it was settled by an enlightened, educated race many generations ago. The period is so far back that written history gives us no account of the date of these early settlements. The Egyptian hieroglyphics carved upon columns, temples, and tombs point far away into the dim distance of past ages, but even these shadowy records cannot give us the origin of that ancient civilization. All the northern and northeastern portions of the African continent were occupied by civilized people long before the commencement of the Christian era, but how long no one can tell. Carthage was settled by the Greeks. Many of the towns in Northern Africa were settled by the Latins. The white race has been in contact and association with the black race for many centuries, and yet there has been very little improvement; indeed I do not think there has been any at all. We are not informed of any progress of the race in the interior of Africa. They remain in the same condition they were ages ago, living upon the spontaneous productions of the earth, fighting occasionally and selling their prisoners into slavery; and reaching no higher destiny than to eat, and drink, and sleep, and die. So far as history tells us, this people has never produced a man who has exhibited capacity for great achievements in the pursuits of peace or the conquests of war.

It is true that great men have come from Africa, but they were not of the Ethiopian race. I read a few days ago an address in which Hannibal, Saint Augustine, and others were classed as Africans. They were doubtless Africans by residence, but not by blood, race, or language. Hannibal was a Greek, born in Carthage, an old Greek colony; Saint Augustine was a Latin; Jugurtha, the Numidian, was of Asiatic blood.

Thus far the negro in his native country has exhibited neither desire nor capacity for improvement. In this country I cheerfully admit that they show evident signs of advancement. I see indications of this every day, and the sight gives me sincere pleasure. It may be that Providence has reserved their development to a later period, and that we are to be the means of civilizing, educating, and elevating the whole African race. God grant that this may be so, and that those now among us may soon qualify themselves to discharge the new duties and responsibilities which this Government has assigned to them.

Mr. President, we are told that it matters not what might have been the system of Government before the adoption of the fourteenth and fifteenth amendments to the Constitution; that we are now living under a new order of things, as mentioned by a Senator yesterday. It is very true that the fourteenth amendment changes fundamentally the whole system of our government. Under the old *régime* citizenship was conferred by the separate States, now by the Constitution of the United States; and now it is claimed that as the Constitution makes the citizen, the General Government has power to legislate for him in all the relations of life, no matter whether he resides in the District of Columbia, in Maine, Missouri, or Oregon. I will not at this late day and hour make an argument upon this amendment, but it strikes me as most singular that Senators of undoubted ability should claim an additional power under the latter clause of the amendment, namely:

> The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

I take the view of the Senator from Ohio, [Mr. THURMAN,] that it was entire surplusage to put those words there, and it would be competent for Congress to enforce it whether those words were there or not. No new power was given by them, or if a new power was given, if under that power in the fourteenth and fifteenth amendments to the Constitution you have the right to pass the first and fourth sections of this bill, then I should like to hear some Senator who has advocated this bill tell me where the limit is, where the power stops. If it is a power conferred upon Congress because Congress has power to follow the individual citizen in all his relations to the States, I should like to know where the power stops. Where does it stop? Nowhere. Your State governments are gone—annihilated. If the power exists here, it is a question of discretion with the Congress of the United States to what extent the power may be exercised; and if at this early day a majority of this body is willing to provide that every colored man shall be admitted to the inns and hotels of all the States and to the schools, although the schools are supported by State taxes and State endowments; to provide that they shall have the right to ride in the cars, to visit theaters and taverns on the same footing with white men, what in the world is left to the States? Nothing, absolutely nothing.

The fourth section of the bill is still more objectionable than the first, if such a thing be possible. There you invade the jury-box of the State, a system created and supported by State legislation and State taxes, the creature of the State in every sense of the word; and yet you will follow your individual citizen there and say he shall have the right to sit in the jury-box.

What is to be the effect of this law upon our educational system? Demoralization and destruction. Almost every State in the Union has its common-school system and its school fund. These funds have accumulated through past years or generations, and have been sacredly guarded against waste or diversion. My own State, in spite of some misfortunes that came with the outbreak of the war, has accumulated a princely fund, almost sufficient under careful and economical management to give a common English education to every child, white or black, in the State. Colored schools are sustained by this money the same as others. We are willing that these people should enjoy an equal share of the benefits to be derived from this munificent fund, but we are not willing to have mixed schools.

If this law is attempted to be enforced there it will be the utter destruction of our school system, and the school fund that has been accumulated through the last half century will be of no more use to our children than if it belonged to the Czar of all the Russias. Our school law, which this act practically nullifies, will be repealed, and the fine school-houses that have been erected at an immense public cost will be closed up and suffered to rot down. The whole educational machinery of the State will be destroyed or rendered inoperative. The children of the white population who enjoy wealth or competence will be sent to private schools; the children of the poor, both white and black, will be suffered to grow up in ignorance and vice. So far as it is in your power, you remand the State back to a condition of hopeless ignorance, with its usual concomitants of vice and crime. You destroy at one fell blow all the solemn enactments of our State Legislatures; you breed among us a war of races that will be

cruel and exterminating; you destroy or render useless property to the value of many millions, and divert or render useless the school fund we have accumulated for the education of the children both white and black; you ruin our people and put back our State half a century in the career of progress and civilization, and you do all this with a sanctimonious air and in the name of God and liberty! You go from State to State in the character of political iconoclasts, breaking into fragments every image of beauty, and utterly demolishing those institutions designed to bless the people and give glory and perpetuity to the whole nation. I care not to speak of the miserable subterfuge by which New England colleges are to be saved from the influence of this moral debauch, this saturnalian revel of blind fanaticism, in which the fairest and holiest institutions of the country are to go down in utter and hopeless ruin. This is the cruelest blow that has yet been inflicted upon the people of this country.

When the war blotted out slavery, multitudes of the wisest and best men desired to see the great act of emancipation accomplished with less injury to both races. When, as a natural sequence to this act, you endowed the freedmen with citizenship, the people submitted to the new policy with its new state of things; when individuals of the colored race were appointed or elected to positions of honor or trust there was no organized opposition to this course of things when they were individually qualified; but when you make use of this sickly sentimentalism, this miserable simulation of philanthropy and patriotism, to poison all the fountains of knowledge and veil the whole land in the darkness of ignorance, you have gone one step too far, and the people will not submit to such acts of refined tyranny committed in the holy name of liberty.

One word more on this point. This act is adapted, if not designed, to pander to all the baser passions of our nature, to compel social contact and intercourse where it is repugnant to both parties. By this act you thrust the colored man into a position that is quite as distasteful to him as it is to his white neighbor. You may gratify the vanity and ambition of a few that can be "pleased with a feather, tickled with a straw;" vain, senseless fellows who rejoice in the glory of fine clothes and cheap jewelry; you may stimulate the unholy propensities of some coarse animal natures by giving them easy association with the dearest of all our household gods; but the great mass of the colored people will live to curse the act that promises to them nothing better than present misery and prospective annihilation. You destroy the friendship now existing, and force the two races into direct antagonism, and in such a contest the weakest must always go to the wall.

Mr. President, I protest against this bill because of its tendency to political consolidation. It means the destruction of State governments and the consolidation of all power at Washington, the capital of the Republic. I know very well that the tendency in the governments of Europe is to consolidation, and that is one of the best reasons why we should avoid such a result. Germany has destroyed the small kingdoms of Saxony, Bavaria, Würtemberg, Westphalia, and numbers of little principalities and dukedoms, and has constituted itself a grand and powerful Prussian empire. The empire is magnificent in its proportions, in its material wealth and moral power, but the individual states are lost in the glory of the central government, and the individual German is fast drifting into the condition of an educated slave.

Switzerland is another example in point. This confederation has remained for centuries, preserving among its cantons the light of liberty, although environed on all sides by the old monarchies of Europe. Even Napoleon, the conqueror of Europe, respected the liberties of this mountain land; and although he made himself protector of the Confederation of the Rhine he did not seriously disturb the governmental machinery of the Old World republic. But the demon of consolidation has come, and the days of liberty in Switzerland are numbered. It may still maintain the form of a free government, but the old Helvetic Republic, that has been the admiration of liberty-loving men throughout the world, is putting out its own light, destroying its own liberties.

The present tendency with us is to the same end. We are hastening to be swallowed up in the same mighty maelstrom that has ingulfed every republic in the history of the world. The lust for power and the greed of gold have distempered the minds of men; the organic law of the country is treated like a child's bauble, a thing to be admired or broken at pleasure; the States, one after another, lose their independence and come drifting toward the central whirlpool; and soon we shall have a grand central government, while the States will possess nothing better than the name or mere form of republics.

Notice a few of the measures that have lately been introduced into Congress, and see how they comport with the spirit and genius of our Government as it existed only a few years ago.

A bill to establish a national university is now pending before this body. A national university within the power of the Federal Government! I presume that is based on the fourteenth amendment to the Constitution.

Mr. MORRILL, of Vermont. May I inquire of the Senator from Missouri if he is not aware that the subject was recommended to Congress in a message by Washington himself?

Mr. BOGY. I am aware that Washington in one of his messages speaks of education, and that he recommends the appropriation of land at that time in what was called the Northwestern Territory, if it were constitutional. He makes the suggestion most doubtfully; but the discussion upon that subject showed that it had no foundation.

Mr. MORRILL, of Vermont. I do not mean to say that I am in favor of incorporating such a university; but I think the Senator is mistaken in saying that General Washington coupled any question of doubtful constitutionality with the matter. I desire to ask the Senator if Jefferson did not also recommend the same thing?

Mr. BOGY. I think not in that way. I am not prepared to answer hastily the question of the Senator from Vermont; but I will say that at the outset of the Government Washington no doubt believed very much in enlarged powers of the Federal Government. He was what might be properly styled of the federal school of politics. His politics were a reflex of his own gigantic reputation, and were perhaps tinged with the idea of central and consolidated power exercised by every great commander. However that may be, it seems to me at this late day to be a most astounding bill. Unless we have a right to pass this bill on constitutional grounds, we have not the right to pass it at all; and if we pass that bill, we can also have a national university for the education of all people, of all races and colors, including the Chinese in California.

Then there is a bill to establish a commission to inquire concerning the alcoholic liquor traffic in the different States, and this bill has already passed the Senate. The ultimate design of this law may be to promote temperance; an excellent thing in itself, but hardly within the range of subjects enumerated in the powers of Congress. But if we commence this style of legislation we must go on to the legitimate conclusion. People are quite as intemperate in eating as drinking. We must pass sumptuary and hygienic laws, that will go to the root of this matter. Congress must not only raid the beer-saloons and whisky-shops, but must enter by commission the *cuisine* of the wealthy epicure, and see on what meats our great Cæsars feed, and thus save them from the vices of drunkenness and gluttony.

A bill to endow national colleges for the advancement of general science and industrial education. Such institutions are admirable in themselves, and it may be that they are designed to compensate for the great injury to our educational interests by the bill now under consideration. At the same time the authority for such a measure is not to be found in the Constitution.

A bill to establish a national board of health. This is akin to the liquor commission and is quite as legitimate and proper as that measure. If we begin this work we must follow it to the end. We must regulate the doctors, the wine merchants, the tobacconists, the distillers, the brewers, and the cooks.

A bill for the education of the Chinese by the national Government is introduced by another Senator.

I do not know how many other propositions of the same character are pending before this body to-day; and if we possess power to do these things it would save a vast deal of expense, a vast deal of trouble, many useless elections, to do away with the entire State governments and let us have one grand imperial Prussian government here, because it will be so in fact.

If the system now attempted to be enforced by a certain class of Senators on this floor be adopted, you may as well go further and make it imperial in grandeur also, because there is always glory to be attained in that line. If we are seeking glory alone, if it be the object of the American people to acquire a position in history which has never been equaled by any nation that has gone before us for power and greatness and glory and wealth, make it an imperial government, and the empire of Charlemagne and the empire of Napoleon will sink into insignificance in comparison with a government that will control a whole continent.

I entertain no doubt that if you destroy your States and erect a grand, central, imperial power, it will first subdue the American continent and then cross the Pacific to conquer China and Japan, reversing the course of the ancient conquerors and illustrating that poetic exclamation—

Westward the star of empire takes its way.

But this was not the purpose of our Government. Our fathers went on a long pilgrimage for liberty, paving the way with their bones and consecrating it with their blood; but they dreamed not of conquest. They sought to kindle beacon-fires on the western shores of the Atlantic that might be seen by the oppressed of all nations, and thus attract them to these shores where we profess to protect every man in his "life, liberty, and the pursuit of happiness." God gave America to be free and to preach freedom to all the world.

That, in my estimation, was the design of the framers of this Government, to maintain the States in all their power, in all their sovereign rights, consistent with their connection with the General Government; not with power sufficient to enable them to retire at pleasure and destroy the Confederacy, but as members of a Union indissoluble in itself, and yet each member fulfilling its high mission in its own way, discharging all the duties in its own sphere, untouched by the hand of the Federal Government. We are departing from it rapidly, and if this departure be not arrested the Government will last but a short time. I see no hope, and so far as this body is concerned the fiat has gone forth. I do not speak of the gentlemen who vote for this bill in a party sense, but I say men of their convictions will carry out the policy of centralizing this Government, and unless the people can be awakened to a sense of their duty as well as to the knowledge of their rights, we are lost.

Certainly the men who made this Government succeeded admirably, and for many years we were elated with our success. We thought we had peculiar qualities fitting us to sustain free government, and hence it was a common saying among us that other peoples, such as the French, Germans, and Spaniards, were entirely incapable of maintaining a republic. But in my opinion we have shown as little adaptation for the preservation and maintenance of free government as any people that have lately tried the experiment. We were peculiarly favored by circumstances that did not exist in those old countries. We had no aristocracy to humble, no nobility to break down, no throne to destroy. We were all on the same platform. But little disparity in the possession of wealth, and our only object to establish an independent nation of intelligent, active, enterprising yeomanry.

The great men who framed the organic law of this Government drew their wisdom from all the lessons of history. They studied carefully the laws of all nations, ancient or modern. Our Government has features drawn from the Greek and Roman systems of old, and the later laws of the Saxons and Normans. They gave to us a grand and beautiful temple of liberty, bringing its pillars and porticoes from Athens and Rome, and lifting over all the great dome of modern civilization. There is perfect symmetry in this glorious structure, and not a flaw or blemish from the corner-stone to the cap-stone, from the deep foundation to the loftiest pinnacle. The architects were wise men, the materials were good, the workmen were faithful, and so they gave us the fairest and grandest temple on which the sun ever shone. Shall we let it stand as the glory of the nation and the beacon-light of the world, or shall we bow ourselves between its pillars like blind Samson, and perish ourselves beneath the wreck and ruin thus wrought? Nay, let us preserve the glorious inheritance that has come to us as the fruit of the wisdom and patriotism of our fathers; let us rather heal than open afresh the wounds of sectional srife; let us subdue the spirit of party animosity and race antagonism; let us return to first principles, seeking the welfare of all sections and classes alike, preserving a just distribution of power between the State and Federal governments, cultivating peace, harmony, justice, and forbearance among ourselves, thus making the American Republic a blessing to all its people and the light of all nations through the ages to come.

Senator from Alabama.

SPEECH OF HON. WM. T. HAMILTON,

OF MARYLAND,

IN THE UNITED STATES SENATE,

May 27, 1874.

The Senate having under consideration the report of the Committee on Privileges and Elections in the case of F.W. Sykes, contestant, *vs.* G. E. Spencer, sitting Senator from Alabama—

Mr. HAMILTON, of Maryland, said:

Mr. PRESIDENT: As one of the minority of the committee, I beg leave to present some considerations in addition to those already presented in their printed views on this question why the report of the majority should not be affirmed by this body. This is one of those troublesome questions arising out of the condition of society, both social and political, in the Southern and Southwestern States. It is among those that we have recently witnessed in Louisiana, Arkansas, and Texas. It presents to us those scenes of disorder and indeed revolutionary action that prevail in that section of the country.

I think there ought to be no question in the mind of any gentleman who will read the report of the majority and the views of the minority and the evidence in the case and it is all of record, as to the unwarrantable and disorderly meeting of that portion of the members of the Legislature of Alabama electing Mr. Spencer. There ought to be but one opinion upon that subject, that Mr. Spencer is not properly and legally a member of this body. In his election there was a total, indeed a contemptuous, failure to observe and obey the requirements of the laws and constitution of Alabama. As matter of form and in fact of law this is admitted even by the report of the majority, concluding however, as it does, that it was but a question of fact, and that too a fact accompanied by equities, which were to be considered in determining who is to be the representative of the State of Alabama on this floor. The sum and substance of the majority report is that, everything considered, looking at the political condition of the State of Alabama at that time, looking at the fact that it had elected a republican governor and State officers, and looking behind the organization of the Legislature and assuming the fact that it had elected a majority of the Legislature, whatever legally might have been required to be done by the constitution and laws of Alabama in organizing the Legislature and electing a United States Senator, in the face of all this amounted to nothing; that the people of Alabama at that time desired a republican State government in all its branches, and that therefore there should be a kindred representation upon this floor.

Mr. President, upon the leading facts in this case there is no dispute. They are conceded on all hands.

The senate of Alabama consists of thirty-three members and the house of representatives of one hundred members. They were elected in the fall of 1872, at which general election a governor, lieutenant-governor, secretary of state, and other State officers were elected. Upon the day prescribed by law, the 18th day of November, 1872, two bodies, each claiming to be the Legislature of Alabama, assembled in Montgomery. One body assembled at the State capitol and the other assembled at the court-house. The house of delegates which assembled at the State capitol consisted of fifty-four members who held certificates of election issued to them by the proper officer as required by law. The senate which assembled at the State capitol consisted of nineteen members who also held certificates issued to them by the proper officer. Those two bodies, meeting in their respective chambers at the State capitol, organized and continued their organization from day to day, and transacted business. They proceeded to count at the proper time, in joint convention, the votes for governor and other State officers elected at the same election, and ultimately on the 10th day of December, in conformity to the law of Congress, elected Mr. Sykes to this body, his term commencing on the 4th day of March, 1873. Nineteen members of the senate and fifty-one members of the house of delegates, a quorum of each, voted for him; seventeen being a quorum of the senate and fifty-one a quorum of the house of delegates.

Upon the same day, the 18th day of November, 1872, at the court-house assembled other bodies of men claiming to be the Legislature of Alabama. Forty-seven members of the house of delegates having certificates of election, and six members claiming to have been elected from Barbour and Marengo Counties, but without any certificates of election, organized. I shall not refer to others who participated in this body without any certificate and without the shadow of an election, but confine my remarks, wherever applicable, to those members from the counties of Marengo and Barbour because they were legitimate claimants and contestants for their seats afterward when these bodies were fused, upon the 21st day of December following, under the arrangement proposed by the Attorney-General. The six members from Barbour and Marengo were a part of the body meeting at the court-house, and made a quorum for it. They had no certificates of election as was required by law. The senate of that body meeting at the court-house had but fourteen members having certificates of election, and three others having no certificates of election, making seventeen in all and just a quorum to do business, and embraced in that number was Mr. Miller, claiming to be a member from the senatorial district of Butler, Conecuh, and a part of Escambia County, who had no certificate of election and who never was elected. There was not in that senatorial body at the time of the election of the sitting member, Mr. Spencer, more than fourteen members who had certificates of election as required by law to entitle them to seats in the Legislature of the State of Alabam, nor were there more chan sixteen ever elected by the people, being one less than a quorum to do business. This house of delegates and senate thus constituted proceeded to elect Mr. Spencer to a seat in this Chamber; and the question now arises, Which of these two bodies shall be recognized as the rightful Legislature of Alabama? That is the question for the consideration of the Senate. Which of those two bodies assembled in Montgomery upon the 18th day of November, 1872, and constituted and organized as I have described shall be recognized in the determination of this question as the rightful Legislature of Alabama? For it must be the Legislature, the rightful, legal, constitutional Legislature of a State that elects the Senator. There cannot be two Legislatures. There cannot be a *de facto* Legislature and a *de jure* Legislature existing at the same time. There must be a Legislature *de facto* and *de jure* combined, to come within the meaning and terms of the Constitution. It must be the Legislature of Alabama, elected and organized under its constitution and laws, that elects the Senator. And we are to determine here to-day, and it is the sole question for our determination, which of these two bodies electing these two gentlemen as Senators constituted that rightful Legislature of Alabama.

How are we to ascertain that fact? Can we go behind the organization of either of these bodies, for I will comprehend them both, and ascertain who were elected by the votes of the people? Can the Senate of the United States go behind the organization of the Legislature and ascertain and determine who were and who were not elected by the people as members of such Legislature, canvass the votes, hear and decide upon contests for seats in it, and to determine generally who were entitled to be seated as members? The majority report admits that you cannot so do, and I think it proper here to read that portion of the report in order to show that it claims no such power in this body:

In the opinion of your committee it is not competent for the Senate to inquire as to the right of individual members to sit in a Legislature which is conceded to have a quorum in both houses of legally elected members.

I know a qualification is attempted to be put on this general denial of right on the part of this body to do so in that part of the sentence I have quoted, in which it is limited to a Legislature "conceded to have a quorum of legally elected members." There can be no such limitation. I ask the honorable Senator who submitted this report whether a "concession" by any one can make a member of the Legislature? I care not if every inhabitant, every politician in the land were to "concede" that a gentleman were elected to the Senate of the United States, or as a member of the lower House, or as a member of any legislative body in any of the States, such concession does not constitute him a rightful member of the body. Something more is required where written constitutions prescribe what is to be done in

order to clothe any one with legislative power. The only muniment by which any one can hold his seat in this Chamber is by the vote of the Legislature of his State, cast for him as prescribed by the constitution and the laws, and in no other way. Therefore the word "concession," as used by the majority of the committee, cannot be impressed into its service to enlarge or diminish the rights of this body in this respect, or be allowed to weigh anything one way or the other in determining this power of the Senate.

I shall only say here that the right to inquire into the elections of members of a Legislature is in that body and in that body alone to which they are accredited by their election. That body has supreme control over their own identity or entity. That body alone has supreme control over its own organization. That body alone can decide, and from which there is no appeal, who shall constitute the members of the organization, and such decision establishes the legal validity of the body and for all purposes. It is no part of our duty, we have not any right to inquire into the individuality of the legislative body. We are obliged to take that legislative body as it exists and as we find it, organized under the constitution and laws of the State. The constitution and laws of the State bring it into existence, and by them and as they direct are we to be governed in determining the status of any legislative body, either one in fact or assuming to be one. In no other way can we undertake to determine whether the Legislature be a rightful one or a false one. I repeat, therefore, that it would be an unwarrantable and most wanton assumption of power on the part of this body to undertake to organize a Legislature for any State by undertaking to determine for itself who should be members of it. By the constitution of Alabama, by the constitution of each of the States, it is expressly reserved to the legislative bodies in each, as it is by the Constitution of the United States reserved to us, that each House to which the member is accredited is the sole, exclusive judge of his right to sit in it. It is a final judgment, from which there is no appeal to any tribunal upon earth, either judicial or representative, and is binding upon us and all the world beside wherever it may come in question. Both branches of the Legislature of Alabama determining who their members were settled the question for us. It may be apparent to us, it may be absolutely certain in our judgment, that not one-half of the persons actually sitting as members of either branch were legally elected, yet with that we can have naught to do. We are bound by the judgment of each branch, they being the exclusive judges, and being bound we are obliged to take their act as the solemn act of the legally constituted legislative body of the State.

For the just consideration of a question like this, one is obliged to cast aside all party affiliations, sympathies, prejudices, and influences, and especially discard all party power. It is one of the gravest questions known to any legislative body; for it presents the great idea of order as against disorder, of peace as against violence, and of rightful authority as against revolutionary turbulence. If we permit these things to be done with our sanction, there is no safety or security in the regular transmission of authority from one legislative body to its legitimate successor.

But, Mr. President, undertaking again to assert just here what Senators upon the other side cannot successfully deny, that this body has no right whatever to inquire into the election of individual members of the Legislature of a State in considering the election of a Senator to a seat in this Chamber, they will not deny but that we are to accept that election by the Legislature of the State as conclusive and binding upon us in so far as it involves the legal entity or being of such Legislature; and that all we can do in the premises is to ascertain from the best sources possible whether it be a Legislature already constitutionally and legally organized in fact which is claiming to accredit a Senator to this Chamber.

We are not here to inquire whether A B, or C D, or any other individual is a member of any body, senatorial or representative, of the State. We are to look only at the body aggregate, at the corporation. Into its individual or constituent elements we have no right to look. We are obliged to confine our inquiry to the one leading, controlling, sole fact in this case, and that is to ascertain simply which of these two bodies claiming to be the Legislature of Alabama is the rightful, legal, and constitutional Legislature, or whether either be, and in doing this it is not required for us to know the name of a single member of either body.

The important question, then, is how are you to ascertain this? Up to this point there is no trouble; all the facts are conceded by both sides. And the question again recurs, how are you to ascertain now whether the body meeting in the State capitol and electing the contestant, Mr. Sykes, to a seat in this Chamber is the rightful Legislature, or whether the other body, meeting in the court-house and electing the sitting member, Mr. Spencer, is the rightful Legislature? How is this to be ascertained? Upon what evidence are you to arrive at correct results? You cannot, as I have before shown, go behind the meeting of either and go down into the many election precincts and count the votes and canvass the returns and adjudicate contests between delegates and senators in order to know who are the members of the Legislature, for that is a power confided solely to another tribunal—the Legislature itself. We cannot, we dare not abandon the living, complete idea of a legislature in its aggregate, concrete, and corporate individuality, character, and functions. To do this, and go back to its elements down into the precincts, see there to the qualification of electors, to their regular registration, the casting and reception of the votes, counting and canvassing the same, finding and declaring results, investigating frauds, acts of violence or intimidation, and all the other concomitants and incidents attendant upon a popular election, is such a gross, wanton, and reprehensible usurpation of power, that no one, it seems to me, would be willing to tolerate much less admit it.

Mr. President, there is but one mode known to all considerate men, it strikes me, and it is the plain mode. There is but one mode to ascertain and recognize the rightful Legislature of a State. It is the great fact and it is the only fact in this cause, for one or the other of these bodies must be the Legislature of Alabama. What are the evidences upon which you are to found this fact? First, take the constitution of Alabama, see its provisions for the election and organization of its Legislature; next, then, take the laws of Alabama, and see how under that constitution and those laws members are elected to the Legislature, how recognized as members, and how organized into a body called and known as the Legislature. There is no other mode by which we are authorized to ascertain results for our own action. There are incidents connected, true, with all this which go to fortify the result attained in this way.

The constitution of Alabama provides that the Legislature shall consist of thirty-three members of the senate and of one hundred members of the house of representatives; that a majority of each house shall constitute a quorum to do business. It provides further that the Legislature shall meet in the city of Montgomery; it provides further that the Legislature shall provide registration and election laws; it declares that the Legislature shall provide for the case of contested elections in that body. The Legislature, in pursuance of these provisions in the constitution, has provided every material thing calculated to secure a legal vote and to ascertain who were the members of either house. There is no omission anywhere. If you but just examine the laws in this respect of the State of Alabama you will observe that no requirement of the constitution has escaped notice, but that everything has been provided for, from the registration of the voters down to the complete ascertainment of the result, and afterward for the contest of these results before the proper tribunals by those who are not satisfied with them.

The constitution of Alabama requires that the Legislature shall meet in Montgomery biennially, and the law fixes the day. The 18th day of November, 1872, was the day for meeting. The State of Alabama provided a State-house in which the Legislature should meet—a building called the State capitol. The old one was burnt in 1850; it was rebuilt in 1851 or thereabouts. In that capitol by express law was provided a senate chamber in which the senate was to meet, appropriated exclusively to the meeting of the senate; in that capitol also was a room appropriated to the meeting of the house of delegates. In the city of Montgomery, therefore, as in the city of Washington, each house had its meeting-room appropriated to that purpose and to nothing besides. Upon that day, the 18th day of November, 1872, there was nothing to prevent the members of any political party from meeting, having the requisite qualifications to sit as members in either branch. The halls were there ready and open for either and for all.

Nay, more. By the constitution of Alabama, section 6, article 4, to which I desire to draw the attention of Senators in order to show with what regularity and order these people, members of the Legislature, could meet and thus receive, transmit, and perpetuate a government in the form and manner so particularly prescribed. It is provided in the constitution in the article to which I have referred that—

> The president of the senate and speaker of the house of representatives shall remain in office until their successors are elected and qualified.

The lieutenant-governor of the State was *ex officio* president of the senate, and as such president of the senate presided over its deliberations and in all cases of a tie vote had the privilege of deciding. Two years before Mr. Lindsay had been elected governor and Mr. Moren lieutenant-governor and Mr. Parker secretary of state. Therefore, the lieutenant-governor, Mr. Moren, at the meeting of this Legislature was the president of the senate, and by the constitution it was made his duty to preside over that body until his successor was installed. Mr. Hubbard was the speaker of the preceding house of representatives. Therefore, under the constitution of Alabama, he was entitled to preside, and it was his duty to do so, over the body meeting upon that day, the 18th of November, 1872, and until it elected his successor. The constitution of Alabama so speaks, and it is the paramount law to us on this occasion.

Accordingly, at noon on the 18th of November, 1872, the lieutenant-governor appeared in the senate chamber, the chamber in the State capitol dedicated to the meeting of the senate, and took the chair. He was not only entitled to be there, but it was his duty to be there. Taking his seat as president, he called the members present to order. There appeared upon the floor then eighteen members who presented their certificates of election. They were then sworn in by Judge Smith, a judge of one of the courts, who was authorized by law to do it, and they became qualified members of the senate. On the next day another member holding a certificate appeared and qualified as required by law, making nineteen members of the Senate who thus appeared, having duly authenticated certificates of election, and qualified before a proper officer, being two more than a quorum to do business, and meeting in the hall dedicated to this purpose, and pre

sided over by the lieutenant-governor as president of the Senate in obedience to the constitution.

Now let us turn to the other house, the house of representatives. At the same hour, on the 18th day of November, Mr. Speaker Hubbard, who was the speaker of the preceding house, appeared in the hall of the capitol appropriated to the meeting of the house of representatives and took his seat and called the house to order, when forty-five members having certificates of their election as required by law appeared. There not being a quorum as fixed by the constitution of Alabama, they adjourned over to the next day, as they had the power to do from day to day until a quorum was obtained. Fifty-one members constituted a quorum. Upon the next day four more appeared, and still being without a quorum they adjourned over; and upon the third day fifty-three members—two more than a quorum—having all certificates of election duly issued to them, appeared and were duly qualified. They proceeded to organize by the election of Mr. Stone as speaker, and other proper officers. Afterward another member having a certificate appeared and qualified, making fifty-four members in all. This body, thus called into being, meeting in this regular way in the State capitol, no one having a certificate of election being prevented from appearing and participating as a member, no violence, no intimidation, nothing to interrupt the peaceful progress of organization or legislative action—such was the constitution of that body; and I ask whether anything could be more regular, more formal, more in accordance with the constitution and laws of Alabama? There was the lieutenant-governor, known to be the president of the senate; there was the speaker of the house, known to be the speaker, each in his place, as required by the constitution of Alabama, prepared to organize each branch of the Legislature of the State meeting in these two chambers dedicated to their several purposes, and so meeting did organize, and these bodies constituted the Legislature that elected Mr. Sykes. As to all this there is no question; no one will dispute this detail of facts; the majority report admits it all.

Upon the 3d day of December following, this Legislature proceeded in conformity to the law of Congress to elect a Senator of the United States, and from day to day as required by law they balloted until a final result on, the 10th day of December, was reached, when Mr. Sykes was elected Senator, he receiving 19 votes in the senate and 51 in the house.

Now, let me refer, Mr. President, to the other body, claiming to be the Legislature and electing Mr. Spencer to the Senate. Fourteen members of the senate having certificates of election, and three others claiming to be elected, and forty-seven members of the house having certificates of election, (four less than a quorum,) and six others claiming to be members elected but not having certificates of election from the counties of Barbour and Marengo, did not appear in the hall of the senate or of the house of representatives at the capitol upon the day fixed by law for the meeting, but, on the contrary, went off to a court-house, a United States court house, not a place appropriate or fit for the purpose, and without any notice whatever to their fellow-members, without notifying the speaker of the last house, without notice to the president of the senate, there organized in a court-house of the United States in the city of Montgomery, and there proceeded in the absence of the lieutenant-governor and of the speaker of the last house of representatives, who were in the city and in their places in the capitol, to elect a speaker for one body and a temporary president for the other body. Those two bodies thus constituted proceeded, upon the 3d day of December, to elect Mr. Spencer as Senator in Congress. Thus far, which of these two bodies, with such facts before us and none other, should be recognized as the legal Legislature of Alabama? Which could be? With nothing beyond what I have stated, can a body of men, without any reason, thus acting and thus organizing, possess or lay claim to any legal or moral force whatever?

What more? The governor of Alabama, then Governor Lindsay, communicated with the body meeting in the State capitol, recognized it as the Legislature of Alabama. It transacted business; it passed at least one law signed by him. Under the constitution of Alabama both houses in joint convention are required to count the votes cast for governor and lieutenant-governor and the other State officers. This body, thus organized at the capitol, proceeded upon the 23d day of November to hold a joint convention, and then and there proceeded to count the votes for governor as required by the constitution. The returns were submitted to this body, and none other, by the secretary of state to whom the returns were made. This body, and none other, canvassed those returns, and declared upon that day that Mr. Lewis was elected governor, Mr. McKinstry lieutenant-governor, and Mr. Raglan secretary of state. There never was a return before the other body, not a vote there canvassed. Immediately thereupon a committee was appointed by this body to wait upon the governor-elect, Mr. Lewis, and advise him of his election. He at once took the oath of office and became the governor of Alabama; so did McKinstry, who became lieutenant-governor; and so did Raglan, who became secretary of state under that canvass of returns. Here there was conformity to every provision, both as to the law and constitution. But now and at this point the troubles begin. As soon as Governor Lewis was inaugurated and Mr. McKinstry was qualified as lieutenant-governor, they took part and acted in conjunction with the body assembled at the court-house. I shall not comment upon that, for it is not material with the views I shall endeavor to enforce, nor need I allude to the fusion of these two bodies that subsequently took place, because that fusion was the result of a compromise which cannot in law affect the right of either Mr. Spencer or of Mr. Sykes to a seat, as their election took place respectively on the 3d and 10th of December, and the fusion took place, I think, on the 21st of December, under the arrangement proposed by the Attorney-General of the United States, and which we all remember.

Let me go back a moment. We had, then, this Legislature, regularly assembled in the State capitol under the regular officers and in the regular discharge of its duty, and in official relations with the governor of the State, Mr. Lindsay, and with all the other State and local officers then in official power in the State. There was then unity in all the departments of the government of Alabama, and the whole machinery of the State was working in perfect harmony—the executive, legislative, and judicial. The body of disorganizers meeting at the court-house could effect nothing in themselves, having no support from the other departments of the government. But the inauguration of Governor Lewis and his co-operation with it warmed it into active being and gave it the vitality it exhibits in this cause. Now we have its pretensions put forth, and just here is involved the divergence of these bodies. It is asserted in the pretensions of the body meeting at the court-house that in the other body meeting in the State capitol were six gentlemen—I shall not refer to more because six will determine the question—who then held certificates of election, but who were not in fact elected by the people; and taking these from the fifty-four meeting in the State capitol would leave it without a quorum to do business, and adding the six assumed to be elected in their stead—and who were in the body assembled at the court-house—to the forty-seven there meeting who had certificates of election, there would be in the court-house a quorum to transact business, and if worth anything at all as a Legislature, it was of course entitled to elect a Senator. Nothing is said as to the regularity of the meeting in the State capitol; it is not controverted nor brought in issue; but the whole case is upon the position simply that among the members seated in the State capitol were six persons, three from Marengo and three from Barbour County, who, while they held certificates of election, were not in fact elected, and those six counted out left that body without a quorum of members required to do business, and of course to elect a Senator; and that the converse would be true, by counting these six into the body meeting at the court-house would give to it a quorum with its consequent powers.

For the sake of the argument admit all this to be so, for this is the sole question. It is not whether they were elected in fact; I do not care whether they were elected or not; that is wholly immaterial to the issue. The question is, and it is the only question, were these six persons, holding their certificates of election from Barbour and Marengo Counties under the laws and constitution of Alabama, entitled to be in the State capitol body, meeting as it did and as the regular Legislature, and when this election was held? I repeat again that the simple, sole question is, had those three members from Marengo and those three members from Barbour the right, the legal right, the constitutional right, to be sitting members in the Legislature of Alabama upon that day and to make an integral part thereof?

How did they get there? We must look to the laws and the constitution of Alabama to know what constitutes a member in the first instance. We must know whether, according to the terms prescribed by their laws and constitution in ascertaining the will of the voter, there must be certain processes by which the representative of the voter is to reach his place so as to be a member of the legislative body. If so, whether he got there by fraud or otherwise is immaterial to the inquiry, for that is a matter for subsequent action. He and the voter both must go through a certain process before the final end is attained, and we have no business to inquire into it; it would be reversing our whole system and theory of government to do so. The constitution of Alabama is explicit on that point, that each branch of the Legislature shall be the exclusive judge of the elections, qualifications, and returns of their own members. As to this there is no question. We are constituted the judge of the election of our own members, not by usurping the functions of the Legislatures of the States, not by going back to the voter and behind the action and judgment of Legislatures upon their own members and determining who were elected members of the Legislature, but only by going up to the Legislature itself as organized, and determining whether it is the rightful Legislature according to the laws and constitution of the State, which we are obliged to notice in establishing the relations of this body to each Senator upon this floor.

In the beginning I propounded the question, How are we to arrive at the fact which of these bodies was the rightful Legislature of Alabama? I have gone so far into the formal organization of the body meeting at the State capitol to show that it was all right, meeting at the right place, and at the right time, and organized under the authorized officers. I now come more in detail to the main point in controversy, namely, were the members from Barbour and Marengo and the senators from Butler, Conecuh, and part of Escambia entitled to be in the State capitol upon the day of meeting, and to be sworn in as members? because if they were upon that day entitled to be in that body when that body assembled on the morning of the 18th of November and were qualified, there was no power to oust them until by a regular contest it was made to appear that they were not entitled. When the lieutenant-governor appeared in his seat in the Sen-

ate chamber, and called the senators from Butler and Conecuh and also the senators from Barbour and Marengo and those senators presented their certificates of election, was not the lieutenant-governor obliged in the discharge of his duty to recognize them and allow them to be sworn in? When the speaker of the house, Mr. Hubbard, as required by the constitution, took his seat on that 18th day of November, and when the members from Barbour and Marengo were called and their certificates of election were read and they were sworn, could he deny them the right to be sworn and to be recognized as members afterward? If no one could deny the right of all these gentlemen to be sworn in as members, and no one was there to deny the right if he could, for then and there was the place and time, shall it be that we can undertake to say now that we have the authority and right to go back to that day and behind that day and behind that organization of the Legislature of Alabama made that day under its own constitution and laws, to determine that these men were not elected and that they were not entitled to be sworn in as members of that body?

Do not the constitution and laws of Alabama make provision for the election of its own senators and representatives and for the returns and qualifications thereof? The members of the house of representatives are elected biennially and senators every four years. How do we arrive at the just results of the people's will in this respect? We must have some forms of procedure to secure orderly results. They must be observed. My honorable friends on the other side must not undertake to say that they had a majority in the State of Alabama as shown in the election of governor. That reminds me of the Louisiana case and the speech of my honorable friend from Indiana [Mr. MORTON] on that occasion, that a majority of the people of Louisiana were republican, that there was no question about the sentiments of the people fully or fairly expressed, and that therefore the Legislature and State officers ought to be so. That will not do. Government means order. Liberty regulated by law is our idea of government. The voice of the people can be heard only through the channels established by law and the regular transmission of it through the means provided by law—by defined age, residence, by intelligence and property often, by registration, by the ballot and its numerous attendants, from the casting to the final canvass of it. It is only as derived in the manner prescribed by the law that the people's will in representative governments is at all effective or ought to be. Men who love order must always maintain this essential principle in American government. The moment you depart from it, the moment you break down the bulwarks that guard the expression of the freeman's will, you are at sea. No, Mr. President, the law prescribes expressly what each individual must do in order that his voice may be heard in communion with the voice of the people.

In pursuance of the constitution of Alabama an election law was passed by the Legislature, by which the public will could be ascertained as contradistinguished from that of a mob, and by which legal, constitutional, and orderly government could be maintained and peaceably transmitted. I now refer to the act passed October 8, 1868. It was passed, as it was then supposed, to secure to the people in that State all their just rights for their own government. It is clear and comprehensive in its provisions; it omitted nothing by which those people, and all classes of them, should have an opportunity to secure their votes and have their will ascertained. The law provides generally for the appointment of inspectors of election, and for a registration of voters. It provides, then, that no one upon the day of election shall be challenged who is thus registered; so that voters could quietly go to their registration officers and be registered and vote upon the day of election, and there could be no interference with their right to vote if their names appeared on the registration lists. It was the duty of the inspectors of election, upon the closing of the polls, to count the votes and certify the poll-lists; they were to seal up the boxes containing the ballots and poll-lists and deliver them to the returning officer. Let me pause just here and ask, was it essential in order to secure the result of the popular will that the voters should be registered, and that the votes should be received and counted by the regular inspectors of election? Was it important that the ballot-box thus sealed up should be delivered by the returning officer, in whose charge it was put, to the judge of probate of the county within forty-eight hours after it was delivered to him? The importance of this is shown by the following provision. The inspectors of election having counted the votes and certified the poll-lists, and having delivered the ballot-box and poll-lists to the returning officer, and he to the judge of probate of the county, section 36 of the law provides—

> That judges of probate, sheriffs, and clerks of the circuit court, or any two of them, of the several counties, are hereby constituted a board of supervisors of elections in and for their respective counties; and it shall be the duty of said board of supervisors to open, compare, and count the ballots cast at all elections.

That is their duty, and it is a plain duty. Is that important in the regular transmission of authority under the laws of Alabama? Can any one count these votes besides the supervisors and inspectors? Can those returning officers return them to any gentleman they may select to count and canvass them? Would their certificates of election avail anything? Not at all; for you must have some regular channel for the transmission of authority for any stable government. The order begins at the elections in our Government, and failing there our whole system is wrecked. The voter is a freeman in every sense of the word, but he cannot vote where he pleases, or when he pleases, or as many times as he pleases. But what further? This board is to "compare and count all ballots cast at all elections." It is therefore made a judicial body; it is a judicial power to determine all questions incident to the count, and it is a judicial power having no limit, and from which there cannot be any appeal except that prescribed by the act itself. It is given to them, and having been given to them to judge, their judgment is final and conclusive upon all the world beside, and can only be affected by a contest made before the Legislature and as provided by law; and I am sure it will hardly be contended that this body is at liberty to go behind a tribunal established by the laws of Alabama to determine these questions of membership in the first instance, and only subject to revision by the Legislature itself upon a case made for contest in order to seat a Senator in this Chamber. Again, see what the law provides further:

> SEC. 37. *Be it further enacted*, That it shall be the duty of the board of supervisors of elections, upon good and sufficient evidence that fraud has been perpetrated, or unlawful or wrongful means resorted to to prevent electors from freely and fearlessly casting their ballots, to reject such illegal or fraudulent votes cast at any of such polling places, which rejection, so made as aforesaid, shall be final, unless appeal is taken within ten days to the probate court; and in case of a tie for any county officer, the board of supervisors shall decide.

There is jurisdiction full and complete given by the laws of Alabama to the board of supervisors not only to count but to revise and reject votes, and yet it is proposed that we go behind the decision of that tribunal, draw it in question, revise it and determine for ourselves and to suit our purposes who are members of that Legislature notwithstanding the right of that board and ultimately of the Legislature is indefeasible to do it and make it conclusive upon everybody. Is not this provision of the law conclusive upon us that the persons in the State capitol assemblage having the certificates of the secretary of state based on the returns of these boards were members of that body, and rightful members until displaced by a regular contest? It is admitted that there was no appeal from any decision made by the boards upon any question before them in discharging their official duties in canvassing and counting the votes and making their returns.

Mr. MORTON. Is the Senator speaking of the board of supervisors?

Mr. HAMILTON, of Maryland. Yes, sir.

Mr. MORTON. Will the Senator bear in mind that the supervisors of Barbour County first sent up a false return, the result of the injunction, and two days afterward sent up a true return, showing that the three men who took their seats in the capitol house of representatives were not entitled at all; and taking them out, that house had no quorum?

Mr. HAMILTON, of Maryland. We shall see about that presently.

Mr. MORTON. That is the record.

Mr. HAMILTON, of Maryland. I shall come to the Barbour and Marengo elections presently. These are incidental points; I am now on the question of certificates. What further is the duty of these supervisors?

> SEC. 38. *Be it further enacted*, That it shall be the duty of the board of supervisors, within five days from the date of receiving the sealed boxes and certificates of the number of votes cast at each polling-place from the inspectors, to make certificates on blanks furnished by the secretary of state, of the exact number of votes cast in their county for each person, stating the office such person is voted for, and forward them, excepting for governor, lieutenant-governor, secretary of state, auditor, treasurer, and attorney-general, to the secretary of state, who shall, after such returns have been duly examined by the secretary of state, be filed as other public papers required to be kept in his office, and shall be subject to the inspection of any elector of this State.

That is their duty; and allow me to dwell here for one moment. The boards of supervisors of Marengo and Barbour made returns of the votes cast in those two counties to the secretary of state, as required by provisions of the law, of the three members elected from each county. From Marengo, Morgan, McNeil, and Kimblough were returned as duly elected members. They took their seats in the capitol Legislature under the certificates issued to them by the secretary of state based upon these returns. From the county of Barbour, Williams, Dent, and Cody were returned as duly elected members, and they took their seats in the capitol Legislature under the certificates of election issued to them by the secretary of state based upon these returns.

These boards of supervisors then having made their returns as provided by law, what next was to be done by the secretary of state? Remember their count and return was final; it was conclusive upon the secretary of state, upon everybody except the bodies to whom they were accredited. In cases of contest of course their elections were re-examinable by the Legislature under its constitutional right to judge of the election of its own members. Their returns were conclusive of course upon the secretary of state, and with the certificates of the secretary of state were conclusive upon the president of the senate and upon the speaker of the house of representatives when demanding admission to a seat in either body. Being conclusive upon the secretary of state, what else could he do but obey the law and issue the certificates, when the supervisors of election having this judicial power of canvassing, rejecting, and returning the votes returned to the secretary of state their canvass and their count, their declaration of votes given to each person? Could he contest it? Could he refuse to issue certificates of election? No, Mr. President, he could not do any such thing. However erroneous that count might have

been, his duty was to observe the judgment of that body, the board of supervisors, and to be guided by it; for section 42 of the law prescribes his duties, as follows:

SEC. 42. *Be it further enacted*, That it shall be the duty of the secretary of state to forward certificates of election to such persons as may be ascertained to be elected to any office in this State, addressed to the board of supervisors, at the court-house of the county in which such person returned as elected may reside, within ten days after receiving such returns of election from the supervising board of the county; and it shall be the duty of said board of supervisors to forward said election certificates to the persons entitled thereto.

When the board of supervisors determine and declare the number of votes cast for each individual and return them to the secretary of state, it is his duty to issue certificates according as those returns shall appear to be and to forward those certificates to the boards of supervisors and by those boards they are to be handed over to the persons entitled to receive them. Was that done? That was done. We are not here inquiring as to whether those returns were right or whether the count was right or whether any exclusion of votes was right. These boards of supervisors excluded in many cases whole election precincts in their canvass and count of votes for cause as they allege. They had the power to do it under this election law; and have we the right to inquire into it? Have we the right to go back and sit in appeal upon this act and revise their decision and determine for ourselves whether they did it rightfully? I take it for granted not. These certificates based upon these returns of the supervisors were issued to the two senators and the six members from Marengo and Barbour. These certificates of election were presented upon the day of assembling in the State capitol. The lieutenant-governor, the person authorized by the constitution to occupy the chair in the senate chamber of that capitol building, and the speaker of the house called the respective bodies of the Legislature to order; these certificates were there and presented. Who could dispute or gainsay them, unless indeed the contestants? Why were they not there to dispute them? They were not there. They were away off in another part of the town organizing, outside of the capitol building provided by the State, members without any returns and without any certificates of election, but upon their assertion that they were elected. The assertion might or might not be true. What was to be done by the lieutenant-governor, as president of the senate, and the speaker of the house? Could the speaker of the house, required to sit there under the constitution, upon his own motion say that the gentlemen with certificates should not be recognized as members? Certainly not. What could he know about it? The board of supervisors was the arbiter. Its judgment must be the judgment of the speaker of the house, as well as of the secretary of state. Claiming to be members, they were sworn in upon these certificates on that day; and the members thus admitted upon these certificates thus issued by this board made the quorum and organized the house of representatives as a branch of the Legislature of Alabama upon that day in the capitol building.

The Legislature was fully organized, Mr. Lindsay being governor and Mr. Moren being lieutenant-governor, and it was recognized by the governor by communications to it.

Now let me for one moment notice the interrogatory of the honorable Senator from Indiana. He has said that afterward there was another certificate issued by Secretary Raglan, who succeeded Mr. Parker, to the three republican members from Barbour, growing out of a subsequent return made by the supervising board of that county. That was afterward.

Mr. MORTON. Two days afterward.

Mr. HAMILTON, of Maryland. I do not care when; it was afterward, after the organization of both houses at the capitol. Raglan was not secretary of state until the capitol Legislature counted the votes and declared him to be so. Raglan could only take his office after the canvass of the votes by the Legislature. The three men in the capitol Legislature from Marengo and the three from Barbour had the certificates of Parker, secretary of state, when the votes were being canvassed by Raglan, who afterward gave a certificate to others from Barbour.

Mr. MORTON. The Senator does not comprehend the purport of my question. The Senator a while ago was discussing the effect of a certificate given by the supervisors, insisting that it was final.

Mr. HAMILTON, of Maryland. No; the supervisors give no certificate; they only make a return of the votes cast.

Mr. MORTON. Well, call it a return. The Senator was insisting on the effect of that return. I call attention to the fact that they made two returns within two days of each other; that the first return was a false one confessedly, that two days afterward they made a true return showing the other set of men to be elected; and leaving out the men who received the benefit of the first false return, there was no quorum in the house that met in the capitol.

Mr. HAMILTON, of Maryland. I understand the force of the question very well. I am talking about the organization on the 18th day of November, for that is the pivot point of all this controversy. If those gentlemen presented their certificates, and there were none others in existence, I care not how fraudulently or wrongfully they may have been issued to them; that day upon their certificates when the speaker called that house to order they were entitled to be sworn, and nobody was present to say nay. That is the point. There was no other return until say two days after this capitol Legislature was organized. In regard to what the honorable Senator chooses to denominate a false return, I do not know whether he intends to reflect upon the officers connected with that return. I know that in committee, if I am permitted to speak of what occurred there, the imputation of fraud on anybody connected with this matter was not at all pressed. The return itself in vindication of these officers as made shows that they acted fairly; and it is but due to this supervising board that I should cite it. If I am in error in stating what they did on that occasion I desire to be corrected: but in justice to that board and the action of that board which the Senator pleases to term a false return, I will present it. In the county of Barbour all the returns were made by the supervising board; and I have before me a copy of the original, certified to by the secretary of state and taken from the records of his office, about which there can be no doubt. It shows how fairly they acted in the premises. Blank returns are furnished to the boards of supervisors. The secretary of state by the very election law I have read from is required to furnish the blanks to each supervising board, in order that they may make out a schedule of votes upon it. They returned for senator James W. Mabry 2,170 votes; Jacob Black, 1,981 votes. Mabry was the democratic candidate, and Black the republican. So for the Legislature, democrats, Williams, Dent, and Cody, each 2,180, varying a few votes; and Williams, Clark, and Fantroy, republicans, each 1,900 and a fraction. These are the first returns made by the supervising board to the secretary of state, and upon which he acted in issuing the certificates of election.

Mr. MORTON. In that connection I have here the corrected returns sent up two days afterward, giving an account of the vote in the ballot-box that had been excluded two days before, which changed the result five hundred votes and elected the other man.

Mr. HAMILTON, of Maryland. I am coming to that. I do not intend to omit anything connected with this return; that is, the return referred to by the Senator, remember, sent up two days afterward; but I have given you the return of the supervising board to the secretary of state, upon which he issued his certificate to the members upon which they got their seats and were members at the organization. No other certificate, up to this time, was issued. Raglan, after this body thus organized had declared him elected, issued certificates to the other gentlemen from Barbour.

I desire still further to say about this supervising board that they left nothing in the dark. While they made return of the votes cast as I have announced, they at the same time made return that they were enjoined from counting box No. 1, in the city of Eufaula, thus showing that there was no desire to conceal anything; and they returned at the same time the petition for the injunction and the decree of the chancellor enjoining them; and here it is appended to their return. Whether that injunction was right or whether it was wrong, these supervisors being enjoined by the court obeyed the injunction and made their return of the vote cast and not enjoined, upon which alone the secretary of state could issue a certificate. Afterward this injunction was dissolved, and the same supervisors then, although after the organization of the House, made an additional return of the votes in that box, as follows:

We, the undersigned supervisors of elections in and for the county of Barbour, having received notice of the dissolution of the injunction in the case of James W. Mabry *et al.*, *vs.* us in the chancery court in and for said county, we certify and report to the secretary of state that we have counted and compared the votes contained in box No. 1 at the precinct at Eufaula in said county, mentioned in our certificate heretofore sent to said secretary of state in relation to the late election in said county and find the following result, to wit:

For senator, Jacob Black, 748 votes.
James W. Mabry, 182.

And they give a like cast of votes for members of the lower house. I see nothing criminal or wrong on their part; and I here make the inquiry, did all this justify these persons from Barbour who claimed to be elected, and who were in fact elected by the subsequent returns, in running off, in sneaking, if I may be allowed to use the expression, into another body and getting together in another part of the city in a house not used for any such purpose? I am sure if the honorable Senator from Indiana had been lieutenant-governor of that State or speaker of the house he would have gone right to the place where everybody expected him to be, the senate chamber or the representative hall in the State capitol, expecting there to meet all the members, the claimants and contestants, and both delegations from Barbour and Marengo, and to settle then and there their differences. If there was to be a revolution, if there was to be disorganization, let it be there where all had the right to meet and where all were expected to meet. Does the honorable Senator undertake to say that because there may be fraud or abuse in the election of a senator below or half a dozen members of the house, and which members may determine the political complexion of the body, therefore it is right in order to avoid the necessity of a contest to correct the abuse or fraud according to the forms of law that the half-dozen claiming to be members in their stead shall make arrangements to meet with a certain number of members sufficient to constitute a quorum, if all were members, and absent themselves from the regular Chambers in this Capitol and meet at some outside place, at some hotel down in the city, or in one of the public halls, or in the room of one of the courts of the United States, and leave the Vice-President sitting in that chair, and the House without a Speaker, with its Clerk calling the roll, and elsewhere have an organization without either, and claim to be the Congress of the United States? Is there propriety in this?

Does not one's sense of order and of law revolt from any such proceeding? The honorable Senator well remembers the troubles about the members in the other House from New Jersey many years ago and the "broad seal" of that State. These very members elected from New Jersey determined the political complexion of that body. Those gentlemen with a sufficient number of acknowledged members could have gone into some other place in this city with the same degree of propriety and organized a separate body. Did they do it? No; they appeared where they ought to be, in the Hall of the House where the Speaker was expected to be, and there it was fought out. If these gentlemen from Barbour and Marengo, claiming to be entitled to their seats, felt so much aggrieved because others occupied them, if such great injustice was done them, why not appear in that hall where this wrong was committed and there maintain their inviolable rights against this fraud and wrong to the last extremity? There was the place to vindicate their rights. Why, two separate bodies each claiming to be the law-making power! How might it not have involved the people of Alabama in all kinds of civil discord and possibly in civil war? Could you have two legal constitutional legislative bodies sitting at the same time in that State without trouble? The same scenes of disorder might have prevailed there that prevailed in Arkansas, and almost prevailed in Texas, and did and does still prevail in Louisiana. Can you, and is it safe in any respect, recognize such a condition of things that must eventuate in disorder, as attended and characterized the proceedings of the body meeting at the court-house?

The honorable Senator, instead of applauding these men and vindicating their course, should have told them that their place, and the place for brave men demanding their rights, was right where they were entitled to be, in the chamber in the State capitol. There was their place. Not sneaking around the city of Montgomery, away from the presence of the regularly constituted officers of the government, and outside of the capitol, organizing irresponsible and independent bodies to legislate for the people of Alabama and involve them in disorder and bring them to the verge of civil war. If it had not been for the patience, the deliberation, and the patriotism of the men assembled in the capitol, who felt obliged for the sake of peace, and for that alone, to sacrifice their rights and yield the organization in their own capitol, there would have been great trouble if not civil war in that State as in other States of the South. It is because of that, and to prevent such like occurrences, and to have regularity, certainty, and order in the regular transmission of authority, that I occupy the floor to-day, rather than for the reason that I may have any personal preference between the gentlemen contending for a seat in this Chamber.

But, as I said, whatever occurred afterward cannot have relation back to the time when this body met at the State capitol on the 18th day of November, 1872, and organized. How can there be a valid objection to the organization of that body in the capitol? If there was a proper organization on that day, or if the members from Barbour and Marengo, with their certificates of election, appeared upon that day and were sworn in and afterward other members appeared and the organization thereupon was completed, there was but one course to pursue by those who had the right to complain, and that is pointed out by the laws of Alabama. Those laws are not silent on that question. I have shown you that this body was regularly organized according to law under the constitution of Alabama in the capitol. Then what was to be done by these gentlemen if they had anything to say why the certified members should not continue to hold their seats? The constitution of Alabama provides for contesting elections. That constitution directs that the Legislature shall make laws providing for contested elections, and it did so.

I know what party prejudices and zeal for party success are, and here lies the very point in this case. If there had not been a Senator to be elected by this Legislature, I have no question that there would have been no trouble in Alabama. All these gentlemen would have met in that hall of the capitol on that day; those who held certificates would have been seated; notice of contest would have been served and a regular contest would have ensued, as it did ensue afterward under the organization proposed by the Attorney-General. We are all familiar with the arrangement proposed by the Attorney-General and accepted by both bodies. I will not speak of it because it can have no influence on the question before us, for both these elections for Senator were made before this arrangement was effected. Contests were afterward made. The laws of Alabama provided amply, plainly, and specifically for contests. Contest was afterward made in the case of the delegates from Barbour, and also in the cases of the senators from Marengo and Butler and Conecuh. This of course was regular and in conformity to law.

But these people were determined to avoid a contest by organizing in the manner they did outside of the State capitol in order to make the election of a Senator first. They knew that they had no standing in the capitol in primary organization. Of course they felt so, or they would have been there on that day. They had standing only wherever they might choose to meet, and with themselves alone. They could lose nothing by their action; having no standing in the capitol in the organization there, they soon saw they could lose nothing and might gain everything by an independent organization and then throw themselves on their party here, and with what eminent success so far we have seen. They have gained everything by their revolutionary course, and have set an example that I fear in our disordered condition may be too often emulated.

But to proceed. To justify an avoidance of this contest and to justify the meeting in the court-house the honorable Senator from Indiana says that there was a false return made in the case of the election of the members from Barbour. Suppose it was; could it not be set aside upon contest? But I would ask the honorable Senator whether this meeting in the court-house was not a fraud, a deliberate fraud, upon the laws of Alabama providing for cases of contested elections? Was not this revolutionary and disorderly Legislature set up in order to avoid the force of those laws? They determined to assume the power of organizing within themselves, despising all the forms and force of law, and then to depend upon the results of revolution, maintained as they supposed they would be by the authorities in Washington. That was the meaning of that organization and nothing else. It was not done to promote order, nor peace, nor good government. It was done to secure personal objects. It was done to advance selfish views. It was done to secure party power at whatever sacrifice of order and of law.

What else have we in this case? I have no doubt that according to the returns made by the board of supervising officers, subsequent to the organization of the capitol Legislature, the republican members from Barbour were elected. The honorable Senator has put that as conclusive upon this question, against the capitol Legislature, for, as he asserts, taking those three members to which Barbour was entitled from the Legislature meeting at the State capitol left it without a quorum. But this is an apparent error, for we must remember that this Legislature convened on the 18th day of November, the day fixed by law, and these members then held their certificates of election which by law entitled them to be sworn as members, and they were so regularly sworn and became members, and are to be accounted in law as members until removed by a regular contest for their seats. But I undertake to advise that honorable Senator, this being the sole instance which he has cited by which this capitol Legislature might be deprived of a quorum to do business, that fifty-four members, having certificates of election duly issued to them by the secretary of state based upon the returns made to him by the supervising board, qualified in that body, and even deducting three members from Barbour, leaves fifty-one, and fifty-one constituted a quorum. The honorable Senator therefore will be obliged to hunt up another member for exclusion in order to deprive the capitol Legislature of a quorum. If he will look at the proceedings of that body, he will find that fifty-four members appeared and qualified, and therefore it never was deprived of a quorum, even admitting what the Senator asserts, that the members from Barbour should not be counted to make a quorum. So that in all respects the organization at the capitol is in my judgment impregnable against all assaults.

If all that be so, Mr. President, have not we the evidence before us that in all respects, as required by the constitution and laws of Alabama, the regular Legislature met in the State capitol on the 18th of November, 1872, organized and proceeded rightfully to transact business? It is not my purpose to inquire into the elections of the members of the Legislature only in so far as it may tend to give a moral tone to the legal status of the Legislature, not at all to affect the law of the case, or that we have the right to do so; for I care not if not one of them was elected in fact, if the authorities having the power to adjudge and proclaim them to be elected did so, that we are obliged to recognize, and it ends the controversy. We have nothing else to do with this part of it, but our only duty is to determine the rightful legislative body of that State as organized under its laws and constitution and in conformity to both.

Mr. President, I have detained the Senate much longer than I intended upon this subject; but its importance will I trust be a fair excuse. I propose now to refer to the facts respecting the election in Marengo for senator, and which involved practically the members of the lower house. That was a case of regular contest after the fusion of both bodies under the arrangement of the Attorney-General. The democratic candidates were returned from that county by the supervising board. There was a township or a precinct in that county off some distance from which the returns had to be conveyed through a wet country, and in passing streams the returns of the present officers got wet, and were defaced and made illegible, and the board of supervisors were not able to count them. They rejected them, as they had the right to do under the law. The secretary of state was of course bound by that decision as we ourselves are. Rejecting them for this reason, they so stated in their return. They returned the votes they could count, and as counted by them the democratic senator and members were elected, and they got their certificates. The contest for their seats, or for the seat of the senators rather, ranged over a wide field it appears of illegal and rejected votes. The committee appointed to investigate the matter finally determined that the republican candidates in Marengo had a majority of about 240 votes, and stated in their report that they had great difficulty in arriving at the result.

Mr. MORTON. One thousand and fifty-eight majority.

Mr. HAMILTON, of Maryland. We will see who is right or wrong here. I am always willing to be corrected if in error.

Mr. MORTON. I have the returns here if they are correct.

Mr. HAMILTON, of Maryland. We will see who is correct. My memory may fail me, but I think I am right. I have here the report

of the committee—the unanimous report of the committee—Mr. Pennington as chairman, and who was president of the court-house body. This is the report made to the senate of Alabama:

The committee of four appointed by resolution of the senate to inquire into and report upon the contested seats from the districts of Marengo, and Butler, and Conecuh, respectfully report that they have examined the returns and poll-lists connected with the election for senator in Marengo County on 5th of November last, and also the registration lists of said county, and have taken the evidence of sundry witnesses presented by the contesting parties. From the witnesses thus examined they find that upon a count of the votes actually cast in said election in that county for senator John W. Dereen received 3,087 votes; James T. Jones, 2,145 votes; so that Mr. Dereen received the highest number of votes actually cast at said election for senator. We also find that for each of said candidates a number of votes were cast which do not appear upon any registration list which has been presented before us.

We find that illegal votes were cast at said election in favor of both candidates; we also find that the ballots and poll-lists of the Dayton box, in that county, were greatly injured and mutilated by being exposed to heavy rains in its transfer to the county seat, so that a number of ballots cannot be counted at all; but making all deductions and allowances for these causes, the committee report that John W. Dereen received 243 legal votes more than his competitor, Mr. Jones.

Mr. MORTON. Will the Senator allow me to make one suggestion?

Mr. HAMILTON, of Maryland. Yes, sir.

Mr. MORTON. That was the compromise report which was made unanimously, and these recitals were the excuses given before for casting out the votes. I have the official returns on the State ticket, the votes being upon the same tickets, and the republican majority was 1,058 in that county.

Mr. HAMILTON, of Maryland. What document does the honorable Senator read from?

Mr. MORTON. I read from a memorial which purports to give the official returns from these two counties and to give all the proceedings had in the court. I presume it is correct.

Mr. HAMILTON, of Maryland. I take the report of the committee and the returns as here certified by these gentlemen.

Mr. MORTON. You have read correctly the report of the committee.

Mr. HAMILTON, of Maryland. I am not aware of any compromise in this report. The committee in this report state definitely the result of their investigations. They state they had trouble in arriving at the result on account of defaced returns, &c.

But making all deductions and allowances for these causes, the committee report that John W. Dereen received 243 legal votes more that his competitor, Mr. Jones.

Upon that I stand in making the assertion I did before this body as to Mr. Dereen's majority. Now you can see the troubles in the investigation by the committee. Who can say that the supervisors did not act honestly and justly, and who shall condemn their decision in such a case? At all events they had the right to make it; and I wish to be understood that I only comment upon this in order to give to the legal phase of this case a moral tone, or at least to defend it against the grave charges made by the Senator; not that it is of any consequence to the real inquiry who had the majority of votes. These members had the certificates of election based upon the returns of the proper officers on the 18th day of November, 1872, and when the capitol Legislature was organized as required by law; and that is all that is necessary for the purposes in view.

Is there any force or virtue in what I say? It is not my purpose to read much law on this question, but I have detailed elaborately what the laws of Alabama require in order to reach the result of an election, and as upon those laws depend the just solution of this question, I wish to speak somewhat upon the efficacy of returns and certificates of election as laid down by an eminent author, and also as to the regular transmission of authority.

I read from the Law and Practice of Legislative Assemblies, by L. S. Cushing, section 233:

But it is also essential to the very idea of this form of government that the electors should be divided into separate constituencies, either territorially or otherwise, &c.

And then he goes on—

And in order to insure equality of representation among these constituencies, without which some portion of the people would be deprived of their just rights in the functions of self-government, it is indispensable to regulate beforehand, by law, both the manner in which the elections shall be conducted and the evidence by which the result shall be authenticated—

I have given to the Senate the manner in which these elections have been conducted as directed by the laws of Alabama—

otherwise, when the representatives should come to assemble themselves together, they would have no means whatever of ascertaining for themselves whether the several constituencies were duly and properly represented.

Section 235:

It follows, therefore, that whenever these two principles, freedom of election and equality of representation, are admitted to be fundamental (as they are in all the constitutions of government in this country) the manner of conducting elections, which has been established by the laws, and the evidence agreed upon beforehand to authenticate them, cannot be varied or departed from in any important particular, consistently with the very nature of a representative government, and, consequently, that the only evidence, by virtue of which any one can rightfully assume or be permitted to assume the functions of a member of a legislative assembly, under such a form of government is the return or certificate which contains and embodies the result of the proceedings at the election, as decided upon by the returning officers.

I read this law in order to apply it to this case as we go along. Is there an omission in this whole case either in the manner in which the elections were conducted or in authenticating the results? But proceeding, I read now from section 240:

The principles of parliamentary law applicable to the question are perfectly simple and plain; founded in the very nature of things; established by the uniform practice and authority of Parliament and confirmed by reason and analogy. These principles are as follows: First, that every person duly returned is a member, whether legally elected or not, until his election is set aside; second, that no person, who is not duly returned, is a member, even though legally elected, until his election is established; third, that conflicting claimants, both in form legally returned, are neither of them entitled to be considered as members until the question between them has been settled; and fourth, that those members who are duly returned, and they alone, (the members whose rights are to be determined being excluded,) constitute a judicial tribunal for the decision of all questions of this nature.

Is there not reason in all that I have read and sound political philosophy, and do we not come within its spirit and letter in this case? It is decisive, in my judgment, of this whole question if it be worth anything. The returned members met in the appropriate halls and were presided over by the constitutional officers, and qualified as required by law and organized. Can it be possible that such a body as that, thus organized, is to be stripped of its constitutional functions and powers? What I have read to you is strong and sensible and truthfull; it is decisive language; it is plain English that no one can misunderstand. I do not know whether authority cited as this in political cases amounts to much; but I have thought it proper to read it in the hope, faint though it be, that it may impress some one.

I now propose to read from section 242 of the same author. Some States do not provide for the returns of members of the Legislature, do not indicate by any formal legal manner who are entitled to a seat or who shall organize the respective houses. Troubles have ensued in those States and will ensue everywhere where there is not some well-regulated and defined mode of authenticating results or in securing organization in order to secure the peaceable transmission of authority or government. This was felt at one time in the House of Commons. It was felt in France, and therefore in France it was deemed necessary to make provision to avoid the occurrence of trouble by members meeting together without any certificate of election or authentication of his membership, but only claiming to be members. I read from section 242 of Cushing:

The only mode in which an organization can be secured, at all events—

Now hear this—

is to designate by law the persons who shall temporarily constitute the officers of the assembly. In France, under the old constitution, it was provided, that, on the assembling of the deputies, the oldest member should take the chair as president, the five youngest members should act as secretaries; and that the assembly, thus temporarily constituted, should proceed to a verification of the powers of the members, or, in other words, should ascertain who were duly returned. A similar provision has been introduced into the laws of the State of Massachusetts with respect to the organization of the house of representatives. The returns are made into the office of the secretary of the commonwealth before the day of assembling; that officer furnishes the sergeant-at-arms with a list of the members so returned, who alone are to be admitted into the chamber of the house.

You will observe that. The sergeant-at-arms is required to furnish each member with a certificate, and no one not having that certificate of election can enter the hall.

The oldest of the members (not the oldest person) thus admitted takes the chair as presiding officer; the clerk of the preceding house acts as clerk until his successor is chosen and qualified; the sergeant-at-arms in like manner continues in office until a new one is chosen, and the house is thus completely organized for the temporary purpose of ascertaining who are in fact members, and indeed for all necessary purposes, until new officers are regularly chosen.

Why all this? To secure order, of course, and the regular flow of authority. Has the State of Alabama made any like provision? Singularly so; specifically so. The State of Alabama, I suppose, above all other States in the Union, has prescribed more specifically how the respective houses of her Legislature shall be organized. It prescribes by the constitution that the lieutenant-governor shall preside over the senate and shall be the presiding officer until his successor is qualified. It provides—and this is an original provision, probably not found in any other constitution of the States that I just remember—that the speaker of the last house shall remain in office until his successor is qualified. There is a specific provision made for the regular succession of the legislative bodies by which and through which there can be no disorder. Then both chambers are to meet in appropriate places designated by law. These two gentlemen are to preside in their respective chambers as prescribed by law, and the members having certificates, or those claiming seats, are to come before them in these chambers in order to determine whatever questions may arise upon them. There is no State in this Union, I venture to assert, that has been more careful in endeavoring to avoid the very kind of trouble that has ensued, and that is now upon that people.

And yet, Mr. President, just think what actually occurred in this case. Here was the lieutenant-governor of the State in his chair in the senate chamber opening the session of the senate, and the speaker of the house in like manner opening the session of that house, under the constitution and the laws of Alabama; and in another portion of the town, in a United States court-room, another set of men meet, assume to be the Legislature, and elect their own president and their own speaker, and thus put into being a hostile body. The very thing which it was contemplated by the constitution of Alabama to avoid was dual houses, divided houses, quarrels in organization, and the troubles and broils incident to bodies meeting without any prescribed manner. After the people of Alabama had made their constitution and laws, in order to avoid precisely such a difficulty as this, after

they had built a State-house for the accommodation of the Legislature, we find these persons upon the day when they should have met at the capitol and appeared before the presiding officers designated by the constitution, going off into the town and assembling clandestinely, at least without notice to these presiding officers or other members, at a court-house. I believe it was the United States court-house.

Mr. SAULSBURY. Yes; it was the United States court-house.

Mr. HAMILTON, of Maryland. Those are the court-houses or places in which such men meet in these days. They feel safe there for any work against or in defiance of their own people, for they are protected by the military power of this Government. Instead of meeting in their own State-house, their own hall, built and paid for by the State and for that only purpose, and before their own lieutenant-governor and speaker of the house, they shamelessly met where the United States could throw over them a shield of personal protection in whatever they might do.

Before I leave the authority which I have quoted, allow me to read a few words upon the question of a quorum, to which I have directed already the attention of the Senate, in the organization of the Legislature. I read from section 247:

> In all counsels and other collective bodies of the same kind, it is necessary, therefore, that a certain specified number, called a quorum, of the members, should meet and be present, in order to the transaction of business.

A quorum of members is required to be present; by the constitution of Alabama, a majority of each house is required to constitute such quorum. Then who is to be regarded as members in the first instance to constitute a quorum? I read from section 253:

> In some of the ways above mentioned, the quorum of each legislative assembly becomes established at a fixed number, the presence of absence or which can always be ascertained by counting. This is usually done after the assembly is constituted, by its presiding officer, who announces or reports the result. In the Senate of the United States this duty is performed by the Sergeant-at-Arms, upon whose report to the Presiding Officer, the latter announces the result. For the purpose of ascertaining whether a quorum is present, every person who is entitled to vote, that is, every person whose return as a member has been admitted, and who has been regularly sworn as such, and no other person, is to be counted. This rule excludes, first, all mere claimants to seats, whose claims, however well founded they may be, are not yet admitted; but it does not affect the rights of persons duly returned, however ill-founded their claim may be, and notwithstanding their elections may be controverted.

That is the law of this case. Were not these persons, constituting the State capitol legislature, duly returned? No one disputes it; no one can dispute it. There is not a tittle of evidence in the case to impair any right belonging to them by reason of fraud or anything of that kind, for nothing of the kind is charged. The question of fraud was not in the case at all. It was pretermitted, if at any time relied upon; and certainly not pressed before the committee, and indeed not seriously pressed here, no evidence whatever was taken to prove it; and we have the right to assume that there was no fraud. You will not presume fraud; it must be affirmatively shown. Therefore if you recognize authority as I have given it to you from an able author, just in his own words, and I think admitted by every judicial mind to be law everywhere, how is a just mind to avoid its judicial force?

Now, I again repeat, have we come up to the measure of proof in order to establish the legal status of the body meeting at the State capitol? What more do you want? What more can you have? The honorable Senator would go back and inquire who were elected, not who were returned; not who were qualified, not how they met, but investigate as to who were elected members of the Legislature. With that question I maintain we have nothing whatever to do; and I think that by authority and reason both I am unquestionably right in this position; and denying this right of inquiry to the honorable Senator he is left, and his legislature is left, without a single muniment to justify or fortify their pretensions to a legal legislative body. Without this investigation into the returns for members of the Legislature I here again assert that the body meeting at the court-house has not a single fact to give it the color even of a legislative body.

The honorable Senator from Indiana has said, in illustrating the strength of his position upon this part of the question, and with reference to the house of delegates meeting at the State capitol, that taking away the three members from Barbour, there was no quorum in that body, and therefore, however rightfully they met, and however rightful the Legislature might be, there being no quorum present, had no right to elect a Senator. That is the substance and meaning of his proposition. Then without a quorum, there was no election, because they could not transact business. Now, Mr. President, let me take the honorable Senator on his own view in this respect. If he is determined to press this question into a count of votes below in the election precincts to ascertain who was elected to the Legislature, let us see how that would affect the composition of the senate of the body electing Mr. Spencer.

But fourteen members having certificates of election were in that body when it organized and when Mr. Spencer was elected. There were but seventeen men who had any pretense of an election in that body when he was elected. Seventeen constituted a quorum. One of those was Mr. Miller, the pretended senator from Butler, Conecuh, and part of Escambia. Mr. Martin was the regularly returned member. He was returned by the board of supervisors, and an honest return it was. He held his certificate of election and he was a member of the body that elected Mr. Sykes. Mr. Miller at the same time was a member of the court-house body which elected Mr. Spencer, and made the quorum of that body. Upon his real election there depends a question whether the senate electing Mr. Spencer had a quorum of elected members, whether holding certificates or not. I am not now alluding to members having certificates, I am now speaking about elected members and going upon the ground laid down by the Senator.

What are the facts in this case? I have the report of the committee of the Legislature here to vindicate whatever I say in regard to this matter. It was a divided report, it is true; but the lines of difference are so marked and distinct that there can be no trouble in coming to an equitable conclusion when we come to compare where the difference occurs. This senatorial district was composed of the counties of Butler and Conecuh and part of Escambia, the part of Escambia before this senatorial election having been cut off from Conecuh. The vote stood thus for senator as returned by the board of supervisors:

For Martin, democrat, Butler	1,389
For Miller, republican, Butler	1,185
For Martin, democrat, Conecuh	1,134
For Miller, republican, Conecuh	856

That is the way the returns were made by the returning board, and upon which the certificate of election was issued to Mr. Martin. Mr. Martin had 2,523 votes and Mr. Miller had 2041, according to this return.

Now comes the difference. Remember, the vote of part of Escambia was included in the aggregate vote of Conecuh in the returns. But in a contest made by Miller for the seat of Martin, Mr. Pennington, being a minority of the committee, reported that the votes cast for Martin in that part of Escambia cut off from Conecuh were improperly cast for him. The majority reported that they were properly cast, the committee consisting of three members; Mr. Pennington in his minority report contending that two ballots instead of one were cast in that part of Escambia, one for senator and one for the local officers, when all should have been upon one ballot. Before that time Mr. Smith, the republican governor of Alabama, had by proclamation declared that the senatorial and representative vote should be returned to the old county out of which the parts of the new was formed. Accordingly the voters in that part of the county upon that occasion, instead of casting an entire ballot with the name of Martin on it and the local county officers, voted for the county officers of Escambia on one ticket and for the senator upon another, as the latter vote was to be returned to the supervising board of Conecuh County and the former to the supervising board of the new county, Escambia; but in the case of Mr. Miller his name was put upon the one ticket with all the county officers. There is no question made between the majority and minority report as to the real vote cast in that part of Escambia. Martin received 453 votes and Miller 221. This is admitted by both reports and by all sides, and the only question involved was whether the votes cast for Mr. Martin, being cast upon a separate ticket, should be counted for him, for if so counted then there was no doubt as to his election. The majority (democratic) reported that they should be counted; the minority (Mr. Pennington, republican) reported that as they were cast upon a separate ballot they should not be counted, and that not counted Mr. Miller was elected.

Now what was the result? Here came the crisis of the contest in the fusion senate. It was thought necessary that Mr. Miller should at all hazards be seated in that body as the elected member from that senatorial district, because unless he were seated and recognized as an elected senator there would not be a quorum of elected senators in the senate when Mr. Spencer was elected. Accordingly, the republican member of the committee reported that those 453 votes cast for Martin should be excluded from the count, and that the vote cast for Miller should be counted. The democrats upon that committee voted that both should be counted. If both were counted, of course Martin would be elected; but excluding the vote for Martin, Miller would be elected by about 200.

Now, Mr. President, you will understand how the matter stood upon the reports. What was done? For one moment I will turn to the official report. There is no trouble about the facts in this case. Here is the report of Mr. Pennington which I will take and which gives the facts. He says here:

The vote for Mr. Martin, as estimated and returned by the supervisors, was:

Butler County	1,389
Conecuh County	681
Escambia County	453
Total	2,523

The vote for Mr. Miller was—

Butler County, (as returned by the supervisors)	1,185
Conecuh County, (as returned by the supervisors)	856
Escambia County, (not returned, but found to have been voted)	221
Total	2,262

This shows a majority for Mr. Martin of 261. But deduct the 453 illegally voted, returned and counted for Mr. Martin, in Escambia County, and deduct the vote cast for Mr. Martin at the precincts of Monterey, Manningham, and Dead Fall, in Butler County, illegally estimated and counted, aggregating 204 votes, and it leaves Mr. Miller a majority of 346 votes, and he is therefore entitled to the seat.

Mr. MORTON. That was a part of Escambia County—three townships.

Mr. HAMILTON, of Maryland. Yes, sir; but deducting those "453 alleged illegal votes" cast for Mr. Martin, of course Mr. Miller was elected. This report of Mr. Pennington goes on to argue that these votes should be deducted because the vote, as I have before stated, was given on a separate ballot. I have already shown you that that

was done because a new county had been established by the name of Escambia, and, I think, three precincts of Conecuh were embraced within its limits; and, there being no revision of the senatorial and representative districts before this election, the returns of those precincts so cut off to form the county of Escambia had to be made to the supervising board of the old county, Conecuh, from which they were taken, and still made a part of the vote of that county in the election of senator from Butler and Conecuh, and of representatives from Conecuh. And Mr. Pennington in his report contends that Mr. Martin's name not being put upon the same ticket with the county officers, under the code the whole vote cast for him in Escambia was illegal. The vote itself is not questioned as cast for Mr. Martin. Thereupon, it was determined by the senate, or rather the president of the senate, that Mr. Martin was not the legal member, and he was excluded from his seat, which he had held from the time of the organization of the body until long after the election of Mr. Sykes, and after the fusion of both bodies.

But let us see how the result was attained by which Mr. Miller obtained a seat in the senate, not as a matter affecting the question now before us, but rather as a matter of curiosity to see how things are done where it is supposed that it is important they be done. A majority of the committee reported that the returns were legal; that the votes cast for Mr. Martin, in Escambia, were rightly counted and returned for him, and that he was therefore legally elected and a legal member of the body, and submitted a resolution declaring Mr. Martin to be entitled to his seat. Mr. Pennington, the minority, made report that Mr. Miller was elected, and moved, as an amendment to the resolution submitted by the majority, that Mr. Miller was legally elected and entitled to the seat held by Mr. Martin. The first question then was upon that amendment to the original resolution. A motion was then made to adjourn and the adjournment was had. On the next day—I read from page 85 of the journal of the senate of the State—"the question being on the motion to adopt the report of the committee in the Martin-Miller contested-election case, as a *substitute* for the motion to adopt the resolution submitted by Messrs. Parks and Edwards with their report"—you will understand they, being a majority of the committee, reported that Martin was duly elected and submitted a resolution to that effect, whereupon Mr. Pennington offered a substitute declaring that Miller was duly elected—the amendment passed by a vote of 16 to 14, as the journal shows.

There is a little outside history connected with this vote, and about which there is no doubt, and which I take the liberty of stating. There was a democratic member, Mr. Edwards, and one of the gentlemen who made this report, who desired to go home and wished to pair off on this question—a very common thing in this Chamber, as we all know. He paired with a gentleman by the name of Glass and went home. When the question came up Mr. Glass voted. This body was very closely divided politically. His vote was indispensable to the desired result—namely, to seat Miller—and he voted. Without his vote it could not be done. He violated his solemn agreement, that which we regard here in the nicest sense of honor and obligation. The consequence was that that vote would have made it a tie, and the lieutenant-governor having the casting vote, would have carried the substitute and concluded the whole question for all time. Whereupon, seeing this, Mr. Cobb, a democrat, voted in the affirmative. His object in voting in the affirmative was to move a reconsideration, telegraph to Edwards to return, and his presence would of course settle the question in favor of Martin. This could be done, you will observe. With Edwards present there could not then be a tie in the vote, the democrats having a majority of one, so that the president could not interpose with his casting vote, and therefore no such substitute as that offered by Mr. Pennington could ever pass. Then Mr. Cobb moved to reconsider the vote just taken, and pending the discussion upon it the senate adjourned.

Now, sir, let me read to you what was done the next day upon the meeting of the body and upon the motion of Mr. Cobb to reconsider, and see how they do things in Alabama to accomplish their objects:

The journal of yesterday was read and approved.
The president decided the motion to reconsider the vote taken yesterday on Mr. Haralson's substitute in the Martin-Miller contest out of order, and declined to put the motion to the senate.

That is a question for parliamentarians to determine, and we have some expert ones in this body, to whose attention this is now directed. Mr. McKinstry, the lieutenant-governor of the State, and by virtue of it presiding officer of the senate, decided that that motion to reconsider was out of order, and declined to put the motion.

Mr. Cobb appealed from the decision of the president.
Mr. President declined to put the appeal to the senate.
Mr. Parks made the point of order that the question then recurred on the motion to adopt the resolution submitted by Messrs. Parks and Edwards with their report, as *amended* by the adoption of the substitute.
Mr. President overruled the point of order, from which decision Mr. Parks appealed.
Mr. President declined to put the appeal.
William Miller, jr., appeared in the senate chamber, and was qualified and took his seat as senator from the thirty-first senatorial district.

That is what their journal of proceedings show, and that is the way in which Mr. Miller got a seat in the Senate. It was necessary to admit him to make a quorum of elected members of the body that sent Mr. Spencer here, and although this was done long after his election and long after the fusion, still it was done to give coloring to Miller's seat in the body electing Mr. Spencer, as he constituted the quorum there. He never was elected nor was he ever legally seated. There never was a vote upon the adoption of the resolution as amended by the substitute at all, and a more barefaced wrong was never perpetrated.

Mr. President, (Mr. BOREMAN in the chair,) you have been long enough in this Chamber and in the chair to know something about parliamentary law. Read the journal of these proceedings, and could you, could any honorable man, do such a thing? I will not insult you by putting such an interrogatory to you. I am now speaking about the moral relation of things to this case and not about the law or right of the case, and I only speak of its moral relations because of the harsh opinions expressed by the Senator from Indiana and others as to the conduct of the supervising boards and of the secretary of state.

We all know that the adoption of a substitute or an amendment to an original resolution is not the adoption of the thing itself; that it requires further consideration and another vote to do it, and make it the original; but the president of the senate of Alabama under such proceedings directed Mr. Miller to be sworn in. And he thus, not elected by the people, nor admitted to a seat in the senate by a vote of the senate, but forced upon that body and upon the people of Alabama by the ruling and action of the president of the senate, is the man and the only man having a pretense to an election upon which a quorum of that body depended which sent Mr. Spencer and upon which we are to confirm or reject him. I want it impressed on you, Mr. President, and the mind of the Senate, that upon this man Miller entirely depends the fact whether there was a quorum in that body, at the time Mr. Spencer was elected, of elected members; not certified, but elected members. I am not now speaking about members holding certificates, but about elected members holding certificates or not, and assuming that we are permitted to go behind everything and see who were elected. Let it be understood again that I do not refer to this because I consider it at all necessary or important, for in any view other than a moral one in this case I stand on the laws and constitution of Alabama. I do not go into the elements of the constitution of the Legislature. If we have enough to show that the Legislature as a body was regularly organized for the discharge of its functions, it is all we require for a solution of this case.

Entertaining these views my colleague on the committee, the Senator from Delaware, [Mr. SAULSBURY,] and myself made the minority report, maintaining that Mr. Sykes was legally elected a member of this body, and we submitted a resolution accordingly. But in view of the fact that at no time was there a quorum of legally elected members in the senate when Mr. Spencer was elected and therefore not legally elected, and for the benefit of those who believe that we have a right to go behind certificates and inquire into the election of members below, but who hold as the Senator from Indiana does that it requires a quorum to elect, I therefore propose the following resolution modifying the resolutions originally submitted by the minority of the committee:

Resolved, That Hon. George E. Spencer, not having been elected a Senator from the State of Alabama by the lawful Legislature of that State, is not entitled to a seat in this body.

Resolved, That Francis W. Sykes, having been duly and legally elected a Senator from the State of Alabama for the constitutional term commencing March 4, 1873, is entitled to the seat in this body now held by Hon. George E. Spencer.

I have, Mr. President, thus in a desultory manner attempted to discharge my duty as a member of the committee and do justice as far as I can to the people of Alabama and maintain the regular and peaceful transmission of power from one set of public servants to another, and which is especially required in our form of government. For of all governments on earth ours does require order in the establishment and in the regular transmission of authority. Unbridled license and mob rule are the antipodes of republican government. I am for liberty regulated by law. While at times evils may result and injuries come to the body-politic, and wrongs be here and there perpetrated, it is always better for us to be upon the safe side and conform our conduct to the forms prescribed by law. Look at the South in its disordered condition; look at Arkansas; look at Texas, but recently on the brink of trouble; look at Louisiana; look at the States where such things are permitted, and is it not all a warning to us not to do like wrongs by justifying them? If we recognize that members elected or claimants can separate into independent bodies upon any technical wrong or even essential wrong; if we recognize that any persons assuming themselves to be elected can set up Legislatures wherever and whenever they choose; if we recognize that we have a right to go down and inquire into contests for members of Legislatures in the States, there is no end to the troubles that may come upon us, especially in the South in its present demoralized condition. There is no election where you cannot have abundant opportunities for trouble. Aspiring men, ambitious men, selfish men, all that class of men who are only waiting opportunity to serve their ends, may quickly enough in the midst of political excitements and political contingencies bring danger upon us all and upon our institutions. Where we have a matter so well settled as this, a regular government, a governor acknowledged to be so, a Legislature meeting at the State capitol, presided over by the lieutenant-governor and by the speaker of the last house, officers authorized by law to do so, organizing and proceeding to business, and in relation with all the departments of the government, can there be a question but that having this evidence we should recognize its legal validity by declaring that to be the Legislature of Alabama which elected Mr. Sykes by admitting him to a seat on this floor as one of the Senators from the State of Alabama?

Sanborn Contracts.

SPEECH OF HON. JAMES B. BECK,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

May 26, 1874,

The House having under consideration the bill (H. R. No. 3256) to repeal so much of the act of May 8, 1872, entitled "An act making appropriations for the legislative, executive, and judicial expenses of the Government for the year ending June 30, 1873, and for other purposes," as provides for the employment of persons to assist the proper officers of the Government in discovering and collecting money withheld, and for other purposes—

Mr. BECK, said:

Mr. SPEAKER: Before discussing the merits of the bill under consideration, and before noticing the state of things which rendered it necessary in the opinion of the Committee on Ways and Means, I propose stating my own personal relations to the investigation which led to the presentation of the bill. In the distribution of the work of the committee, early in the session, the chairman appointed Mr. FOSTER, of Ohio, and myself a sub-committee to examine and report upon all matters relative to the operations of the Internal Revenue Bureau. In the course of our investigations we found that the collection of taxes due on repealed laws had fallen off beyond what we supposed they would, and we required an explanation. The Commissioner was summoned before the committee, and he said that his collection of such taxes had been materially interfered with by contracts entered into by the Secretary of the Treasury with John D. Sanborn, and others, under the law of May 8, 1872, which I may as well read now. It provides as follows:

And from and after the passage of this act the Secretary of the Treasury shall have power to employ not more than three persons to assist the proper officers of the Government in discovering and collecting any money belonging to the United States whenever the same shall be withheld by any person or corporation, upon such terms and conditions as he shall deem best for the interests of the United States; but no compensation shall be paid to such persons except out of the money and property so secured; and no person shall be employed under the provisions of this clause who shall not have fully set forth in a written statement, under oath, addressed to the Secretary of the Treasury, the character of the claim out of which he proposes to recover, or assist in recovering, moneys for the United States, the laws by the violation of which the same have been withheld, and the name of the person, firm, or corporation having thus withheld such moneys; and if any person so employed shall receive, or attempt to receive, any money or other consideration from any person, firm, or corporation alleged thus to have withheld money from the United States, except in pursuance of the written contract made in relation thereto with the Secretary of the Treasury, such person shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than $1,000 or imprisoned not less than two years, or both, in the discretion of any court of the United States having jurisdiction; and the person so employed shall be required to make report of his proceedings under such contract at any time when required to do so by the Secretary of the Treasury.

The committee were unable to see under the provisions of this law, which by its terms required the persons employed under it to assist the proper officers of the Government in collecting delinquent taxes, as these officers were known to be the collectors of internal revenue who were required to report to the Commissioner, how he could be ignorant of the collections made, or the operations had under it. He assured us that he was, and that he had, as long ago as October 1, 1873, addressed a letter to the Secretary upon the subject to which he had received no answer. These things seemed strange and looked suspicious. We presented a resolution to the House, which was adopted, directing the Secretary to furnish us with all the contracts, papers, correspondence, payments, &c., under that law. Some delay followed, and considerable reluctance was expressed by the Secretary and his Assistant Secretary to give the names of the parties who had not been proved delinquent. The committee decided that a full statement should be made, and after *four* or *five* amendments and additions, as developments forced them out, the record on the desks of members was furnished. Whether it is complete or not now I am unable to say; it was obtained in installments, and very lame excuses made for each omission as we developed the existence of what was furnished in detail.

I cannot speak of the reasons for the failure to give a full, frank statement of the whole matter at once beyond what the record shows, because I refused to go to the officers of the Treasury Department and ask any questions privately, resolving not to know anything on this subject which might be considered private. I threw that responsibility on my colleague, Mr. FOSTER, whose political affiliation with them rendered it eminently proper for him to do what it would or might have been improper for me to attempt.

The task, therefore, of ascertaining the preliminary facts devolved on the gentleman from Ohio. I requested him to take charge of the matter himself, and he did so. I consulted with him, of course, from time to time; going with him once at his request to see the Assistant Secretary of the Treasury, when the question arose whether the names of parties should be given. Mr. Sawyer protested, as he says, claiming that it was a legislative outrage, or as Mr. FOSTER recollects his words, (see page 121,) that it was an infamous proceeding on the part of the House to demand that the names of the men charged with offenses should be given to the House and the country. We told him that we believed the committee would demand that the names and all other facts should be furnished, and they did so demand. That demand was answered first by the communication which I hold in my hand, Executive Document No. 132, in which the Secretary purported to give us all that had been done and all that was known at the Department under the contracts entered into by virtue of that law. He uses the following language:

The papers herewith transmitted comprise copies of all the contracts, schedules, receipts, certificates, checks, and other correspondence having any bearing upon or relation to any and all steps or action taken by the Treasury Department under the provisions of law referred to.

In justice to the persons whose names are included in the lists accompanying the several contracts of those who are claimed to be indebted to the Government on account of taxes or otherwise, and who have not been proceeded against, permit me to add that no evidence whatever of such indebtedness has been presented to the Department.

The statement that contracts had been made with parties to collect money from people against whom no evidence whatever of indebtedness had been presented, seemed strange. We soon ascertained that the Secretary had not furnished us with all the facts. We knew that important papers had been withheld from the committee, whether intentionally or not, of course we were not advised, and we demanded them by a peremptory order. Even the letter of the Commissioner of Internal Revenue of the 1st of October, which we learned from the Commissioner had been written on that subject, was not furnished to us. General orders issued in violation of law to supervisors and collectors of revenue, putting them under the control of Sanborn, were withheld. A want of frank, manly directness was painfully apparent. It required five efforts to obtain the papers we have now obtained; whether we have now obtained them all or not I do not know.

On the facts furnished we proposed to repeal the law. We examined no witnesses. We saw from the papers furnished that the law was working badly, and was being horribly administered. We saw that the usurpations of the Treasury Department and their perversions of the act of 1872 were such that the revenues of the Government were no longer safe, if intrusted to their keeping. The committee therefore prepared a bill to repeal the law, and our action was made public. Then for the first time Mr. Sanborn asked to be heard. We thought that as he was the contractor, and had received $213,000 in cash for doing nothing, absolutely nothing that we could see, under the unwarranted authority conferred upon him, except prostituting the officers of the Government to his purposes, it was right that he should be heard, especially as our decision was against him. He came before us, and when he came he changed his mind and declined to speak. He brought with him other witnesses whom he desired should be heard, Mr. Caughlin and others, and they were heard, each witness making the outrageous conduct of the Department more painfully apparent. Then we said to the Secretary of the Treasury and his other officials, "If you desire to be heard we will be glad to hear you." They came; every witness that appeared except a few of the last who were summoned by the committee when we found that facts were being withheld, were volunteers who came to protest against the repeal of the law or to vindicate or excuse themselves because of the part they had taken in its execution, or in the inception of the Sanborn contracts.

Mr. CLYMER. I would like to ask the gentleman a question, if by so doing I will not interrupt him.

Mr. BECK. Very well.

Mr. CLYMER. The gentleman has spoken about the difficulty the committee had in obtaining the information and letters from the Treasury Department. I see that in a letter of Supervisor Hawley, reference is made to his having seen a contract and collected money under a contract made by the Department with a Mr. Wood, of New York. Did the committee ever obtain the papers in that case? There is no report of it that I can find.

Mr. BECK. We never did; the reason for that perhaps was that Mr. Wood's contract was not made under this law, but under some previous arrangement. Very likely it was some other nefarious scheme. However, as I have said, the committee heard only the men who presented themselves before us, volunteers seeking to show why we should not repeal this law, or why we should not condemn their action under it. After hearing them all, I have no hesitation in saying to the House, and I will make my statement good before I conclude, that the whole investigation developed a system of corruption, perversion of law, usurpation of authority, and plunder of the public Treasury, such as I never saw equaled and I hope never will see again.

Because we have fearlessly and honestly set forth the facts thus developed in a report to this House, the motives of members of the committee have been impugned; they have been denounced in the public press of this city by the organ of that Department—I say the organ of the Department, because the correspondence of its officials appears there. In this morning's paper is a statement of the Assistant Secretary of the Treasury and a leading editorial charging the sub-committee with improper conduct. Not long ago an article appeared attacking the sub-committee, charging us with having a mania to keep money out of the Treasury; assigning that as the reason why we sought to repeal the law. The same thing was repeated by the Assistant Secretary of the Treasury when before us some three weeks ago. Yesterday there appeared an article in the same paper, from which I will read an extract to show the animus of the Treasury officials as expressed through the Government organ. I speak of it because I have no doubt it was instigated by the Treasury Department, if not written there.

In the course of the investigation it was found necessary to look into the private affairs of certain witnesses. Links in the chain of testimony were needed to make the record of Sanborn's transactions complete. There was nothing so glaringly improper in this as to provoke unfavorable comment; but, when the first step in this direction was taken, the curiosity of the examiners seemed to be aroused. Sanborn and his sub-agents were thenceforth treated as suspected persons, in fact as prejudged criminals, and from a mere examination of the workings of a law the object of the investigation seemed to be changed to a persistent effort to convict somebody of some corrupt act. In short, the investigation thenceforth became personal." A wild hunt followed after some ill-defined scandal, and a smelling-match was begun, in which each committeeman's nose was more eager than the other in the effort to detect foul odors. Frightened and demoralized by the prevalent demand for purgation and reform, and perhaps prompted by other and more personal motives, the republican members gave the whole thing into the hands of men who, to say the least, are unfriendly to the party, and who in fact would not be altogether scrupulous about the manner in which they trumped up charges against political enemies. In this way the committee traveled far away from the original design of the investigation.

I am willing to meet all such slanders, and test the conduct of the committee and every member of it by any standard the Treasury officials or their organ may choose.

These charges are leveled distinctly against the sub-committee, composed of the gentleman from Ohio [Mr. FOSTER] and myself, but more particularly against me as their political opponent. The charge is made that we have gone out of the way to trump up evidence against them, and have been unscrupulous in the means resorted to. They have thrown down the gauntlet in the face of the committee, and have vilified and denounced us without just cause or shadow of reason. I accept the issue. I will now say what I never intended to say until thus insulted, that I will make their record so black, from their own evidence, that they cannot stay in that Department and retain the confidence of honest men of any party, and the President cannot keep them there, and retain either the confidence or respect of the country. I will not deal in denunciation, but will set forth the facts, *facts* taken from the record, signed and acknowledged by themselves, such as demand impeachment and demand the conviction of Sanborn of high crimes and misdemeanors. I have those facts now before me, and each member of the House can test their accuracy by turning to the records as I refer to them.

I confess that I feel the injustice of these unwarranted attacks, because I have studiously refrained from doing anything which might even look like injustice. I have refused to speak to witnesses in advance, or to hold conferences as to the proof which might be obtained, knowing how eagerly the enemies of public men seek to slander and defame them. My colleague [Mr. FOSTER] will sustain me fully in this statement.

But before I proceed to consider these matters in detail, I want to refer for a moment to the original law. That law was a blunder. But at the time it was passed by Congress, although there were four sessions of the committee before they could agree upon it, and it was finally passed upon a call of the yeas and nays by only ten majority, the gentleman in charge of it, General GARFIELD, stated to the House, and no doubt he believed it, that all the dangers which members apprehended had been carefully guarded against. He assured us that the Senate conferees were absolutely unwilling to recede; but that they had amended it so as to require a written statement on oath of all the money that was believed to be withheld by any person or corporation, in order to enable the Secretary of the Treasury to know where the derelict property was. He referred to the punishments imposed for fraud or violation of its provisions. He said that the committee thought, and doubtless the majority of the House also believed, that it was guarded so that it was impossible that any great wrong could be perpetrated under it. Under such circumstances, it being part of a general bill, it became a law, the yeas being 87, nays 77, almost a strict party vote, the democrats opposing, the names being as follows:

YEAS—Messrs. Ambler, Averill, Beveridge, Bigby, Bingham, Austin Blair, George M. Brooks, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick R. Butler, William T. Clark, Cobb, Coburn, Conger, Cotton, Dawes, Donnan, Dunnell, Eames, Elliott, Farwell, Wilder D. Foster, Frye, Garfield, Hale, Halsey, Havens, Hawley, Gerry W. Hazelton, John W. Hazelton, Hill, Hoar, Hooper, Houghton, Kelley, Kellogg, Kendall, Ketchum, Killinger, Lansing, Lowe, Lynch, Maynard, McGrew, Merriam, Monroe, Moore, Morey, Leonard Myers, Negley, Packard, Palmer, Isaac C. Parker, Peck, Perce, Peters, Platt, Poland, Prindle, Rainey, Ellis H. Roberts, Rusk, Sargent, Scofield, Seeley, Sessions, Shelden, Sloss, H. Boardman Smith, John A. Smith, Thomas J. Speer, Sprague, Starkweather, Tuthill, Twitchell, Upson, Wakeman, Walden, Wallace, Walls, Wheeler, Willard, Williams of Indiana, and John T. Wilson—87.

NAYS—Messrs. Adams, Arthur, Banks, Beck, Bell, Biggs, Bird, James G. Blair, Braxton, Caldwell, Coghlan, Comingo, Critcher, Crocker, Crossland, Davis, Dickey, Dox, Duell, Duke, Ely, Farnsworth, Finkelnburg, Forker, Getz, Griffith, Haldeman, Handley, Hanks, Harmer, Harper, Hay, Hereford, Herndon, Hibbard, Kerr, McClelland, McCormick, McHenry, McIntyre, McJunkin, McKinney, McNeeley, Mercur, Merrick, Benjamin F. Meyers, Morphis, Orr, Packer, Hosea W. Parker, Eli Perry, Potter, Price, Randall, Read, Edward T. Rice, John M. Rice, Ritchie, William R. Roberts, Rogers, Shanks, Sherwood, Shoemaker, Slater, Snyder, Storm, Sutherland, Taffe, Terry, Turner, Tyner, Vaughan, Whitthorne, Jeremiah M. Wilson, Winchester, Wood, and Young—77.

I confess I did not believe that even departmental ingenuity could torture it so as to render possible one tithe of the frauds and extortions which are now developed under it, though my observation and experience had prepared me for almost anything which would enrich partisans at the expense of the people under this Administration.

On the 10th of March last, while making a speech on this floor upon the expenditures of the Government and the usurpations of the Executive Departments as exhibited in the illegal uses of unexpended balances of appropriations for former years, which by law, or any fair construction of it, ought to have been covered into the Treasury, I happened to refer to these Sanborn contracts, which were then being investigated, in the following language:

As a specimen of how these things operate, I cannot do better than remind the House of the legislation which rendered possible the consummation of the contracts reported to us the other day by the Secretary of the Treasury, made by him with a man by the name of Sanborn, and with others. Under it Sanborn and two other men got control of the Treasury, demoralized all the internal-revenue service, and are to-day issuing letters of marque and reprisal against men all over the country. That is a specimen of the way executive officers usurp power when they can. Look at the report, and see also the letter of the Commissioner of Internal Revenue, protesting as far as he dared. Out of these things from which they are now collecting, the Commissioner of Internal Revenue for the year 1872 collected $19,000,000 through his ordinary collectors, and for the year 1873 $6,300,000. Yet the Secretary of the Treasury has so construed the law as to put into the hands of Sanborn and his associates the management of all this business, giving them 50 per cent. of all they can collect, and requiring all the internal-revenue officers of the United States to report to them in all such cases as they point out, or embrace in the drag-net they have spread, thus suspending the regular operations of those officers who would attend to the collection of our revenues for 10 per cent. Such proceedings carried on by the executive officers of the Government furnish only another evidence of the reckless disregard of law characteristic of the present Administration. As such I refer to it; its enormities will be exposed hereafter.

In a few moments after I closed my remarks, that law and the proceedings under it were defended by the gentleman from Massachusetts [Mr. BUTLER] with even more than his usual ability. I rose and put a question to him while he had the floor, which with his answer I will read:

Mr. BECK. What I want to ask of the gentleman is this: Whether he supposed that in the remarks I made about the Sanborn contract, characterizing it as fraudulent, I had allluded to him in any way?

Mr. BUTLER, of Massachusetts. By no means; on the contrary, I said to my friend that I thanked him for making the allusion, as it gave me an opportunity to state what I could not state otherwise.

Mr. BECK. I surely never would have connected the gentleman from Massachusetts with such contracts as I understood these to be. If there is anything on earth that seems to me apparent, it is that these contracts, from their inception to the present time, are reeking and buoyant with corruption.

He replied again:

It is easy to say "corrupt;" but if you will show me how it is corrupt to have any man called upon to pay his taxes who had not paid them, who had kept them back for three years, and who never meant to pay them if they were not forced out of him, and then collect them and pay them into the Treasury, I will beg that man's pardon, and that of the gentleman from Kentucky too; and that will be hard enough. [Laughter.]

* * * * * * *

I wish my friend from Kentucky, [Mr. BECK,] when he makes his next speech, would, instead of dealing in general terms, come down to the facts, and tell us where was the corruption, how it had been carried out, what was done about it. When he does so, if he can convince me that these contracts were conceived in corruption any more than that corruption which is an incident to original sin, I shall be very glad to go with him to root them out. But until he does so, I am not quite ready to denounce men generally; and whenever I may be found denouncing men generally on this floor, I want to be called to order. I only deal with individual men and with the exact facts. I say to any gentleman who has anything to say upon this subject, "Put your finger on any case, and I will examine that case with you, although it is not part of my business."

I want his help now, because I am prepared to prove that these contracts were corrupt and ought to be rooted out, and he has promised to help if the facts are made plain.

I refer to that debate now, because at that time I did not intend to connect the gentleman from Massachusetts with those contracts, and I do not intend to try to connect him with them now; but I have read the extracts from the proceedings in March last for the purpose of announcing to the House that what I then said in a general way I am now prepared to make good specially and in detail, so that no man can gainsay the truth of the charges or defend those contracts on any ground of legality, morality, justice, or economy.

In the midst of such a mass of evidence it is hard to select, under the limit of the hour rule, the portions which will make the matter most intelligible. Much, of course, must be omitted, and only a few matters can be referred to as specimens of the whole. I shall confine myself to the conduct of those now in office, as it is with them and the danger of continuing their administration of the law that we have to do. Secretary Richardson, while Acting Secretary under Mr. BOUTWELL, entered into the two first contracts with Sanborn, and after he became Secretary added two others by way of amendments or riders to the first, each and all of them of sufficient importance and magnitude to have arrested the attention of any Secretary, no matter how busy his *routine* work may have kept him. The first contract, of August 12, 1872, embraced eighty or a hundred distilleries in New York and Brooklyn. The second, of October 30, 1872, comprehended seven hundred and sixty persons, charged with having withheld taxes on legacies, successions, and incomes. The third, of March 19, 1873, covered the cases of over two thousand persons, charged with delinquency in payment of taxes on legacies, successions, and incomes. The fourth, and most remarkable, of July 7, 1873, was a drag-net thrown over five hundred and ninety-two railroad corporations, charged with having refused to pay taxes on dividends and interest paid upon bonds, which were due and owing to the Government.

The magnitude of those contracts would have arrested the attention of any faithful official, however feeble his intellect, sufficiently at least to have induced him to make inquiry at the office of the Commissioner of Internal Revenue, why these people and corporations were allowed to remain derelict so long before 50 per cent. of the amounts owing by each of them should by contract be given to John D. Sanborn? I regard the studious avoidance of the responsible and faithful officers of the Internal Revenue Bureau by the high officials of the Treasury, to say nothing of their lawless usurpation of author-

ity over its business, as the most damaging evidence of their want of official integrity. Neither the pretense of pressure of business nor the routine which is held up as an excuse for everything, either, excuses or palliates it. Commissioner Douglass and his officers were in the same building. Every fact necessary to be known to the Secretary and his assistants could be furnished by them, as they well knew. A decent regard for the rights of the people required that at least inquiry should be made, if not consultation had, before contracts involving millions of money and thousands of people were entered into and half of all that could be made out of them given to Sanborn and his accomplices.

The fact, I repeat, that this was not done of itself, if there was nothing else in the record, constitutes such gross negligence as to closely approach malfeasance in office. The Secretary and his assistants knew, indeed were familiar with, the internal-revenue laws. They will hardly plead that they were not. If they do, they ought to have inquired; if they do not, they knew that they were violating the plain provisions of these laws by their conduct in the Sanborn contracts. The Commissioner laid an abstract of these laws before our committee. He alone can order suits to be brought; his collectors are by law required to report to him; they alone can give receipts and acquittances for taxes paid. They are "the proper officers of the Government," to be assisted in their duties by the persons who might be employed by the Secretary of the Treasury under the law of 1872. All returns of money collected have to pass through the Commissioner's office, and no authority was given by the act of 1872 to the Secretary to give any part of such money any other direction.

So obvious were these facts, that the Commissioner on the 1st day of October, 1873, addressed an official letter to the Secretary asserting his rights; telling him what he had heard of the outrageous proceedings and orders from the Secretary's office; furnishing him with a copy of a private letter written by the Solicitor to Dr. Presbery, which by the way is even now withheld, setting forth the law so plainly, that neither the Secretary nor any of his assistants could have any further excuse for ignorance. The letter ought to be carefully read by every member. It is as follows:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, D. C., October 1, 1873.

SIR: Referring to section 1 of the act entitled "An act making appropriations for the legislative, executive, and judicial expenses of the Government for the year ending June 30, 1873, and for other purposes," approved May 8, 1872, (17 Statutes, chapter 140, page 69,) I have to state that I have received a letter dated September 22, 1873, from J. M. Hedrick, esq., supervisor of internal revenue, calling attention to copy of a letter of Collector Todd, of Saint Paul, Minnesota, dated August 6, last, addressed to him, in which Collector Todd says: "Dr. A. F. Presbrey was here last week looking up the old assessments against the railroad companies from 1867 to 1872, and found some eight or ten thousand dollars due from them to the Government. In answer to my inquiries as to whether these deficiencies should not go on our next (23) I have received the inclosed letter from him, which is submitted for your examination. I cannot conceive how these taxes can be collected at law without an assessment being made by the Commissioner of Internal Revenue."

The copy of the letter referred to in above copy of Mr. Todd's letter, as having been written by Mr. Presbrey, reads:

"The Solicitor of the Treasury, under date of July 28, writes me, 'the manner of collecting the differences found is not by an assessment through the Commissioner's Office. The payment must be made by check or draft, made to the order of the Secretary of the Treasury, which is a guarantee to the payor that the amount gets to the Treasury,'" &c.

The above letter is not here alluded to as an official letter of the Solicitor of the Treasury, and I find by inquiry at the Solicitor's Office that no copy of such a letter as an official letter has been retained.

As I understand the terms of said section 1, of the act of May 8, 1872, it provides that the persons whom the honorable Secretary is authorized to employ ("upon such terms and conditions as he shall deem best for the interests of the United States") are to be employed to "assist the proper officers of the Government in discovering and collecting any money belonging to the United States whenever the same shall be withheld by any person or corporation;" and it had never occurred to me that in cases where such a person rendered assistance to a collector of internal revenue in collecting an internal-revenue tax, or was employed to render such assistance, the fact of such employment could relieve the proper officers of internal revenue from their respective duties in assessing, collecting, or prosecuting for such taxes or penalties.

Section 41 of the act of June 30, 1864, amended, makes it the duty of collectors "to collect all the taxes imposed by law, however the same may be designated, and to prosecute for the recovery of any sums which may be forfeited by law," &c.

Section 36 of the same act provides that "each and every collector or his deputies shall give receipts for all sums by them collected;" and the third section of the act of March 3, 1865, provides that "the gross amount of all duties, taxes, and revenues received or collected by virtue of the several acts to provide internal revenue to support the Government and to pay the interest on the public debt, and of any other act or acts that may now or hereafter be in force connected with the internal revenues, shall be paid by the officers, collectors, or agents receiving or collecting the same daily into the Treasury of the United States, under the instructions of the Secretary of the Treasury."

In view of the above, I respectfully inquire whether Collector Todd shall not be instructed to return the amount which has been found to be due under the circumstances stated on his Form 23, to this office, in order that the assessment may be made and tax duly collected as provided.

Very respectfully,

J. W. DOUGLASS,
Commissioner.

Hon. W. A. RICHARDSON,
Secretary of the Treasury.

[Indorsement.]

Respectfully referred to Solicitor of the Treasury for his opinion as to the proper answer to be made to this letter.

WM. A. RICHARDSON,
Secretary of the Treasury.

OCTOBER 3, 1873.

Can it be believed that such a letter as that, written under such circumstances, could be ignored by officers who intended only to do their duty; yet it is now admitted by the Secretary and his Solicitor and proved by the Commissioner, that the letter was never answered, never noticed; was withheld even from the Committee on Ways and Means till specially demanded, after we had been officially advised that we had all the papers. It is impossible to believe that it was overlooked or neglected for any purpose other than to enable them to persist in known violations of law to enrich Sanborn and his confederates at the expense of the people. As if to fling defiance in the face of the Commissioner and the country and add insult to injury, the Secretary not only ignored his letter, but fifteen days afterward he issued the following order:

TREASURY DEPARTMENT, *October* 15, 1873.

To Supervisors and Collectors of Internal Revenue:

You are requested to assist John D. Sanborn, of Boston, in the examination of such cases of alleged violations of the internal-revenue laws as he may ask for your co-operation.

Mr. Sanborn is acting under an appointment from the Treasury Department, and may need some aid and information from your district for the purpose of verifying his claims.

Please render him such assistance as he requires.

Very respectfully,

WM. A. RICHARDSON,
Secretary of the Treasury.

Will any man defend that act? Will any man pretend that it was ignorantly done? If so, I answer that it shows such want of capacity and fidelity, that the money of the people is unsafe in such hands. Turn to pages 76 and 77 of the Secretary's letter to the committee, and it will be seen that $217,078 out of the $427,030 assumed to have been collected by Sanborn and divided equally between him and the Government, was obtained after October 1, 1873, and $173,398 of it was collected and divided after January 9, 1874, and after the Committee on Ways and Means were taking active steps to stop the robbery of the Treasury. Was all this done innocently and ignorantly? Was it not rather an earnest effort to get all the money possible out of the Treasury before the Representatives of the people could stamp the transactions with their condemnation. How much has been taken out up to this time I of course do not know. I sometimes think we have been delayed in our action by requests to be heard in order to postpone the repeal of the law and to allow the divisions to go on.

Returning to the contracts with Sanborn. In the first contract, of August, 1872, as to the distilleries, it was shown that all or nearly all of the men and firms embraced in it, and which the Secretary agreed to pay Sanborn half of, were under indictment at the time and had been for four months previous to the date of the contract. Stiner, Martin, &c., paid agents of the Government, had worked up the cases. Sanborn himself was a special agent, drawing his pay and whatever money he chose for whatever he saw fit to demand for (so-called) expenses. The district attorney, judges, and officers of the United States courts knew all about them. The Internal Revenue Department had ordered the suits. There was nothing to discover, nothing to assist about; yet Sanborn was to have half of all that could be made out of them.

The case of Simon Herman illustrates the process of "black-mail" resorted to; he was indicted in March, 1872. One A. Goodrich Fay, a stool-pigeon or confederate of Sanborn, a confidence man—call him what you will, but read his testimony and you will not call him a man of veracity—got hold of Herman and managed to get at least $3,000 out of him, of which $1,000 was divided between Sanborn and the United States, and the other $2,000 between Sanborn and Fay, at least so Herman swears Fay told him; and Fay writes to Banfield that Herman is a man of high character, which is more than any one who reads his testimony will say for Fay. Fay writes October 15, 1872, to Banfield:

However, rather than be suspected of complicity with fraud, Mr. Herman is willing to pay the Government a tax of two dollars per gallon on the said ten barrels of whisky, which would be $1,000 and the costs of the action. I would further respectfully state that said Herman is a man of high character and of large means, and that he denies any complicity with frauds upon the Government.

Herman swears before the committee, when questioned by me as to how much and for what purposes he had paid his money, as follows:

I paid $1,000; I gave a check for that amount to Judge Davis, who was then district attorney, and whose receipt I now hold.

Question. What was the date of that check?

Answer. November 3, 1872.

Q. What other money did you pay, and to whom?

A. I do not know exactly whether it would be right for me to tell.

Mr. BECK. It is legitimate for you to tell, and you are summoned here for that purpose.

The WITNESS. I was innocent of the charge, and I did not want to have an indictment against me; I never had one before in my life. A gentleman named Fay came and said that he could settle that matter with Mr. Sanborn, as there was nothing in the case. Then Mr. Davis told me that there was nothing in the case, and he did not want to receive the check. When I offered it to him first, Mr. Davis said to me, "Let the matter rest; there has been some blackmailing concern," and he returned me the check. When I came out of his office I met Mr. De Kay, the assistant district attorney, and he went in before the judge in court and had the case dismissed.

Q. What money did you pay to Mr. Fay?

A. I gave him a check for $2,000 that day, on the 3d of November.

Q. In addition to the $1,000 you paid?

A. Two thousand to Mr. Fay.

Q. Mr. Fay telling you that he and Mr. Sanborn could settle that case?

A. Yes; he said that Mr. Sanborn would get half of that $2,000.

Q. And they agreed that the case would be settled if you paid the money?

A. Yes; that is what Mr. Fay agreed to.

Q. So that you have paid $3,000?

A. Yes.

Q. One thousand dollars to District Attorney Davis, and $2,000 to Mr. Fay, on the agreement that he and Sanborn would settle the case?
A. Yes.
Q. To whom was the $2,000 check made payable?
A. To the order of A. Goodrich Fay.

The Government got $490 and Sanborn $490 out of the $1,000. Fay swears that he kept all the balance. That is a specimen of the robbery licensed by the contracts of August, 1872. Fay could not even tell us what the indictments were for. It was simply "*black-mail.*"

When the additions of legacy, succession, and incomes against nearly three thousand people were added by the enlarged contracts the field of operations was greatly extended. By the act of 1872 we had abolished moieties to informers in internal-revenue cases, and had provided for the retirement of all assessors and assistant assessors with their clerks, spies, informers, and other retainers early in 1873. All the worst of that class, finding Sanborn master of the situation, swarmed to him and entered his service on most any terms. "Addition, division, and silence" seemed to be the leading qualifications expected and demanded; reckless disregard for truth being, of course, understood to be indispensable.

Some one said before us that Sanborn's agents were *legion*. They must have been, for he swears he has paid out $165,000 of the $213,000 he received; but, strange to say, he does not know and has kept no sort of account of where this immense sum of money has gone, except in the most general way. When members study the record and read the contradictions of Caughlin by Mr. PHELPS; the perjury proved on Green by Mr. King and by the records; the utter, wanton, reckless disregard of truth and decency proved on Prescott by Mr. Dickinson of Boston, of Fay by Herman, and of Sanborn by himself and everybody else, they will understand what a swarm of worthless characters the *Secretary* had licensed as "*marauders upon the public Treasury*"—to adopt the language of the report of the committee, which clearly expresses the idea.

Finding that to ask, was to receive, and that it made no difference whether money collected came under the terms of his contract or not, the subsidized revenue officials being willing to turn over to him any money received from any source, and the *Secretary* and his assistants at headquarters being willing to give whatever he claimed, he asserted a right to and obtained one-half of large sums collected from Williams & Co., Gottlieb Scheerer, and others, on account of taxes owing on what is know as Schedule C, being proprietary medicines and things of that sort. Will the friends of the Secretary and his assistants say that it was anything less than robbery of the tax-payers of the country to give Sanborn one-half of the amount collected by internal-revenue officers from a class of taxes not only not embraced in any contract with him, but not even applied for; and will the friends of Sanborn deny that he is amenable to the punishments prescribed in the act of 1872 against men who collect or receive money not provided for in their contracts and set forth in the affidavits required?

Will either or both deny that it was the right and duty of the Committee on Ways and Means to condemn in language not to be misunderstood the Treasury officials who connived, winked at, or rendered possible such flagrant offenses?

But I must hurry on and examine the railroad contracts, because I propose to make good, by the provisions of the agreements as to them and the division of the money under them, what I said at the outset of my speech, that I would show that the conduct of the Secretary and of Sanborn was so palpably illegal and wrong that impeachment of the one and imprisonment of the other ought to follow.

The following is a transcript of the entire proceedings, from the records of the Treasury Department, by which this now infamous appendage was attached to the contract of Sanborn:

BOSTON, *July* 1, 1873.

SIR: I have the honor herewith to inclose a list of railroad corporations doing business in the United States which are indebted to the Government for taxes upon dividends and interest paid upon bonds, which they have heretofore withheld and refused to pay.

I would respectfully ask that the inclosed list be added to my said contract made with the Secretary of the Treasury, said contract bearing date August 13, 1872, and as amended October 30, 1872.

Very respectfully, your obedient servant,

JOHN D. SANBORN.

Hon. WM. A. RICHARDSON,
Secretary of the Treasury.

Subscribed and sworn before me, a legally appointed notary public for the city and county of New York, this 3d day of July, in the year 1873.

[SEAL.] WM. H. STINER,
Notary Public, (239.)

[Indorsements.]

Respectfully referred to the Solicitor of the Treasury.

WM. A. RICHARDSON,
Secretary of the Treasury.

JULY 7, 1873.

I recommend that the within list be added to and made a part of Mr. Sanborn's contract.

E. C. BANFIELD,
Solicitor of the Treasury.

Approved:

WM. A. RICHARDSON,
Secretary.

Observe the date when this proposition was approved, July 7, 1873; observe the unqualified character of the oath; then turn to page 152 of the testimony, and you will find that Sanborn admits that he committed perjury when he swore that those railroads, five hundred and ninety-two in number, were all indebted to the United States for taxes which they have withheld and refused to pay. He admits that he swore to what he did not know to be true, to what was in fact a lie. Many of the roads did not owe a dollar; many of them had never earned a dollar; many of them had not progressed beyond organization. One, said to have its headquarters in my own city, Lexington, the Cincinnati, Lexington and East Tennessee, has not stuck a spade in the ground to this day, and there are many others in that list in the same condition. They were taken, as Sanborn swears, from some railroad guide-book, and sworn to by Sanborn as delinquent *en masse*, when, as he stated, he did not know anything as to over four hundred of them.

When his oath was required by a law of the United States to be taken before he could obtain a contract, he swears to a known falsehood for personal profit, as the record shows he did. I would like to know by what name short of perjury the act can be characterized? But that is not the worst. Sanborn swears that the Secretary and Solicitor of the Treasury advised him to swear as he did, and to take the contract for them all, after he had explained to them that he did not know that the facts were true; and they were added to his contract by these high officials, with full knowledge that the oath was false. I questioned him on the subject; and in the midst of much prevarication he made the following statements among other things:

Question. To whom did you talk?
Answer. I talked with the Solicitor and the Secretary about it.
Q. Those were the only men that you consulted, were they not?
A. Yes, sir.
Q. It was one of those officers that advised you to put the roads all in?
A. I can't tell you about that.
Mr. BECK. That was 1873. Mr. Richardson was Secretary then, of course.
The WITNESS. I wanted it returned, and I told them if they wanted the list revised and cut down to just the number that I knew about, I would do so.
Q. And they advised you to put them all in?
A. Mr. Richardson accepted the whole report.

* * * * * * *

Q. Well, I want to get at this: that you objecting to putting all in, coming here and making the facts known to the officers of the Department, and offering to go back and revise your list, and put in only such as you knew about; after all this they were all put in with the consent of the Department.
A. They were, certainly.
Q. And this oath, that all these railroads on this list were indebted, and that they had withheld their taxes and refused to pay them, was sworn to by you with the full knowledge of the chief officers of the Department that that was not the truth, and they accepted it? Is not that the fact?
A. They accepted the report, of course.

It became a matter of interest to the committee to know who was responsible in the Department for such a flagrant violation of law, and such an unwarranted robbing of the Treasury as was thereby authorized. The Secretary appeared and professed the most profound ignorance. The Solicitor appeared and he told all about it; he said these railroads were added to Sanborn's contracts by order of the Secretary; that he was sent for to the Secretary's room, and in his presence and by his order made the indorsement of approval which appears thereon. This statement is too important for me to state it in my own language; I therefore give it as Mr. Banfield gave it to the committee.

Mr. KASSON. Before we argue the question of the effect of those instructions, let me ask whether this order made over your signature on the 7th of July, by which all the railroad companies in the United States were made a part of Mr. Sanborn's contract, was made with the knowledge and concurrence of the Secretary of the Treasury?
Mr. BANFIELD. It certainly was.
Mr. KASSON. Although *you* made the order?
Mr. BANFIELD. I made the order, but the business was done in the Secretary's office, personally, right there. The whole business was done in one minute, and it was done as a short method of avoiding writing a long contract to cover those cases. That was the fact about it. Mr. Richardson had not the slightest objection to putting them in. He desired that the list should be made a part of the contract, and that short method was adopted for doing it.

* * * * * * *

Mr. BECK. To narrow the thing down to a single case which illustrates all the others, I take this order made in July, 1873, adding to Mr. Sanborn's contract 593 railroads. That is "respectfully referred to the Solicitor of the Treasury," by Secretary Richardson and returned by you with this indorsement: "I recommend that the within list be added to and made a part of Mr. Sanborn's contract." That seems to be an official act on your part, requiring deliberate consideration.
Mr. BANFIELD. I stated just now that that paper was presented to the Secretary of the Treasury, and that I was sent for, as I often am, to receive instructions in regard to this matter; that Judge Richardson stated that Sanborn had presented that list and wished to have it added to his contract, and some remark was made as to there being no need of having a long written contract prepared expressly for this thing, and that method of determining and fixing it as a part of his contract was adopted right there and then. It was the result of Judge Richardson's determination that that should be a part of the contract, and I made that indorsement right there in his room.
Mr. BECK. But it was referred to you in writing. Was that indorsement made in your presence?
Mr. BANFIELD. It was made right there.
Mr. BECK. He referred it to you in writing in his own room, and you wrote this indorsement in his room, recommending that it be made part of the contract?
Mr. BANFIELD. Yes, sir.
Mr. BECK. Why was there all that formality, and why was it necessary for you to do that?
Mr. BANFIELD. You must ask Judge Richardson that. He desired to have it done.
Mr. BECK. Then you did not understand that it was referred to you to look into and examine, but simply to obey orders?
Mr. BANFIELD. That is all.
Mr. BECK. Mr. Sanborn swore that he talked either with you or Secretary Richardson or the Assistant Secretary, and communicated the fact that he had no knowledge as to whether any of these railroad companies, except about 150 out of the 593 on the list, owed anything, and that the whole number was put in by the direction of the officers of the Treasury. What do you know about that?
Mr. BANFIELD. I never heard a word of all that in my life; never heard any such thing suggested.

Mr. BECK. If that was the fact, that all the railroads in the country were put in, amounting to 593, when Mr. Sanborn knew nothing about the indebtedness of any except 130, putting the number at the outside limit—you having previously given this order, signed by yourself as solicitor: "It is proper that notice should be given to the collectors not to receive payment in cases embraced in Mr. Sanborn's contract, it being understood that it relates to claims not of record in the collector's office"—with that notice and this list of railroads made a part of Sanborn's contract, was it possible, if your instructions were obeyed, for any officer of internal revenue to collect taxes from any railroad company?

Mr. BANFIELD. Not, I suppose, if full instructions were given to everybody, and they were faithfully obeyed.

Mr. BECK. This order, at least, was your deliberate act?

Mr. BANFIELD. After consultation with the Secretary of the Treasury.

Mr. BECK. After you had given that order, when this man came to you with this list of five hundred and ninety-three railroads, alleging that they were all indebted to the Government, was it not your duty to look into that question, knowing that you had given an order to the collectors not to receive payment in any case that was embraced in Sanborn's contract?

Mr. BANFIELD. If the matter had ever been referred to me for the purpose of making an investigation of it, in all its relations, of course I should have done it thoroughly and fully; but it was not.

Unless the Solicitor is guilty of perjury the responsibility for these railroad contracts is upon the Secretary. Will any man here rise in his place and justify such contracts under such circumstances? Will any man say that after such things are found to have been done, he ought longer to be the custodian and trustee, through whose hands nearly $400,000,000 of the money of the people has to pass every year?

But that is not all, nor is that the worst. Among this list of railroads are the Buffalo, New York and Erie Railroad Company and the Delaware and Hudson Canal Company; they were not embraced in any contract with Sanborn prior to July 7, 1873. He could not by any possibility have any claim on the Treasury on account of any payments made by them prior to that date, and the Secretary could not fail to know that fact. Turn to page 75 of the Secretary's letter and it will be found that the Buffalo company paid $2,202 on the 28th of April, 1873, one-half of which was paid to Sanborn, and on the 17th of July, 1873, the Delaware Company paid $9,668, of which Sanborn got one-half. The first is case No. 8, page 97, in which the following papers appear:

NEW YORK, *April* 19, 1873.

SIR: Referring to contract made with Hon. GEORGE S. BOUTWELL, late Secretary of the Treasury, bearing date August 13, 1872, as amended by the agreement bearing date October 30, 1872, I have the honor to report that the Buffalo, New York and Erie Railroad Company, parties named in my schedule accompanying said contract, has paid over to me the sum of $2,202.71, being the full amount of tax on dividends due the United States by the same, and which has never before been paid. I herewith inclose the said sum, and respectfully request that one-half of the same shall be paid into the Treasury to the credit of the Secretary of the Treasury, and that the remaining half thereof shall be paid to me, in accordance with the terms of my said contract. I also inclose the letter of the Buffalo, New York and Erie Railroad Company.

Very respectfully,

JOHN D. SANBORN.

Hon. WM. A. RICHARDSON,
Secretary of Treasury, Washington, District of Columbia.

TREASURY DEPARTMENT,
Washington, D. C., April 24, 1873.

SIR: I inclose for collection draft No. 402, drawn by G. Cameron, president of the Buffalo, New York and Erie Railroad Company, on the National Bank of Commerce in New York, for $2,202.71, in favor of the Secretary of the Treasury, and made payable to your order. Please deposit the proceeds of this check to the credit of my special-deposit account of moneys received and paid under first section of the legislative, executive, and judicial appropriation act, approved May 8, 1872, and issue certificates of deposit therefor in favor of John D. Sanborn.

Very respectfully,

WM. A. RICHARDSON,
Secretary.

F. E. SPINNER, Esq.,
Treasurer of the United States.

TREASURY DEPARTMENT,
Washington, D. C., April 29, 1873.

SIR: Inclosed you will find the Secretary's check for $1,101.35, being the full amount due you under your contract with the Secretary in the case of the Buffalo, New York and Erie Railroad Company.

Very respectfully,

WM. A. RICHARDSON,
Secretary.

JNO. D. SANBORN,
Adams Express Office, Boston, Massachusetts.

The other is case No. 16, page 130, in which the first paper is the following letter from Mr. Sanborn:

NEW YORK, *July* 1, 1873.

SIR: Referring to contract made with Hon. GEORGE S. BOUTWELL, late Secretary of Treasury, bearing date August 13, 1872, as amended October 30, 1872, I have the honor to report that the Delaware and Hudson Canal Company, parties named in schedule accompanying said contract, have paid over to me the sum of $9,668, being the full amount of tax on interests or other causes, due to the United States by the same, and which has never before been paid.

I inclose herewith the said sum, and respectfully request that one-half of the same shall be paid into the Treasury to the credit of the Secretary of the Treasury, and that the remaining half thereof shall be paid to me in accordance with the terms of said contract. I likewise inclose the letter from the treasurer of said company and statement upon which the indebtedness is admitted.

Very respectfully,

JOHN D. SANBORN.

Hon. WM. A. RICHARDSON,
Secretary of Treasury, Washington, D. C.

The Secretary referred this to the Solicitor, and he decided that Sanborn was entitled to half of the $9,668, and it was paid.

It will be observed that Sanborn had not in fact received this money; it was sent on the 1st day of July, 1873, by Mr. Hartt, treasurer of the company, to the Secretary, and was all collected by the regular internal-revenue officers of the Government, as the following letter shows:

NEW YORK, *July* 1, 1873.

SIR: This company herewith tenders to you its check for $9,668, in payment of certain taxes on interest payments, which taxes were omitted to be paid at the respective dates when they became payable, or were not reported at those several times, because of doubts in the minds of the officers of the company, sustained by similar doubts expressed by the assessor of the district at that time. Those taxes are now demanded by the supervisor of internal revenue for this district, under the act of July 13, 1866, as amended; and to avoid delay and difficulty this company has decided to hand you the amount claimed, respectfully reserving and asking you to concede the benefit of any and all rights, legal and equitable, which may hereafter accrue to the company or be found to exist by virtue of any judicial decision in any case or cases similar in character which may be carried into the courts for adjudication.

This sum is made up as follows:

Arrears of taxes claimed	$8,598 30
Interest charged as an equitable adjustment in lieu of penalties	1,069 70
As per statement inclosed	9,668 00

If consistent with your convenience and sense of duty, I should be very glad to receive a reply to this letter.

Very respectfully, your obedient servant,

J. C. HARTT, *Treasurer.*

Hon. WM. A. RICHARDSON,
Secretary of the Treasury, Washington City, D. C.

I maintain that the payment of both these sums to Sanborn are impeachable offenses. He had not a shadow of claim to one dollar on account of either of them. He had not even applied for a contract which could by possibility cover these amounts when they were paid, and it was as much a deliberate plundering of the Treasury to pay him any part of it as it would be to deliver to him any other portion of the public funds.

Sanborn knew that he was not entitled to a dollar from either of these roads when he received it; he knew the provision of the law under which his contracts were made, and he took this money knowing that he was guilty of a high misdemeanor when he took it. The law of May, 1872, provides:

And if any person so employed shall receive or attempt to receive any money or other consideration from any person, firm, or corporation alleged thus to have withheld money from the United States, except in pursuance of the written contract made in relation thereto with the Secretary of the Treasury, such person shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than $1,000 or imprisoned not less than two years, or both, in the discretion of any court of the United States having jurisdiction; and the person so employed shall be required to make report of his proceedings under such contract at any time when required to do so by the Secretary of the Treasury.

I have selected these cases so as to avoid the howl which would otherwise be raised that I am dealing in general denunciation of officials without specific proof, not because they are the worst. The Delaware and Lackawanna Railroad and others I could name, are perhaps more flagrant. Green's operations in the West are equally so; but I cannot cite them all. Let some gentleman deny or defend the charges made, and they will be maintained and supported, by proof piled mountain-high.

As to the Secretary's knowledge upon these subjects, Mr. Simmons swears:

Mr. William A. Simmons, collector of the port of Boston, then came before the committee, and was directed by the chairman to make such a statement as he desired.

Mr. Simmons said: I am desired, as I understand, to make a statement of what has been done in my former supervisory district regarding the Sanborn matter. Some time in the winter of 1872–'73, Mr. Sanborn came to me at Boston and showed me a contract or something relating to a contract which he had with the Treasury Department, and desired me to assist him in the examination of papers and to render him such other assistance as he required. I declined to do so unless I had an order from a superior officer to that effect. He then stated that Mr. Richardson, the Assistant Secretary of the Treasury, was in town, and he would like to have me see him in relation to it. I sent my revenue agent, Mr. Horton, to see Mr. Richardson at his former office, just below me. On Mr. Horton's return he reported to me that Mr. Richardson said that Mr. Sanborn had a contract from Mr. BOUTWELL, and that it was something which did not concern me as an internal-revenue officer, and that I was to render him such assistance as he desired. As it was out of the ordinary routine, and as I had no written order, I went down immediately myself to see Mr. Richardson. I saw him within an hour from the time that Mr. Horton reported, and he said to me in substance what I have now stated as having been said to Mr. Horton: "You will render Mr. Sanborn what assistance he desires." * * * * * * * *

Answer. Mr. Richardson gave me just the order which I have indicated to you, and when he came to be Secretary he embodied his language to me in the letter from him, which I have read.

Question. Did he, in private conversation, tell you to turn over to Mr. Sanborn, Mr. Horton, or any other officer?

Answer. He said to me, "You will render Mr. Sanborn whatever assistance he requires. It is a matter which does not concern the internal revenue at all, and you are not required to report upon it." I interpreted from that that I was to render assistance through my office—not personally, for I had neither time nor inclination to do that.

The Secretary has forgotten it all. Mr. Hawley received these verbal instructions from Simmons, as he swears, and both seem to have been very glad to act on them and turn over their men to work for Sanborn at the expense of the Government. Hawley swears that all the facts as to the Delaware and Lackawanna Road were ascertained by officials under him as early as May, 1873, more than two months before Sanborn even applied to have it put into his contract; yet Sanborn got half of the $100,000 from the Treasury Department this year since this investigation began. Whatever Sanborn knew about it he learned as an officer of the Government and through our paid officials. Green, another of Sanborn's pimps, a practitioner before the Departments—and it is strange how many fellows like Green, Fay, Prescott, &c., are *pet* practitioners before the Departments—went West, armed

with the following authority from the Secretary to raid on the railroads and subordinate the internal-revenue officers under pretense that he was a favored official sent out by the Secretary:

TREASURY DEPARTMENT,
Washington, D. C., June 3, 1873.

SIR: You are requested to assist Frank M. Green, esq., who has been employed to assist in collecting claims in favor of the United States for internal-revenue taxes which have been withheld, in the examination of official records and by allowing him to make examinations of the same in such cases as he may call upon you for assistance.

To the supervisors and collectors of internal revenue.

Very respectfully,

WM A. RICHARDSON.

While his partner, Dr. Presbrey, went forth on a similar errand with like authority from the Assistant Secretary. His reads thus:

TREASURY DEPARTMENT,
Washington, D. C., July 21, 1873.

SIR: You are requested to assist Dr. O. F. Presbrey, who has been employed to assist in collecting claims in favor of the United States for internal-revenue taxes which have been withheld, in the examination of official records, and by allowing him to make examination of the same in such cases as he may call upon you for assistance.

Very respectfully,

FREDERICK A. SAWYER,
Acting Secretary of the Treasury.

To the SUPERVISORS AND COLLECTORS OF INTERNAL REVENUE.

While each had secret-service commissions from Solicitor Banfield. Not satisfied with all this, they demanded authority to examine the books of the Commissioner of Internal Revenue. That officer properly refused until an order came from the Secretary and his Solicitor, which he was of course bound to obey. I will read what he says upon that subject:

Question. You stated that Mr. Green had at times obtained information from your office by the order of the Secretary of the Treasury?

Answer. Yes; two or three times, I think.

Q. In what form did that order come to your office?

A. I think in the form of a letter of request, (a couple of them you have here,) asking me to let Mr. Green go to my lists. These lists contained a record of all the taxes assessed and collected from the first of the system, in 1862, and of course to an enterprising lawyer they would be a mine for him to work. I therefore put a man in charge of those lists, and told him not to allow anybody to look at those records without my special authority, adding, with a little jocoseness, that if he did there would be a funeral in the abatement division. Mr. Green came to ask permission to see the lists, and I refused to give it to him, stating that if the Secretary sent me a written request it would be my duty to furnish him with the facilities, and I did so on the statement of Mr. Banfield that Mr. Green was an officer and was entitled to the knowledge.

Q. When once Mr. Green got possession of all those lists that you had or got authority to examine them, then he had information in his hands which he could use very extensively?

A. I only gave him such information as the Secretary or Assistant Secretary asked for specifically in writing about certain railroads. For instance, he wanted to know what tax a certain railroad had paid in a certain year, and I allowed him to have information in writing to that extent.

Q. Were these letters signed by Mr. Solicitor Banfield?

A. The note showing that Mr. Green was entitled was signed by Mr. Banfield. Green's letters were addressed to the Secretary of the Treasury, and were referred by him to the Solicitor by indorsement, and the Solicitor referred it with recommendation to me, if I remember correctly.

Q. And on that recommendation, which you regarded as an order from the Solicitor, you furnished information as to the railroads, which Mr. Green wanted to know about?

A. Yes.

Q. Do you recollect about how many such railroads there were?

A. No; I do not recollect. Of course we have copies of those letters, and I will send them down to the committee.

Q. Did not the information which Mr. Green got put him absolutely in possession of the condition of the railroads in your office?

A. He knew from that information how much they had been assessed and how much tax they had paid, and when he could find out how much money they had earned and how much dividend they had paid, and how much surplus they had, he could ascertain with certainty whether they had paid all the taxes for which they were liable.

Q. Mr. Green had been in your service for a long time?

A. Yes; in Virginia. He was a very expert man.

Q. He spoke of having a patent of his own, but he declined to tell us what it was.

A. It is very patent that that gave him all the information he needed.

Q. His patent seemed to be his power to get orders from the Treasury Department.

A. It was in regular course of business, and the Solicitor, I suppose, felt bound to give them to him.

Q. I have some trouble about this patent of his. His patent was his power through the Treasury Department to get information from you. Was he an officer of the Government?

A. After I got Mr. Banfield's letter I assumed that he was. That letter said he was.

I might go on to show in detail how the whole service of the internal revenue was corrupted and subordinated to Sanborn; how the officials were required to serve him; how even the United States attorneys became his hirelings. But time would fail me. The following letter from the Solicitor to Mr. Bliss shows how absolutely Sanborn was made master over the revenues and the revenue officials:

DEPARTMENT OF JUSTICE,
OFFICE OF THE SOLICITOR OF THE TREASURY,
Washington, D. C., March 27, 1873.

SIR: In reply to your letter of the 15th and 26th ultimo, making certain inquiries in relation to the contract existing between the Treasury Department and Mr. J. D. Sanborn, I have to say:

First. That you are hereby authorized to institute suit in any case presented to you by Mr. Sanborn arising under his contract, when, in your opinion, the facts presented justify the institution of suit.

Second. I doubt the expediency of enforcing the payment of penalties for failure to pay the tax to which you particularly refer, to wit, legacy and succession taxes.

Third. It is proper that notice should be given to the collectors not to receive payment in cases embraced in Mr. Sanborn's contract, it being understood that his contract relates to claims which are not of record in any of the collectors' offices.

Fourth. The contract provides that payment shall be made of the entire amount collected to the Secretary of the Treasury, who pays out of the same the amount due to Mr. Sanborn. You will therefore hand over all sums received by you, whether received on suit, by compromise, or voluntary payment, to Mr. Sanborn, who is accountable to the Secretary of the Treasury.

I have verbally requested Mr. Sanborn to cause copies of his contract to be made

I am, very respectfully,

E. C. BANFIELD,
Solicitor of Treasury.

GEO. BLISS, JR.,
United States Attorney, New York.

It must not be forgotten that up to June, 1873, Sanborn, though a contractor, was a regularly paid official of the Government. I hold his monthly accounts in my hand, which show that he received from November, 1871, till June, 1873, $7,689.18 for pay and expenses; having from August, 1872, large contracts of his own to work up, and officials by the dozen, assigned to him besides. He sent his man, Fay, to Europe to work up customs cases in which he, Sanborn, was informer, no man recommending him but Sanborn. I suppose nobody would; yet he was commissioned at once. Fay drew from the Treasury $2,726 in gold, in about four months. Gentlemen will, I hope, examine his account; it is in the record. At Frankfort and elsewhere he spent forty dollars a day for board, and charged as railroad fare four times what it cost; he collected over $600 for samples, so called, which he says he disposed of as follows:

Q. I see here an item of $150 for samples and traveling. What are those samples?
A. Samples of commodities.
Q. What became of them?
A. I turned them over to the department.
Q. To whom?
A. To Mr. Madge.
Q. Do you know what Mr. Madge did with them?
A. No, sir; I do not.
Q. These are all new things to me and I would like to understand them. I see here another item of £104 0*s.* 6*d.* for samples of damasks, huckabacks, linens, gloves, hosiery, woolens, &c., furnished by L. P. Bosworth. What did you do with them?
A. I gave them to Mr. Madge, a special agent of the Treasury.
Q. That item of £104 0*s.* 6*d.* is without the duty being paid on, of course?
A. Yes, sir.

The whole thing reeks with corruption. But I must not weary the House with further details.

We did not prove that any of the money collected by Sanborn and his associates was paid to any of the officials of the Government. I care little where the money went; it was wrongfully taken from the people and the Treasury by the maladministration of law by the officers intrusted with its execution, and their unfitness for their positions is almost as well established when they knowingly permit others to take public money wrongfully as if they had kept it themselves. The loss is the same, the morality is not much better. I am free to admit that I have no idea that any of the money went into Mr. Richardson's pocket. I believe he is personally honest.

Honesty, capacity, and fidelity are each indispensable requisites for public service. To be merely honest, that is, not to take bribes or rob the Treasury, forms an essential but a small part of what constitutes a good public servant. These traits may be admitted as incontrovertibly true, and if it is shown that either from want of capacity or fidelity the money or property intrusted to him is being squandered on or by others, he should be dismissed as promptly as if he was a thief. He may be both honest and capable, but if he is not faithful, and by reason of his want of fidelity the public interests suffer, he should not be retained in place or power. Since my service here, I have known men who were strictly honest and perfectly capable, who were so unfaithful as to be wholly unfit for their position.

Want of capacity or fidelity, one or both, are clearly, I may safely say indisputably proved, against the Secretary of the Treasury, his Assistant Secretary and Solicitor, in the Sanborn contracts to an extent sufficient not only to warrant but to demand their prompt removal. Nothing that I can say would add a feather's weight to the terrible verdict rendered against them by the Committee on Ways and Means; a verdict all the more terrible because it was rendered exclusively on evidence furnished by themselves and their associates, at their own request; a verdict rendered unanimously by a committee certainly of equal dignity and importance with any in the House, eight out of the eleven members of it being the political friends of the officials selected to take charge of the revenues of the Government, because of their experience, intelligence, and justice. No light offense, no mere oversight or neglect, no blunder such as all men may make, would have called forth such language from such a committee as that which I propose to read:

The committee, feeling alarmed at the apparent looseness with which the law has been administered, were desirous of ascertaining where the responsibility rested, where it would seem to belong, somewhere in the Treasury Department. They have had before them the Secretary, Assistant Secretary Sawyer, and the Solicitor of the Treasury. The Secretary gave but little information and exhibited an entire want of knowledge as to the manner of making the contracts, administering the law, or of the provisions of the law itself. His only connection, so far as he could remember, with these transactions, was in affixing his signature to the various papers presented to him as a mere matter of office routine, without knowing their contents.

The Assistant Secretary disclaimed any particular knowledge of the law or contracts, and he in like manner affixed his signature as a matter of office routine. The Secretary and the Assistant Secretary, by their testimony, show that the papers were prepared by the Solicitor, thus indicating the responsibility upon him. The Solicitor, in turn, testified that he is simply the law officer of the Treasury Department, and a subordinate of the Secretary of the Treasury, without any power in

regard to the administration of this law, except that expressly given by the Secretary; that he had consulted in every instance with the Secretary or Assistant Secretary of the Treasury; that he had in all cases simply obeyed the directions of his superior officers, and that the contracts and the various orders of the Department were well known to the Secretary and Assistant Secretary.

The disagreements and contradictions given respectively by these gentlemen, as appears from their testimony, is a matter greatly deplored by the committee, as by it they are unable to fix upon any one, or anywhere, the responsibility for the maladministration of this law; and they look with serious apprehension upon the apparent effort of these gentlemen to transfer the responsibility each from himself to the other.

While the committee, therefore, are unable to determine where the responsibility rests, they cannot in justice to themselves ignore the fact that these three persons deserve severe condemnation for the manner in which they have permitted this law to be administered.

The gentleman from Ohio [Mr. FOSTER] in his very able speech the other day states his own conclusions thus:

It is impossible with the evidence now before us to determine just where the responsibility for the maladministration of the law rests; but that it rests somewhere in the Treasury Department is the general verdict of all who have given this matter their attention. The motive governing and controlling its administration I am not yet able to understand; but I do know that Sanborn has been permitted to collect taxes that could have been easily collected by the ordinary agencies, and the Treasury in its present depleted condition has been robbed of over $200,000, and this money has gone into the pockets of Sanborn. The Department permitting this irregularity is deserving the condemnation of the people, and the officers controlling it are unfit to remain in its charge.

When such a committee feel compelled to use such language in a well-considered report to this House concerning the Secretary of the Treasury and his chief assistants, there is no escape from the conclusion, that their conduct has been highly reprehensible. No words could be used within the limits of parliamentary propriety, which could have made the charges of want of capacity and fidelity more distinct than those selected. Their disagreements and contradictions and their efforts to transfer responsibility from themselves to the others is as direct a charge of want of truthfulness in their statements as could well be made.

The criminal ignorance of the Secretary and his Assistant Secretary of the law and its administration, which ignorance they held up as a shield against the responsibility which they felt knowledge of their own acts would necessarily imply, was proof conclusive of an utter want of capacity, or fidelity, or both, rendering necessary this verdict and conclusion:

While the committee, therefore, are unable to determine where the rerponsibility rests, they cannot in justice to themselves ignore the fact that these three persons deserve *severe condemnation* for the manner in which they have permitted this law to be administered.

That sentence exhausts the English language; nothing can add to its severity. The committee might have used harder words but not stronger ones. When the committee say they deserve *severe condemnation* a decent respect for public opinion would seem to require their prompt resignation. If they did not promptly tender it the President will come short of his duty to the country if he does not promptly dismiss them, unless they or their friends on this floor will show that the charges of the committee are untrue or unjust. I stand here prepared to challenge contradiction of the conclusions arrived at by the committee, and pledge myself to make good all that we have alleged. Each member of the committee will do so. Let the friends of these gentlemen defend them now, or let the admission be conclusive that they *cannot*—I will, if it is more likely to call out a defense, say *dare not*. I am not here to use hard words or to deal in denunciation or abuse; I have no malice, indeed no feeling in this matter; but justice requires that I should lay the facts before the House and the country which rendered our report necessary.

Mr. ELDREDGE. Will the gentleman allow me to ask him a question right here?

Mr. BECK. Certainly.

Mr. ELDREDGE. I am, as every one must be, profoundly impressed with the charges made against the Secretary of the Treasury and his assistants. They are beyond description terrible and wrong. But the gentleman from Kentucky [Mr. BECK] tells us that this Committee on Ways and Means have done their full duty, that they are right in this matter. He has presented a very grave question here, one which I would like to hear him upon with reference to my action upon this resolution. He has charged directly, and it seems to me he has sustained the charge, that the Secretary of the Treasury is guilty of an impeachable offense. I say it seems to me that he has sustained that charge to the fullest extent. If that be so, I cannot conceive that the Committee on Ways and Means, rightfully described as he has described them, as men of ability, intelligence, and experience, will have done their full duty until they present to this House a resolution of impeachment of that officer. He ought to be impeached, if the statements of the committee are true; and in my judgment that committee cannot escape the responsibility without presenting him for impeachment. We cannot, gentlemen of the House, and I say this for the purpose of calling my friend's attention to it, we cannot kick a man or pull his ears because we differ with him or because he has done wrong. The Constitution provides a legitimate and proper way by which we may proceed and have jurisdiction of these officers, and not only remove them from office, but prevent them from ever again holding office of profit or honor. If the gentleman from Kentucky [Mr. BECK] is right, and I have no reason to doubt that he is, I can vote to impeach the Secretary of the Treasury. But I know of no law by which as one of a co-ordinate branch of this Government I can kick him, or pull his ears, or pronounce him a rascal by law.

Mr. BECK. The gentleman has taken a good deal of my time to make a speech. We have presented a bill to repeal the law; that is all which we present now. In pressing that, we have shown the enormities that make it our duty to present that bill to the House. We ought not to ask Congress to repeal a law unless great wrongs are done under it. We have shown the wrongs; we have laid the bill before the House, and that is all, I repeat, that is up now. When the question of impeachment or censure shall come up, then the speech of the gentleman from Wisconsin [Mr. ELDREDGE] may fit very well. I am asking now that this law shall be repealed, that these contracts shall be annulled, that the condemnation of this House shall be placed upon that law and upon these contracts and upon the men who administer them, that the recurrence of these things shall be made impossible. That is as far as we are going now.

Mr. ELDREDGE. I beg pardon of the gentleman; I thought the resolution of censure was before us.

Mr. BECK. Not at all; it is not before the House in any form. I say that when the Committee on Ways and Means do, as they were compelled to do, call attention to the facts, and say that they cannot tell where the responsibility belongs because of the anxiety of these gentlemen each to shoulder it upon the other, and that they ought to be severely condemned, in my judgment they have made it impossible for the Secretary of the Treasury to retain his place or for the President to keep him.

Mr. ELDREDGE. The gentleman and I do not differ.

Mr. BECK. It was only yesterday that I saw it stated that a poor engineer of this District, while yet on the witness-stand, at least not discharged, because he did not properly serve or swear for the powers that be, was dismissed in disgrace; even while a witness before an investigating committee of this House. That is all right, I suppose; but Secretaries and Assistant Secretaries and men high in authority who are defying the laws of Congress are to be sustained and retained. If they are, it will not be by my vote, if any censure I can put upon them will aid in removing them.

The Secretary and his assistant have both taken special pains to throw the blame upon Solicitor Banfield. He appears frequently and prominently in these matters. But I do not intend to be led away, by throwing the responsibility upon a subordinate, when the heads of the Department are accountable. Mr. Banfield may be as culpable as any of them; but he is a subordinate. The chief officers are the responsible men. He had to obey their orders—he says he did. I do not intend to decide that he did not, in order to open a door for the men really responsible to escape at his expense.

I contend that this law has been administered with reckless disregard of right and justice. That the officers of the internal revenue who ought to have had control of it were absolutely ignored, is beyond all question true. The facts proved I maintain unquestionably call for the condemnation of this House. I am glad to say on behalf of the Committee on Ways and Means that throughout this whole investigation, while I deny that we have ever sought to traduce private character or to become a smelling committee, (as these gentlemen through their organ see fit to charge,) we have, regardless of party, marched up to the responsibility of this case, no matter who it hurt or who it helped, seeking only to get at the truth and to lay it naked before the House and the country. Every member of the Committee on Ways and Means, as this record will show, as all the evidence verifies—every member of the committee, whether republican or democrat, has desired to lay the truth bare before the country.

If the other committees of the House would stand up to their responsibilities in the investigations with which they are charged with equal fidelity, it would be better for them as men, better for the country, better for their party even, if they have only regard for that.

Mr. Speaker, I have contended long and earnestly on this floor that most of the maladministration of public affairs, most of the corruption, extortion, extravagance, and wasteful expenditures of the money of the people grows out of the disregard of law and contempt for legislative authority by the Executive Departments of the Government. All our pretenses of economy, or if you please all our honest and earnest efforts in that direction, by cutting down salaries, trimming here and pruning there from the meager wages paid to public servants high and low, are mere shams or senseless demagogery so long as we allow the Executive Departments to defy our power, and disregard with impunity our resolutions and laws. We would be considered silly idiots if we were seen struggling to save the dripping from the spigot while the bung was out and the wine in the cask was flowing freely from the bung-hole, and we were not even trying to stop it or to right it up.

We are brought face to face now in these Sanborn contracts with a palpable, glaring case of executive usurpation and disregard of law. I am glad it is made so plain that the facts can neither be denied nor defended even by the officials who did the wrong. If the labors of the Committee on Ways and Means shall tend in any manner to curb and check the evils of which I complain, we will have done good service to the country; if we are only going to repeal this law, annul

these contracts, and boast before the country that we have given high evidence of virtue and morality by our prompt action in this matter, and quit reform here, our labor will fall far short of the great end I am striving to attain.

This is but one of many things of the same general character—an index pointing to other and even greater abuses. I have repeatedly urged that there could be no safety in the disbursement of the public money or in the management of our finances so long as punishment was not promptly administered whenever the law was violated. It ought to be ground for impeachment whenever an executive officer spends more money than Congress appropriates for any specific purpose, or spends it so as to create a deficiency. If money enough is not furnished let the work stop, let the public business suffer, let the Representatives of the people take the responsibility for their acts; but make it an offense which will surely be punished if executive officers undertake to override what they may consider or what may in fact be bad laws, and spend money which has been withheld or refused by Congress.

It is because we have not held officials responsible for derelictions of duty that such enormities as have been developed in these Sanborn matters are possible. The Secretary of the Treasury might well suppose that he would never be questioned, no matter what he did in that regard, when he saw what had been done and was being done with impunity every day in his own Department and in all the others, not only without protest or remonstrance from Congress, but when he saw that the dominant majority in both Houses always became indignant and resisted even the inquiries which the minority from time to time insisted on making, relative to executive abuses.

When $4,282,000 could be taken out of the Treasury, as the Secretary shows has been done during this year in violation of the plain provisions of the law of July 12, 1870, from old balances for the year 1871, and the act be defended by the leading members of the House; when quartermasters can sell property to the amount of $107,000,000, and not even tell Congress what debts they pay with it; when the proceeds of over four hundred ships can be applied as the Navy Department pleases without accountability anywhere; when the Postmaster-General can so arrange with straw bids and sham contracts as to enrich all his friends and retainers and expend $35,000,000 a year without accountability; when millions on millions are annually squandered or stolen—that is a better word—by contractors, agents, and other harpies in the management of Indian affairs; when the Secretary of the Treasury has a "slush fund" of over $5,000,000 a year, to do as he pleases with, keeping his corps of useless staff officers and retainers by the hundreds around his own office; when he can lend for from three to six months $135,000,000 of public money to syndicates in violation of law, and issue $44,000,000 of greenbacks or any portion of that sum he pleases in known violation of his right and duty and again withdraw it at pleasure, and see all these things and others equally bad or worse, not only winked at but defended, justified, and sustained in these Halls by his party friends, no wonder he thought he could do what he pleased to gratify and enrich his friend, Sanborn.

We have, however, laid bare the enormities of that law as administered, and exposed the frauds, extortions, and robberies under it until even the Secretary had to say that it ought to be repealed unconditionally. Sanborn had to admit that he could say nothing in defense of it. No man in the House has yet ventured to sustain it, or to maintain the legality of the conduct of the Treasury officials under it. When the law is repealed and these contracts annulled, it will be time enough to discuss on this floor what our further duty will be.

The lesson will not be lost. Executive usurpation will soon cease, when Congress determines to hold men to strict responsibility. Let it be known that want of either integrity, capacity, or fidelity in the management of public trust will be promptly exposed and surely punished, and Sanborn contracts and like wrongs will become impossibilities.

I said when I took the floor that I would prove by the record the charges I made, and would sustain the report of the committee by the proof. I have endeavored to use no argument not warranted by the evidence. The record is full of frightful facts which I have not even alluded to. I stated that I would be as moderate in expression as possible, for I confess to feeling a sense of indignation at the charges of the press, instigated as I believe from the Treasury, against my fairness as a member of the committee, as well as at the reflection on the committee whose cause in this matter is mine.

Macaulay in his review of the Life of Lord Clive portrayed his feelings when before a committee of the British Parliament thus:

> He described in vivid language the situation in which his victory had placed him—a great prince dependent upon his pleasure, an opulent city afraid of being given up to plunder, wealthy bankers bidding against each other for his smiles, vaults piled with gold and jewels thrown open to him alone. "*By God*, Mr. Chairman," he exclaimed, "*at this moment I stand astonished at my own moderation.*"

I confess, Mr. Speaker, when I run my eye over the evidence, the orders, and the receipts now before me; when I know how careful I have been not to allow party bias to work injustice to individuals, and I had such a field as was opened up by the hardly-concealed robbery of the Treasury, and then look at the attacks which the Treasury officials have sought to make upon me and the committee I have the honor in part to represent, I, too, stand amazed at my own moderation.

Invalid Pensions.

SPEECH OF H. H. STARKWEATHER,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

May 21, 1874,

On the bill (H. R. No. 3421) making appropriations for the payment of invalid and other pensions of the United States for the year ending June 30, 1875.

Mr. STARKWEATHER. Mr. Speaker, the total amount recommended by this bill is $29,980,000, and it should be a matter of pride to every patriotic citizen of these United States that this munificent sum is paid to the loyal men who served in the Union Army, and to their widows and children, without expense to them. Even the expense of the vouchers and postage is paid by the Government. The expense of payment formerly, for a portion of the time under the several pension acts, was paid by the pensioners, as will appear by the following acts.

By the joint resolution of July 17, 1862, agents received 2 per cent. on all disbursements made to pensioners, limiting, however, the compensation of any agent to $2,000 per annum.

The act of June 30, 1864, provided that in addition to the compensation at that date allowed by law, "every pension agent disbursing $50,000 annually should receive not exceeding $500 per annum for clerk hire, office rent, and office expenses; and every agent disbursing $100,000 annually, not exceeding $750; and for every additional $50,000, not exceeding $250 per annum for the purposes aforesaid," limiting, however, the compensation of any agent to the sum of $4,000 per annum.

The act of July 8, 1870, authorized the compensation of agents prior to the date of the passage of the acts now in force; the act of September 29, 1785, directed the payment of pensions under such regulations as the President should prescribe.

It is not known by what agents or officers the earliest payments were made; but soon after the passage of the act above referred to, the commissioners of loans are recognized as discharging this duty in the several States. This system prevailed until the Bank of the United States was chartered in 1816, when the duty of paying pensions was required of it without compensation. After the expiration of the charter of the United States Bank, State deposit banks acted as agents for paying pensions, to prepare the vouchers, and charged the Government thirty cents on each voucher prepared and paid, out of which sum the postage on the voucher and the check remitted in return is to be paid by the agent.

The amounts paid by the Government as compensation to all agents after March 1, 1869, were as follows:

From March 1, 1869, to June 30, 1869	$36,563 86
From July 1, 1869, to June 30, 1870	129,313 52
From July 1, 1870, to June 30, 1871	280,190 20
From July 1, 1871, to June 30, 1872	347,379 72
From July 1, 1872, to June 30, 1873	481,981 47
From July 1, 1873, to November 30, 1873	151,697 96

The amount paid for pensions for the year ending June 30, 1871, was $33,077,383.63; for the year ending June 30, 1872, $30,169,341; for the year ending June 30, 1873, $29,185,289.62.

The act of February 20, 1847, allowed compensation to agents for paying pensions, limiting, however, such compensation to $1,000 per annum.

Prior to the passage of the act of July 8, 1870, agents charged pensioners who applied for payment in person from one to two and a half dollars, and in some instances larger amounts, for the preparation of vouchers. When payments were made on power of attorney, agents charged twenty-five cents and fifty cents for administering the oath and filling up the jurat. The act of July 8, 1870, relieved pensioners from this onerous tax on their pensions.

In explanation I desire to have printed with my remarks the following letter:

TREASURY DEPARTMENT, THIRD AUDITOR'S OFFICE,
Washington, D. C., May 1, 1874.

SIR: The list of disbursements made by the pension agents during the fiscal year ending June 30, 1873, handed you yesterday at your request, should be explained.

The act of July 17, 1862, allows 2 per cent., provided the amount of compensation received during the year does not exceed the sum of $2,000.

The act of June 30, 1864, provides an *additional* sum for "clerk hire, rent of office, and office expenses," in proportion to the amount disbursed, as follows: For the first $50,000, $500, and for every $50,000 additional, $250; provided the total amount shall not exceed the sum of $4,000.

The act of July 8, 1870, provides that agents shall within fifteen days immediately preceding the 4th day of March, June, September, and December of each year prepare a blank voucher and forward the same by mail to the post-office address of the pensioner, who on or after the above-named dates shall execute and return to the pension agent, who shall immediately draw his check for the amount due and forward the same to the pensioner; and for such service he shall be allowed the sum of thirty cents for each voucher prepared and paid, including all postage, under this act.

Before the passage of this act pensions were paid semi-annually instead of quarterly as now, and he was allowed in addition to the compensation to deduct from the *pensioner* for each voucher executed a fee from twenty-five to sixty-five cents, and to charge the pensioner the necessary postage incurred.

The agents are obliged to pay all the expense incurred in running the agency.

such as clerk hire, rent of office, and all office expenses, so that the amount actually received by the agents as compensation is about one-third of the amount allowed by the United States.

Very respectfully,

ALLAN RUTHERFORD, *Auditor.*

Hon. H. H. STARKWEATHER,
House of Representatives.

By the bill reported from the committee the fees for vouchers are reduced from thirty cents each to twenty cents, thereby saving in expense to the Government more than $60,000.

The following table shows the fees, salary, and commission of each pension agent. It should be stated that while many of these agents receive as fees, salary, and commission sums ranging from three thousand to eighteen thousand dollars, they pay out of this salaries of clerks, office rent, postage, and other expenses, leaving their net compensation as now reduced for the most important offices about $4,000, and for the less important offices from two to three thousand dollars. This reduction of fees is an important saving to the Government, and should be placed to the credit of Congress in its endeavors to secure economy and reform in the public service:

Amounts disbursed by pension agents during the fiscal year ending June 30, 1873, from Third Auditor's office.

Reduction of the Army.

SPEECH OF HON. R. C. McCORMICK,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

May 29, 1874,

On the bill (H. R. No. 2546) providing for the gradual reduction of the Army.

Mr. McCORMICK. Mr. Speaker, in my residence upon the frontier I have been much with the Army, and have, I think, a fair knowledge of its organization and work and the difficulties with which it has to contend. No one of these is more fruitful in embarrassment than the habit into which Congress has fallen of annually unsettling, if I may use the expression, the laws and regulations governing it. It has come to such a pass that no officer, however long and faithful his service, however great the sacrifice he may have made for his country, is assured of his position in the Army or of what will be his rank or compensation.

I hope that if this bill is to become a law it will be a finality and we shall hear no more of a reduction of the Army or a change of the laws relating to it, and have no further agitation calculated to demoralize and depress an important branch of the public service.

The Army is already very small for the great area of our country, and at times, even recently, much of the frontier has been without adequate protection for life and property, and settlement and development have been retarded to an extent not at all creditable to a strong and progressive government.

But there are several features in this bill that should not under any circumstances meet favorable consideration. The proposition to pay the troops by checks strikes me as utterly impracticable and likely to work great injustice to the soldiers, especially upon the frontier, and most of the troops should be there, if they are not there already.

Banks are few and far between, settlements are frequently remote from the posts, and currency is never abundant. It will often be impossible for the soldier to have his check cashed without submitting to annoying delay and a heavy discount. In many instances he will have to trade out his check to his great disadvantage and cost.

Of the thousands of checks to be issued many will be lost, constant trouble will come from the necessity of identifying the parties in whose favor they are made, and the labor of paying and recording the checks at the different sub-treasuries and depositories upon which they are drawn will call for the employment of quite as many men as may be saved to the Pay Department by the introduction of this new method of paying the troops.

The difficulty experienced by merchants and contractors in the Territories in getting quartermaster and commissary checks cashed is sufficiently suggestive of what the poor soldier would have to go through in order to realize his monthly stipend, and the officers would fare but little better. Even in the older States the payment by checks must be attended with more or less of inconvenience to the soldier, and make him liable to imposition and extortion on every side. It is true that it is provided in the bill that the Secretary of War may in his discretion retain the present mode of payment in localities where the check system is found to work hardship to the troops, but with the proposed great reduction in the number of paymasters how can this be done?

Other features of the bill seem equally objectionable and impracticable; but time will not allow me to make more than this general reference to them. The bill could not in my opinion, if it were so intended, be more inimical to the best interests of the Army and of the country than it is in some of its provisions, of course excepting that which opens promotion in the staff corps, which is just and desirable and I think should have been enacted into law long since.

Upon the frontier, however successful the so-called peace policy, may prove—and many of the reports regarding it are to say the least highly colored—there will for years to come be need of troops. Almost daily we have news of Indians leaving their reservations with hostile intent; and the presence of troops to hold them in check, and to punish them if they go upon the war-path, is a part of the President's policy as announced in the reports of the Interior Department and Indian Bureau, and commended to the people of the Territories.

My friend from Wyoming [Mr. STEELE] informs me that within a few months past two new military posts have been established as an actual necessity in the Sioux country, and that in the face of the repeated assertion upon this floor that the Sioux are at peace and troops no longer required to look after them.

For gentlemen like the member from Ohio, [Mr. BANNING,] who think there should be no standing army in the United States in an era of national peace, I cannot do better than quote the well-put words of a gifted English writer:

Though a soldier in time of peace is like a chimney in summer, yet what wise man would pluck down his chimney because his almanac tells him it is the middle of June.

Civil Rights.

SPEECH OF HON. WILLIAM B. READ,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

May 29, 1874,

On the bill to protect all citizens in their civil and legal rights.

Mr. READ. Mr. Speaker, I shall endeavor to adapt my remarks in a fitting manner to the occasion, and shall faithfully attempt to adhere to this rule, and at the same time it is a matter of great doubt as to whether I shall be competent to throw any light upon the all-important subject that I propose to discuss at this time, knowing full well that the subject, to my mind, has been ably and elaborately discussed by many on this floor who are profound in learning and erudition, during the present session, and by men of far more experience than myself. But believing in the fitness of things, and the justice that is due my own race, and the interest that should be felt by all who sympathize with the principles of civilization, and the building up and the maintenance of the once glorious country, I shall enter upon the discussion of the civil-rights bill, now pending before Congress, with a good degree of assurance and confidence, and am inclined to hope that I shall be able to give some reasons to the unprejudiced mind why the civil-rights bill should not pass, and believing that, should it pass and become a law, it will work a very great injustice, and be both prejudicial to the white and black races, and hope that, for the sake of peace, good order, and obedience to laws it will not be the misfortune of the country to have it emblazoned on its statute-books.

The negro question has been, from my earliest recollection, a source of distraction and discord, and has engendered more bad blood and sectional feeling than that of all others; and I had hoped that when the late terrible war was ended that question would be done with forever. But how sad my mistake! It seems to have become more potent, and has assumed a larger range than ever it did before. It has grown out of the hatred and political aggrandizement of the radical party, the party now in power.

The anti-slavery party, an element for many years before the late war, busied themselves with that peculiar institution, and waged an unceasing war upon the institution and the South, and in every conceivable manner directed their energies in a manner to destroy the institution of slavery in the South. The cry went forth that it was a matter of impossibility for this country to exist intact, one-half free and the other half slave territory, and the institution was made the hobby and pretext for politicians, pulpit orators, and all to ride into popular favor and political power and position. It was urged and proclaimed everywhere in the North that the agitation of the negro question should never cease until the last shackle was stricken from every slave in the land, and that then a jubilee would come, peace and good will would reign supreme, and the promise was then and not till then should they cease agitating the question.

Under these threatenings and threatened menaces, the people of the South found in many instances that their slaves were being made insubordinate, their rights and private property assailed, and they kept in constant dread and fear. Seeing the rapid increase and growth of the North and Northwest in population, and the increasing desire to wrest from them their property, by unjust legislation or otherwise, and believing that they had as much right to their property in slaves as had the northern man in his railroads or manufactories, they justly felt a very great jealousy. They could not brook the idea of losing their all, their little patrimony that had descended to them, and which had been entailed upon the South by those who were then seeking to take it from them or destroy it in some way. They looked upon the radical party as a party that disregarded the written laws and compacts made and solemnly sanctioned by our forefathers, and that they, the radical party, appealed to a higher law, which law was undefined, and every one was left to choose his own course and means of destroying the institutions of the South. Threats were made from within and without, and bands were formed to bring about insurrections among the negroes by the vandal and the lawless. The northern heart was brought up to red heat, and a large majority were ready to consummate, as they called it, the good work begun.

The South, stricken with terror at the rapid encroachments made, and the radical party having obtained the reins of government in their own hands, with the Army and Navy to back them, naturally began to look to some means of self-defense and safety. Their resort and theory was to a peaceable secession, which proved to be a very fatal one in the sequel. A war of four long years was fought, over one million and a half of men were from time to time summoned to arms, and over half a million of them to-day fill soldiers' graves. The South was ruined, the people impoverished who were once wealthy, the land drenched in blood, and the negro set free. Now, had that been the sequel of this great drama, and the people of the South been permitted to return to their avocations uninterrupted, a much better state of things would exist in that God-forsaken country. But no, sir; the radical party, flushed with the success they had had, as a giant filled with new wine, instead of trying to build up the waste places and restore the people to peace and happiness again, set to work to concoct all manner of obnoxious laws and reconstruction acts that would and could oppress that people, under the pretext of giving the negro his equal rights under the laws, as they called it, and with them any and every means justified the ends. The whole object was to perpetuate themselves in power. The negro must be enfranchised and become a voter and a lawmaker. Hoards of carpet-baggers were poured into the South, and all manner of schemes and frauds, of both a political and financial character, were perpetrated upon both white and black.

They told the poor negro that the radical party had set them free, and that they were their friends, and that their old masters were their enemies and oppressors, and to place no confidence in them; that their only object was to enslave them again. By which means they secured the negro vote entire, and the unbounded and unbridled hate of the negro toward the native whites. A fearful state of things was the result, while the North at the same time were glorifying over the result of things, and husbanded the thought that they were the instruments that gave the song of freedom to all; and the promise went forth that the negro question was now settled forever and that they would receive the plaudits of the whole civilized world and the negro vote for their years of toil and strife in destroying the fair and sunny South. God help and pity them if they can take comfort and pleasure in such enormities!

May we never be called again to pass through such a war. It was one scene of carnage and blood for four long years. Thousands of the best men on both sides fell upon the battle-field, and thousands of wrongs were done and perpetrated under the plea of the necessities growing out of the war. It freed the slaves. The southern people accepted cheerfully the situation, and asked for peace; but there was no peace, and my opinion is firmly fixed that the South has more to complain of since the war than they did during the war.

When the war closed the South, in their poverty and rags, without means, went to work and tried to build up the waste-places and make a support for their wives and children.

Many of the Southern States were induced to ratify the thirteenth amendment to the Constitution with the avowed promise by the Government, or those in authority, that if they would do so they would be restored to the Union with all the rights, privileges, and immunities that the other States had and enjoyed. Little did they apprehend at the time that they by that act were assisting in forging the chains that swept away from them the last vestige of liberty left them; little did they think that there was to follow what is termed the reconstruction acts, the enfanchisement of the negro to their great detriment, and the disfranchisement of themselves. The illiterate negro was made a full-fledged voter and office-holder, and a conspicuous politician whose only privilege was to vote for and place in office the carpet-bagger. They performed their part of the drama most nobly, and under their guidance and the negro the native whites were not permitted to vote, or a large majority of them. The Southern States were plunged into endless debts, say near three hundred million dollars, the money stolen and applied to private purposes, railroads and private property confiscated, personal property taken and converted to private use without compensating the owner therefor. The citizens lived in terror, and in many of the States do yet; anarchy, rapine, and murder have reigned supreme, and no stability in the local government of many of the States. How grateful the South ought to be to the Federal Government for her many acts of kindness to them in reconstructing them! Such acts will never be forgotten by that noble band of people who have stood and borne with patience and anxiety all the many enormities heaped upon them.

The action of the Federal Government in sustaining such a system of plunder against those people ever since the war is unparalleled in the whole civilized world. Napoleon, the great warrior, who dragged the plowshare of destruction over Europe, and destroyed his thousands of men and millions of property, did no greater injustice than has the Federal Government done the South. The inheritance left the people is a glaring spectacle. The South has been turned into a Hayti and a Mexico. Nothing but strife and contention are heard or seen in many of the States; the heavy tread of the soldier with his bristling bayonet and smoking cities are now heard and seen in some of the distant Southern States; good and law-abiding citizens are killed, who have no means of protection; they are fleeing from their homes, and seeking places of protection in a more friendly clime.

What a terrible state of things is this in a civilized country, and all, too, attributable to and the off-shoot of radical rule. They set the ball in motion and they keep it moving. They claim to be the party of moral ideas and the party of progress. In what have they progressed since they have been in power? Simply they have made the South in the last fourteen years a wilderness and a desert. Where there were eight millions of people, rich, prosperous, and happy, there is now that number or more in poverty and rags, and living in a state of anarchy. They have created a national debt of over $2,000,000,000. Their policy has created large State debts where they held the power; debts of railroads and corporations, individual debts, and debts of cities and towns, which total indebtedness is nearly as much as the whole property of the country is worth, and besides which they have given to the country a currency, a promise to pay, depreciated in value, which has robbed the laboring people of the country of untold millions of their just earnings, and in addition to which they have imposed taxes and tariffs that have nigh ruined the country; and yet that party claims to be the party of progress and the great friend of the people! God save the mark, and deliver us from such rule.

The party seems to have come to the conclusion that any means justifies their ends that will keep the radical party in power; they have created nearly sixty thousand offices, quite an army, whose duties are to see in part that the people are strictly loyal and will vote the radical ticket. They do the most of the dirty work of the party. To make their position more secure, and leave no doubt on the subject as to the success and perpetuity of their party, they by fraud and force foisted upon the country the fifteenth amendment to the Constitution, and thereby secured to their party an accession of nearly one million of votes. The negroes are the most illiterate class of persons in the country; they vote like automatons; they vote as they are touched and moved by their party leaders. Subsequent results show that the party acted with a good degree of shrewdness in that, from the fact that it is clearly shown that the present incumbent of the White House did not secure a majority of the white votes cast at the last election. The negro answers them a very valuable purpose; but as soon as their services to the party is rendered, it has no further use for them as a class until the next election.

Now, we are told that this political and physical death in the South is not complete; that the fortunes of the radical party are waning, and something must be done to save its drooping fortunes or it will soon topple and fall to the ground—unless something new can be brought before the negro and the republican party in the North. The cry goes forth and is raised, "Let us open the gaping and bleeding wounds of the war and pass a civil-rights bill;" or, in other words, a bill which means social equality, and that will save our ship in the drifting storm from the breakers, and will enable us to secure the offices this fall and the presidental election in 1876.

I now propose to discuss the civil-rights bill that is pending before Congress, and beg the kind indulgence of the House while I do so. I am convinced that this bill, should it become a law and be enforced, will have an effect upon the Southern States far more deleterious than any law that has ever been passed by this or any other Congress. It will break up the common-school system in all the Southern States, and produce an interminable strife between the two races; and I now serve notice upon the republican party that they will be held accountable by both races for this act, and an indignant people will not submit to this and the many repeated outrages much longer. We fancy that the handwriting may now be seen upon the wall, and that the days of that party and those who support this bill are numbered. A terrible political reckoning is close at hand.

The bill now pending and which has been discussed so elaborately is in the following words:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whoever, being a corporation or natural person and owner or in charge of any public inn; or of any place of public amusement or entertainment for which a license from any legal authority is required; or of any line of stage-coaches, railroad, or other means of public carriage of passengers or freight; or of any cemetery, or other benevolent institutions, or any public school supported, in whole or in part, at public expense or by endowment for public use, shall make any distinction as to the admission or accommodation therein of any citizen of the United States, because of race, color, or previous condition of servitude, shall, on conviction thereof, be fined not less than $100 or more than $5,000 for each offense; and the person or corporation so offending shall be liable to the citizen thereby injured in damages, to be recovered in an action of debt.

SEC. 2. That the offenses under this act and actions to recover damages may be prosecuted before any territorial, district, or circuit court of the United States having jurisdiction of crimes at the place where the offense was charged to have been committed, as well as in the district where the parties may reside, as now provided by law.

The bill undertakes to do that which no other country has done before. It makes the Federal Government a kind of censor or overseer over grave-yards, hotels, theaters, steamboats, railroads, &c.; or, in other words, it fixes a kind of police regulation over them, and I suppose that the authority and power given in the bill will be construed by the officers of the present party in power to authorize that detectives, retainers, and informers must be appointed to set around hotels, travel on railroads and steamboats, attend grave-yards, &c., to see that colored people have due regard paid them, and their civil rights fully meted out to them. Now imagine to yourself these many watchers at the grave-yards, hotels, &c., during their arduous duties in giving information of any little casualty that may occur, and the many little petty suits, prosecutions, and informations that will follow. It is nothing more nor less than a bid or preminm for perjury and crime. The citizen will be dragged from his home and vicinage, to be tried before a Federal court by irresponsible parties, at heavy costs and great inconvenience, only to gratify the caprice of the negro and afford a little political capital for the radical party.

By what right does Congress assume to impose this bill upon the country? They cannot find any warrant for it in the Constitution or its amendments. The friends of the bill contend that the right is found in the fourteenth amendment. I deny it. It is not warranted by that instrument either in the thirteenth, fourteenth, or fifteenth amendments to the Constitution. Then why all this ado about it? It is for no other purpose than to hold on to the negro as a voter, and another attempt, among the many, to produce and make a consolidated form of government of this, as has been the tendency and purpose of the radical party ever since its organization.

The States under our form of government have the right, and sole right, to protect and guarantee the civil rights of the various citizens thereof, to fix and control the police regulations of each State for itself, and no power on earth has the right or authority to interfere with or control them in their action, provided said State or States have a republican form of government.

That fact is fully established, I think, in the opinion of the Supreme Court of the United States, (whose judges are of the choosing of the dominant party,) in what is termed the Slaughter-house case, that came up from New Orleans. That case grew out of a charter granted by the State of Louisiana to certain parties in New Orleans who owned a slaughter-house, which in fact was a monopoly and was so regarded by nearly all. Parties aggrieved applied to the State court for redress; the State court sustained the company, and an appeal was taken to the Federal court and an opinion rendered in the case, which is as follows:

Not only may a man be a citizen of the United States without being a citizen of a State, but an important element is necessary to convert the former into the latter. He must reside within the State to make him a citizen of it, but it is only necessary that he should be born or naturalized in the United States to be a citizen of the Union.

It is quite clear, then, that there is a citizenship of the United States and a citizenship of a State, which are distinct from each other, and which depend upon different characteristics or circumstances in the individual.

We think this distinction and its explicit recognition in this amendment of great weight in this argument, because the next paragraph of the same section, which is the one mainly relied on by the plaintiffs in error, speaks only of privileges and immunities of citizens of the United States, and does not speak of those of citizens of the several States. The argument, however, in favor of the plaintiffs rests wholly in the assumption that the citizenship is the same, and the privileges and immunities guaranteed by the clause are the same.

The language is: "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States." It is a little remarkable, if this clause was intended as a protection to the citizens of a State against the legislative power of his own State, that the word citizen of a State should be left out when it is so carefully used, and used in contradistinction to citizens of the United States in the very sentence which precedes it. It is too clear

for argument that the change in phraseology was adopted understandingly and with a purpose.

Of the privileges and immunities of the citizen of the United States, and of the privileges and immunities of the citizen of a State, and what they respectively are, we will presently consider; but we wish to state here that it is only the former which are placed by this clause under the protection of the Federal Constitution, and that the latter, whatever they may be, are not intended to have any additional protection by this paragraph of the amendment.

If, then, there is a difference between the privileges and immunities belonging to a citizen of the United States, as such, and those belonging to the citizen of a State, as such, the latter must rest for their security and protection where they have heretofore rested, for they are not embraced by this paragraph of the amendment.

And they further say:

But when, as in the case before us, these consequences are so serious, so far-reaching and pervading, so great a departure from the structure and spirit of our institutions; when the effect is to fetter and degrade the State governments by subjecting them to the control of Congress in the exercise of power heretofore universally conceded to them of the most ordinary and fundamental character; when in fact it radically changes the whole theory of the relations of the State and Federal governments to each other, and of both these governments to the people, the argument has a force that is irresistible in the absence of language which expresses such a purpose too clearly to admit of doubt.

It will therefore be observed that the question of the rights of the States was fully discussed, and that the fourteenth amendment did not confer or take away any right of a citizen of a State, and we may infer that by that opinion the internal polity and police regulations of each State should be regulated by each State. The only effect that amendment has, so far as the citizen is concerned, is that the State is prohibited from doing certain things therein specified, and until a state of case does arise in that of making a distinction among her citizens. When that amendment was framed and became a part of the Constitution I do not suppose that it was in the remotest degree thought that the Federal Government, by an act of Congress, could confer upon the negro, as a matter of right, the privileges of mixed common schools, free access to churches, grave-yards, boats, railroads, theaters, &c., and it has been left to the more modern sages to give that interpretation.

The Judiciary Committee of this House, in their report on the woman suffrage question, in January, 1871, say:

The clause of the fourteenth amendment, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States," does not, in the opinion of the committee, refer to privileges and immunities of citizens of the United States other than those privileges and immunities embraced in the original text of the Constitution, article 4, section 2. The fourteenth amendment, it is believed, did not add to the privileges or immunities before mentioned, but was deemed necessary for their enforcement as an express limitation upon the States. It had been judicially determined that the first eight articles of amendment of the Constitution were not limitations on the powers of the States, and it was apprehended that the same might be held of the provisions of the second section, fourth article.

It will be seen that that learned committee took the same view of the question as did the Supreme Court.

At the same term of the court the case of Bradwell *vs.* The State of Illinois came on to be heard, and was decided. The plaintiff in this case was a woman. She applied to the supreme court of that State for a license to practice law, which the court refused to grant her. She claimed the right under the fourteenth amendment. The case was brought to the Supreme Court, who decided the case against the plaintiff. The opinion is as follows:

In regard to that amendment (the fourteenth) counsel for the plaintiff in this court truly says that there are certain privileges and immunities which belong to a citizen of the United States as such; otherwise it would be nonsense for the fourteenth amendment to prohibit a State from abridging them, and he proceeds to argue that admission to the bar of a State of a person who possesses the requisite learning and character is one of those which a State may not deny.

In this latter proposition we are not able to concur with counsel. We agree with him that there are privileges and immunities belonging to citizens of the United States in that relation and character, and that it is these, and these alone, which a State is forbidden to abridge. This right in no sense depends upon citizenship of the United States. It has not, so far as we know, ever been made in any State, or in any case, to depend on citizenship at all. Certainly many prominent and distinguished lawyers have been admitted to practice both in State and Federal courts who were not citizens of the United States or of any State. But on whatever basis this right may be placed, so far as it can have any relation to citizenship at all, it would seem that as to the courts of a State, it would relate to citizenship of the State; and as to Federal courts, it would relate to citizenship of the United States.

The opinion just delivered in the Slaughter-house cases renders elaborate argument in the present case unnecessary; for, unless we are wholly and radically mistaken in the principles on which those cases are decided, the right to control and regulate the granting of license to practice law in the courts of a State is one of those powers which are not transferred for its protection to the Federal Government, and its exercise is in no manner governed or controlled by citizenship of the United States in the party seeking such license.

It is unnecessary to repeat the argument on which the judgment in those cases is founded. It is sufficient to say they are conclusive of the present case.

This case is equally as strong if not stronger than the Slaughter-house cases, and I am led to the conclusion that a different construction of the fourteenth amendment is in violation of the intent of that instrument itself, and that no such power was conferred upon Congress by that amendment, as is contended for by the friends of the bill. Then, if not conferred, it is reserved to the States or the people. Articles 9 and 10 of the first amendment to the Constitution are as follows:

ART. 9. The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

ART. 10. The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

The Constitution further provides that the citizen of each State shall be as follows:

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

That clause of the Constitution has been ably construed by Justice Washington in the case of Corfield *vs.* Coryell, as far back as 1823, who answers the question, "What are the privileges and immunities of a State?"

We feel no hesitation in confining these expressions to those privileges and immunities which are, in their nature, fundamental; which belong of right to citizens of all free governments, and which have at all times been enjoyed by the citizens of the several States which compose the Union from the time of their becoming free, independent, and sovereign. What these fundamental principles are it would perhaps be more tedious than difficult to enumerate. They may, however, be all comprehended under the following general heads: "Protection by the Government, the enjoyment of life and liberty, with the right to acquire and possess property of every kind, and to pursue and obtain happiness and safety; subject, nevertheless, to such restraints as the Government may justly prescribe for the general good of the whole."

And I will say further that any privileges named in the civil-rights bill before the adoption of the fourteenth amendment was derived by those who enjoyed them exclusively from the State of which they were citizens.

From all the facts before us we are driven to the conclusion that while the decision of the Supreme Court in the Slaughter-house cases and the case from Illinois, and the Constitution remains unchanged, Congress has no right or power to legislate upon the subject of civil rights, and if it should do so it will be a palpable usurpation of power not warranted in the Constitution nor demanded by the country.

Now, what legal right has the white man that the negro has not? Why, in many instances the negro has many more rights than the whites and are more privileged than the whites. The key-note to this whole crusade is that it means, and is intended to effect and produce, equality of races in a social point of view; and no one understands it better than the negro. Why the many meetings of the colored people in this District last winter, declaring their equal rights, and in a word social equality? Look at Tennessee. The negroes held a large State mass meeting a few weeks since and denounced those who opposed the civil-rights bill, among whom was Senator BROWNLOW, one of their own chosen officials. Some of the resolutions are as follows:

Whereas there is now a bill before the Congress of the United States conferring on the colored citizen civil rights, and as it is our duty as men to arrange for the perfect development of posterity means of instruction, we call the attention of the Congress of the United States to the fact that the public institutions of Tennessee, in point of principle and practice, are anti-republican and proscriptive, and that their tendency is to breed discord between the citizens and the spirit of caste and hate: Therefore,

Resolved, That we most respectfully ask the passage of the civil-rights bill as introduced by Hon. Charles Sumner, of Massachusetts, and reported by the Judiciary Committee, containing the provision of impartial education afforded us by the public schools of the country and to our children, as the most potent power to develop republicanism and love of country, good feeling, and personal regard mutually.

Resolved, That the institutions endowed by the General Government be so regulated that the colored citizens shall be admitted to them impartially in proportion to their population, and that provision shall be made to carry out the appointment of this class of citizens.

Now, what does all this mean but mixed schools and perfect social equality? It is nothing more or less; and the next step will be that they will demand a law allowing them, without restraint, to visit the parlors and drawing-rooms of the whites, and have free and unrestrained social intercourse with your unmarried sons and daughters. It is bound to come to that—there is no disguising the fact; and the sooner the alarm is given and the people take heed the better it will be for our civilization. I am no alarmist; I speak from conviction.

Let us pursue the resolutions of the Tennessee meeting a little further, and see whether they do not mean social equality. The following preamble and resolution were also adopted:

And whereas our fellow-citizen, David Galloway, of the State of Tennessee, and a citizen of the United States of America, is now condemned to a felon's life through the barbarous decisions of the unjust code and constitution of the State of Tennessee, for having in civil life married, by the laws of Tennessee, the wife of his choice, a white woman of mature age, and every way competent to contract with whomsoever she pleased; and whereas his marriage was in conformity with his privilege as an American citizen in the land of his birth, with his heart loyal to the flag of his country, an ex-Federal soldier who fought to sustain, during the war, the Union and Government of the United States; but who, since he returned to civil life, has been outraged by the judicial farce of a trial in two courts of Tennessee, and deprived of his liberty and divested of his manhood and the enjoyment of his personal rights: Therefore,

Resolved, That we, his fellow-citizens, feel bond with him in the outrages he has received, and do pledge our efforts to raise sufficient means to employ counsel to bring his case before the Supreme Court of the United States and vindicate the rights of the colored citizens of Tennessee to the civil rights of marriage with whomsoever they may contract and choose, and strip him of the outrage and odium placed on him and us by the unjust and barbarous constitution and laws of Tennessee.

Many other resolutions of a similar character were passed at the same meeting, and are too lengthy to be inserted here; but enough is shown to place the question beyond doubts as to what the negro means by civil rights. It is perfect social equality of the races in all the departments of life; and should it be attempted to be forced upon the whites in the Southern States, it will be the death-blow to the common-school system and the degradation of the whole country. Anarchy and bloodshed will follow in its wake, a war of races will

ensue, and the great sufferers will be the colored race. Some few of them, to their credit be it said, are opposed to the civil-rights bill. They are sensible; they see the effect it would produce, and they find that it is fraught with evil and mischief, and that no good will result from it to them as a race.

The Rev. Mr. Derrick, a colored Methodist minister in the city of Richmond, Virginia, the other day, in addressing his congregation, said:

From information received, the Government now contemplates the passage of a bill in which the coeducation of the races is to be attempted. Now, I may be frowned at by my own people, but, regardless of frowns and consequences, I will say the moment such an enactment appears on the statute-book the public-school system in the South will receive a blow that will cause its death, and no power this side of heaven can infuse life into its dead carcass. Then who will be the losers, the blacks or the whites? I need not tell you. That I leave you to answer and ponder over. I am anxious for the days to come when caste will be abolished; but the teachings of two hundred years cannot be forgotten in ten or twenty years. I will look forward with gloomy anticipations if such a law is passed. Why, how long would such a system be maintained in the fifteen ex-slave States? Just as long as would be required to go through the forms of law needed to destroy it. Some bring the lawfulness of the bill in question; but all things that are lawful are not expedient. As a negro, I am with you as far as consistency will allow me. There are to be found in the South over one million colored children attending schools. Are we prepared to furnish means to continue their education when these States refuse to impose taxation for school purposes, which they will surely do?

He takes the sensible and rational view of the question, and his prediction will be appreciated, and will meet the commendation of all thinking and reasonable men of the country.

Now let me say, in conclusion, to my republican friends, stay your hands, and let this cup pass, or you will be the instrument that will entail more horror and crime upon the country than ever has been done before. The white race must be the ruling class in this country. I am willing, and will assist, in giving the negro all of his civil rights under the law that is necessary for his peace, happiness, and security; but I am not willing to give him social rights, and I shall use every means in my power to prevent it. Let us stay this hand of persecution and oppression, and all enter anew in the race to build up and make our country one of the greatest and grandest in the world. Quit this sectional strife, and deal fairly and justly and temperately with each other, and a better destiny will await us.

Customs and Internal-Revenue Laws.

SPEECH OF W. C. WHITTHORNE,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

June 2, 1874,

On the bill (H. R. No. 3572) to amend existing customs and internal-revenue laws, and for other purposes.

Mr. WHITTHORNE. Mr. Speaker, the honorable chairman of the Committee on Ways and Means in asking the attention of the House to the consideration of the present bill authoritatively said, in substance, that the changes made and proposed in the existing tariff laws by his committee were few, slight, and immaterial, and so far as the amount of revenue to be derived therefrom was concerned, its sum was nothing. So, then, the sinking-fund pledge of the Government is to remain dishonored; the demand of the country for relief is to be ignored, and doubt, uncertainty, and distress are to rest upon the industries of the people, at least until another election shall determine for the guidance of this committee in what quarter sits the wind.

And is this the statesmanship of the republican party? Profoundly surprised must the people be that after months of labor so little is accomplished by a party whose majority is such as to give them full and unembarrassed control over every question likely to affect the destinies of the Government.

Indeed, sir, when you look back but two years to the promises made by those who then had and now have control of the Government; to the defiant boasts they made of their management of our finances; to the grand results predicted of the redeeming virtues of the syndicate; to the monthly statements of the large reductions of the public debt furnished by the Secretary of the Treasury, all leading the people to believe that they were to be relieved of the heavy and onerous taxation under which they were and are laboring, the country must be startled at "the entertainment to which we are now invited."

Recognizing the distressed condition of all branches of industry, the paralysis that has seized trade and commerce, and the want of employment to labor, it is serious and pitiable that no relief is to be tendered by those who have heretofore professed to have the power to do so much.

Sir, is it possible that the Committee on Ways and Means can discover no relief? Have they no policy to submit to the country? Shall the Government credit be dishonored and the country bankrupted under a "Micawber" policy? Is it not cruel mockery that they should bid us "wait for something to turn up?"

Sir, ought not the committee to recognize the fact that the country is wearied of class legislation, is sick of favoritism and sectionalism in your tariff, and at once address themselves to the task of relieving the people of the payment of bounties and pensions to those who have for long years enjoyed them under the name of protection? How onerous and heavy these have been and are I need but to quote the words of a distinguished member of that committee, used in a speech delivered at the last session of Congress, and who is now a member of that committee as well as a leading member of the republican party.

Says Mr. BURCHARD, (to whose speech I refer,) in a table evidently prepared with great care, the tariff pensions paid by the country are per annum, as follows:

Tariff pensions.

Articles.	Value domestic productions, 1870.	Duty.	Increased cost.
Cotton	$165,000,000	40 per cent.	$51,241,000
Pig-iron	*1,850,000	$7 per ton	12,950,000
Silk	30,000,000	60 per cent.	11,250,000
Salt	†2,289,500	101 per cent.	1,431,687
Wire	5,000,000		1,063,000
Woolens	176,000,000	69 per cent.	50,286,000
Railroad iron	620,000	$7 per ton	4,340,000
Wrought iron	710,000	$13 per ton	9,230,000
Steel	11,250,000		2,387,340
Paper	†21,216,802	20 per cent.	3,536,132

* Tons. † Census of 1860.

These facts might be told in other words, but they could not be presented more strongly. While it is true that the tariff has been reduced 10 per cent. since the date of that speech, yet the principle has not been at all affected.

The truth is, that the immense amount paid by the people that goes into the pockets of the manufacturers of the country under the guise and sanction of your protective revenue laws, if applied directly to the payment of the national debt, would in but a few years totally extinguish it.

But it is urged that our public debt must be met. Granted; yet it can only be paid by taxes derived from the people. This debt is an admitted charge upon the life of the nation. It is not all, I submit, upon the brief span allotted to its present inhabitants. It is wrong to crush them with its weight. They only owe their part; our successors to-morrow must and should meet theirs. How should this be done? It is but just to levy only such an amount of taxes as will equitably discharge our part of it. What is that equitable part? I answer, just that proportion of our surplus capital that we can part with without detriment to our present pursuits or injury to the inheritance we leave to our successors.

In the appropriate language of another, "High taxes increase prices, create social inequalities, discourage small industries, establish monopolies, and are a temptation to fraud." Can the truth of these words be disputed? Does not the present condition of the country attest their verity?

Notwithstanding the door of the workshop is closed, that almost universal bankruptcy threatens us, yet the unemployed laborer and the poor everywhere find the price of food, shelter, and clothing high. Notwithstanding large manufacturing establishments are being reopened or never submitted to the panic, yet small establishments and industries have perished or are perishing. Notwithstanding the rich are comfortable and see no occasion for alarm, and believe, or affect to believe, that all is well, and that neither change in tariff nor currency is necessary, yet the poor are becoming poorer. New England prospers while the South and West languish, and the measure of social inequality is increasing; and as these facts are passing, vast combinations in wealth amounting to monopolies are being made. To be among the favored is it surprising that fraud should become an instrument?

Your taxes are high, because you would foster, enrich, and protect by "bounties and pensions," as the gentleman from Illinois calls it, a favored few and a favored section of the country. If you would reverse this and do equal justice to all, you would remodel your tariff, collect your taxes simply in the interest of revenue, and just that amount of revenue demanded by the interest and gradual payment of your debt and an economical administration of the Government. Let it bear upon all sections, all capital, and all industries alike.

This thought brings me directly to some reflections upon a proposition I had the honor to submit at an early day of the present session. It was a bill to repeal the tax upon distilled spirits and tobacco. This proposition was submitted before the Secretary of the Treasury had informed this House and the country of the apprehended deficiency in the revenue, and was put forward under the influence of the predictions made by the distinguished chairman of the Committee on Ways and Means in the Forty-second Congress of what the country might expect from the changes then being made in the tariff, and the predictions made by the distinguished chairman of the Committee on Appropriations. A revenue of about three hundred and fifty millions was promised by the chairman of Ways and Means from the tariff of 1872, and a reduction of expenses for 1876 to two hundred and thirty millions by the chairman of Appropriations.

Taking this general basis, and not believing it as either just or politic to pay so much of the public debt as was contemplated by a large surplus of taxation, I believed that the major portion of the revenue derived from the tax upon distilled spirits and tobacco could be dispensed with, and whatever deficiency might exist by its repeal could be and should be made up from the possessors of the capital of the country, namely, banks, railroads, insurance, and other corporations.

One of the ablest and most profound students of political economy said long since that "taxation ought to be levied at the time or in the manner in which it is most likely to be convenient for the contributor to pay it." Taking this most wise rule, which commends itself at once to the approval of all just men, together with the injunctions of the Constitution, I am prepared to maintain that the tax upon distilled spirits and tobacco is unjust and wrong, and should for this very reason be repealed.

It is not the meaning of your Constitution and form of government to select one industry and not all for taxation. Nor is it in the meaning of that instrument that the burden of taxation shall fall exclusively upon one section or one clime and not upon all. Nor is it in the meaning of that instrument that the product of one man, and not all, shall be taxed for the support of the common Government. You are expressly prohibited by the Constitution from levying a tax upon exports, and yet in this given tax you do so.

Permit me for a moment to invite your attention to the injustice especially of the tobacco tax. Turning to the report of the Commissioner of Internal Revenue for 1873, I find he reports 116,440,934 pounds as the actual product of manufactured or taxable tobacco for the year 1873, and there was but little beyond this, because no one could sell unless to a licensed dealer. Now this quantity estimated at a fair value per pound, without taxation, say 30 cents, would make the sum of $34,932,280. What, suppose you, this sum of the labor of a few of the States of your Union was taxed? In the same report I find the Commissioner says it yielded "a grand total" of $34,386,303.09. One hundred per cent.! Does not the very statement show that it is too heavy? Its injustice becomes more apparent when you reflect that other industries are not taxed; that other sections escape its weight, its annoyances, and vexations; that it goes to the payment of an untaxed bond, which "bond is capital to him who holds it, and a tax to every one else." To the payer of this tax must and does come the reflection that while others enjoy the protecting smile of the Government he is punished with the weight of its frown. Add, then, the fact that it is enforced by agencies expensive, unusual, and corrupting, and you will concur with me that its repeal is demanded alike by justice and sound policy.

But, sir, if the magnitude of your debt and the necessary cost of the administration of the Government will not enable you to dispense with this odious tax, then I have respectfully to insist that you relieve it of its oppressive and vexatious features. In its collection proceed upon the idea of honesty among the people, and follow regulations and agencies to which they have been accustomed. Do away with spies, informers, and detectives, and the support these agencies derive from force. Adopt the license system entirely, and let each person engaged in the trade report the amount either of sales or of capital employed, and grade your tax upon that. Following this idea, which I have not now either time or opportunity to elaborate, you can dispense with an army of office-holders; you will cheapen the cost of collection and make the payment easier and more acceptable in manner to the tax-payer.

The tax required of the producer, though he should not engage in trade or be an actual dealer, and the requirement that he should sell alone to a licensed dealer, in its enforcement amounts to a gross outrage. A very large number of persons who raise tobacco, less than $100 in value, are cut off from payment of rent in kind, the adjustment of their accounts for family supplies, and exchange for the necessaries of life, because they live remote from licensed dealers to whom alone they can barter or sell. Were I to recite the details of the enforcement of the penalties for a violation of the laws in this respect, its cruelty and hardship would account for the disfavor with which the people, especially the poor, regard this law and the earnestness with which they demand its repeal. Will the Committee on Ways and Means give their attention to this complaint? It can be remedied without materially affecting the revenue. In fact, the revenue may be increased by reducing the amount of license tax required of the retail dealer.

The small retail dealers in tobacco are, under operation of the existing law, driven from the trade, and the use of tobacco is becoming the luxury of the rich. Indeed, in this and other respects, the tobacco tax seems to have been framed with the view of favoring the large dealers and in the interest of the manufacturers at the expense of the producer.

It is especially in this connection that I would commend to the consideration of the committee the wisdom of the rule of taxation already quoted, "that taxation ought to be levied at the time and in the manner in which it is most likely to be convenient for the contributor to pay it." If, then, I repeat, the condition of the finances will not admit a total repeal of this law, and the supply of any deficiency likely to arise from such repeal from the sources I have named, modify your internal-revenue laws in the interest of revenue and not in the interest of classes; popularize the methods and manner of its enforcement, cheapen the cost of its collection, and you will be enabled to receive more in amount at less rates than you now impose.

When you come to regard the immense amount of taxation paid annually by the people of the United States for the support of their national, State, and local government, amounting in round numbers to $700,000,000 per annum, and to realize the truth of the axiom in political economy that taxation is the abstraction of the capital of the country, and that every interest in the country is being prostrated in this abstraction of capital, it seems most strange that the Committee on Ways and Means should hesitate in recommending a line of policy which would relieve the industries and labor of the country from the weight and burdens of protection and class legislation, and under which these industries and this labor are coerced into the payment of millions to foster and enrich the favored few.
